MOORE'S

RURAL NEW-YORKER.

AGRICULTURE HORTICULTURE MECHANIC ARTS. EXCELSIOR. LITERATURE SCIENCE ARTS NEWS

VOLUME V. NO. 1 | ROCHESTER, N. Y.—SATURDAY, JANUARY 7, 1854. | WHOLE NO. 209.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:

EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. Bixby.—H. C. White.—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

THE RURAL TO ITS READERS.

"And here is the first number of the Rural for 1854, with a grand figure-head, clear print, and all the *et ceteras* to match! Well, it *is* a beauty, truly—so much improved in appearance, so decidedly genteel, as to be scarcely recognizable. It looks amazingly like sticking to the text, this practical demonstration in the line of "Progress and Improvement"—so far, at least, as externals and manner, are concerned. Hope *prosperity* will not make our visitor proud and conceited, but that he will retain his good qualities as a friend and instructor."

And so, Reader kind, you doubt the personal identity of your old and tried friend—one who has diligently labored in your behalf for years, rendering an account of his stewardship every week with fidelity and punctuality. And you call us beautiful, even genteel—think we're progressing, but doubt our bearing prosperity without becoming aristocratic. Our profound salaam for the compliment, but *never you fear* about the prosperity; for, thanks to you and a good many thousand of the "rest of mankind," we're not altogether unused to success, and shall endeavor to comport ourselves properly—continuing as frank, sociable and useful as heretofore. True, we have donned a new dress which pleaseth us exceedingly, and perhaps imparts a proud appearance,—yet in other respects, you will find us "the same old sixpence," only more so, in all the essential requisites of our vocation. While we congratulate ourselves upon our externals—and tender acknowledgments to all who have contributed toward furnishing us an outfit so elegant and becoming—we claim to have witnessed a sufficient number of seasons of seed time and harvest to distinguish between chaff and wheat, and therefore rely upon *deeds* and *merit* rather than *manners* or *appearance*.

No, no, good friends,—we are in no wise puffed up or afraid of soiling our attire, tasteful and *recherche* as we trust it doth, in your eyes, appear. On the contrary, we shall continue our labors as earnestly and hopefully as ever, to furnish you weekly a complete and varied cargo of literary wares—Practical, Scientific, Miscellaneous and Novel. Though we believe in progression, you will find us the same plain-spoken, hard-working, common sense Husbandman you have been wont to consider us—with a rare fund of information on Horticulture, Mechanics, Science and kindred topics—a peculiar talent for Story-telling, Biography, History, and instructive and amusing Miscellany and Anecdote—and a tact for communicating the most important News of the Day in few words. In each and all departments we intend to expend more time and means, and to talk as plainly and truthfully, as heretofore—leaving stilt-walking and non-committalism to such as sport kids and cambric, and sneer at those from whom their support is derived.—Our object is to benefit, *not* the exclusive few of upper-tendom, but the upper ten hundred thousand. Our primary aim is to make the Rural New-Yorker the most practical, scientific and reliable exponent of Agricultural practices in the world. This is no unmeaning boast. We have the means at command, and the disposition to use them liberally for the accomplishment of an object so desirable. Next to, and combined with this, we are resolved to furnish the best Literary and Family Newspaper obtainable.

From the moment our first number was issued, "Excelsior" has been our watchword, and we now nail that expressive and comprehensive motto to the Rural shield. Thus far we have cheerfully increased our expenses as far as our means and prospects would warrant, by adding from year to year, to the editorial, publishing and printing forces of the establishment—for all which we are receiving a rich reward.—Those of our contemporaries disposed to sneer or smile at the *number* of editors engaged upon the Rural, are requested to note the several distinct departments, the variety of subjects discussed, and compare the paper as a whole, with other journals—their own, for instance; and if they doubt whether the investment *pays*, the comparison may be extended to our subscription books. These remarks are made in no boasting or revengeful spirit, and are only intended for application where they will be understood. We have ever endeavored to treat our contemporaries with due respect and courtesy, and would not knowingly impede the progress of any sincere laborer in the cause of Improvement.

Readers All—friends and strangers—a specimen of our fifth volume is before you for examination. Though not as perfect in some respects as we hope to make the remaining fifty-one numbers, we trust it will meet your approval; and if it does, may we not receive some substantial token of your interest in the prosperity of this journal and the cause it seeks to promote?

WINTER MANAGEMENT OF HORSES.

The Suffolk, Clerland Bay, or Clydesdale is probably the best breed of horses for plowing and other heavy farm work, while roadsters, hunters and racers may be equally good for their respective uses. But for strength, endurance, activity, and adaptation to *all* the manifold wants of farming life, the common horses of the United States, in our opinion, are superior to all others. In no other country, too, are there so many horses kept in proportion to the population. This is an unmistakable evidence of great and general prosperity. In Europe "poor people" form nine-tenths of the community, and never enjoy a sleigh ride *after their own horses*, while in America comparatively few are so poor as to be unable either to keep horses themselves, or to frequently hire from livery stables. The number of horses kept for hire is beyond all credence to an European. These horses must be kept on hay, bran, shorts and oats, and hence the comparatively high price of these cattle foods in our large cities. Hay is usually higher here than in England, while wheat is 50 per cent lower. And yet, much more labor is required to grow the wheat than the hay crop. Why this difference?

Without stopping to examine this point, it may be well to inquire if farmers cannot be more economical in the use of hay. City horses must have hay. They cannot get the proper *bulk* and nutriment in a cheaper form.—Bran is worth $14 per ton in this city, and we question if it is more nutritious than good timothy hay. We can get the same amount of nutriment in corn at 70 cents a bushel, or at $23 per ton cheaper than in hay, or probably in any other food. But we do not get the required *bulk*, and therefore cannot use corn or oats alone. Hay, therefore, which is certainly the most natural food, appears to be our only resource, as under ordinary circumstances it would be our cheapest. But this congregation of horses in one point produces an artificial demand for hay, and proportionably high prices. Under such circumstances it appears highly probable that farmers can winter their horses and cattle more economically than on hay. Some farmers think horses cannot do without hay, but this is a mistake. One winter, after our hay crop had failed, we kept seven horses for three months on cut oats in the straw, a little barley meal and bran, and ruta-bagas. The horses kept in admirable condition, in fact never did better, and we found this much cheaper than wintering with hay.

A horse requires about 33 lbs. of hay per day, which, at present rates in this city, would make the cost of keeping a horse for six months $42. Cannot a horse be wintered on a farm at a much less cost? There can be no doubt of it. All that is required is the same amount of nutritious matter and bulk in some palatable food. In good clean straw and corn meal we have the very thing. To get an amount of nutritious matter *in straw* equal to 33 lbs. of hay, we require, according to Boussingault, 165 lbs. Of course no horse could consume such a quantity. But if we give him 30 lbs. of straw, and 8 lbs. of corn meal, he would receive quite as much nutritious matter, and in about the same bulk, while the cost of wintering in this way would be very materially reduced. Horses, like other animals, crave variety; and a little oil-cake or pea meal might be substituted, occasionally, for the corn meal with advantage. If the horses are kept constantly at hard work, a little extra oil-cake, peas or oats may be regularly given, inasmuch as they are highly nitrogenous and would be more likely to supply the increased destruction of muscles caused by violent exercise. "But my horses will not eat straw—they will starve first." Then let them starve. They will come to their food in a few days. Let the straw be clean and sweet, *cut short*, and well mixed with the meal, so that they cannot separate them, and our word for it, your horses will eat it and do well, and if they have an occasional feed of carrots or ruta-bagas, they will do better.

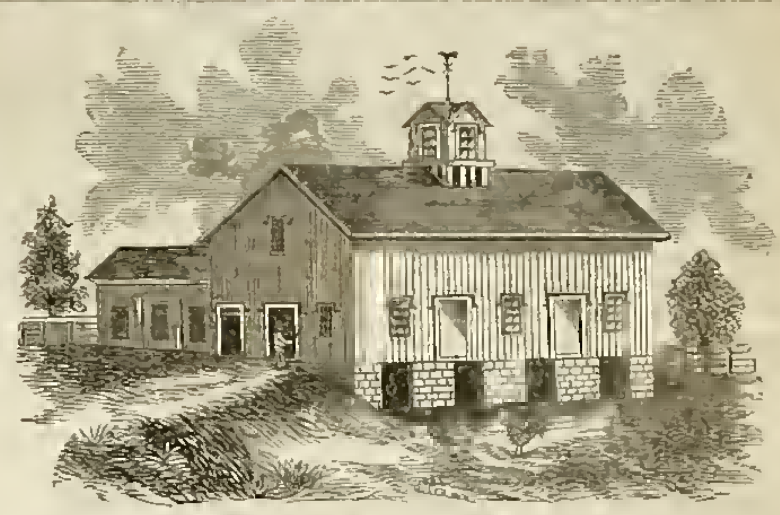
AMMONIA IN RAIN WATER AND SNOW.

That the atmosphere contains ammonia was shown by De Saussure, and confirmed by Liebig; but the proportion was so infinitesimally small, that few have ever attempted to *accurately* estimate it. It is well known, however, that water has a strong affinity for ammonia, absorbing some 670 times its volume. It was, therefore, to be supposed that rain would contain ammonia, collected as it ascended in vapor and descended in rain, from the atmosphere.—Brande first showed that this was the case, in 1825. Since then, many have observed the presence of ammonia in rain water, but none, we believe, have ever accurately determined it, though many eminent chemists have made the attempt. Boussingault has recently furnished a paper on this subject in the *Comptes Rendus*. He appears to have removed one of the main difficulties of the subject, by discovering a means of accurately ascertaining the amount of ammonia within one ten-thousandth part. He finds that rain water contains much more ammonia than water taken from the Seine, the Durcq, and other rivers. Thus, in the first week in April, he found 4.34 milligrams in one litre of rain water, at Paris, while water taken at the same time from the Seine, contained only 0.16, or the rain contained *twenty-seven times* as much as the water in the river. This would indicate that the power of soil, to retain the ammonia of rain water percolating through it, has not been overrated.

Snow water contained 1.78 milligrams in one litre, nearly a third less than rain water. The old idea, that snow contained a large quantity of ammonia would, therefore, seem to be *comparatively* erroneous. Snow, however, after it had lain 36 hours on a fertile garden soil, contained 10.34 milligrams in a litre. It is supposed that this large quantity of ammonia must have passed into it from the soil.

Potato Disease.—The *Mark Lane Express* has an able article on this fertile subject, and says of it:—"All precedent, all experience, all accumulation of knowledge, all things are set at naught by one fell swoop." Dr. Bollman's theory of high drying, in which many had high hopes, has proved, in numerous instances, unsound and ineffectual. The article concludes with offering the following advice which is equally applicable here as in Great Britain:—Plant as early as possible, so as to get a large portion matured and sold before the disease sets in, as it usually does with great severity, late in August, though this year it was about the middle of September before it became general.

Lime hastens decomposition, hence its value on all soils abounding in organic matter.



MODEL WESTERN NEW YORK BARN.

Some time since we gave a cut of a model New England barn, remarking that while it was *good*, we thought we had many, in Western New York, that were much *better*. The accompanying representation of a barn of George Brown, Esq., Phelps, Ont. Co., N. Y., will show that we were not mistaken. "The length," in the language of the owner, "is one hundred feet. Width 44 ft. Posts 20 ft. A wing back, 36 by 21 ft. The whole rests upon a wall 10 ft. high and 2 ft. thick. The rear is banked up to near the sill, from which side we enter with hay and grain. Front, there are three 12 ft. piers in centre, and two 6 ft. at each end, leaving four 12 ft. openings which are closed by two doors each, hung at the top with rollers. The doors have a rolling blind for ventilation, and when open stand behind the piers. The frame work inside the walls is supported by two rows of posts, standing upon stone pedestals 2 ft. high, 14 inches square at bottom and eight inches at top, and are shown by the dots in fig. 2. In basement, fig. 2, B is a cistern, 9 ft. deep, 9 by 21, and receives the water from all the roofs. C., Faucet under which are logs bored to lead the water to the tubs A A. E., Root cellar, 9 ft. by 18, sets back of the wall in the bank, is arched over with stone and covered with earth. F., (fig. 3) manure cellar, 21 ft. by 31, is on a level with the basement and yard in front, and is accessible with a team by a large door, 9 by 10 ft.

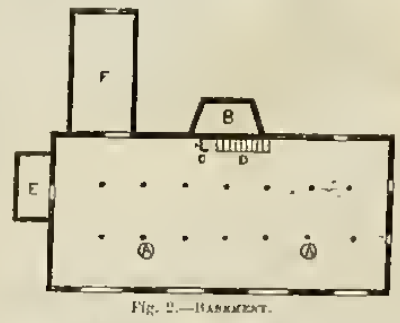


Fig. 2.—Basement.

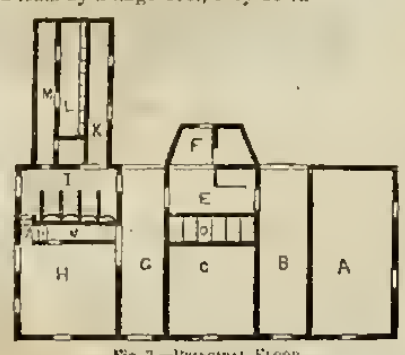

Fig. 3.—Principal Floor.

Fig. 3 is the principal floor and its arrangements. A. bay, 24 by 44 ft. B, thrashing floor 14 by 44 ft. C. bay, 24 by 24. D, granary, 8 by 24, with six bins, from the bottom of which are spouts for loading the grain below. There is a door from each bin opening into a feed room E, which is 12 by 24, with a door on each side, making a communication from one floor to the other. F, room over cistern, 9 by 21; from this there is a bin 9 ft. square, for storing cut feed. In the remaining part there is a pump and rat for wetting up feed. G, thrashing floor, 14 by 44. H, carriage room, 24 by 24, entered at the end by door 10 ft. wide, opposite to which is another door, same size, giving entrance to stable. J, alley in front of horse stable, 4 by 24, from which the horses are fed in box mangers. I, Horse stable, 16 by 24, divided into five stalls. A span of horses can enter it harnessed and can pass to any and every floor without being unharnessed. K, alley in front of cattle stable, 4 by 36. This length is divided in to 12 box mangers. I have partitioned off three of these mangers for the purpose of putting in a single cow or yoke of oxen. L, cattle stable, 12 by 21. M, open shed. Over the horse stable are two rooms finished off, 12 by 16; one for wool and the other for old harness &c. Over carriage, granary and feed rooms are hay lofts.—The basement will accommodate four or five hundred sheep, for which purpose I at present devote it. The barn is equally well adapted to wool growing, rearing or feeding cattle or grain growing. It will hold two hundred tons of hay. If there is one thing, about it that I would recommend more than another, it is the manure cellar. The manure is worth twice as much as that exposed to sun and rain; besides not having to pass through it spring and fall."

THE ECONOMY OF SHELTER.

Shelter is a want of the first necessity in our climate of cold and storm, and no farmer may neglect with safety or economy many and sundry provisions of this nature. He needs a good house for the comfort of his family and himself, a barn to keep his grain and fodder from the weather, stables to protect his domestic animals from cold and storm, sheds and cellars to keep his manure from leaching and wasting, and convenient out-houses to stow his various vehicles and implements when not in use. A portion of these wants are everywhere conceded, but others are neglected with much loss to those who are careless of their importance.

We too often see farms upon which no provision has been made for the shelter of a portion of the stock through the winter. Does the farmer know that he can ill afford the loss which will result from this neglect? Does he consider that to keep an animal while exposed to the weather in good order, requires nearly double the food that will suffice when he is comfortably sheltered? and that the increased value of the manure will repay the trouble attending the extra care then required? It is the truest economy which looks closest to the comfort and thrift of the stock kept upon the farm.

Many a farmer suffers a heavy loss by the exposure of his manures to the weather. The chief value of a fertilizer lies in that part of it which water will dissolve. Let it lie and leach through the spring or winter, and a good share of its worth is gone. Shelter it in sheds or cellars, and a saving will soon be made of more than their cost, and this will prove the truest economy where manure is valued and good crops desired.

Sometimes the wagons, plows, and other farming utensils weather the year through, out of doors. What need be said of the economy of such a course? Nothing, for those who pursue it are too careless of such considerations to heed our remarks.—R.

Soot does not benefit the clover plant, while for wheat, timothy and other cereals, it is found most valuable.

THE FIELD OF THE SLOTHFUL.

I went by the field of the Slothful, and by the vineyard of the man void of understanding; And lo, it was all grown over with thorns, nettles had covered the face thereof, and the stone wall thereof was broken down.

Then I saw, and considered it well: I looked upon it, and received instruction.

Yet a little sleep, a little slumber, a little folding of the hands to sleep: So shall thy poverty come as one that travaileth; and thy want as an armed man.—Prov. xxiv, 30–34.

Such a text, thoughtfully pondered, needs no sermon to follow it. It is a brief and truthful picture of the life and fate of the slothful husbandman. It is full of instructive suggestions to those who will look upon and consider it. It is a pointed and earnest warning against ignorant Idleness, whom Poverty surely follows, and Want soon overtakes and conquers. Let us meditate on the words of the Wise Man, and look for the counterpart to the Field of the Slothful, if any such yet linger in the Agricultural world.

Solomon had a thorough contempt for slothful, slack-handed farming, and loses no opportunity of giving drowsy Ignorance a view of its own deformity, and its own certain fate. He tells the sluggard who "will not plow by reason of the cold," that though he descends to beggary, he shall "have nothing in harvest." He says, "he that sleepeth in harvest is a son that causeth shame," and the crib of him that "keepeth no oxen" shall be clean of corn; and that all slackness and carelessness temleth to poverty is again and again reiterated. The Wise Man was a firm believer in thorough culture, in promptness and diligence, in neatness and good order upon the farm. Let us see what our text teaches us:

1. It declares against *weeds*. No one but "a man void of understanding" would suffer his field or vineyard to become "all grown over with thorns," or would allow "nettles to cover the face thereof;' for it is evident to every thinking farmer that but one full crop can occupy the soil at one time, and if that is a crop of weeds, no corn or wheat can grow. If it is a partial crop of thorns or nettles, it will also be but a partial crop of grain. But the Field of the Slothful is not the place to look for clean culture. It requires industry—wide-awake, diligent-handed industry—to keep thorns and nettles from growing and spreading from furrow to furrow, and from field to field. Let there be "a little folding of the hands to sleep" and the vineyard is grown over and covered, so that years of labor shall scarce clear it again. Leave them undisturbed and "thy poverty shall come as one that traveleth."

2. *Poor fences* are a sign of slothful farming. "The stone wall thereof was broken down."—The "man void of understanding," and only he will suffer his walls and fences to go to decay. Poor crops are bad enough without having them destroyed by unruly animals, and probably the neglect to replace a stone or two, first tempted the half-starved cattle of the sleepy husbandman to trespass on his vineyard.—Broken walls and fallen fences, need no word of condemnation—they ever characterize the Field of the Slothful—and ever show that Want, "as an armed man," has firm sway and full possession.

And now, having seen and looked upon the Field of the Slothful, "let us consider it well and receive instruction." Do our fields and vineyards show marks of negligence—of ignorant and unthoughtful cultivation? Do weeds find a peaceful foot-hold, even in the fence-corners and along the walls, there to mature their seeds and fix their roots for a wider and deeper innovation? Are we "without understanding" of their constant tendency to impoverish the soil and injure the crops we would cultivate? Are we careless of the need that an unceasing warfare be waged against them? If we are, here is a warning for us. Our farms will soon "be all grown over with" Canada thistles, or "the face thereof covered with" red root, if we slumber to the fact that these or other vile weeds have a foot-hold upon them.

Is there any thing in our walls and fences to remind us of the Field of the Slothful? As neat, substantial walls, and well-built fences, are ever an adornment of a farm, so those of a fallen and tumble-down character deface whatever other beauty it may possess. Then see that ye have them not. Call not for "a little sleep, a little slumber," but bestir yourselves until no portion of your farm shall in any way remind you of "the vineyard of the man void of understanding." So shall Poverty never overtake you, or "Want, as an armed man," rule over you.—H.

STARCH IN POTATOES.—It has often been observed by farmers in the habit of feeding potatoes largely to their stock, that the potatoes were more nutritious in the fall than in the spring. This opinion is confirmed by analysis. De Candolle (Phys. Veget. Tome, page 161) found that the amount of starch in potatoes decreases in about the same ratio as it increases while they approach maturity. Thus, in August, 100 lbs. of potatoes gave 10 lbs. of starch. In September, 14 1-2 lbs.; in October, 14 3-4 lbs.; in November, 17 lbs. This proportion is constant during January and February, but diminishes in March so as to come down to 13 3-4 lbs. in April; and in May to 10 lbs.

Communications.

A CARROT CROP.

Eds. Rural:—In accordance with your request, I now send you an account of my carrot crop and the method and cost of cultivation. The ground, measuring twenty-seven rods, or about one-sixth of an acre, was plowed late in the fall of 1852, and four loads of coarse strawy manure carefully turned under to the depth of four or five inches only. About the middle of May following, five cart loads of well rotted manure were spread evenly over the surface.—Then plow twelve inches deep with a swivel plow, in such a manner as not to bury the manure, but to leave most of it about half the depth of the furrow, or near the surface. In a few days it was harrowed, and again plowed and harrowed, and one quarter of a pound of seed of Long Orange Carrot, drilled in rows eighteen inches apart. Soil, a light, yellow, gravelly loam—in wheat the preceding year, following corn. The hoeing was performed at different times, as business allowed. Harvested by running a swivel plow, with a strong horse, as close to the row as possible, then seizing as many tops as both hands will hold, and pulling them out toward the furrow. If laid in bunches of about half a bushel in each, with the tops all one way, they can be secured rapidly, by twisting off at the crown. The account with the crop is as follow:

Dr.	
To seven loads manure at 75 cents per load,	$5,25
Casting, spreading and plowing,	3,00
Seed and sowing with machine,	50
Three days hoeing,	3,00
Harvesting 2½ days,	2,50
Interest on land, $40 per acre,	40
Total	14,65
Cr.	
By 95 bushels Carrots, at 20 cents,	19,00
Half value of manure for succeeding crop,	2,62
Tops for fodder,	1,00
Amount	22,62
	14,65
Balance,	$7,97

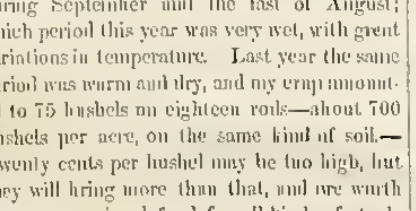
Equal to $18,00 per acre.

This is a small crop—only 570 bushels per acre. With us, it has been a poor season for all kinds of vegetables. Carrots grow mostly during September and the last of August; which period this year was very wet, with great variations in temperature. Last year the same period was warm and dry, and my crop amounted to 75 bushels on eighteen rods—about 700 bushels per acre, on the same kind of soil.—Twenty cents per bushel may be too high, but they will bring more than that, and are worth it as an occasional food for all kinds of stock.

What do you think of artificial manures for carrots? Would not superphosphate of lime be valuable? What is your opinion of the plan of manufacturing it, described in the *American Agriculturist?* B. Works.

East St. Johnsbury, Vt., 1853.

Remarks.—We have never used superphosphate as a manure for carrots, but judging from its effect on turnips, we think it may prove valuable, though we should expect a greater increase from *good* Peruvian guano. It is, however, difficult to get *good* guano, but it is still more difficult to get *good* superphosphate of lime, and still more difficult to make a good article yourself—unless you can get your bones *finely ground*. If you can get good bone *dust*, you can readily make a better superphosphate than you can purchase of the manufacturers. We have had no experience in the exact method described by the chemical editor of the *Agriculturist*. It is an original plan of his own; and if he says it answers the object, why, of course, we are bound to believe him. We must say, however, that did he not speak from actual trial, we should not have had the *least faith* in the method. As it is, we cannot agree with the recommendation to mix unleached ashes with superphosphate.



SHEEP RACK.

The above engraving represents a sheep rack that I use, and which is made as follows: Take, for your posts, 3 by 3 scantling, cut 3 feet long. Four inches from the top, and thirteen inches from the bottom, frame in rails 2 by three, bored to receive rounds two inches in diameter. The rounds should have a shoulder, and tenon to follow one and a quarter inch auger, and should go in loose so as to turn readily. Space off and bore your rails by setting a round six inches from the post; skip two inches and set another round, making four rounds occupy six inches, and then another space of six inches, and so on to any length desired. Fit a board eleven inches wide under the bottom rail, and even with the front edge of the rail; then cut three blocks like L L, 2½ feet long, and nail across the ends and middle. Nail in the bottom and the rack is finished.—This arrangement gives one foot space to each sheep. The rounds turning at the slightest touch, leaves no possible chance for sheep to wear or rub the wool off while feeding. This rack answers all the purposes for feeding hay, grain or roots. George Brown.

Phelps, Ontario Co., N. Y. Jan., 1854.

INDIAN CORN.

Eds. Rural:—Having raised something of a crop of corn the past season, and kept an account of all expense in the culture and gathering it, (as I do on all my farm products) I have thought perhaps a statement through the Rural might be of interest to some of your readers. Although the result shows an more than an average crop of the best farms of the neighborhood, and falls far short of what is sometimes grown; still, I think it will show a good return for the labor bestowed in cultivation. It will also show its value as compared with other crops. It requires no stimulants for its growth except those found in abundance on all well managed farms, where the corn is principally fed out on the farm, and a well arranged method for saving manure is adopted. The stalk, if well saved, will be found the best of fodder for stock, particularly for milch cows.—Another consideration of importance as connected with this crop, is its importance in a rotation of crops. No other so well prepares the soil for a succeeding crop of wheat. And if the land was highly manured, and in good condition, it may be sown with barley or peas, or planted with beans, to be followed with wheat in the fall. Indeed, I have always considered it a loss to fallow ground after corn, when it is in good condition, and free from thistles, &c. I prefer to plant corn on a good grass or clover sod, but on farms varying in soil, no definite plan of rotation can be adopted. We must be governed by circumstances, adaptation of the soil to the various crops, &c. But to the point.

The ground planted was eighteen acres—wheat stubble. Soil, sandy loam—manured with 20 double loads of manure from stables, pig-pens, &c.; plowed from ten to twelve inches deep; rolled and dragged; marked out both ways, 3½ feet apart; planted with large eight-rowed yellow corn, 17th, 23d and 24th of May; cultivated both ways as soon as large enough, and about twelve days spent with the hoe.—Cultivated both ways, the last of June and first July, and about the same time spent in hoeing as at first; cut up and stooked first of Sept.

Cost, Dr.	
To man and team, to plow 10 days, at $2	$20,00
Rolling and dragging five days, at $2	10,00
Man and horse to mark out two days $1,50	3,00
Planting 11½ days $1	11,50
Five bushels seed corn 75 cents	3,75
Man and horse, cultivating 10 days, $1,50	15,00
Hoeing, 23½ days, $1	23,50
Cutting up, 22½ days, $1	22,25
Husking, 64½ days, $1	64,50
Whole expense	$175,50
Cr.	
By 1,852 bushels ears corn at 37½ cents	$694,50
Thirty-six loads of stalks, worth $4	144,00
Twenty-five loads pumpkins, on same ground, 50 cts	12,50
Whole value	$851,00
Deduct cost	175,50
Profits of crop	$675,50
Profits of acre	37,52

Cost to raise bushel ears 9½ cents.

In this estimate, I value the corn in the ear at one-half the value of shelled corn. By some this may be thought high, but my corn will pay for shelling, and return one bushel of shelled to two of ears. C. K. W.

Le Roy, N. Y., Dec., 1853.

SALE FAIRS.

Through the influence of annual fairs, and the wider dissemination of agricultural journals, public interest in rural improvement in Western New York has received a new impulse. Though much has been done, there is still room for improvement. After having reared good animals, it is important to know how we may effect the most advantageous sale of them. Many farmers avail themselves of the opportunity which is afforded for the sale of stock at the annual county and State Fairs. The object of this article is to call the attention of those who are interested, to the advantages which would be derived from frequent sale fairs at the principal villages, for the transfer of domestic animals. Buyers and sellers would be mutually benefited.

Such fairs should occur on successive days, that each individual might attend as many as he should desire, at the different places. The advantage to the seller would arise from the certainty of sale, and the uniform rate of prices, according to quality. The buyer would be benefited, by being able to gather, with greater facility, the desired number of animals. Such an arrangement would render the sale of animals as systematic as that of grain and other products. A. Blake.

A Good Crop.—I have a lot containing nine and three fourth acres, which I manured, slightly with course manure, and broke up deep, the last of June. After harvest, dragged it once, and ganged it twice with a gang plow. I sowed on the field about twelve bushels of wheat and ganged it in.—This season I harvested *four hundred and eight bushels*, (being nearly forty-two bushels per acre) which I have sold at twelve shillings per bushel, amounting to six hundred and twelve dollars. Those who can beat this without extra manuring must have good land.

George W. Jackman.

Livonia, N. Y., Jan., 1854.

PARSNIPS AND MILLET.

Parsnips.—In answer to the inquiry of John Williams, respecting sowing parsnips in the fall, I would say:—The Parsnip we all know is a biennial; the plant withstands the winter, and in some instances becomes a pest where it grows spontaneously, and is then called the *Wild Parsnip*—we often read of persons being poisoned with the wild parsnip. I took my seed from *Wild Parsnips*, or that which was growing in the field without cultivation.—Not being able to detect any difference either in taste or smell between the wild and tame, I concluded the root which had been eaten for parsnip and operated as a poison must have been something else. (Will some Medical man set us right on this subject?) I had sown the seed in spring with poor success, and some 5 or 6 years ago, a fall and winter very much like this, I planted parsnip seed in December (10) and onions 5th January—this was the first and last good crop of the former I have ever raised. In this instance the yield was enormous, and the roots 5 inches diameter and 2 feet in length; one, I recollect, was 3 feet. This great growth I attributed to the seed lying in the ground. I would recommend by all means to plant parsnips in the fall for large roots and large crops, or if planted in spring, soak or steep the seed and plant when the ground is wet or quite moist.

Millet should be sown about the time of planting corn, and if grown for seed, 2 qts. is sufficient to seed an acre, (as it yields more than a thousand fold;) for hay or to cut green for soiling, I should think 10 or 12 quarts a plenty. There are 2 kinds of Millet; one a round, compact head—the other open and branching.

I. W. Briggs.

West Macedon, N. Y., Dec., 1853.

RULE FOR DEALERS IN HAY, COAL, &C.

Perhaps in no one thing is the "arithmetic" of farmers put to a severer test than in ascertaining the value—perhaps with cold fingers—of a given number of pounds of hay at a given price. To these I would recommend the following rule of Adams, as easy, practicable and infallible:

Rule.—Multiply the number of pounds of hay, or coal, by one half the price per ton, pointing off three figures from the right hand. The remaining figures will be the price of the hay or coal (or any other articles by the ton) in cents and mills, which can be easily reduced to dollars.

Example.—What will be the cost of 658 pounds of hay, at $7,50 per ton.

Solution.—$7,50 divided by two, equals $3,75—by which multiply the number of pounds—thus:

658
$3,75

3290
4606
1974

$2,46(750

The principle of this operation is the same as in interest—dividing the price by two, gives us the price of half a ton or 1000 lbs.; and pointing off the three figures to the right is dividing by 1000—the same as in interest. The result above we have found to be $2,46, which is correct. And now, brother farmer, get your pencil and see if you can find the above rule in fault. If you do, report. a.

THE WINTER RADISH FOR STOCK.

The winter radish is a more sure crop than turnips; may be sown two weeks later if necessary, and will yield as many tons to the acre. I have had roots that weighed 14 pounds each. Cattle will eat them as well as any other roots; at least they never refuse them. Their relative value compared with other roots I have not tested; I read an article, however, which set me to growing them for food.

A farmer, I think in one of the New England States, fed them to his cows that were in milk, and the milk was improved both in quantity and quality. It appeared he was in the habit of raising a quantity of roots of different kinds for feeding; on this occasion his favorite roots had run out, and having a good heap of winter radishes, he commenced feeding his cows on them, but kept dark, almost fearing the result when it should be found out in the house. After about a week his wife said to him, "What have you been feeding the cows of late?" He replied fearfully, "Why! what is the matter?" "Oh, don't be alarmed; I suppose this is one of your experiments, as the milk has increased very perceptibly for a few days past, I concluded you had changed their feed." Since that time he has raised them in large quantities for his cows, and thinks them preferable to beets or carrots. If any of your readers have had experience in this direction, an account of it will be interesting.

I. W. Briggs.

West Macedon, Dec., 1853.

Thaer examined chemically the air collected from the surface of dung heap, and found little or no escape either of ammonia, or carbon.

Agricultural Miscellany.

NEW YORK AGRICULTURAL SOCIETY.

The Annual Winter Meeting of the New York State Ag. Society, will take place in Albany, on the 7th and 8th of February ensuing. There will be the usual exhibition of fat animals, dressed meat, poultry, &c., and also of grains, seeds, butter, cheese, fruit, &c. We will give the premium list next week.

The annual election of officers for the ensuing year will take place at this meeting, and it is hoped that there will be a full delegation from all the County Societies; especially, let Western New York be (what it has never yet been) fully represented. The interest, of the Society demands attention in this particular.—Another very important consideration, to be brought before this meeting is the permanent location of the State Fair at one or two places. Let all who feel an interest in the welfare of the New York State Agricultural Society, be at Albany on the seventh of next February.

Sulphate of Lime is found by Chevalier Clavasses to be admirably adapted for arresting decomposition in vegetable substances. He made this discovery accidentally. He then procured some potatoes, all of which were diseased. These he divided into three portions; one lot he placed in a weak solution of sulphuric acid, and then in lime water. The second lot was placed in the lime water first, and afterwards in the acid. The third lot was left untouched. On examining them ten days afterwards, he found that the first lot was as sound as when taken in hand. The second lot was slightly diseased, while those untouched were rapidly decaying. The flavor of the potato was not injured by the sulphate. How far this process may prove of practical value, future experiments must determine. The fact, *if it is a fact*, however, is a matter of great interest. It has long been known that acids and acid salts would arrest decomposition, but we believe this property has not previously been claimed for sulphate of lime.

SMITHFIELD CATTLE SHOW.

The show this year we are informed was "less splendid" than usual, though for utility (symmetry and firmness of flesh being the tests of excellence rather than over fatness) it was superior to all others. "The Herefords were generally considered by good judges as extraordinary specimens." The most attractive animal in the show was a short-horn ox, 5 years and 8 months old, "fed on grass, hay, turnips, beans and oatmeal, and linseed cake." He is 18 hands high, 6½ feet from tip to shoulder, 3 feet across the hips, 10 feet in girth behind the shoulder, 12 feet in length from nose to rump, and 4 feet 5 in. from chine to brisket, and weighs about 1,200 lbs. Prince Albert outstrips all his competitors in the pig classes, and the Duke of Richmond and Mr. Duke, of Eryham, near Oxford, were very successful in the sheep department. We will give further particulars when our Agricultural exchanges come to hand.

Results of Underdraining.—Will underdraining pay? has been most conclusively answered in the affirmative, by several independent practical experimenters. John Johnston, near Geneva, has, perhaps, underdrained more than any other man in America. But this is not all he does to fertilize his farm.—He has for many years been in the habit of fattening large numbers of cattle on oil-cake, corn, &c., and thus making a large quantity of most valuable manure. In a communication to the *Country Gentleman*, he says that he raised $1,830 worth of wheat from 45 acres last year. "So, upon the whole, I had a paying crop." This was on drained land. On a few spots that he thought would not pay to drain, the midge *destroyed all* the wheat; and on a ridge which, though a little wet, he tho't would bring a good crop without draining, *at least one-half was destroyed by the midge.*

Cooking roots for Hogs.—At the Hillsborough Agricultural Society, it was stated that Mr. How, Methuen, Mass., took an equal number of pigs of the same litter, and kept one lot on meal *uncooked*, or merely mixed with water. To the other lot he gave an equal weight of meal *scalded*, or *cooked*. Those on the *uncooked* meal *increased much more* than those on the *cooked*. The experiment was then reversed, and again resulted in favor of *raw* meal.

Foreign Butter in England.—Of the importations of butter into England, for the past three years, Holland has supplied more than two-thirds, or about *ten thousand tons* annually. The Hanseatic towns stand next on the list, and supply about two thousand tons annually; about one thousand tons; Belgium and other countries. In 1850, the United States sent about 360 tons of butter to England; in 1851, about 140 tons; in 1852, 14 tons.

Monroe Co. Ag. Society.—The annual meeting of this Society, for the election of officers, &c., will be held at the Court House, in Rochester, on Wednesday, the 10th inst.

Orchard and Garden.

THE GARDEN AND THE ORCHARD.

"God Almighty first planted a garden; and, indeed, it is the purest of human pleasures; it is the greatest refreshment to the spirits of man, without which buildings and palaces are but gross handiworks."—*Lord Bacon.*

A HOME never seems complete without a Garden,—without the protection and embellishment of trees and flowers. The finest buildings and the most costly palaces are but "gross handiworks," until taste has given them this appropriate adornment. This "purest of human pleasures"—this "greatest refreshment to the spirits of a man," among the enlightened and refined is required to fill out the circle of blessings with which they would surround their lives.

It is well that this is so. The influences with which it brings the heart in contact, are as needed as they are pure and genial. A writer* well says,—"A blessed moral influence emanates from whatever adds to the attractions of home. A farmer who has early taught his children to interest themselves in the cultivation of fruits and flowers, has done much to shield them against the allurements of vice; for the difference between a dwelling situated amidst bleakness and desolation, and one embowered among trees and flowers, and surrounded by all the charms of beautiful scenery, is sufficient to make an indelible impression upon the character of the young;—and long afterward, in the stormy murture of life, or in sickness and sorrow,—these hallowed images shall come back to sustain, to solace, and to cheer the riper years of manhood, and the declining strength of old age." And wherever one may dwell, whatever may be his employment, if he has ever known the pleasure of planting and tending until it came to perfection, a fruit or flower of his own, it will be a green spot in the memory of the past to which he will often recur, and an experiment which he will long to repeat, as long as his heart is not utterly depraved by ambition, or avarice, or still more degrading passions and pursuits.

It is cheering to know that there is a growing taste for horticultural pursuits, an increased demand for information, and an enlarged desire to study into and practice this pleasant and healthful art. We are fair to believe that the RURAL NEW-YORKER, going, as it does, into thousands of Rural Homes, has been instrumental in no small degree in forwarding this noble work. Every week, for the four years past, it has had its good word to say of the Orchard and Garden, commending them to its readers, instructing and advising as to their management, and encouraging by the story of their results. It is not too much to claim for it, when we say, that it has thus made thousands happier and better in the increased attraction which its influence has given to their homes. And thus genial shall its influence ever be. We shall seek to make this department worthy of the success which has attended it—an able ally in the cause of Horticultural Progress—a faithful epitome of the new, the seasonable, and the useful—hastening, as far as lies in our power, the "Good time coming," when "the desert place shall be made glad, and the wilderness blossom as the rose."—R.

*——Geo. Jaques, Esq., of Worcester, Mass.

STRAWBERRIES ARE RIPE.

I HAVE just been examining some very large, fine, ripe Hoveys, and Early Scarlet Strawberries grown in the open air by C. F. PEABODY, Esq., of Columbus, Georgia; and transplanted vines and fruit in full bearing, green and ripe, into pots from his garden on the 20th Dec. The pot was placed in a basket and forwarded by HARNDEN'S Express to Miss THORNBURN, New York, where they have just arrived this day, the 24th December.

In a note Mr. PEABODY says:—"These plants have borne for 10 months in succession, in the open ground, for he has never cultivated a strawberry in a pot, or in the green-house."

The plants look very healthy, but the leaves are very small—not usually larger than a shilling piece, on the genuine Hoveys—for there can be no mistake — they are the genuine Hoveys.

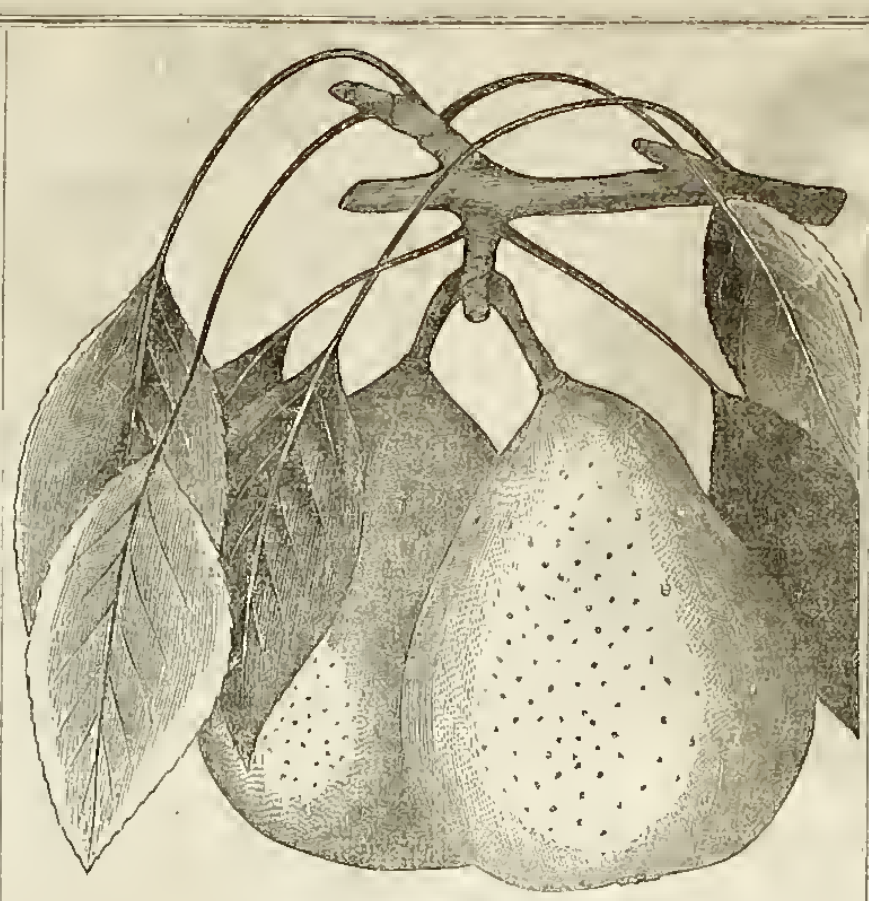
The plants exhibit not the least disposition to put out runners, on the contrary, they are now pushing up new fruit stalks, although some of the single small plants have from six to ten fine berries ripe and green on them.

Mr. P. has often given his mode of culture to the world. It is simply new, fresh soil reduced by hand, intermixed and trenched deep and well drained,—moderate quantity of vegetable manures alone, water freely when needed, but not more water than we have often applied under other culture in Western New York. The plants are cultivated 18 inches, or 2 feet apart, and most thoroughly mulched.

He thinks after the plants are thoroughly acclimated and trained, they will bear as well here during all June, July, August, and part of September, as in the south. I hope some one will give it a thorough trial. The fruit, instead of the vines, must be fed.

R. G. PARDEE.

New York, Dec. 24, 1853.



THE ST. GHISLAIN PEAR.

THE ST. GHISLAIN is a most excellent Belgian pear, introduced into this country by S. G. PERKINS, of Boston. The tree is remarkable for its uprightness, and the great beauty and vigor of its growth. Shoots light brown. Fruit of medium size; pyriform, neck narrow, acute, tapering to the stalk, to which it joins by fleshy rings. Skin, a pale yellow, with sometimes a faint blush, or a few gray specks. Stalk, an inch and a half long, curved. Calyx rather small, open, set in a very shallow basin. Core small. Flesh, white, buttery and juicy with a fine sprightly flavor; first rate when in perfection, but occasionally varying to second rate. Ripens in September, and is better when gathered early and ripened in the house. It is hardy and productive, and flourishes well on its own stock or as a dwarf on the quince.

Any of our readers who have had experience with this pear, would do us a favor by informing us of its merits in their respective districts. Now that the RURAL has attained not only a very large, but extended circulation, we hope to collect and disseminate much information respecting the adaptation of the various varieties of fruit to different localities,—and, as much as possible, to ascertain the *cause* of the observed fact, that some varieties are valuable in one district and worthless in another.—Please, therefore, furnish us with your experience on this and other practical and important horticultural subjects.

With this number, we commence giving a series of excellent engravings of some of the most valuable and popular varieties of fruits, &c.

CRANBERRIES.—THEIR CULTIVATION.

IN the RURAL of Dec. 10th is found an inquiry as to the manner of propagating cranberries, the best kind for cultivation, and where they can be most conveniently procured. It should be a matter of rejoicing that the culture of this delicious fruit is beginning to attract deserved attention. In the vicinity of Boston they are grown to a great extent, and it is believed with good profit to the cultivators.—They are grown successfully upon light, dry soils, requiring only to be kept free from weeds and grass, as a good farmer would free his field of beans. They may be grown by taking roots from the marshes where they grow wild, and putting them out in rows at least three feet apart each way. They are said to flourish well and bear fruit without watering artificially, or the application of manure. Unquestionably their growth and fruiting would be aided by the judicious use of fertilizers. They thrive and produce good fruit in very poor land and have done equally well in yellow loam.

Cranberries may also be grown from the seed, either by sowing the berries broad cast on prepared soil, or by planting them in hills as far apart as it would be desirable to have them when growing. When planted, unless much decayed, the fruit should be broken between the thumb and finger, and the seeds covered with moist earth. It takes much longer to obtain bearing vines from seed than from roots. Cranberries may also be grown upon low wet land, and their productiveness will be increased by having the land under water from October to last of May, or until it is warm enough to start vegetation. Water in the manner here named, cannot be very essential, as the growth of a good crop from the same kind of vines, planted on dry soil, fully proves. These may be many varieties of the cranberry, though medium is seldom, if ever, made of more than two. There are the low, or creeping, and the bush cranberry. The first are most favorably known, as from them are obtained all the fruit with which the market is supplied. The high cranberry is a native of Western New York. Though seldom found except in isolated trees or bushes. They have probably never been cultivated to any extent. It would be desirable if a few trees could be obtained for the purpose of ascertaining their value for cultivation.

It is to be presumed that vines may be obtained in many swampy places in Western New York, as they certainly can in Michigan and other western States. They may be cut up with a hay hoe, and easily transported where desired, and will with culture soon increase to a good plantation.

Some of the western readers of the RURAL, will be able to say how much the plants will be worth ready for transportation. The usual time of planting is in the fall, though it is possible the early spring might answer as good a purpose. This information has been obtained by reading and not by experience, upon which point it remains for some more competent person to write. H. C. W.

Erie Co., 1853.

WESTERN APPLES.

THE *Cultivator* has received 120 varieties of fruit made up of selections from those exhibited at the North Western Fruit Grower's Convention, held at Chicago, and says:

In looking over this collection, we were particularly struck with the great size and beauty of some of the specimens, as compared with those grown in the north-eastern states. Specimens of the Jonathan apple from Illinois were as large as good Spitzenburghs or Baldwin, and possessed a brilliancy and smoothness very rarely equaled by any fruit. Such apples would unquestionably sell in New-York or Philadelphia for five or six dollars a barrel, at the least. Some of the Fallwater were as large as well grown Fall Pippins; and Rambos were at least double the size of ours. Other sorts, as for instance the Esopus Spitzenburgh, Pomme Grise, Pennock, Maiden's Blush, and Yellow Bellflower, possessed no superiority in size.

SEASONABLE HINTS.

CATERPILLERS' EGGS.—"An ounce of prevention is better than a pound of cure," and if you would apply it in the case of these pests of the fruit tree, look carefully, and you will find the eggs of the caterpillar in good sized patches upon the smaller limbs. Scrape them off, and at one blow you destroy hundreds of future depredators. On small trees this can easily be done.

CUTTING SCIONS.—The present month is a proper time for cutting scions for grafting, as also are December and February. Shoots of last year's growth from healthy and vigorous trees furnish the only good scions, and care should be taken that they are of firm, well ripened wood, as the value of the future tree depends on the perfection of the scion as well as that of the stock. They can be kept until needed, in a dry, cool cellar, with the lower ends buried in the earth; or better, in pits in dry, sandy soil, situated on the north side of a wall or tight fence.

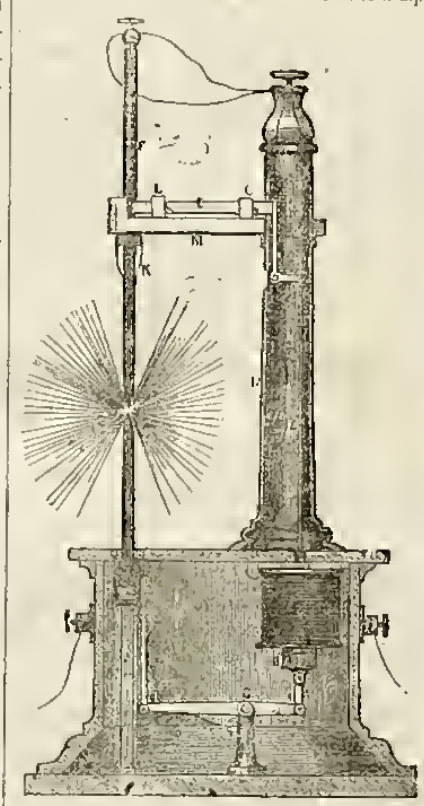
EXAMINE YOUR APPLES.—Apples stored in cellars or fruit rooms, need frequent examination in winter, and the removal of all decaying ones, is necessary to the proper preservation of those in sound condition. Many thousand bushels are lost every year by want of attention to this matter. The fungus or mildew of decay is always contagious, and affects not only those in actual contact but taints the air of the room.—R.

At the last exhibition of the Pa. Hort. Society, there was exhibited a Duchess de Angouleme pear, five inches long and four and a quarter broad, weighing 25¾ ounces.

Mechanic Arts, &c.

ELECTRIC LAMPS.

WE give below, an engraving of an electric lamp, which we had the pleasure of seeing several times while in London. We have no faith in electricity as a motive power, either for decomposing water, propelling machinery, or furnishing light; for the obvious reason, that no *force* is eliminated without a corresponding destruction of matter. And it is well known that six pounds of carbon (coal,) are equal to thirty-two pounds of zinc for producing heat, or other force, while in the one case we burn with air, which costs nothing, and in the other, with sulphuric acid, which is, and ever will be, expensive. And in all probability coal will ever be much cheaper than zinc. While such are our views, we cannot but say that this electric light astonished every one, by its brilliancy and power; it was exhibited one dark night on the Duke of York's monument, one of the highest places in London, from whence, it is said, it could be *distinctly perceived* at a distance of nine miles. The light was thrown on to a building on which we were standing, and tho' it was a quarter of a mile distant, we could see clearly to read. Such was the effect, that it was gravely proposed to have an electric light and a vast reflector suspended over the city, and which it was confidently expected would furnish an artificial sun, to turn night into day and render street lamps unnecessary. The following description will enable the reader to from a correct idea of the nature of the lamp:



The electro magnet is at A; and its armature, B, which is beneath, is shown in contact so that the brass rod C, passing through the centre of the magnet, is in its elevated position. The rod thus—by means of the bell-crank lever, D, bearing against the loose sliding bar, E—holds the main vertical sliding rod, F, in a fixed position. The armature, B, is screwed on to the lower end of its link-rod, C, so as to admit of easy adjustment; and it is connected by a link on its lower side, with the shorter arm of the double, G, the opposite longer arm of which has a spring catch, H, jointed to it, and arranged to work in the finely-toothed sliding ratchet-piece, J.

This ratchet terminates, as also does the upper sliding rod, F, in a steel or platinum spring clip, K. The loose overhead bar, E, works in small guide eyes, L, on the bracket, M, and this bracket slides down with stiff friction upon the main pillar, N. When, from the consumption of the electrodes, the distance between their points is increased so much as to stop the current, the spring, O, draws down the armature, B, and lifts the ratchet at the same time that the upper sliding rod, F, is released. The electrodes thus simultaneously approach each other, and the requisite distance being attained, the consequent instantaneous renewal of the current fixes them both by the upward jerk of the armature.

A LIFE RAFT.

MR. J. W. HARRISON, of Harnden's Express, has constructed a life raft, which consists of a series of floats connected by a lattice frame-work. A screw is attached to one side of this frame-work, and by turning this screw the frame and floats are extended—something in the manner of an extension table—till they form a raft of sufficient length to hold some hundreds of persons at one time; having also the buoyant power to sustain the weight of that number of persons. The whole raft, when unextended, is in a compact form, not occupying more than one-fourth the space of an ordinary life-boat on the deck of a vessel. In the event of danger, this contrivance may be thrown overboard, and one person, by getting upon it and turning the screw, may convert it in a few seconds, into a large raft, of more capacity than a dozen life-boats, and not so liable to capsize or founder. It may also be converted into a bridge for the safe landing of passengers on shore from steamboats, in cases of accidents from fire. The invention appears to be an ingenious application of a known principle to a new, useful and humane purpose.—*Philadelphia Ledger.*

METALLIC CASK-MAKING.

THE new and ingenious principle of making casks from metal, patented by Mr. Clare, of this town, is now in operation at his works in Nash Grove. The casks are make by machinery, expressly adapted to this new branch of manufacture by skillful engineers, whose services were secured for the purpose. The staves, specimens of which have already been exhibited in public, are of peculiar construction, and the great difficulty to be overcome was to produce each stave complete by one operation. This is effected by means of a screw press, to which a large mechanical power is applied. The iron is cut into the required lengths, and after being subjected to a powerful heat in a furnace is transferred to the press where it receives its exact form and mould—The machine throws out the stave at the rate of one per minute. It is necessary to cut the iron in opposition to the grain, in order that when the hinge is formed it may be made without cracking. The staves, on being completed, are grouped, and formed into casks when required for use. Each stave is calculated to bear a pressure of 100 pounds on the square inch. The heads of the casks are formed by a machine adapted to cut circles of a very large diameter with the utmost precision. By a very simple plan the heads of the metallic casks can be removed without disturbing the hoops which bind them together—a matter of the utmost importance where it is necessary to transfer liquids from one cask to another. It is tho't that the metallic casks will ere long come into general use, and almost, if not entirely supersede the common wooden casks now employed for all purposes.—*English Paper.*

WHAT THE MASON HAS DONE.—Centuries before the dawn of civilization in the empires of the West, he constructed those monuments of rude, but magnificent grandeur which moulder now on the banks of the Ganges and the Nile. It was he who reared the stately temples of Minerva and Jupiter, which are so inseparably associated with all that is noble in Grecian philosophy, all that is beautiful in Grecian art. And in the dark ages which followed the downfall of western civilization, when the temples of Rome were ruined, the palaces of the Cæsars plundered, the Pantheon despoiled, the amphitheatres laid waste, it was he who reared up the noble piles of Christian architecture which ushered in a new era in the history of the world, and another and a more beneficent period of human existence.—*The Builder.*

HORSE RAKE.—Anson B. Dingman, of Mt. Upton, N. Y., has invented an improved horse rake, which consists in attaching the wheels to the shafts, and hinging the head at its attachment to the thills, so that nothing but the weight of the head is to be lifted, and this is done to much better advantage than where the fulcrum is at the front end of the thills—an excellent improvement. The inventor has applied for a patent.

Domestic Economy.

DOMESTIC RECIPES.

CHEAP LOAF CAKE.—Take 2 cups of sugar, 2 cups of butter, 3 eggs, and two grated nutmegs, or two teaspoonfuls of oil of lemon.—Rub the sugar and butter to a cream and beat in the eggs; take out half of this mixture, and to the remainder add three cups of milk quite warm and a little yeast, and stir in sifted flour enough to make it quite stiff. Allow this to stand several hours till perfectly light, then add the reserved portion of butter, sugar, and eggs; mix well together, and bake. By adding two pounds of raisins the cake will be very rich.—If coffee cups are used, the above will make four loaves.

INDIAN MEAL DOUGH NUTS.—A tea cup and a half of boiling milk, poured on two tea cups of sifted Indian meal. When it is cold, add two tea cups of wheat flour, one tea cup of butter, one and a half of sugar, one of yeast, and two eggs, with a tablespoonful of cinnamon or grated nutmeg. If not sufficiently stiff, add equal portions of wheat and Indian meal. Let it rise till very light. Roll it about half an inch thick, and cut it into small diamond shaped cakes, and boil them in lard.—*Southern Agriculturist.*

BUCKEYE BREAD.—Take a pint of new milk, warm from the cow; add a teaspoonful of salt, and stir in fine Indian meal until it becomes a thick batter; add a gill of fresh yeast, and put it in a warm place to rise. When it is very light, stir into the batter three beaten eggs adding wheat flour until it has become of the consistence of dough; knead it thoroughly, and set it by the fire until it begins to rise; then make it up into small loaves or cakes, cover them with a thick napkin, and let them stand until they rise again, then bake in a quick oven.

MAKE YOUR OWN CANDLES.—Take 2 lbs. alum for every 10 lbs. of tallow, dissolve it in water before the tallow is put in, and then melt the tallow in the alum water, with frequent stirring. This will clarify and harden the tallow so as to make a most beautiful article, either for summer or winter use, almost as good as sperm.

HOE CAKE.—Sift a quart of Indian meal, and a teaspoonful of salt, and a piece of butter the size of an egg. Wet it with milk, not very stiff; after you have stirred all well together, spread your dough about half an inch thick, upon a smooth board prepared for the purpose. Rub it over with sweet cream, and set it up before a good fire, supporting the board with a flat iron. When it is well browned, turn it over, loosening it with a knife. After moistening it with cream, brown the other side, as before. When it is done, cut into square cakes, and send them to the table hot; split and butter them at table.

Educational.

READING DIFFERS FROM TALKING.

PROSE, at least in all argumentative and consecutive works, differs, and ought to differ, from the language of conversation; even as *reading ought to differ from talking*. —COLERIDGE.

THE remark above—quoted from a chapter in "Biographia Literaria," on the essential differences between prose and poetry—puts in words what every child instinctively feels, that "reading ought to differ from talking." The contrary is and has been held by many teachers, but the few examples we have known in which they have succeeded in making it the practice of a pupil, have shown us how distasteful and unnatural it is. Such reading has always, "a semblance of petulant ease and self-sufficiency," very grating to the ear of the listener. From a note to the sentence above quoted, we extract the following paragraph:

It is no less an error in teachers than a torment to the poor children, to enforce the necessity of reading as they would talk. In order to cure them of *singing* as it is called, that is, of too great a difference, the child is made to repeat the words with his eyes from off the book; and then, indeed, his tones resemble talking, as far as his fears, tears and trembling will permit. But as soon as the eye is again directed to the printed page, the spell begins anew; for an instinctive sense tells the child's feelings, that to utter its own momentary thoughts, and to recite the written thoughts of another, as if another, and far wiser than himself, are two widely different things; and as the two acts are accompanied with widely different feelings, so must they justify different modes of enunciation.—H.

[For the Rural New Yorker.]

WHO WOULD NOT BE A TEACHER?

MOURNFULLY sighs the wind around my school house, to-day, for there are no scholars here to enliven the weary hours as they drag themselves slowly along over the dial plate.—The clock stands there in its niche in the wall, with stern, upbraiding tick, telling me that "time halts not though my scholars are not gathered around me." Day after day has it ticked off the hours and minutes, and they have met me here each morning with the same bright, sunny smile: each evening with the same shout of joy, I have seen them separate, each turning to his own home. And then I have offered up thanks and praises to God, that he has placed me here as one of this happy company. Oh! the teacher's is not a selfish enjoyment; for, ever and anon after some hard explanation, how does his heart throb, to see by the brimming eye that a new idea has been caught by the young mind of his charge.—When days and weeks of toil have been spent helping forward some one to whom nature has not been so profuse in her gifts, does not his heart almost choke his utterance to find that one standing side by side with those who had previously been his superiors? Who would not be a teacher, as he looks forward to the time when his influence shall be the ruling motive in those under his charge? He will then occupy the position of father, counsellor and guide, and his influence thus descending will aid in forming the character of succeeding generations. E. C. COE.

FAMILIAR PHRASES.

EXPRESSIONS sometimes occur so apt and felicitous in their application, that they are seized upon and adopted as common property. It is frequently, however, a more difficult matter to name the author than to quote his words, and among these may be reckoned the familiar expression, "*First in War, First in Peace, and First in the Hearts of his Countrymen.*"

The *National Intelligencer* states that Chief Justice MARSHALL was the author of the above celebrated expression in reference to WASHINGTON. It was embodied in a series of resolutions offered in Congress in the year 1799 by Judge MARSHALL, then a member of the House of Representatives, on the occasion of the death of General WASHINGTON. The following are the resolutions:

THURSDAY, Dec. 19, 1799.

The House of Representatives of the United States, have received intelligence of the death of their highly valued fellow-citizen, George Washington, General of the Armies of the United States, and sharing the universal grief this distressing event must produce *unanimously resolve*—

1. That this House will wait on the President of the United States, in condolence of this national calamity.

2. That the Speaker's chair be shrouded with black, and that the members and officers of the House wear mourning during the session.

3. That a joint committee of both Houses be appointed to report measures suitable to the occasion, and expressive of the profound sorrow with which Congress is penetrated in the loss of a citizen *first in war, first in peace and first in the hearts of his countrymen.*

MEN of genius are often dull and inert in society; as the blazing meteor, when it descends to earth, is only a stone.

WASHINGTON IRVING.

PERHAPS we cannot more appropriately open our Portrait Gallery for 1854, than by presenting the above capital likeness of the distinguished American writer, WASHINGTON IRVING. A biography of IRVING scarcely need be given, since he has written an auto-biography with his own pen; not in dry details of facts and figures—not in a chapter on the common incidents and accidents of life—not in the self-puffing laudations sometimes published by the successful author while living, or by mistaken friends and admirers after he is dead—not in any work designed especially to set forth his own merits, and, presenting himself to the crowd, to say: "Lo! here am I, bow down and worship." The numerous works from the pen of WASHINGTON IRVING are his biography, and in them we catch a glimpse of the character of the man. The exquisite humor displayed in that inimitable work, *Knickerbocker's New York*, opens to our view a power of appreciation of all that is genial and sunny in human nature. "The Sketch Book," "Bracebridge Hall," and other kindred works, show us a heart alive to all that is generous, touching, and pathetic; "Astoria," "A Tour on the Prairie," "Tales of the Alhambra," and similar productions, display a power for romance blended with the historical, not inferior, although differing in kind, from that of the great romancer, Sir WALTER SCOTT himself.

In the field of history, IRVING takes rank with PRESCOTT, and SPARKS and BANCROFT, as his life of COLUMBUS, and his works on Spain fully prove; and it is such authors as the above who have solved the question asked a few years since in England, "Who reads an American book?" by answering "Every Englishman who can read at all."

IRVING is one of the oldest as well as one of the most successful of our American authors. Among the numerous and brilliant writers that have risen within a few years in our country to challenge the popular applause, and whose works have contributed not a little in pushing to the wall many old and standard publications, he stands unmoved, the foremost of the classic writers of his age and country; and his works are, probably as much sought after, and as much admired now as they have ever been.—They will never cease to be popular, because they are true to nature, and do not owe their celebrity to factitious or accidental circumstances. Their language will never become *dead*, for it is the language of the heart. The style is of that chaste, easy, and flowing character, which a man can read and understand. Purity of sentiment, and elegance of diction, are IRVING'S characteristics; and the endorsement of his name is a guaranty that all may read a work and be benefited thereby.

What BRYANT is to American Poetry, IRVING is to American prose; and the works of both should be accessible to the youth of our country as preeminently reading for the home circle. The contributions of the latter, to the pages of the *Knickerbocker Magazine* under the cognomen of *Geoffry Crayon*, were among the most efficient means of giving that periodical its extensive and justly merited popularity. IRVING like PRESCOTT has won some of his brightest laurels from fields of Spanish and Spanish-American history. Both are intimately acquainted with the subject, both have spent many years among the rich mines of manuscript and antiquarian lore, stored away in the archives of those interesting localities; and the adventures of those stern enthusiasts and iron warriers, the Spanish cavaliers, furnish themes as romantic in history, as are the feats of imaginary heroes who have an existence only in the realms of fiction.

The literary labors of our author, have been remunerative in wealth as well as in fame; and the income afforded him by the copy right of his works enables him to live in that elegant ease, and refined but quiet style, so gratifying to a man of literary tastes and pursuits. He has never been married, and various causes for this have been assigned by a gossiping public; among which are disappointed affections, and the early death of the object of his heart's devotions. Whatever may have been the cause, it has not in the least blunted his sensibilities to all that is instructive and pleasing in the regions of fact or fiction; and we have reason to thank God, that, besides being such ourselves, WASHINGTON IRVING too is an American.

MEDLEY OF CHARACTERS IN CONGRESS.

FIRST and foremost in the list of those who will make their impress is Old Bullion, who is not inaptly called the Roaring Lion of the West.

Next on the list is Joshua R. Giddings, who will probably second Mr. Bullion in most, if not all his movements.

Gerritt Smith, the eccentric head and front of the extreme wing of the Abolitionists, will no doubt, also side in the main with Messrs. Benton and Giddings, and startle the hot blood of the south with radical anti-slavery propositions.

John Wentworth, known as Long John, is another character, who, after an absence of one term, returns from the Chicago district, and will be likely to make all the mischief he can.

Caleb Lyon, an erratic poet and politician, philosopher and statesman, who comes from one of the New York districts as an Independent Democrat, and is one of the great champions of the Land Reformers, will also figure conspicuously.

Jose Manuel Gallegos, the delegate from New Mexico, comes endorsed as a good Locofoco, but he does not understand a word of English, and his speeches will therefore be *Greek* to most of the members.

Mike Walsh, of New York city, appears on the national stage, and that as the very hardest of the Hard Shell Democracy of the Empire State. Of him we need not speak.

The eccentric Wm. R. Smith, of Alabama, who is doctor, lawyer, preacher, professor, and we know not what else, is another character returned to the next Congress as a Hard Shell Democrat. He it was who, during the last Congress, made a move to have Kossuth indicted for high treason.

THE ROYAL FAMILY OF RUSSIA.

THE following amiable family picture may be interesting at this time, when Russia is thrusting her ursine nose into the politics of Europe:

Peter I., the founder, as he may be called, of the present imperial family, was the murderer of the two daughters and the sons of his brother Ivan, and the murderer, it is asserted, according to more than one of the annalists of his reign, by his own hand, of Alexis. He was himself murdered by Menzikoff, (a name that has again risen up in history,) the favorite of his wife Catherine, who when united to Peter was already the wife of a living husband, and their children were afterwards declared incapable of reigning, because born in sin. Anne, the eldest daughter of Ivan, put 14,000 Russians to death, and banished twice as many.—A revolution displaced the younger Ivan to put on the throne Elizabeth, daughter of Peter I., and her reign was remarkable for her drunkenness and debauchery. Peter III., her successor, was notoriously the offspring of crime, and was dethroned and strangled by his wife, Catharine II., the same infamous woman who had assassinated the dethroned Emperor Ivan, and whose own son, Paul—the father of the present Emperor Nicholas—was strangled by his courtiers.

A GREAT man is one who, in some sense or another, adds to the world's possessions; be it in government, in poetry, or in philosophy, he is a bringer into life—a builder, a creator, a planter, an inventor—in some sort a doer of that which nobody else has done before him, and which nobody, then, besides himself, seemed willing or prepared to do. Now, it is very certain that the world really loses nothing.—A truth once known, is known forever.

Useful Olio.

VIVIPAROUS FISH.

A REMARKABLE fact in Natural History is developed by Professor Agassiz, in the November number of *Silliman's Journal*—viz.: the existence of *fish producing living young*. Mr. A. C. Jackson, a gentleman attached to the Navy-Yard Commission on the California coast, while fishing in San Salita Bay, caught with the hook and line a fish of the perch family containing several young, properly developed and lively. The occurrence seemed so extraordinary that Mr. Jackson was induced to send the specimens to Professor Agassiz at Cambridge. They were examined by the Professor, and are pronounced by him to be an entirely new species. He proposes for them the Generic name of *Embiatoca*, in allusion to the peculiar mode of reproduction.

The account given of the structure of the organs of the species is very interesting. Professor Agassiz enters into a minute scientific investigation. The body of the fish is compressed, oval, covered with scales of medium size. The scales are cycloid, differing from those of other fishes which possess an exterior resemblance to this style. The posterior portion of the dorsal fin is supported by numerous articulated branching rays, which are sheathed at the base by two or three rows of scales, separated from those of the body by a rather broad and deep sealeless furrow. This last peculiarity has not yet been observed in any other fish. The alimentary canal is remarkably uniform in width for its whole length. There are no cœcal appendages in any part of the intestine. The ovary consists of a large bag, of a light violet color, clear and transparent, subdivided internally into a number of distinct pouches, opening by wide slits into the lower part of the sac. In each of these pouches, a young fish is wrapped up as in a sheet. All the young are packed closely together, to economize space; some having their heads turned forward, and others backward. The number of young contained in the sacs seem to vary. Mr. Jackson counted *nineteen*; Professor Agassiz has discovered only eight or nine in the specimens he has received. The size of the young is generally one-third of the full-grown fish—a remarkable fact.

Of the specimens received here, there are evidently two species, differing from each other by slight physiological peculiarities. The names of *Embiatoca Jacksoni* and *Embiatoca Caryi* are inscribed by Prof. Agassiz.

The scientific world will agree with Prof. Agassiz that "a country which furnishes such novelties in our days, bids fair to enrich Science with many other unexpected facts." The incentive to further exertion becomes more powerful.

THE RAINING TREE.

THE Island of Fierro, is one of the most considerable of the Canaries, and I conceive that name to be given it upon this account—that its soil not affording so much as a drop of fresh water, seems to be of iron; and indeed, there is in this island, neither river, nor rivulet, nor well nor spring, save that only towards the sea-side there are some wells; but they lie at such a distance from the city, that the inhabitants can make no more use thereof. But the great Preserver and Sustainer of all, remedies this inconvenience by a way so extraordinary, that man will be forced to sit down and acknowledge that he gives in this, an undeniable demonstration of His goodness and infinite Providence.

For, in the midst, there is a tree which is the only one of the kind, inasmuch as it hath no resemblance to those mentioned by us in this relation, nor to any other known to us in Europe. The leaves of it are long and narrow, and continue in a constant verdure, winter and summer; and its branches are covered with a cloud which is never dispelled, but resolved into a moisture, causes to fall from its leaves a very clear water, and that in such abundance that the cisterns, which are placed at the foot of the tree to receive it, are never empty, but contain enough to supply both man and beast.

TELEGRAPH MIRACLES.

IT may not be generally known that operators in magnetic telegraph offices become so familiar with the sound of the instrument thro' which they receive communications, as to know what it says; that is, they learn to understand the raps and pauses as a language, and without the necessity of having the marks and dots taken upon a moving slip of paper, can, from sound alone, write out communications. And perhaps everybody does not understand that an operator at one office may have connection with an hundred offices, and write in them all at the same time. At the telegraph office in this city, when communications are passing from New Orleans to New York, every word going both ways may be understood. The operator is heard to call New York, from New Orleans, and in an instant the reply passes on its return. In this manner items of intelligence, business notices, messages and jokes between the operators are daily exchanged over the enormous circuit of two thousand miles, and the most wonderful fact of all is, that a person familiar with the business, can stand on the sidewalk in front of the office, in this city, when the communications are complete, and, by the ticking of the instrument, can understand the messages as they ply at inconceivable speed—can hear the operators at New Orleans call, "Hallo! New York!" and catch the response from the Empire city, of "Aye, sir," while drawing a single breath.—*Cin. Com.*

UNDER the influence of music we are all deluded in some way. We imagine that the performers must dwell in the regions to which they lift their hearers. We are reluctant to admit that a man may blow the most soul-stirring strains from his trumpet, and yet be a coward; or melt an audience to tears with his violin, and yet be a heartless profligate.

Sunday Reading.

CRUSHED JEWELS.

BY FANNY FERN.

THERE has been childish laughter,
Footsteps quick and light,
Baby voices chiming,
Young eyes flashing bright,
Tones of deep rich music,
Thrilling the heart all through;
Eyes which stole from violets,
The darkness of their hue.

Cheeks, which borrowed shading
From the rose's leaf;
Brows, untouched by pencils
Of the painter's grief.
Tiny forms, at twilight bowing
Beside their mother's chair;
Dimpled hands, upraised to Heaven,
"In attitude of prayer."

But Jesus sent his jeweller down
To crush them one and all;
He said He had need of them
To deck his coronal.
So back unto His keeping
The jewels He has given;
Knowing full well you'll find them
All rosed in Heaven.

GOD AND NATURE.

NATURE, the field wherein God unfolds the infinity of his skill and beneficence in the works of mind and matter, is replete with the divinest instruction, and is marked by the footprints of the Providence which is ever glowing with unceasing and everlasting love. In the extent of its revelations, in the glory of its mechanisms, in the harmony of its relations, in the excellency of its results, themes are presented of absorbing interest.

In the far heavens, where colossal systems of worlds dwell, stretching far beyond the vision of the telescope, yet all retained in order and saved from confusion, by the will of Him whose will is law and whose word is obeyed by the countless hosts of celestial vaults.—In that noble system, in which satelites revolve around planets, and planets around the sun, and comets come from and depart into remote space, all held in their courses by the central world, by whose light they are illuminated, by whose heat they are warmed, and by whose influence they are blessed.—In the atmospheric ocean that encloses the earth on every side, in which electricity and magnetism roam and perform their allotted task, where lightning plays and thunder crashes; where fierce storms rage and genial airs gently flow; where vapors float, snow is formed, rain falls, and the bow of promise is painted.—In the oceans of earth, whose awful depths, and irresistible motions and hoary roar speak the sublimity of God, and whose living forms and treasures excite wonder.—In the earth, where innumerable forms of departed animal life are buried in solid rocks; where vast masses of a luxuriant vegetation have been changed into mineral coal, and where metallic treasures are found.—The earth's surface, with its rugged mountains and fertile valleys, its broad plains and rich soils; its gushing springs and noble rivers; its great forests, smiling fields, delicious fruits, and various flowers; its diversified scenery and blended colors; its day for activity and its night for rest; its organic life, from its lowest unfoldings up to man, the most marvelous of all, each one endowed with capacity for enjoyment, and adapted to its outward relations.

In all these, the ear of the reflective mind hears thrilling voices that speak of the existence of vast power, of unlimited wisdom, of impartial justice, and of boundless goodness, and the eye of the devotional soul sees clear evidence of the presence of that Father from whom cometh "every good and perfect gift." For there is not one object in nature, which when understood in its relations and results, does not show skill in its creation and beneficence in its intention, and excite adoration of God, of whom we may truly say, "For of him, and through him, and to him, are all things."

M.

A TOUCHING SCENE.

A BEAUTIFUL infant had been taught to say, and it could say little else, "God will take care of baby." It was seized with sickness, at a time when both parents were just recovering from a dangerous illness. Every day it grew worse, and at last it was given up to die. Almost agonized, the mother begged to be carried into the room of her darling, to give it one last embrace.

Both parents succeeded in reaching the apartment just as it was thought the baby had breathed its last. The mother wept aloud when once more the little creature opened its eyes, looked lovingly up in her face, smiled, moved its lips, and in a faint voice said, "God will take care of baby." Sweet, consoling words! they had hardly ceased when the infant spirit was in heaven.

"A MAN," said one of the Jewish fathers, "should be prepared for death the day before; but as he does not know when that day is, he should always be prepared."

HE that preaches gratitude pleads the cause both of God and men; for without it we can neither be sociable nor religious.—*Seneca.*

SENTENCE FROM HORACE.—No one is born without vices, and he is the best man who is encumbered with the least.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

A NEW-YEAR'S ACROSTIC.

Most worthy friends, and patrons all
Ou you may richest blessings fall;
On life's broad stream, may prosperous gales
Refresh your sail, and fill your sails;
Each week, you'll find me at your side
Some *good* to cast upon the tide.

Reports of all that's new to bring,
Unruly lightnings stretch the wing—
Russians on Turks dire warfare wage—
An insult on the passing age,
Let *peaceful* Arts our powers engage.

No vague or undigested dreams,
For form the staple of our themes,
Wresting from Truth her golden beams.
Your aid we ask, kind friends, to tell
Of crops that failed or yielded well,—
Relating *facts* about the soil,—
"Knowledge is power" to lighten toil—
Each one his mite should freely cast,
Redoubled to return at last.

Emerson is the author of the following beautiful verse:

"I caught the sparrow's note from heaven,
Singing at dawn on the alder bough;
I brought him home in his nest at even;
He sings the song, but it *pleases not now*,
For I did not bring home the river and sky:
He sang to my ear, they sang to my eye."

[Translated from the German for the Rural.]

THE OLD FISHERMAN:

Or, The Revenge of the Just.

Semnow, the old fisherman, with limbs benumbed with cold, was carrying a load of twigs and other pieces of wood, which he had gathered in the neighboring forest to warm his little cottage. With difficulty he tottered along the snow-covered path before the house of Ithamar, the hunter, and was about to cross the bridge near which his little cottage stood, when he was stopped by a rough voice: "Where did you get this wood? It is not yours. You have purloined it from mine."—Semnow was afraid. "My neighbor, I have not purloined it," stammered the fisherman.

Ithamar—"Don't tell me a lie, old man! It is but yesterday when I was felling trees in my forest, and cutting the wood. The wood I left there; from there you took it,—put it down here."

Semnow—"No, hunter! Honestly and justly have I gathered it, twig by twig."

Ithamar—"You lie! old grey head. Put it down here."

Semnow—"Do but see, I have nothing but small, dry twigs, which I collected just as I found them scattered upon the snow."

Ithamar—"You have purloined it. Why must I listen to your falsehoods?" So saying, he seized impetuously the burden of wood from the old fisherman's shoulder, and hurled it into the stream. "Now the quarrel is at an end," said he scornfully, and ran into his house. Semnow looked sadly after the hunter, and with tears in his eyes went to his cold little cottage.

A few days after, great masses of ice were floating in the stream, and many lumps rose formidably to the arch of the bridge. All around the ice was bursting asunder, and here and there it was forming in heaps, which resisted and swelled the raging current. At that time, Challisson, the son of Ithamar, was returning from town, and wished to pass over the bridge, which lay between him and his home. Irresolute and frightened, he trembled at the shocking scene. Semnow himself, who was repairing a boat, near by, dissuaded the youth from hazarding his life in crossing.—Ithamar, on the other side of the river, perceived this, and impertinently called out:—"Come over speedily; the bridge is not going to break just now; God knows how that quarrelsome old man wishes to mislead you. Come over!" Challisson runs—shock upon shock against the bridge. The youth is tottering,—another shock, and he falls; yet another greater still, and the bridge is shivered to pieces, and together with the youth thrown into the water. The father was raging, but the old fisherman felt great pity at the sight. Terribly the youth cried for help. Hemmed in by the beams of the bridge, and pressed by the ice, the torrent swept him along. Inconsolably the hunter ran along the shore, cried and wrung his hands.—How could he expect the fisherman would save the unhappy youth?

But Semnow, with his silver-haired head leaped into his boat, courageously forced it through the beams and the clods of ice, snatched the youth from the whirlpool, and placed him safe upon the shore. "Here I restore your son," said he amiably, with a tone that might have tamed wolves. "Behold, he is fresh and healthy, only somewhat frightened." Ithamar dared not look up, and stood for a long time ashamed and mute. "Forgive me, honest old man," said he, at length, very much moved, and with a stream of tears, which in spite of himself rushed down his rough cheeks, "forgive my harsh conduct." "Why should I forgive you?" replied Semnow, with a friendly look. "Have I not taken enough of vengeance?" "Ah," rejoined Ithamar, "beneficence is your revenge! O God! do the honest revenge themselves thus?" T.

DESULTORY PARAGRAPHS.

Eds. Rural:—Since beginning to write, I have thrown off—I scarce know how or where—some scores of desultory thoughts and fancies, a portion of which (in one form or another) have already appeared "in the papers."—But my book of "Chance Jottings" still receives an occasional paragraph of a print-worthy character, so I have been tempted during the fragments of leisure now mine, to revise some past writings of this nature, and (adding thereto many new and better thoughts) offer them to your readers. Their character will appear from the specimens given below, and if my eye meets an old acquaintance, he must remember that some of them "went the rounds," anonymously, years ago.

Yours, &c., J. M. Bixby.

Alabama, Genesee Co., N. Y., 1858.

I.

Thoughts or Impulse.—We like to read what is written from the impulse of the moment, for those sentiments and feelings which arise in the imaginative mind when in the *mood*—when it catches from the occurrence or the scene the true glow of inspiration—are often best worth a record and a perusal.

II.

As "Eternal Now."—Though we ever look back with a kind of melancholy satisfaction on the past, it dims not our forward gaze into the future. It is the realm of Hope—the clime where we reap the sure harvest of the seed which life scatters. But, that the fruit may be pleasant and wholesome, let our thoughts be anchored in the present—let us seek to give its appropriate use to every moment of that "Eternal Now," which only is really and certainly our own.

II.

Let the Unfortunate be Cheerful.—Rare are those genial souls who can always preserve their cheerfulness, for the "ills of life" come lighter or heavier upon every one—and seldom is the spirit with which they are borne proportioned to the weight with which they fall. But some people entertain the idea that an unfortunate man should never smile or enjoy himself in the least, and give him no share in their sympathies, unless he wears a gloomy look and mopes away his life. I do not believe in this doctrine. Honor to the man who has to bear sickness or poverty, or both at once, and yet keeps clear of the heavier load of discontent. Let him hope on and see sunshine, if he can, in the least breaking of the clouds which overshadow him.

IV.

Limited Views Partial.—"We judge by comparison. To exclude the great is to magnify the little." This remark, by Coleridge, explains the reason why a limited view, though a clear one as far as it goes, cannot furnish the ground from which to form our judgment.—Our data must not only be truthful but general—embracing the whole subject.

V.

New Year's Thoughts.—Another year has gone from us—has passed beyond the dominion of chance and change—bearing its multiplied traces of good and evil on our mental and physical natures. "We are not what we have been," but our course is beyond retracing; we can only review it, and thus learn from its teachings. Whatever it may tell us, it is sure that our reflections, should we live to the close of the present year, will take their color from our own conduct. Though "by taking thought" we cannot "add to our stature," we can add to our pleasures—we can prepare for a pleasant retrospect by living well as we pass along.—We can perform our duties with faithfulness, and refuse not even small pleasures, but rather partake of all the little gushing rills which fill the sweet stream of contented felicity.

VI.

Selfishness vs. Social Happiness.—Selfish men are never at peace. Their views are so narrow and so much alike that they are forever in conflict with one another. The path of freedom and quietness cannot be found save by those with large hearts and extended views of the aims and means of life. Social happiness in this crowded world, cannot be enjoyed by a community of selfish individuals. R.

Charity.—*Definition of it.*—Charity embraces the wide circle of all possible kindness. Every good act is charity; your smiling in your brother's face is charity; an exhortation of your fellow-man to virtuous deeds is equal to alms-giving; your putting a wanderer in the right road is charity; your assisting the blind is charity; your removing stones and thorns and other obstructions from the road is charity; your giving water to the thirsty is charity.—A man's true wealth hereafter is the good he does in this world to his fellow men. When he dies, people will say, "what property has he left behind him?" But the angels will ask, "What good deeds has he sent before him?"—*Irving.*

It conversation be an art, like painting, sculpture, and literature, it owes its most powerful charm to nature; and the least shade of formality or artifice destroys the effect of the best collection of words.

If sensuality be our happiness, we ought to envy the brutes; for instinct is a surer, shorter, safer guide to *such* happiness than reason.

"WHAT'S IN A NAME?"

Let a close observer take a stroll leisurely among the shipping that lines the East river, and he will find that the naming of their ships is no significant an index to the national peculiarities of a people, as more consequential matters. The Spaniard evinces the superstitious tendency of his mind, by such titles as—"Santissima Trinidada," "St. Joseph," "Mother Mary," &c.; and one ill-looking hermaphrodite brig we observed discharging cargo, bore on her stern the euphonious appellation of "The Twelve Apostles!"

The French, again, manifest their *gaite* and gallantry, by such titles for their ships, as "La Belle Julie," "La Baradere," "La Prima Dona."

We met with but one Italian vessel, and she was small and of most primitive construction. Her sticks were badly strained; instead of the modern wheel, her rudder was governed by a tiller of rough wood, with the end curved into a grotesque resemblance of a dog's head. She was also a little "hogged;" and, in contrast with the graceful outlines and raking masts of the clippers that were near her, she appeared to as much disadvantage as a deformed man among a file of picked soldiers. We hailed her, sought the captain; but he spoke no English, and, beyond a few phrases from the operas, our own Italian is bankrupt. We essayed German, however, and there he was at home—invited us to enter the cabin, and pressed upon us his hospitalities. But the name of the ship was "The Archangel," and it confirms our theory. We found but two Dutch (Holland) vessels in our walk, and these two strengthened the conviction; for the Dutch are an industrious, frugal people and the names of the vessels in question were "The Bearer," and the "Gold Hunter." John Bull's crustiness and pugnacity was abundantly attested by such names as "The Bulger," "The Gladiator," "The Spitfire," "The Boxer," "The Julius Cæsar," &c. And Jonathan, *our* Brother Jonathan, whose energies promise to revolutionize the world, whose motto is speed, progression, and universal dominion, shows his devotion to those objects by calling *his* ships "Sovereign of the Seas," "King of the Clippers," "Flying Pigeon," "West Wind," "Game-Cock," "Frightened Lightning," &c.—*Journal of Commerce.*

THE PROMPT CLERK.

I once knew a young man, (said an eminent preacher the other day, in a sermon to young men,) that was commencing life as a clerk.—One day his employer said to him "Now to morrow that cargo of cotton must be got out and weighed, and we must have a regular account of it."

He was a young man of energy. This was the first time he had been entrusted to superintend the execution of this work; he made his arrangements over night, spoke to the men about the carts and horses, and resolving to begin very early in the morning, he instructed the laborers to be there at half past four o'clock. So they set to work, and the thing was done. About ten or eleven o'clock his master comes in, seeing him sitting in the counting-house, looks very blank, supposing that his commands had not been executed.

"I thought," said the master, "you were requested to get out that cargo this morning."

"It is done," said the young man, "and here is the account of it."

He never looked behind him from that moment—never! His character was fixed; confidence was established. He was found to be the man to do the thing with promptness. He very soon became one that could not be spared; he was necessary to the firm as any of the partners. He was a religious man, and went through a life of great benevolence, and at his death he was able to leave his children an ample fortune. He was not smoke to the eyes, nor vinegar to the teeth, but just the contrary.—*London Youth's Instructor.*

"THE OTHER SIDE."

The Dover Enquirer states that President Lord of Dartmouth College, in his lecture before the Lyceum of that town, discoursed for an hour upon this text, in opposition to the prevalent idea that the "world does move."—The venerable President contended that the only movement was in a retrograde direction, and that every generation was *not* growing wiser and better and richer. Adam was the greatest landholder that ever lived, and his posterity for 6,000 years had been dividing his possessions. The men were not so strong nor the women so beautiful as they were 3,000 years ago. Now-a-days man was chiefly made by the tailor, and woman by the milliner. The master-pieces of ancient art were still unrivalled by modern productions, &c., &c. The lecture was imbued with ancient lore, and was a fine end for "Young America" to chew upon.

Conundrums.—We have met with worse conundrums than the following:

What wind would a hungry sailor wish for at sea? A wind that blows *foul* and then *chops*.

When is a hedge dangerous to walk in?—When the hedges are *shooting* and the *bull-rushes* out.

In what color should useless be kept? Invisible. (in violet.)

What proof is there that Robinson Crusoe found his island inhabited? Because he saw a great *smelt* pitching into a little *cove*.

What was Joan of Arc made of? *Maid* of Orleans.

Good Advice.—Some one—we don't know who, but evidently a very sensible fellow—gives the following excellent advice. It is worth following—"May-be you are a bachelor, frosty and forty. Then, poor fellow! Saturday night's nothing to you, just as you are nothing to nobody. Get a wife, black eyed or blue eyed, but above all true-eyed. Get a little house, no matter how little, and a sofa, just to hold two, or two and a half in it, of a Saturday night, and then read this paragraph by the light of your wife's eye, and thank God and take courage."

For the Ladies.

THE BURIAL OF LOVE.

BY WM. C. BRYANT.

Two dark-eyed maids, at shut of day,
Sat where a river rolled away,
With calm sad brows and raven hair,
And one was pale and both were fair.

Bring flowers, they sang, bring flowers unblown,
Bring forest blooms of name unknown;
Bring budding sprays from wood and wild,
To strew the bier of Love, the child.

Close softly, fondly, while ye weep,
His eyes, that death may seem like sleep,
And fold his hands in sign of rest,
His waxen hands, across his breast.

And make his grave where violets hide,
Where star-flowers strew the rivulet's side,
And bluebirds in the misty spring
Of cloudless skies and summer sing.

Place near him, as ye lay him low,
His little shafts, his loosened bow,
The silken fillet that around
His waggish eyes in sport he bound.

But we shall mourn him long, and miss
His ready smile, his ready kiss,
The prattle of his little feet,
Sweet frowns and stammered phrases sweet;

And grave looks, serene and high,
A light of heaven in that young eye,
All these shall haunt us till the heart
Shall ache and ache—and tears will start.

The bow, the hand shall fall to dust,
The shining arrows waste with rust,
And all of Love that earth can claim,
Be but a memory and a name.

Not thus his nobler part shall dwell,
A prisoner in this narrow cell;
But he whom now we hide from men,
In the dark ground, shall live again.

Shall break these clods, a form of light,
With nobler mien and purer sight,
And in the eternal glory stand,
Highest and nearest God's right hand.

[This department will hereafter be conducted by one of our female contributors—a person not too old to cater for the Young, yet of sufficient experience to interest, if not instruct those who have arrived at maturity. She is a Wife and Mother, and conversant with the duties and obligations of a Daughter and Sister, and we have no doubt will render these columns interesting to all sustaining either of those relations. It may be proper to add, that illness has prevented her from attending to the present number, except in contributing the following article.]

A SEASONABLE RETROSPECT.

Another year has fled. Silently, imperceptibly, the wings of Time have glided on, till its months have failed in the past, to be remembered only as gone forever. The summer birds of yesterday, as it were, have sought a more congenial clime—the beautiful of Flora's treasures have perished from our sight, and the perfumed air exchanged for cold and bitter winds—the little babbling brooks are stilled—the fields have doffed their green attire for one of pure and snowy white, and the music of the sleigh-bells merrily falls upon our ears. As we are thus reminded of the quick transition of the seasons, we cannot but realize the rapidity with which we are hastening down the tide of life; and the tableaux can scarcely fail to come before our mental vision, of a similar "passing away" of our earthly career.

This particular season most vividly portrays the declining years of man. The scenes of youth, with its fond hopes, and glowing anticipations, are o'er—the clouds and sunshine, trials and perplexities of middle age, past—the harvest of this world's gain gathered, and maturer life creeps on. The form, bent beneath the buffetings of many storms—the hair, whitened o'er like frost by Time's relentless fingers—the mind, weakened by years of thought and planning—the heart, sore with blighted expectations and disappointed ambition, exclaims, "All things earthly are vanity and vexation of spirit." Their days of usefulness are ended, and they are prepared to enter upon their rest.

With the flight of the old year, what changes have been wrought! All the emotions of the heart have been awakened as it noiselessly advanced, dispensing joy and sorrow in its path. The homes of some darkened by the long absence of loved ones, have been made to beam with happiness by the return of the wanderers; while other hearths were rendered more deeply desolate by a journey to a far off land—a land of hope and promise, but from which the traveler ne'er again would come, the vacant seat ne'er be filled, and the "Ingleside" ne'er again complete.

As we look back upon the months gone, it is a melancholy thought, that the slighted opportunities afforded for instruction and improvement are beyond recall, and lost forever. We can number many golden moments thrown away, many resolutions of amendment broken or forgotten. But we are cheered with the knowledge that we have yet time to perform omitted duties, and that the experience of neglect will be a monitor for exertion hereafter.

The commencement of a new year is a fitting time for a retrospective glance at the manner we have fulfilled our intentions, and for making new determinations for the future.—It behooves us to be diligent and unwearied in the exercise of our talents, as we are unconsciously but speedily wafting on towards the end. Before we are aware, Spring will again burst upon us, with its buds and foliage, its sweet songsters and balmy atmosphere, and so with each succeeding season. We would like when the winter of our days approach to have our stores well garnered—our work done—to feel no regrets. A.

[Written for Moore's Rural New-Yorker.]

AMELIA.—A SKETCH.

Who has not seen and admired the little child with bright blue eyes and flaxen hair, its mild and winning ways, attracting the admiration of all beholders,—beauty and innocence personified? Such was Amelia, when a child.

Who has not watched the unfolding of the beautiful rose-bud? At first the delicate leaves would scarcely be perceptible. As they expanded, they increased in loveliness and fragrance, until they were just ready to burst into full bloom. A striking similitude of Amelia, to the first dawn of womanhood.

The promise of future usefulness seemed destined to be fulfilled. A large portion of time, after she arrived at years of maturity, was spent as a teacher of youth, and it was generally known to be satisfactory to her employers. Not that she loved the care and confinement of the teacher's life, but she delighted in doing good, and her duties, as far as lay in her power, were well and faithfully performed.

When but a child, she saw the cold grave conceal the form of a loved mother, and in later years received a father's dying blessing.—Though surrounded by kind friends, and scarcely knowing the want of a mother's love, yet the remembrance of former years had taught her to "cast her care upon One," who, we are assured, "ever careth for us."

Amelia had not lived thus far through life unloving and unlored; her heart was early consecrated on the holy altar of affection. The object of her plighted vows, was truly one of Nature's chosen men, and she had consented to become his bride when the sun had again dried the torrent of Nature's tears, and Spring had once more arrived with its beauty and bloom, bringing its innumerable company of songsters for the gentle breezes to waft their sweet warblings joyously o'er hill and dale, while the air was redolent with a rich perfume. How suitable the time, when the earth was decked in its finest robes, for her to promise to "love, honor and obey;" but ah! ere that time had arrived, consumption, with its "withering blight," had coiled itself around her heart strings with an unyielding grasp.

She stood at the altar, and gave the remnant of her days to her heart's chosen one—gave him the privilege of watching all through the bright and beautiful summer o'er the sick couch, of doing all that lay in his power to soothe and alleviate her sufferings, as day after day passed away, while her body was racked with pain and anguish; and when the Autumn came, he smoothed her dying pillow,—then, when her form was wasted, and her eye grew dim, death snatched the young and lovely victim, and bore it as on eagle-pinioned wings from his sight, leaving a lonely home and a desolate hearth-stone.

How fit the time to die, when the beautiful things of earth are fast fading away! Why should we complain when the good and gifted are taken, knowing that God loves the sweetest flowers far better than we can?

The leaves had fallen from the trees—the sighing winds had sung a parting requiem over the graves of the flowers, and at the close of a beautiful, sunny day, they "laid her to rest in the arms of her God."

"The rose withereth, the flower thereof faileth away,"—a true emblem of the life of Amelia. M.

ORNAMENTAL NEEDLE-WORK.

Solomon, in describing the wise woman, says, "She maketh herself coverings of tapestry," and it would seem that he, with all his wisdom, did not think it a waste of time for a wife to cultivate the ornamental as well as the useful. She who "layeth her hands to the spindle," and who "holdeth the distaff," may also deck her house with tapestry, and her household with "divers colors of needle-work."

From the earliest ages, woman has so exercised her taste and ingenuity. In the quiet of domestic life she has reproduced, with her wonderful little needle, the flowers of the field and the pictures of the artist.

There is, perhaps, no city in Europe that does not bear witness to this skill, from the rich old tapestry of ancient palaces and curiously wrought altar-cloths of the churches, to the humble bobbin-work of the Swiss and Scotch peasant women.

The patient nun beguiles the solitude of her cell with the delicate embroidery of muslin and silk, and the Indian woman forgets her bondage in stringing colored beads to imitate birds and flowers for the birch basket and the gay moccasin. This love of needle-work is universal in our sex, and we believe it has a refining influence upon them. It is a sedative in trouble, a means of support to the needy, and a source of gratification to the lovers of the beautiful. —*Miss Anne T. Wilbur.*

Some flowers are repulsive at first sight, but when closely examined, unfold a world of beauty. So with men. Don't judge of a man from first sight—he may have good qualities which will develop by acquaintance.

A Wife can make her husband her attorney or agent. She can also sell or lease property to her husband. They are legal rights in N. York.

MOORE'S RURAL NEW-YORKER

ROCHESTER, JANUARY 7, 1854.

Our New Volume,—Briefly.

At the last moment, just as the pages of this number are closing for the press, we are asked for "more copy" to fill this department; and hence, like the authors of ponderous tomes, we indite the preface or leader last, but, unlike them, we must do it rapidly—in this wise:

Thanks to the generous exertions of its friends in all sections, we are encouraged to commence this volume of the RURAL with an edition of *thirty thousand*. This is about double our former circulation, yet from present indications we shall have few, if any, extra numbers to spare as specimens. Indeed, we have been more than surprised since the opening of the campaign.—During the past ten days our receipts on subscription *have fully doubled those of the corresponding period of last year*!—a result as unexpected as it is gratifying. We had anticipated an increased subscription, but were not prepared for such an avalanche as is pouring in from all directions—every mail teeming with scores of lists of new subscribers, the applicants located in various sections,—from Canada to California.

Under these auspices, and in such a dress as is now under your eye, we commence a new year and volume of the RURAL, with a firm determination to merit the unexampled favor and support accorded to the enterprise. It is a pet of ours, this journal—one which we originated, and, with the aid of numerous nurses, have nourished until it has become, we fondly trust, the companion of thousands who appreciate zealous efforts and independent discussion. To increase the value and interest of its pages, and thus keep pace with the generous efforts of its friends, will continue to be our earnest endeavor.

UP TO TIME.—Though we published no paper last week, it has been very difficult to issue this number in season. Indeed, it is an arduous task, this donning a new suit, providing copy, and attending to or superintending the minutæ of sundry other important matters—a good deal like commencing house-keeping, but more laborious and perplexing. We have experienced both felicities, but award the palm to the Elephant we have almost continually seen for the past two weeks—during which period our daily tasks have been so prolonged as to prevent us (except on Saturday and Sunday evenings) from touching the pillow until next morning! Perhaps it's "better to wear out than to rust out," but now that we've got a good start on the new volume—and perchance elevated our credit—we propose to ignore the adage and sleep a few nights with both eyes closed.

— Since the above was written, we find it will be almost impossible to issue this number as early in the week as usual, or as we intended. However, future numbers will probably be fully "up to time."

TO COMPETITORS FOR OUR PREMIUMS.—Though the agents and other friends of the RURAL are pouring in the names and funds beyond all precedent, exceeding our highest expectations, but very few enter the arena as competitors for the large prizes. The specific premiums seem to be the most popular, and we have already paid many in cash, books, and extra copies of our journals. This probably arises from the supposition that there would be a rush for the large premiums—and any result in confining the competition to a few individuals, perhaps less than a dozen.

Persons who have written us for information in regard to their prospects of success, &c., have not been answered, for the simple reason that it would be unjust to advise one and not the other competitors. In this matter we cannot honorably show any partiality, and therefore whenever we report shall do so in the paper, or in a circular addressed to each person interested.

WAYNE COUNTY REPORTING.—Our clerks aver that Wayne Co., N. Y., is entitled to a special vote of acknowledgments. On figuring up the receipts on Saturday evening last, they discovered that Wayne had subscribed, *on that day alone*, for *five hundred and twenty-two* copies of the RURAL for 1854! This may appear a "stumper," but we have the "documents" in substantiation. Other counties reported largely on the same day, but Wayne is clearly entitled to the banner.—We doubt whether any weekly in the State or Union ever received, in a single day, so large a number of subscribers from one county of so small territory and population. Thanks, good friends, for your substantial and magnificent salutations. We shall not be likely to doubt any encomiums upon your wisdom or intelligence, the productions of your soil, or the belief of the good people of your county in progression.

ALLEGANY SPEAKING.—In our Wednesday morning's mail, we received (in five letters,) $210 from Allegany Co., N. Y. Considering the age and population of the county, this is a remarkably handsome report. We bend in grateful acknowledgment to *all* friends, everywhere.

NOW IS THE TIME for those who would give the RURAL a benefit, to make efforts in behalf of its circulation. Reader, if you like our craft and cargo, please exhibit this number, and solicit subscriptions. See Special Notices, Premiums, &c., under head of Publisher's Department.

The Governor's Message.

Governor SEYMOUR transmitted his Annual Message to the Legislature, which assembled on Tuesday, at two o'clock in the afternoon of that day. It is rather an imposing looking document, covering considerable over a page of an ordinary newspaper, and its length will preclude its being read by some who would otherwise do so. It is temperate and moderate in its views and recommendations, but contains considerable unnecessary material. For instance, the whole of the first column is taken up in historical reminiscences and laudations of our ancestors, the materials for which are just as accessible to the people as they are to the Governor.

The Message then discusses the subject of the Common Schools, and embodies an abstract of the Superintendent's report; from which it appears that—

The amount of the Common School Fund on the 30th of September last, was $2,383,251 23, being an increase over last fiscal year of $28,727 14.

The total amount of moneys appropriated by the Superintendent for the coming year is $1,101,240 84.

The number of Schools in 1853 was 11,681.—In 1852 the whole number of children taught in district schools, was 866,935; number attending private schools 36,844; number of children attending colored schools 1,680; amount paid for teacher's wages $1,931,870 18; amount paid for district libraries $19,499 39; total amount expended for common schools $2,169,218 52.

The Governor recommends a separation of the office of School Superintendent from that of Secretary of State, and the establishment of a distinct department. He recommends the establishment of State scholarships in the higher seminaries of learning, and also strongly commends the effort made to improve the condition of idiots.

In regard to the insane, among other things, the Governor says—

There are at this time 446 patients in the State Lunatic Asylum at Utica, and 556 in the Lunatic Asylum on Blackwell's Island. It appears by the reports which have been submitted to me, that the efforts to improve the condition of this unfortunate class of persons have been attended with the usual degree of success. I renew the recommendation contained in my message of last year, for the establishment of another Asylum in the western part of the State.

The Deaf and Dumb, and the Blind Asylums are also recommended to the notice and beneficent action of the Legislature.

After speaking favorably of the value of Houses of Refuge for juvenile criminals, the Message takes up the subject of the State Prisons, from which it appears that—

The number of convicts confined in our State Prisons, are, at Sing Sing 913; Clinton 191; Auburn 756. Total, 1869. Of these convicts 101 are females.

The Message censures severely, and justly, the pernicious practice of confining all grades of criminals together in our common jails, by which means the better classes are brought into contact with the worse, the former being thus greatly corrupted by the evil influences of the latter.

The subject of the canals, the canal revenues, and the enlargement, occupies, as it deserves, far the largest portion of the document. Partial enlargement and improvement, to the amount of $500,000, is recommended to be done forthwith, which will enable the largest class of boats to be brought into immediate use. In regard to the amendment proposed to the constitution so as to obtain a speedy completion of the public works the Governor says:—

As the proposed amendment was agreed to with remarkable unanimity by the members of the Legislature, representing all portions of our State, and as a measure of compromise between conflicting views and sentiments, I recommend its adoption by you, and its submission at an early period. If this is done and the people approve of the amendment, the Legislature can, at its present session, pass the laws necessary to carry out its requirements. The condition of our canals render it extremely important that a fixed and definite policy be at once adopted with regard to them.

On the subject of temperance the Message is non-committal. It asserts the enormity of the evils of intemperance, and acknowledges the failure of all laws to regulate the trafic in intoxicating liquors; but it recommends no remedy therefor, merely saying:

The whole subject will doubtless engage your attention. It is surrounded by difficulties and embarrassments, and unless the legislation in regard to it is judicious, it will increase the evils which it is so important to prevent. Any measures which you may adopt should be framed so as not to conflict with well settled principles of legislation, or with the rights of our citizens.

The Message winds up with a column of extraneous matter which, like the opening column, might have been omitted without injury to its symmetry or logical arrangement; and such an expurgation would have added greatly to its strength. Chief Justice MARSHALL once told a young lawyer who, in Court, was laying down a platform of principles, that there were some things the Supreme Judges of the United States were presumed to know; and Governor SEYMOUR might, in some of his speculative and historical remarks, have presumed the same thing of the Legislature and "the rest of mankind." With these few exceptions the Message is an interesting and valuable state paper, and one worthy of careful perusal by the people.

THE WEST COMING.—Though the majority of our subscribers are residents of Western and Central New York, the circulation of the RURAL is by no means small in the Western States, from which we are now receiving large accessions. Michigan and Wisconsin are particularly well represented in this rush, each daily striking us with pretty large "clubs"—an infliction which we will endeavor to bear with becoming fortitude. We are also receiving favorable reports from the Eastern and Middle States.

Our Albany Correspondence.

MONDAY, Jan. 2, 1854.

ALBANY is again alive—teeming with fun and politics. To-day the usually staid city abounds with gay belles and gallant beaux—with long-faced officers and clerks retiring from their fat positions, and hungry candidates grasping for their easy chairs and choice cuts. The rush can hardly be imagined by one who is not familiar with similar scenes.

The time-honored custom of making calls on New Year's day, was never better observed. A light fall of snow brought out all the available material in the shape of sleighs, and as it is the first snow of the season, the livery men look up and laugh.

I paid my respects to his Excellency, Governor SEYMOUR, and to some of the State officers. The Governor is no less fitted to do justice to the social circle than to the sterner functions of the Executive department. He is certainly an agreeable officer in every respect.

I found the new State officers fully initiated in their various departments. Gen. LEAVENWORTH, Secretary of State, has appointed ALEXANDER G. JOHNSON, of Troy, as Deputy Secretary, and SAMUEL S. RANDALL, of Washington, as Deputy Superintendent of Common Schools. These appointments will give good satisfaction, especially the latter, as Mr. RANDALL has filled that office for some dozen years under former administrations.

Hon. E. G. SPAULDING, Treasurer, has named L. L. DOTY, of Livingston, as his Deputy. Mr. D. has previously filled this position. No better appointment could be made.

PHILIP PHELPS, Esq., will be continued in the Comptroller's office, as he has become an indispensable fixture in that department. It is expected that there will be a clean sweep of all others.

R. F. HICKS, of Livingston, is the Deputy to the Clerk of the Court of Appeals. B. S. VAN RENSSELIER, of Albany, is appointed Clerk in the Land Office by Hon. JOHN T. CLARK, State Engineer. The other clerks will be designated from the various counties of the State.

The caucuses this evening have been more than usually spicy. On the part of the Whig Assembly, the following have received the nomination:—ROBERT H. PRUYN, Speaker; R. U. SHERMAN, Clerk; S. A. NICHOLS, Sergeant-at-Arms; JOHN DAVIES Door-keeper; BYRON ELLSWORTH, Assistant do.

The above will undoubtedly be elected to-morrow on the opening of the House, without any delay.

The Democratic candidate for Speaker is Hon. DEWITT CLINTON, of New York; and JOHN S. NAGEW for Clerk. The Democratic Senatorial Caucus named the officers of the last Senate, with few exceptions.

The Whigs of the Senate have nominated HYAM J. HASTINGS, of the Albany Knickerbocker, as Clerk, and others in proportion. But the mail will close soon, and I must break off, reserving what is worth telling till another time.

As the Whigs have a majority in both houses, an early organization will take place, and the Message be sent in. The Message, though very lengthy, is quite a readable document.

"OWE."

Congressional Proceedings.

CONGRESS has managed to get through the holidays as is usual in all such cases, to wit., to adjourn over until they are past. The members have however again assumed the harness, and we may now look for legislation to move on.—The Hon. GERRITT SMITH has made an out and out abolition speech, in connection with the Koszta affair, and it is the only speech of the kind that has for many years been listened to with any kind of patience in Congress. The venerable form, the firm mellow voice, the eloquent style and logical reasonings of the speaker absorbed the entire attention of the House, and commanded the respect of all who heard him. It is a new era in the abolition question as connected with Congress.

The most important measure yet introduced, is a bill for the construction of a Pacific railroad. It was introduced by Senator SEWARD, of this State, and provides for the building of the road by a private corporation, to which the United States is to loan its credit, in the shape of public stock or otherwise. No lands are to be donated except the right of way, and the road is to be built not south of the fortieth parallel of latitude. It is not probable however, that this, or any other scheme will be adopted at present.—The known hostility of the administration to internal improvement, by the General Government, and the jealousy that exists between the friends of rival routes and rival schemes, will preclude the adoption of any measure, at least this session, to build the road. It is a matter of great public interest and Congressional action, will be awaited with much curiosity.

The Legislature.

BOTH branches of the Legislature convened at the Capitol at 10 o'clock on Tuesday. New members of the Senate were sworn in by the Lieutenant Governor.

The oath to members of Assembly was administered by the Secretary of State.

Hon. Robert H. Pruyn was elected Speaker of the House. Richard U. Sherman of Utica, Clerk. S. B. Nichols of Chemango, Sergeant at-Arms. John Davis of Oswego, Doorkeeper; B. Ellsworth of Chatauque, Assist. Door-keeper.

In Senate, Hugh J. Hastings was elected Clerk; Joseph B. Garlinghouse, of Ontario, Sergeant at-Arms; H. M. Eaton, of Warren, Assistant Sergeant-at-Arms; Samuel R. Sewell, of Erie, Door-keeper, and Almon Beecher, of Steuben, Assistant Door-keeper.

The Message was read in both houses, after which they adjourned.

The Turkish Question.

THE foreign news by the last two steamers is of a very interesting and exciting character.—The report of a great naval battle in the Black Sea, and the defeat and destruction of the Turkish fleet, took every one by surprise; as the previous successes of the Moslem land forces had led people to expect similar results upon the sea. The first accounts however, exagerated the facts, and made out the engagement to be more brilliant for the Russians and more disasterous to the Turks, than it really was. These accounts were received through Russian and Austrian sources, and of course favored the Russian side. Subsequent news has set the matter nearer right, and the next steamer will probably contain an authentic statement of the affair.

It now appears that the Turkish squadron was greatly inferior in strength to their opponents, and the battle was fought with a desperation on the part of the former, that would have given them the victory if the forces had been equally balanced. As it was, several Russian ships and steamers were either burnt or sunk, and the remainder of the fleet were rendered utterly unsea worthy; and only managed by dint of the greatest exertions to drag themselves into a safe harbor, like a wounded snake into its own hole. An account of the affair, so far as ascertained, will be found in our next page.

Great indignation is manifested against the English admiral, SLADE, who was in command of the main division of the Turkish fleet, on account of his lying idle at Constantinople and giving feasts and parties while another and a lesser portion of the fleet was engaged in a struggle of life and death with a hostile and overwhelming force. Some of the English papers demand the recall and trial by a court martial of Admiral SLADE.

It is stated that when LOUIS NEPONEON heard of the result of the battle he was completely overcome. The prospects become daily more certain of the involvement of the Western powers in the quarrel, and the combined fleets are reported to have been already ordered into the Black Sea. The Scandinivian and the Anglo-Saxon have heretofore fought together and overthrown the Gaul; but the Gaul and the Anglo-Saxon have never as yet united against the Scandinivian; and if they do so now, the pride of race as well as nation will render the contest a bloody one indeed. The issue is slow to be joined, but when it comes there can be no withdrawal.

Disastrous Conflagration.

ABOUT one o'clock on Tuesday morning (the 27th ult.,) a fire broke out in a bakery on Front st., New York, which destroyed more than a million dollars worth of property. Several stores on Front street were burnt, and the cinders, flying over the tops of the buildings of an entire block which escaped the conflagration, set fire to and consumed several fine vessels in the harbor; and among them the new world-renowned clipper ship *Great Republic*. This magnificent piece of naval architecture, justly the pride of her builder, DONALD MCKAY of Boston, and the admiration of all beholders, has never made a sea voyage. She came round from Boston a few weeks since, and had just taken in her first cargo for Liverpool when the calamity happened, which in a few hours left her a blackened and unsightly mass. She was the largest ship afloat, built in the most substantial and beautiful manner, and was capable of carrying a cargo of 3,500 tons.

☞ In the Supreme Court of Massachusetts, in the case of James Mitchell vs. the Boston and Worcester Railroad, the jury, after being out all night, returned a verdict for defendants. This was a suit brought by plaintiff, a brakeman in the employ of defendants, for $5,000 damages for the loss of one leg at the knee by falling from a freight train while in motion, which accident he alleged was in consequence of the negligence of defendants, in not providing suitable ladders for him to pass over the tops of the cars. The case has been tried once before, and resulted in a disagreement of the jury.

☞ Benjamin Buckingham, of Northfield, Ct., was one of the earliest California adventurers. He returned in due time with $50,000 in gold. He was not content. He made a second visit to the land of gold and golden dreams, and returned penniless. Last week he was found dead in a mountain cave. His revolver, which was found by his side with one barrel discharged, and a small wound in the head, told the melancholy story. His age was twenty-seven.

☞ Bennett, Marshall & Co. of Pittsburg, have bought a quantity of large iron cannons in Canada, which they will convert into railroad iron. The cannon were used against the United States throughout the whole of the war of 1812, and it is said made sad havoc among our troops at Malden and Lundy's Lane. Converting cannon into railroad iron is an approach to beating swords into plow shares.

☞ It is stated that Mrs. Miller, a daughter of Gerrit Smith, excites a great deal of curiosity in Washington, by appearing in full Bloomer costume. Mrs. Miller is quite handsome and young, and her dress consists of a Scotch plaid frock, which comes down to her knees, pants with morocco bootees, and a jaunty black hat and feather, such as the ladies usually wear on horseback.

☞ The remark of the Duke of Alba, at which young Soule took offence, consisted in a comparison of Mrs. Soule to Margaret of Burgundy. There was nothing intrinsically offensive in this; and unless there was something contemptuous in the manner of the Duke, the young gentleman was rather hasty in his hostile demonstration.

☞ Judge Grier, in the United States Circuit Court at Philadelphia, has decided that the translation of Mrs. Stowe's novel of "Uncle Tom's Cabin" into German is no infringement upon the copy right. This disposes of a question of some importance, which was raised in this instance for the first time.

News Brevities.

—— The bank circulation of Canada is estimated at $20,000,000.

—— New and rich deposits of gold have lately been discovered in Russia.

—— The jailor of Toronto has been fined $10 for selling whiskey to the prisoners.

—— Several new and splendid churches are to be built in Buffalo this year.

—— Three thousand dollars have been subscribed in Covington for the Clay Monument.

—— Cassius M. Clay contemplates opening a banking house in Cincinnati next spring.

—— Fifty miles of Railroad are now in operation in Egypt.

—— The best court of equity is a good conscience. The offender seldom pardons.

—— They have a Maine Liquor law bill before the Tennessee Legislature.

—— Within ten days, a million and a quarter of dollars in U. S. stock have been redeemed.

—— Three-fourths of the entire labor and capital of the United States are employed, either directly or indirectly, in Agriculture.

—— Contributions to the amount of about $700 have been made in Toronto to purchase fuel for the poor of that city.

—— Montreal harbor is a complete blank at present; not a single vessel of any description is visible, except the ferry boats.

—— The Tribune says it is settled that the Crystal Palace in New York is to be "a permanent institution."

—— The Livingston Union says—Mrs. Long, of York, has made cheese every summer, save one, for 75 years.

—— The present National Debt of England is about 4,000,000,000, with no signs of speedy liquidation.

—— The members of the South Carolina Legislature are agitating the question of giving to the people the election of Presidential Electors.

—— Prince Jerome Bonaparte, brother of Louis Napoleon, has just completed his 79th year.

—— The losses by the late floods in Ireland, are estimated at £60,000. A subscription of £800 has been raised at Cork.

—— The Carter block, opposite the Capitol, Lansing, Michigan, was destroyed by fire on the 23d.

—— On Saturday last, a man was tarred and feathered in Clyde, Wayne county, for whipping his wife.

—— Matthew Johnson, a resident of Virginia, has been arrested at Richmond, on the charge of kidnapping a slave.

—— A petition for a prohibitory Liquor Law, signed by 8000 males and 5000 females, has been presented to the Georgia Legislature.

—— A public dinner was given to Gen. Wool at Troy, on the 31st Dec. He has been ordered to California by Government.

—— M. Guizot was the twenty-second child of his parents; all the progeny died young, except him and a sister.

—— A firm at Louisville is engaged very extensively this season, in packing pork for the English market.

—— The New York Herald has one of its periodical rumors from Washington of fresh piratical expeditions against Cuba.

—— One of Bennett's witnesses in the recent libel trial, testified that he staid at home and wrote the Parisian correspondence of the New York Herald.

—— It is proposed at Cincinnati to build a suspension bridge across the Ohio, at an elevation of 78 feet above the height of the flood of 1832—cost $600,000.

—— Mr. Haydock, the Temperance lecturer, known as the ex-wood-sawyer, was arrested in Washington, charged with lecturing in the street on the Sabbath.

—— The Great Western Railway is now open from London to Niagara Falls, a distance of 119 miles. Regular trains are also running east from opposite Detroit.

—— A German who had been bitten by a mad dog nine weeks previously, died in St. Louis on Wednesday of last week. While being taken to the hospital, he bit a friend in the arm.

—— Rev. Thomas F. Norris, proprietor of the Olive Branch, weekly newspaper, died at his residence in Somerville, Mass., on Wednesday morning, the 21st ult.

—— Senator Atherton left $8000 to President Pierce, not for his own personal use, but as a fund, in trust, to be expended in Washington city for certain purposes.

—— A great many passports have been applied for at the Department of State by Hungarians and others going to Constantinople, in the expectation of military employment.

—— The steamer Marlboro, a river boat, just starting for Cheraw, S. C., exploded her boiler, Dec. 23d, killing the captain, the mate, the chief engineer, and twelve of the deck hands.

—— The country trade of Charleston, says the Courier of that city, has increased since 1853, from $1,200,000 to $1,500,000, to the sum, in 1853, of $18,000,000 to $20,000,000.

—— The Albany Journal says that efforts are making to secure the removal of the Columbia County buildings from Hudson and Chatham Four Corners.

—— There are two Cruikshanks, brothers.—Robert, the eldest, is an artist, who resembles and imitates his brother George. One is about 73 years old, and the other, George, is about 70.

—— The Mercantile Library Association of New York has extended an invitation to Thomas Carlyle, to deliver a course of lectures in that city. His answer has not been received.

—— Mr. Soule, the American Minister to the Court of Spain, has purchased a splendid estate at Castillon, his birth place, in the French Department of Artago.

—— One reason of the high price of butter is the large quantity sent to California, where it has accumulated far beyond the demand, and sells at a great loss to the shippers.

—— The Seneca County Agricultural Society intend holding a Winter Exhibition on the 2d of February. Hon. Gary V Sacketthas been chosen President, in the place made vacant by the death of Mr. Delafield.

—— The St. Louis Republican notices the contemplated lectures by Lucy Stone in that city, and asks for her a candid hearing. The young lady is warned, however, not to touch the tabooed topic of slavery.

Foreign Intelligence.

Arrival of the Pacific.

The steamship Pacific arrived Dec. 26, with 103 passengers.

She left Liverpool on the 14th ult.

The news is of thrilling interest. The greatest naval battle since Navarino, has been fought with terrible loss of life, and total destruction of twenty-one ships of war.

The following are the particulars:

On the 30th November, the entire Russian fleet, from Sebastopol, under Admiral Machinof, with 24 sail, appeared off the Turkish harbor of Sinope, where Vice Admiral Osman Bey lay, with 11 Turkish sail.

The battle immediately commenced, the shore batteries being of no use.

The Turks fought like devils, and would not surrender. With most desperate bravery they fought until one ship after another, to the number of 13, were sunk, blown up, or burnt.

Seven Turkish frigates, two corvettes, one steamer and three transports, with several thousand men, have been totally destroyed, and Osmar Bey, the Turkish Admiral, is taken prisoner.

Each of the Turkish ships had, beside crews, 800 troops on board, on their way to Circassia; also, a quantity of money to pay the fleet. All lost.

The Turks burned or sunk seven Russian ships, viz:—two line of battle, three frigates and two steamers. The battle lasted only one hour.

The remainder of the Russian fleet was so shattered that it could scarcely reach Sebastopol.

Where are the French and English fleets?—Giving dancing parties in the Bosphorus. Admiral Slade, the Englishman in command of the main division of the Turkish fleet, is also partygiving at anchor in the Bosphorus.

He returned to anchorage on the 26th, four days before the battle, saying that he could not find the enemy, although merchantmen continued to report having seen numerous Russian ships of war prowling about.

Arrival of the Africa.

The Africa, from Liverpool, arrived at New York, Dec. 30.

Lord Palmerston has resigned his office of Home Secretary of State. He leaves because he will not consent to the new Reform Bill, which extends the parliamentary franchise. His resignation, the *Times* says, has no connection with affairs in the east, and will not alter in any way the policy of government.

From Turkey there is nothing really new.

The naval battle at Sinope is confirmed.—The Turks lost eleven ships—not fourteen—of which three were transports. The Russians lost seven ships. The affair was not so disastrous to the Turks as first reported.

The allied fleets are still in the Bosphorus, and have sent two steamers into the Black Sea to inquire into the Sinope business.

There is no confirmation of the rumor that Persia had declared war against Turkey, but it is supposed to be true.

Diplomatists are still busy with their notes.

The armies on the Danube are in winter quarters and no hostilities.

Liverpool Breadstuffs.—The buoyant tone of the market is undiminished. Wheat and flour are freely offered and find buyers at extreme rates. Prices have advanced on the week 2s per barrel on flour, and 6d per 70 lbs. on wheat.

Indian corn rather better and quoted by a few houses 6dals per quarter dearer.

Liverpool Provisions.—Wm. Gardner & Co.'s Circular says beef sells slowly at about previous rates. Small parcels new Chicago sold with difficulty at 110s. Pork very dull, favoring buyers. Bacon sells slowly. Lard heavy, and buyers holding back for a further decline. Tallow quite irregular. Cheese—fine qualities in fair demand. Ordinary dull.

Clover seed 2s per hundred lower.

The Very Latest.—By Submarine Telegraph. It is currently reported that the allied fleets have been ordered into the Black Sea.

London, Saturday Morning.

The Turkish Embassy has received advices of the Sinope engagement. They do not differ much from the published accounts. The Russians had lost two of their largest and best ships. The town was totally destroyed.

News Paragraphs.

☞ There are rumors of very serious charges being preferred against the Governor of Minnesota, which, if substantiated, will lead to his removal. He was one of the active Democrats of the last presidential campaign, and drew pay as a Congressman, while stumping it for General Pierce.

☞ Mrs. Amelia Opie, the celebrated English authoress, died recently at Norwich, England, aged 85. Her "Illustrations of Lying," is as immortal, as unfortunately is the vice which she has done so much to render odious. She was a Quakeress.

☞ The editor of the Albany Journal has visited the wine cellar of Mr. Longworth, at Cincinnati, where he saw 150,000 bottles, several hundred boxes, and 200,000 gallons of unbottled wine. He has returned home since, in good health.

☞ Meigs has given out an immense contract for hard brick on the water works at Washington, at eight dollars and a half per thousand. Brick for the Capitol extension is now supplied from New York, at fourteen dollars and a half per thousand.

☞ In the Legislature of Georgia a bill has been introduced to establish a system of common school education in the State, and to appropriate $200,000 for the education of poor children in the different counties.

☞ A law has been introduced in the Legislature of Georgia, prohibiting the separation of slave children under five years from their mothers, unless such separation be absolutely necessary to settle estates.

☞ The Southern administration papers continue to ridicule and denounce the New York Hards, and utterly deny them any credit for their professions in favor of the rights of the South.

☞ The Hon. Brookins Campbell, Democratic Representative from Tennessee, died last week Sunday, of spinal affection. He was about 45 years of age, and leaves a wife and one infant child.

☞ A model return upon a writ was recently made by a deputy sheriff in Morgan county, Indiana. It was—"Served the within, but was fit with brick-bats by the woman so that I couldn't serve it."

California News.

Arrival of the Northern Light.

The steamship Northern Light, from San Juan del Norte, arrived on the 20th ult., with 521 passengers and $1,500,000.

There was shipped by the Sierra Nevada, via Nicaragua, Dec. 1, $1,635,118, and by the Winfield Scott, Dec. 1, via Panama, $801,871.

News arrived in San Francisco on the 16th ult., over the Ramsey route, in sixteen days from New Orleans.

The Mountain Echo says that the miners at Durgan Flat are making from $8 to $32 per day. One company took out thirty-two ounces in one day. Badger Hill diggings are represented as the richest in that vicinity.

A company of enterprising citizens of San Francisco have purchased a lot of ground on the western side of the city, which they intend to convert into a rural cemetery, after the plan of cemeteries attached to the eastern cities.

Stockton is represented as being very unhealthy.

The Chinese of San Francisco have donated $1,000 to Captain Love's Rangers, for their services in capturing the bandit Joaquin.

From the report of the Legislative Committee, it appears that the State debt of California is $3,137,688, and the yearly interest $231,912.

There has been some excitement at Jamestown, between the miners and citizens, the former asserting their right to dig up the streets for gold—the latter denying it.

The past fortnight has been a very important one for the miners. The rain has filled the gulches and raised the rivers, and the works of the dry season are closed. The diggings in the river beds have been abandoned, and in many cases, valuable dams, flumes, &c., have been swept away, although the rise has not been great. The miners now look back upon and count their profits and losses for the last six months. The shipments show that undiminished amounts of gold have been produced; yet many of the diggers complain that they have spent much money in canaling, machinery, &c., and have made little.

The miners are pretty well prepared for the winter, and if it be favorable, the golden harvest will be richer than ever.

New diggings have been found in a number of places, but nothing extensive.

Near Minesota, in Sierra county, the tunnels pay very well. A lead two hundred feet wide, evidently once the bed of a stream, has been found under a mountain, and 600 feet above the level of the middle Yuba, near by. In this lead are found the remains of trees, some rotten, others petrified, others changed to a mineral resembling sulphate of iron.

Several valuable quartz veins have been opened in El Dorado, and some discoveries have been made in Calaveras, which, it is thought, will raise the latter to a high position among the quartz counties.

The Grand Jury have indicted three of the city officers of San Francisco for defalcation.

OREGON.

About 1500 immigrants, with 250 wagons, took a new route to the head of Williamette Valley, got lost, and suffered severely. Several died by starvation and exhaustion; it is not known exactly how many. Within twenty-four hours after the news reached the settlements, 20,000 pounds of flour were on the way to aid them, and within eight days there were 94 packed animals, 23 loaded wagons, and 200 head of cattle sent out. All the immigrants are now safe.

The immigrants who have attempted to cross the Cascade Mountains by the new road, have suffered severely.

St. Helena is to be hereafter the terminus of the P. M. S. S. Co's steamers, instead of Portland.

In attempting to arrest an Indian who had murdered a white man near Port Townsend, a fight occurred between the settlers and the Indians, in which one of the former and several of the latter were wounded. The culprit, after some delay, was captured.

THE SANDWICH ISLANDS.

Our dates are to the 5th of November. Up to that date one hundred and twelve whalers had arrived at Honolulu, Lahina and Hilo. The port charges for whalers have been reduced.

Honolulu is said to be free from small-pox, but the disease is carrying off many of the natives in the rural portions of the Islands.

The government sale at Kanai, containing $2,000, was stolen on the 24th of October.

Hawaiian Missionaries have been dispatched to the Marquesas Islands to convert the natives.

In politics, a calm seems to have followed the storm, although the approaching election is beginning to excite attention. Free trade and annexation to the United States are warmly advocated by the Liberal party.

Arrival of the Texas.

The steamship Texas arrived at New Orleans, Dec. 26, from Vera Cruz, bringing San Francisco dates by the Ramsey route, via Mexico, to the 7th inst., being one week later than our previous advices.

The mail steamship Winfield Scott, which left San Francisco Dec. 1st for Panama, went ashore on the following day on the coast of Santa Barbara. She is a total loss. Her passengers and treasure were all saved and arrived back at San Francisco on the 6th, when they were again dispatched by the California on the 7th for Panama.

The ship Eclipse, of New York, was totally lost, on the 20th Oct., 60 miles south of San Blos.

The steamship Cortes, from San Juan, arrived at San Francisco on the 2d December.

Silver mines of extraordinary richness had been discovered near Acapulco.

Arrival of the United States.

The steamer United States arrived at New Orleans Jan. 2d, from Aspinwall, 27th ult. She was detained 13 days waiting for the Winfield Scott. She reports that the Illinois, with the mails and treasure, sailed for New York on the evening of the 26th. The Illinois had 350 passengers and $1,250,000 in gold.

☞ A singular death occurred in New York lately. A little girl was desirous to see the body of a man in a neighboring house, who had been murdered. She was allowed to do so by her parents, but fainted at the sight, was carried home in convulsions, and soon died.

☞ The average income of each person in England is twenty cents a day; in Ireland, eight; in France, fourteen; while in our most industrious States it is thirty; and taking the whole nation, seventeen.

Commercial.

BUSINESS AND FINANCE.

The financial horizon is especially favorable at the opening of the year 1854. The last shadow of the cloud, which some months since threatened a commercial revulsion, has vanished into thin air, and the most morose *bear* of Wall street, cannot set up even the ghost of a *bugbear* to frighten the timid capitalist; unless indeed, it be the Railroad difficulties at Erie, which tend to depress the stocks of roads running through that place and their connexions.—Freights and passage on the lake shore line have been interrupted for a time at least, and it is to be hoped some kind of arrangement will be effected which will remove the grievances of all parties. At all events, the Canada Great Western is nearly completed, which will soon open a new route from the West by the way of the Upper Province and Niagara Falls.

The semi-monthly shipment of gold to the Atlantic cities, from San Francisco, has been between three and four million dollars; of which amount the Nicaragua steamer Northern Light, brought to New York $1,400,910 in gold dust. The steamer Winfield Scott, which was wrecked on her recent passage down to Panama, had on board about a million of dollars in gold, all of which was saved. The Liverpool steamers at each voyage continue to carry out about half a million each to Europe, but they do not export by a large figure as much as arrives, which leaves an accumulating balance in our hands to meet the increased demands of internal trade.

The *Tribune* says the deposites of gold for coinage at the Philadelphia mint for the past year, as compared with that of 1852, is as follows:

	1852.	1853.
January	$1,161,688	$1,962,902
February	3,010,222	3,549,623
March	3,892,156	7,533,752
April	3,991,037	4,760,000
May	4,345,678	4,425,000
June	6,689,474	4,645,179
July	4,103,850	3,605,531
August	2,671,503	4,512,000
September	4,253,057	3,027,805
October	4,140,000	4,462,000
November	7,270,941	3,650,000
December	3,336,981	4,445,000
Total	$51,066,270	$53,373,552

Surplus in 1853, $2,307,276.

The semi-annual interest on a large amount of State, county, city, and railroad corporation bonds has fallen due and been paid off during the week, as also a great number of dividends on paying stocks. This sets a considerable amount of funds afloat which has been accumulating in the treasuries of the several corporations for the past six months. The Michigan Southern road lately paid a dividend of 10 per cent. making, together with a previous dividend, 17 per cent. for the year. The Michigan Central has made one dividend of 8 per cent. for the year. The winter business of all the great lines or railroads has been large. New York Central stock sells at 113¼, Erie 76, Michigan Southern ex. divided 119, Mich. Central do 100¾, etc.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, Jan. 4th, 1854.

The markets open at the commencement of the new year with considerable activity. Wheat and Flour have again gone up, and now stand at a higher figure than they have heretofore reached, the latter being quoted at $7,50@7,75 per barrel, and the former at $1,08 per bushel.

A good deal of trade has been going on in meats, especially pork, and large quantities of dressed hogs have been brought in; but the rates, compared with the price of grain are not quite so satisfactory to producers. It is quoted today at $5,25@5,50.

There are large numbers of country teams in our streets to-day, laden with the coarser products of the fields and forests, as the sudden thaw has given farmers admonition that the good sleighing of a few days past is about ended.

Rochester Wholesale Prices.

Flour and Grain.		**Fruits and Roots.**

NEW YORK MARKET—Jan. 3.

Ashes—Market quiet for old. Sales, pots $5,50, and $5,75 for pearls.

Flour—Little change in Western and State. Holders firm; inquiry good at inside figure, and this is bbl for lots to arrive. Better grades held with much firmness and in fair request. Canadian quiet at $7,75. Sales Western canal at $7,75@7,81½ common to straight State; $7,75@7,87½ mixed to fancy Michigan and common to good Ohio.

Grain—Holders of wheat have advanced for prime parcels considerably above the views of buyers. Sales 2,000 bushels at about $2,00.

Rye, unsettled and higher; sales $1,21.

Oats plenty and quiet, at 49@53c.

Barley scarce at 84@86c.

Corn in limited supply and prices better; demand fair.—Sales at 70@73c new Southern white and yellow; 77@79c old Southern mixed; 81@82c Western mixed; 80@80½c round white; 82c old round yellow.

Provisions—The market for pork is better; demand more active and rather light; sales 600 bbls. at $13,27@13,50 for old mess; $14,12½@14,75 new do; $12,25 do. prime—$11,-12½@11,25 old do; clear scarce at $15.

Dressed hogs not plenty at 6¾@7½c.

Lard more active but prices unchanged; sales 400 bbls. and tcs. at 9½@10c; 1,100 kegs at 11c, part to arrive.

Butter in limited demand at 9@12c Ohio; 15@19c State. Cheese sells at 8½@10½c.

NEW YORK CATTLE MARKET—Dec. 27.

Beef Cattle from $7@9,50, with occasional sales of extra at a higher figure.

Cows and Calves from $26 to 40@65.

Veal Calves from 5@7c per pound.

Sheep, $3 to 4@7¼; Lambs, $2,50 to 3,50@5.

ALBANY CATTLE MARKET—Dec. 26.

At W. Woolford's Hall's Head, Washington street.—Beef Cattle—200 at market. Prices are as follows:—Extra $7,-50; first quality $7; 2d do, 6,50; 3d do, $5@5,50.

Cows and Calves—None in market.

Sheep and Lambs—1,000 in market. Prices at from $3,-50@4. Extra $4,50.

Swine—900 in market. Prices $4@5 ¥ cwt.

CAMBRIDGE CATTLE MARKET.—Dec. 28.

At market 552 Cattle—about 500 Beeves, 52 Stores, consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

Prices—Market Beef.—Extra $7,50; first quality $7; 2d do, $6,25@6,50; 3d do, $6; ordinary $5@5,50.

Hides—$8,50 ¥ cwt. Tallow, $8,50@9.

Pelts $1@1,37. Calf skins 11½c ¥ lb.

Veal Calves—$5, 6@8.

Barrelling Cattle—$5@6.

Stores—Working Oxen—$70, 84, 100@144.

Cows and Calves—$28, 31, 36, 44@62.

Yearlings—$14, 15@16.

Two years old—$21, 25, 28@30.

Three years old—$20, 32, 36, 41@48.

Sheep and Lambs—2,515 at market. Prices—Extra $4,50, 5@10. By lot—$1,75, 2, 3@1,25.

Swine—273 hard fat at 6c ¥ lb, wholesale.

Remarks—The number of cattle to-day is small, but the quality is good. The sales are much better than last week at the same quotations. Sixty head of oxen, from Washington Co., N. Y., were excellent, and took highest price. The amount of stock sold while on the way to market, this week, is large.

BRIGHTON CATTLE MARKET—Dec. 22.

At market 1,425 Cattle, 250 Stores, 3,400 Sheep, and 1,000 Swine.

Prices—Beef Cattle; market dull and prices have declined. We quote extra $7@7,50; first quality $6,25@6,75; 2d do, $5,50@6; 3d do, $4@5.

Working Oxen—Sales at $75, 90, 92, 98, 90@110.

Cows and Calves—Sales at $18, 22, 25, 28, $16@37.

Stores—Two years old $11@17; three years old $20@30.

Sheep—Sales at $2, 2,63, 2,62, 2,88, 3,50@5,50.

Swine—Half; a lot of large hogs at 6c, and a lot of shoats ordinary, 5¾c. A lot of prime quality 6¾c and 6c; at retail from 6½ to 7¾c.

PHILADELPHIA CATTLE MARKET—Dec. 26.

Beef Cattle—The offerings of Beef Cattle this week comprised 1,000 head. Of this number 300 were for New York, and the balance at $7,50@9,50, according to quality.

Cows and Calves are in steady demand at $12@35 for the former. Prime milch cows are in demand.

Hogs are arriving less freely; about 3,000 head being offered. They are in fair demand at 5½@5,75 ¥ 100 pounds. The number of killed hogs offered is very limited.

Sheep and Lambs are scarce and in demand. About 1,200 head sold at $2 to 6,50 each according to quality.

Marriages.

In Broadalbin, on the 15th ult., by the Rev. Mr. Dudley, at the residence of the bride's father, Mr. JOHN P. CASEY, Merchant, of Fowlerville, N. Y., and Miss EMILY J. daughter of E. Bush, Esq.

In Lakeville, Dec. 22d, by Rev. H. G. Illey, Mr. J. N. MILLIMAN and MARY A. CASE.

Deaths.

In Hippenheim, Fulton Co., on the 31 of Dec., POLLY CHURCHILL, daughter of Nathaniel and Lydia Foster, aged 63 years.

In Alabama, N. Y., on the 28th ult., of consumption, MARY A. RHODES, aged 23 years.

THE WOOL GROWER AND STOCK REGISTER.

This is the only American Journal primarily devoted to the interest of Wool and Stock Growers, and should be in the hands of *every owner of Domestic Animals*. It is ably conducted, published in the best style, and nicely illustrated. Each number contains a careful Review of the *Wool* and *Cattle Markets*, and much other *useful* and *reliable* information which can be obtained from no other source.—The Fifth Volume commenced July, 1853. Subscriptions can begin with the July or January number.

Terms:—Fifty Cents a Year; Five Copies for $2; Eight for $3; Eleven for $4. Back volumes, bound in paper, at 40 cts. each,—unbound at 35 cts., or three for $1.—An extra copy free to every person remitting for a club of eight or more copies.

Published monthly, in octavo form. Specimen numbers sent free. Money, properly enclosed, at our risk.

Address D. D. T. MOORE, Rochester, N. Y.

INFORMATION WANTED.

Sometime about the first of June, 1853, a person calling himself Hutton, informed an individual that a man by the name of *James Clark*, of Rush, Monroe county, N. Y., was taken off the cars sick and shortly died, at the house of an Elder *Kingsley*. The name of the place and the road was forgotten so fore the intelligence reached those interested.

Any person having any knowledge of these circumstances, would do an humane act to the aged and widowed mother of the deceased, by communicating with *L. B. Langworthy, Esq.*, of Rochester, N. Y.

GENUINE COCHIN CHINA FOWLS.

I have for sale, by the pair, young Cochin China fowls, warranted genuine, and desirable for their symmetry, great size and beauty of plumage. They are of the latest, purest and best importations in the United States. The *genuine* Cochin Chinas have no superiors. Circulars, with a large illustrative engraving, sent to applicants. Lyons being on the New York Central Railroad, fowls can be forwarded by Express, daily, to all parts of the country. Address, post paid, RODNEY D. ADAMS, Lyons, N. Y.

[209-4teow-2tm]

FARM FOR SALE,

Containing 200 acres of good land, situated in the town of Barrington, within six miles of Penn Yan, and on the stage road leading from Penn Yan to Bath. This farm is in a good state of cultivation, well watered, admirably adapted to grazing or grain growing; about 150 acres of cleared land, and 50 of heavy timber. The house is mostly new, 2 good barns, good sheds and out-buildings, all sufficiently large for the farm. A large orchard of fruit trees bearing a great variety of choice fruit. It is conveniently situated to be divided into two farms, each embracing an average proportion of cleared and timbered land. Terms easy. Possession given at any time to suit the purchaser. The price is $50 per acre. For further particulars, inquire of the subscriber on the premises.

[209-3t.*] DELIA HATHAWAY.

Barrington, Yates Co., N. Y., Dec. 21, 1853.

PERUVIAN GUANO.

We are receiving our supply of Peruvian Guano, per ships Blanchard, Senator, and Gray Feather, from the Chincha Islands, and are now prepared to make contracts for the spring supply. As the demand is large, we would advise all who may be in want of this valuable manure to make early application. Price, $45 per ton of 2,000 lbs.—Be particular to observe that every bag is branded—

No. 1.
WARRANTED PERUVIAN
GUANO,
IMPORTED INTO THE UNITED STATES BY
F. RAIMEDA BROTHERS,
FOR THE PERUVIAN GOVERNMENT,
LONDETT & GRIFFING,
State Agricultural Warehouse, 25 Cliff st., N. Y.

January 2, 1854. [209-2t]

SCRIBNER'S READY RECKONER,

FOR *Ship Builders, Boat Builders, Lumber Merchants, Farmers and Mechanics*. Being a correct measurement of Scantling, Boards, Plank, Cubical Contents of Square and Round Timber, Saw logs, Wood, etc., comprised in a number of Tables; to which are added Tables of Wages by the month, Board or Rent, by the Week or Day, and Railroad Distances. Also Interest Tables, at seven per cent.

By J. M. Scribner,

Author of "Engineer's and Mechanic's Companion," Engineer's Pocket Table Book, etc., etc.

Scarcely is it possible to add to the recommendations of the above book, more than to give its title page. Every one who is engaged in buying, selling, measuring or inspecting Lumber of any kind, will at once appreciate a work of this kind. No pains or expense has been spared in revising and enlarging this edition, to make it in every respect convenient and accurate.

The Log Table was computed by drawing diagrams for each and every log, from 12 to 44 inches in diameter, and the width of each board taken, after taking off the wane edge. The sum total of each board constitutes the amount each log will give, and if there can be any dependence placed upon such strictly mathematical accuracy, no one will hesitate for a moment to abide the results here given, as the method adopted by the author can result in nothing else than strict honesty and mathematical accuracy, to the parties interested.

The best evidence of the usefulness and popularity of this book is the rapid and extensive sale of nearly one hundred thousand, since its publication. We do not hesitate to say that no book of its size and price contains more useful or correct tables.

In all new and lumber countries the book will be found very convenient, as it comprises much that is useful for the farmer, mechanic, and business man.

Orders solicited, and a liberal discount made to wholesale purchasers.

Price, 25 cts. at retail, 6 copies for one dollar, send postage paid, on receipt of the amount.

Address GEO. W. FISHER, Publisher.

Rochester, N. Y., 1854.]209-4teow]

BUFFALO AGRICULTURAL WAREHOUSE AND SEED STORE.

Hiram C. White. [1851.] Amara Mason.

HOLIDAY PRESENTS.

Starr's Premium Piano-Fortes are a first rate article for that purpose, as numbers who bought them last year will testify. I have on hand from 10 to 20 finished instruments, beside 50 to 80 others constantly in process of construction; and shall at all times be happy to supply those who [*after examination had, to do which all are invited,*] believe them to be the best in market. Every instrument will be warranted to give entire satisfaction, at 47 Main st., up-stairs.

FREDERICK STARR.

Rochester, Dec. 20, 1853. 208-3t*

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who result according to terms will be entitled to premiums, &c.

☞ Those who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ The Rural is published strictly upon the cash system—sent no longer than paid for—and all orders should be in accordance with terms.

☞ Our *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the Rural, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ In remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Mr. C. Moore, is duly authorized to act as Agent for the Rural New-Yorker in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

☞ Persons who have forwarded $15 for a club of ten, can extend the number to twenty-five for $30, but all the subscribers must begin at one date.

☞ It is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6¾ cents to any part of the United States,—except Monroe County, where it goes free.

☞ Persons entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ Additions to clubs may be made at any time, at the price per copy paid for the original club.

☞ Extra numbers of the Rural will be forwarded to all disposed to aid in augmenting its circulation.

☞ All business letters, communications, &c., should be addressed to D. D. T. Moore, Rochester, N. Y.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the Rural New-Yorker, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, in Cash, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the Rural New-Yorker—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, in Cash, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, in Cash, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, in Cash, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, in Plate or Books, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, in Plate or Books, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, in Plate or Books, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $6 in Ag'l Books,) to each person sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books or a handsomely bound volume of the Rural for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the Rural and $1,50 in Books.

5th. To every one remitting for TEN copies ($15,) an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the Rural, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

All competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

Two Dollars a Year. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to complete for Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

UNIVERSITY OF ALBANY.

Department of Chemistry.—E. S. Carr, M. D., Professor of Chemistry and its applications to Agriculture and the Useful Arts.

F. E. Hakin, Instructor in Analytical Chemistry.

This Department of the University, having been permanently established, a spacious Laboratory will be opened for the reception of Students, on Tuesday, the 10th day of January inst. There will be a Course of Instruction in Practical and Analytical Chemistry, and a Course of Lectures by Prof. Carr, on the applications of Chemistry to Agriculture and the Manufacturing Arts, continuing during a term of three months. The Laboratory will be open from 9 A. M. to 4 P. M.

The Lectures will be delivered in the evening, and will be free of charge.

For Laboratory Instruction, $20 per term, or $10 per month, for a shorter period. Students will be charged with breakage and the Chemicals they consume. Students will also have access to the State Agricultural and Geological collections.

Analysis of Soils, Ores, Mineral Waters, &c., made on reasonable terms.

Address Prof. E. S. Carr, at Albany, or either of the following gentlemen:—Luther Tucker, office Albany Dutchman; Hon. B. P. Johnson, State Agricultural Rooms; Dr. J. H. Armsby, 663 Broadway. 207-3t.

Copies sent by mail, post paid, on receipt of price.

Published by Derby & Miller, Auburn, N. Y.
Derby, Orton & Mulligan, Buffalo.

For sale by all Booksellers throughout the United States and Canadas.

Poetical.

[Written for Moore's Rural New-Yorker.]

STANZAS: LIGHTS AND SHADOWS.

BY WM. E. C. KNOWLES.

O, THE journey of life, to an hour-time of sadness,
May seem as if rugged and rough to the sight,
And the shadows of grief may encircle our gladness,
And touch all our hopes with the finger of Night;
Yet the sunlight will come, though enveloped in shadow,
And greet us again with a halo of light,
As the shade that has settled awhile on the meadow,
When gone from our view leaves the landscape more bright.

Though the friends which had spoken in praise to our faces,
When wealth held us up to the gaze of the crowd,
May pretend we are strangers, and repulse our embraces,
When poverty comes in its worn, tattered shroud;
Yet a *few* will remain, and more dear that the number
Is small, when compared with the number before;
And their friendship will brighten, though all else be sombre,
And gladden our pathway the same as of yore.

Then the eye will look up, which was cast down in sadness,
And tears will be brushed from the lashes once more;
And the lip that was silent will speak but in gladness,
And smile at the pleasure which yet is in store.
And the day-star of hope, glowing brightly ascendant,
Will raise with a glory to darken no more;
And the sunlight of joy, with effulgence resplendant,
Will shine where the shadows were lingering before.

Grand Rapids, Mich., 1853.

Rural Sketch Book.

[Written for Moore's Rural New-Yorker.]

THE YOUNG VOLUNTEER.

A TALE OF REVOLUTIONARY TIMES.

BY EDWARD WEBSTER, ESQ.

A NATION that has long enjoyed the blessings of peace, has very dim ideas of the distresses and horrors of war. The din of a far-off conflict may be wafted to their ears in a softened murmur on the passing breeze; the rumor of blood and battles in foreign lands may be presented to them in the pen-and-ink sketches of a daily newspaper at two cents a copy; and, stripped of its revolting features, men may read of war at their ease, over their evening tea or morning toast, the booming of cannon being represented by the noisy hammerings of some five years old juvenile of the masculine gender, and the groans and cries of the wounded and the dying, by the shrill pipings of the "next of kin," numbering, possibly, as many months. A brilliant campaign in my enemy's country is a capital means of furnishing candidates for *civil* offices of all grades, from the President downwards, and of fastening a long list of unearned pensioners upon the public treasury; but unless war is the result of a direful necessity, the nation which involves itself and others in such a calamity is guilty of treason before high heaven!

There are occasions, however, and those too often presented, when the temple of the two-faced demon must be unbarred, or freedom and the rights of humanity will be trodden under foot, and deeper wrongs be brought upon mankind, than Mars with all his train of attendant furies is able to inflict. At such a juncture, it is right and proper that the ploughshare should be beaten into a sword, and the pruning hook into a spear; and ploughing husbandmen and gentle shepherds should be transformed into soldiers with mailed breasts and lion hearts.—That such occasions may become less and less frequent, until the promised time when the lion shall dwell with the lamb, and the leopard shall lie down with the kid, should be the daily prayer of all men; and, in the chaste language of the Litany, in common with a deprecation of other direful curses it should be, "from battle, and murder, and from sudden death, Good Lord, deliver us!"

We look back to the scenes of the Revolution with pride and self-complacency, now that its revolting and direful features have been mellowed down by lapse of time, and its sorrows and distresses have been washed out by a long period of prosperity and joy; we recount with glowing imaginations, the deeds of daring, the actors in which have long since passed away. We kindle our own patriotism at those shrines of national erection, the high priests of which live only in history and song. We find men of peaceful habits transformed into heroes, and obscure individuals suddenly raised up to fill high niches in the temple of Fame. Many of these men are identified with the whole period of the revolutionary struggle, and others with a single action or a single incident connected therewith, the repelling of a single inroad, or the overthrow of a single invading force. Among the latter may be reckoned the hero of our story.

DANIEL ASHLEY, the person referred to above, was the son of a widow, living in the then obscure and almost frontier town of CLAREMONT, New Hampshire. His father had been dead some years, and at the time of his decease, he left his pecuniary affairs, which had become sadly involved by unfortunate speculations, in irretrievable confusion, and his wife a widow, with three small children, of which DANIEL was the oldest. The grandfather of young ASHLEY was living in the family at the time of the father's decease; an old man in years, but with a vigorous constitution and an undimmed intellect. He was joined with the widow in the administration of his son's estate, and, by dint of the shrewdest and most prudent management, contrived to reserve to the heart-stricken family, out of the general wreck of their fortunes, a small rocky farm, lying on the outskirts of the village. The widow was one of the best and most prudent of women, and the old gentleman continued to reside with her, and till, as far as it was possible for him to do so, the place of a father to the orphan children.

DANIEL grew up up to man's estate (that is to say, to the size of a man, although as yet young in years) very intelligent, sober and industrious, but very quiet and bashful withal.—He was brave and generous, and endued with all the noble traits of human nature, and would at any moment have risked his life unflinchingly in the cause of humanity; but he would quail before the glance of a woman's eye, as if he had stumbled unwittingly upon a masked battery of cannon. In common with all other young men, he was susceptible to the charms of female society; but he always drew back in their presence, leaving the field uncontested to his young associates with less brains than himself, less mental accomplishments, less personal attractions, but more assurance and self-possession. If he had been blessed with the gentle influences of an elder sister or two to lead him on, these faults—if faults they were—would have been overcome; but unfortunately for him, the other children were both boys, and both his juniors several years. His mother and his brothers loved him, for he was dutiful and affectionate; the village schoolmaster esteemed him highly, for he was an apt scholar; the neighbors all respected him, for he was sober and upright; the young men of his acquaintance thought well of him, for he was considerate and generous; and the young maidens liked him notwithstanding his bashfulness, for he never did or said anything indelicate—albeit they would have liked him better if he had not been quite so shy.

There was a little, merry, blue-eyed girl, just two years his junior, named JANE HART, who had been his school companion through all his early years. Her parents lived near neighbors to his own family, and having no brothers, she was always entrusted to his care. He would go before to make paths for her in the deep snow, carry her on his sturdy young shoulders across a swollen brook, and in fact, watch over her on all occasions as the apple of his eye; and "JENNY," as he called her, fully reciprocated his kind regards. On more than one occasion of truancy and misdemeanor in school, had her tears and pleadings shielded him from punishment; and he had in turn often done battle in her behalf like a true knight.

No wonder, then, that the two grew up to love each other; but as the young man came to analyze his feelings, and view them in their true light, he became bashful and reserved, and lost all courage to confess the soft impeachment. His manner became constrained, almost cold in her presence, and, as opportunity to manifest his preferences succeeded opportunity without avail, it is not strange that JENNY began at last to doubt him, painful as the conviction was to her. She tried all means maidenly modesty would permit to draw him out, but in vain; and, piqued as well as wounded at his seeming indifference, she at length commenced treating him in turn with a coldness as uncongenial to her own nature as it was painful to both; and she on several occasions gave utterance to a sarcasm that wounded him to the very soul. Her kindly nature always revolted at it, for she was one of the gentlest of her sex, and mourned over it afterwards most bitterly in secret; but she half suspected he loved her, and on those occasions strove to banish his shyness by exciting his anger and half driving him to desperation. But it was to no purpose, the explanation could not be made, and the unfortunate misunderstanding widened the breach between them daily.

Young ASHLEY worked assiduously on his mother's little farm, in order to aid in supporting the family, for his grandfather at this time had become stricken in years. He dressed in homespun, like all other farmer's sons of that early day, although he had a better, or rather a more ornamental suit, which he wore upon important occasions, to wit, upon militia trainings and muster days. These were great days among our colonial ancestors, who looked upon the militia as the main pillar of the State; and young ASHLEY held an important position in the town troops, no less so than that of captain. He was indebted for his rank, elevated as it was for one so young, partly to the fact that he had joined the corps as a volunteer, several years before his enrollment had been required by law; had having been elected from the ranks to the lowest grade in the scale of non-commissioned officers simply, because it was difficult to find one willing to perform its drudgery, he had risen gradually to the rank he now held, by the successive resignations and exemptions from military duty of his seniors in office. He owed his promotion partly to this, we say; but it was partly owing, also, to the prestige of his father's and grandfather's names, for they had been *captains* before him.

The grandfather of the young captain had been a soldier in the old French and Indian wars, and had mingled freely in the bloody scenes and horrors of that period. The fire of his youth had not even yet burned out, and he loved to excite a military spirit in the young men of the town, under the plea which proved too prophetically true, that they would yet be needed in the service of their country. A systematic course of oppression had long been relentlessly pursued by the mother country, and restlessly endured by the sturdy colonists.—Clouds which threatened a coming storm, lowered portentiously and darkly above the eastern horizon, and blood had already flowed in the streets of Boston, where five citizens were shot down in a melee by British troops, which had been quartered there to overcome the free spirit of the people. But when, five years thereafter, a company of provincial militia, training upon Lexington common, were fired upon by British troops and several of their members killed, the whole country rose up in arms; and the battles of Concord and Bunker Hill, which immediately succeeded, put an end to all further hope of reconciliation. Patriots, young and old flocked to the standard of their country, and the whole thirteen colonies stood up in open rebellion against their king.

Captain ASHLEY was strongly inclined to join the army, as many of his own company had done, but the tears of his mother, and the necessities of his young brothers restrained him. It was a sore struggle in his heart, however, and nothing but filial duty of the most exalted character prevented the inclination from becoming overmastering. He heard of the battles on Bunker Hill and other fields of his country's glory, and he sighed to join his struggling countrymen in active service; and more when JENNY HART laughingly called him a fair weather soldier, he leaped from his chair and seized an old fire-lock, which was suspended over the mantel, with such desperate energy that, in order to restrain him from starting forthwith, she was fain to ask his forgiveness in tears at her injustice. She pictured to him the higher duty he owed his deceased father's family in such glowing terms, that he was fairly persuaded to relinquish his determination. The only thing, therefore, which was left for him to do, was to enroll himself among the minute-men, and be in constant readiness to repel at a moment's warning, an invading army from his own door. And such a juncture arose full soon.

The whole country had been in arms two years, and both of the contending parties were preparing to make the third a decisive and vigorous campaign. The enemy had negotiated with a petty German prince to furnish *per capite* an army of his own subjects, to be paid for, like cattle for the shambles, at so much a head, in the event of their being killed or of never returning to their own country. The Indians had been bribed to unbury the hatchet in behalf of Great Britain and against the rebellious Colonists, and every possible effort was made in advance to crush out the spirit of resistance by the termination of the ensuing campaign. A vast army of British troops and mercenaries had been concentrating on the Canada frontier preparatory to a descent upon New York and the New England States, with the design of descending the Hudson by the way of Lake Champlain, conquering all the adjacent country, establishing a chain of military posts that would cut off New England from the rest of the Colonies, and then conquering them in turn. Treason was set to work in the American army for the purpose of lending to the enemy efficient aid, and, like the viper in the bosom of the countryman, of stinging colonial liberty to death. The campaign was admirably planned, but for the schemers lamentably and disastrously executed, resulting in their defeat and disgrace, and eventually in at least one unfortunate and ignominious death—namely, the death of Major ANDRE upon the scaffold.

The cloud that had been gathering upon the Northern frontier came down at length in blood and fire. General BURGOYNE, with an army confident of an easy victory, moved forward, capturing the strong forts upon the borders of Lake Champlain, and penetrating deeper and deeper into the rebellious provinces. The blood of murdered innocence flowed under the Indian hatchet, and cried for vengeance from the ground. Gradually the lines of circumvallation, drawn by an indignant and outraged people, approached closer and closer around the doomed army of BURGOYNE; his supplies were cut off, his scouting parties driven in with loss, and defeat and starvation began to stare him in the face. In this juncture of affairs he dispatched Col. BAUM at the head of a German mercenary force, with instructions to scour the State of Vermont for forage and supplies, and to drive into camp all the horses and neat cattle he might find scattered among the green hills. The march of the marauders, accompanied as they were by a strong body of Indian allies, threw the whole country into a state of the most intense alarm. Couriers were dispatched in all directions to call out the militia. The force of minute men were summoned peremptorily to the field, and hillside and valley resounded on all sides with the din of arms.

It was about the 10th of August, 1777, that Col. BAUM commenced his march; and at the first call made by Gen. STARKE for succor from his countrymen, Capt. ASHLEY mustered the few remaining members of his corps and prepared to take the field with them in person. The harvest was at the time ripe for the sickle, and the grass, so necessary for the winter supply of hay in that cold climate, was in the field, much of it as yet uncut; but he thought not of that. The necessities of the country for the services of her children were paramount, and he hastened to obey. The morning the little band of patriots were to start, they had assembled on the village green in order to receive the benediction of their pastor and the farewell of their friends, and were about to take up the line of march, when old grandfather ASHLEY, his head as white as snow, was seen approaching the company with the stately, measured tread of a soldier. He had upon his shoulder a king's arms musket, which had seen service in the old French war, and a huge cartouch box and canteen strapped upon his back.

"DANIEL," he said, approaching and addressing the captain, "You must surrender the command to your first lieutenant and go home. I will take a place, as your substitute, in the ranks."

"No! grandfather," responded the young soldier, "it cannot be! It would disgrace me eternally to do that, and the whole world would call me a coward and a traitor ever after! Go back to my mother and tell her for me, if I fall in the coming fight, that it was not as an undutiful son that I went forth to battle!"

"No man is a coward but he who fears to do his duty," replied the old man; "yours is to go home and look to your mother and young brothers and leave me to fight in your stead. I can hold a steady gun, and my eye is not yet dim, and if I do not make as good a soldier as you, with all my experience in battle, I will withdraw from the field disgraced ever after."

"But," persisted the young man, "suppose we are defeated; you would not be able to escape, you are too old to run."

"He is a poor soldier who goes to battle in a righteous cause and thinks to run," the grandfather answered. "You would not do it in your hot-blooded youth, and I certainly would not in my cool old age. If it is the will of Providence that one of us be killed, certainly it is far better that the lot should fall on me. My race is well nigh run in any event, and a year or two ran make but little difference either way, if one is prepared. You will have many years left to serve your country and your race."

In vain the young man argued, for the grandsire's determination was immovable, and he turned at length to his companions in arms for an expression of their opinion in his favor; but the arguments of the old man had been so forcible, that to the surprise and mortification of the young captain, they unanimously took sides against him. They were all acquainted with the widow's circumstances, and the necessity of her son's presence for her comfort and support, and they felt, too, that the country would not be the loser by the exchange of any soldier in the service for the cool old veteran who offered himself as a substitute. The clergyman was called upon to settle the matter in dispute between them, and both parties pledged themselves to abide by his decision. He reviewed with all candor the arguments advanced on both sides, and decided in favor of the veteran.

Tears of mortification and disappointment stole down the manly cheeks of the young captain, as he unbuckled the sword from his side and surrendered it into the hands of his junior in office, and then, after watching the retiring column until it filed out of sight around the base of the western hill, he turned his face homeward with a heavy heart. His mother, who was well aware of the old man's intentions, although they had been kept secret from the son, was overjoyed at his return, and strove in vain to cheer him up under the bitter disappointment. He felt it as a kind of personal reproach, and he could not banish from his mind the idea that his return would be regarded as an act of cowardice on his part. The dim phantom of JENNY HART'S contempt floated across his imagination, and the recollection that she had once called him a fair weather soldier, nettled him grievously; for he could not but confess in his secret heart that her good opinion was most to be desired by him on earth.

After the humble supper had been dispatched that evening, the mother, with a view of diverting his mind from the gloomy train of thought in which he was indulging, talked to him in a cheerful strain of the busy work that was to ensue; the small field of spring wheat must be harvested; the early oats must be cut, and the meadow hay-field mown. His thoughts however, were far away from the quiet pursuits of husbandry, and his ears were filled with the imaginary din of arms. "What," said he, "if grandfather should be killed while I am at work in the hay-field!" "My God!" he added, springing to his feet as the possibility of such an event presented itself to his imagination, "the whole world would vote me a poltroon forever after. It is too bad—too bad!" and he sat down again in the corner of the ample hearth and refused all consolation. Finding every effort to reason with him vain, while the disappointment was so fresh upon his mind, his mother quietly withdrew and went over to one of the neighbors not far off, to talk over the painful events of the day, and also to attend some brief religious exercises which had been appointed for the purpose of invoking the intervention of heaven in behalf of their sons and brothers, who had been called into the field.

As it happened by chance during this absence, JENNY HART, whose thoughts were running upon the dangers to which the young soldier was exposed—for from some cause she had not heard of the substitution, and supposed her secretly cherished lover was at that moment far away, upon the march to battle—stole over to the widow's in the hope of gleaning some consolation in her own behalf, and of hearing of some parting expression of good will towards herself from him. Judge then of her surprise as she entered, to see the young man sitting listlessly by his own fireside. Her first impulse was one of joy at his presence, but her exclamation, mingled as her satisfaction was with surprise and doubt, was of a nature too complicated to be analyzed by him.

"I thought," she said, without returning his unready salute, "that you was far away, with the rest of the young men, in the service of our country." "I intended to go," he answered bitterly, "but have been overruled. Mother, and grandfather, and the parson, took counsel together, and came to the conclusion that the hay must be cut, and that the harvest must be secured, which is white for the sickle; and I have therefore been compelled to stay at home and do it. The old man has gone in my place."

The warm blood flashed over JENNY'S cheek like lightning over a summer cloud, as the identical idea he most dreaded, flitted through her mind; and without pausing a moment for reflection, she responded with energy:—"For shame! The harvest *is* white for the sickle, and must be cut indeed; *and you are willing it should be done!* but the harvest is your grandfather's gray hairs, and Death is the reaper!" The youth leaped from his chair as if stung by a serpent, crying—"Great God, this is too much!" and then turning towards the girl with flashing eyes and in a tempest of intensest passion, he added fiercely:—"JANE HART! you wrong me! you wrong me cruelly! You have once before this reproached me with cowardice, and now you charge me with a baseness in addition, that ought to bring blushes to the face of the Infernal Fiend! I have loved you in secret, as I have loved my own soul; but I will tear away your image now, although up to this moment it has been my heart's most sacred idol! I would trample it under foot, even if I trampled with it my hope of heaven! Farewell! Tell my mother she will next hear of me on the field of battle, and if I fall like the coward and poltroon you think me, may the carrion crows batten on my carcass!"

He seized his hat and was rushing for the door when she caught him by the arm, crying: "Oh pardon! pardon, as you hope for mercy! DANIEL—dear DANIEL! if you leave me in this way I shall be haunted by remorse forever! I have wounded you in a thoughtless moment, and on my knees will I make atonement!"

She strove to detain him, but he shook her off in the fierceness of his passion, and rushed from the house, leaving her fainting.

Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS NO. 4.

☞ Answer in two weeks.

WE will forward the RURAL three months, free of charge, to *each* of the first *four* persons (residing out of the city) who send correct answers to the above Rebus previous to the publication of the solution.

MATHEMATICAL PROBLEM.

In weighing specimens of Quartz bearing Gold, it has been found convenient to use a balance made of ivory, 12 inches long, round, and of the same diameter throughout the length and weighing one pound Troy, and a small pin in the centre of each end for fastening the article suspended by a fine silken thread; it is also divided into parts to the 1/6 of an inch from one end. I found that a specimen balanced 3¼ inches from the fulcrum, in water, and 3 inches from fulcrum out of water. What was the weight of the specimen.—Gold contained within,—and value of the Gold at $18 per Oz., calling the sp. gravity of Gold 19, and quartz 3½?

CHAS. O. LOOMIS.

☞ Answer next week.

QUESTION.—Place four figure threes so as to make thirty four.

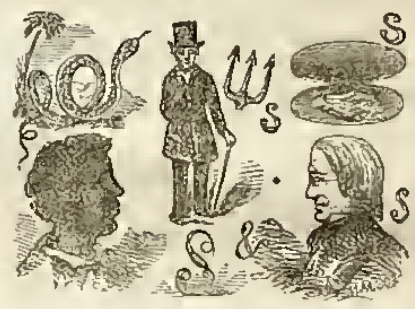
ANSWER TO REBUS, &C., IN NO. 51.



Answer to Illustrated Rebus No. 2.—*Adamantines, Soft Shells, Woolly Heads, and Silver Grays.*

Answer to Miscellaneous Enigma.—*Junius Mercantile Association.*

Answer to Problem.—234.

Wit and Humor.

I MUST LIVE.—A man whom Dr. Johnson reproved for following a useless and demoralizing business, said in excuse, "You know, Doctor that I must live." To this the brave old hater of everything mean and hateful, coolly replied that "he did not see the absolute necessity of that."

CANDID ADVERTISEMENT.—In the New Zealander, of May 19, we find the following card: "*Boot and Shoe Warehouse.* Just opened, a splendid variety of ladies', gents, and children's boots and shoes, the very best ever imported; also *some of the very worst.*"

MEN are made in the image of God. Gentlemen are manufactured by tailors, barbers and boot makers! Woman was the last and most perfect work of God. Ladies are the production of silk-worms, milliners and dress-makers.

To undertake to reason a girl out of love is as absurd as it would be to attempt to extinguish Vesuvius with a two ounce syringe. The only thing that will break a love fit is hard work and boiled pork.

NAOMI, the daughter of Enoch, was five hundred and eighty years old, when she was married. Courage, ladies!

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

NON-SUBSCRIBERS into whose hands this number of the RURAL may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

Progress and Improvement.

CLEANLINESS AND COMFORT OF HORSES.

Last week we said there was no country in the world where so many horses were kept, in proportion to the population, as in America.—We may add that in no other country is the horse worse used than here; in none does he work harder, fare harder, and receive less attention. This is owing, perhaps, to the fact that in Europe the labor of one horse is equal to that of two men, while here we pay as much per day for a man as for a span of horses.—Let any one visit the French or English stables, and he will be satisfied, by contrasting their system with our own practices, that we are lamentably careless, and culpably negligent of the health of our horses. How often have we seen a span of horses brought in from a hard day's work, swathed in sweat, turned into a cold stable, fed, and left to dry, as best they could, without any other attention than to strip the harness off them, and throw it over the stall. How often, too, do we see a span of horses driven John-like into the city, and then hitched with their feet in ice-cold water, to a post—from whence, after shivering a few hours, they are driven as unmercifully home again, to receive the cold comfort of lying down to rest, (?) covered with clotted perspiration, which, perhaps, is carried off them next morning, prior to another day's work, as severe and as inhuman as the preceding. Our horses are short lived, and no wonder. The only thing that surprises us is, that they live half so long, and do half the work that they are compelled to perform.

That warmth, to a certain extent, is equivalent to food, we have iterated and reiterated a hundred times. That comfort and cleanliness are essential to health and long life, is a truth equally worthy of being sounded in trumpet tones, in every farmer's ear. Look at that, English hunter, so active, handsome, healthy and sleek. After a hard gallop, he is brought home to a warm stable, his feet and legs washed in warm water, his ears rubbed till they are warm and dry, and then the groom rubs the legs and body till the horse is dry all over, and his coat shines so that you can see your face in it. So necessary is it considered in England that the horse should be rubbed dry, that a practice has been adopted, and now prevails very extensively, of *clipping* the horses, that is to say, the hair is cut off as close as possible with a pair of shears, and then, with an instrument, somewhat similar in shape to a curry-comb, containing some burning fluid, generally naptha, or spirits of turpentine, *the hair is burned off completely*, leaving the body as smooth and as destitute of hair as a newly shaven chin. The rapidity with which the practice has extended proves its practical value. We know many old farmers who were, at first, so strongly opposed to the practice, that they laughed at the *bare idea of the subject*; and yet these very men, having been induced to try it, declared that their horses could stand as much again work, as with their coats on, and that they would not let their horses remain unclipt in winter on any consideration. Stage coach and carriage horses, hunters and farmers' hacks, are now very generally clipt, saving an immense amount of labor in grooming. We notice that Mecm has recently proposed to clip his farm horses, and to attach a blanket to each harness, in such a manner that it can be easily thrown over the horse, in case he has to stand for a few minutes.

We mention this clipping operation, not that we wish it adopted here, but to show how important it is considered to have horses kept clean, free from sweat, with the pores of the skin in healthy action, &c. We would advise not to singe off the hair, but to keep the horses in a comfortably warm stable, blanket them, if necessary, and the hair will be short and smooth. If you have been to the city, do not drive home at the rate of ten miles an hour; there is no necessity for it. Though ours is a fast age, and this a pre-eminently fast country, yet six miles an hour is fast enough for any farm horses to travel. If driven home at this rate, the horses will be dry, and if a blanket be thrown over them, they will need little or no grooming. We need hardly say that to insure the cleanliness and comfort of horses, or other animals, it is necessary to have clean food, clean racks, clean mangers, clean litter, clean blankets and harness, &c. Show us a man who has a good team well taken care of, a good, substantial harness, kept well mended and oiled, and in perfect order, and we will show you a good and thrifty farmer, who keeps things snug and saves money.

REVIEW OF CROPS IN GREAT BRITAIN;

FOOD — PROSPECTS ABROAD — SUSTAINING HIGH PRICES IN HOME GRAIN MARKETS.

Few seasons have been more unfavorable for rearing and maturing the cereal crops in Great Britain, than the year which has just come to a close. The wetness of the soil, by the almost incessant rains, during the preceding fall prevented the usual breadth of winter wheat from being sown, and what was sown was generally put in, in bad condition. The continuation of snow and storms in many parts of both England and Scotland, to a late period in spring, again prostrated the hopes of husbandmen. Spring wheat was therefore sown in small parcels, and that in bad condition. The wetness of the season throughout, thereby inducing a low range of summer temperature, materially affected crops on heavy clays, particularly when undrained, and seriously affected the productiveness of the wheat crops generally. Taking Great Britain as a whole, it is very generally conceded that the aggregate produce of wheat will be one fourth short of a full average. From authentic sources, both public and private, it appears that the wheat crop in Scotland is greatly superior to that of England, and that is unusual, the crops in the former country have ripened at least ten days earlier than those of the latter. This advance of the ripening process in Scotland, notwithstanding its northern position, and also the superiority of productiveness over England, notwithstanding the disparity of climate and soil between the one nation and the other, speak volumes in favor of Scottish husbandry and Scottish husbandmen—

"When, in spite of nature, crops have been taught to rise,
Which to those northern climes wise Heaven denies."

Thorough draining and an improved system of agriculture, have not only improved the condition of the soil, but materially affected for the better, the temperature of the country. Within the last twenty years the seasons have been completely changed. The stern severity of winter has been removed and a more uniform temperature prevails throughout the year.

Previous to the introduction of Scientific Agriculture into Scotland, had such a succession of snows and rains deluged the earth as have befallen the British Islands during the past year, the season would have been chronicled amongst the "HARD YEARS" and "YEARS OF FAMINE," and there would have been a "cleanness of teeth throughout all their borders."—Thus we see, that although science cannot altogether prevent the calamities of unpropitious seasons, it can greatly restrain and modify them.

The fluctuations in the price of grain in England, the rise and fall in the American markets, both consequent on information, often false, received from the seat of war in the East, have led many to suppose that the high range of prices can only be sustained by the prolongation of war between the belligerent powers. It is amusing to see what effect the telegraphic dispatches received from abroad have had on our markets at home. The Russians are advancing; up go our markets. Anon they recede, war is improbable, the English market is reported dull, and down goes wheat a quarter dollar! Again, the hostile powers are making active preparations—war is inevitable—there is a great demand for wheat, and prices are advanced *one shilling* per bushel, above yesterday's quotations! Thus prices have been see-sawing in our American markets in consequence of two despotic, semi-barbaric powers being at loggerheads, although the seat of war is distant from us many thousands of miles. The Russian war, we have no hesitation in saying, has been used as a catch by artful corn-speculators, both in this and in other lands, towards their own aggrandizement.

That there is a scarcity of grain throughout the British Islands, we have already shown, and that there is a short supply generally in Europe is not to be gainsayed. The harvest in France has been so deficient that the French have become importers of grain to a great extent. In many other States and Nations of Continental Europe there is hardly a sufficiency to meet the demand until the coming harvest. The Indians have already had bread-riots, and what the end may be it is impossible to divine.

That a great deal of the excitement which has arisen regarding the high range of provisions in England, has been produced by the probabilities of an eastern war, cannot for a moment be questioned; at the same time these extravagant apprehensions are more ideal than real, as will be seen from the following facts and figures:

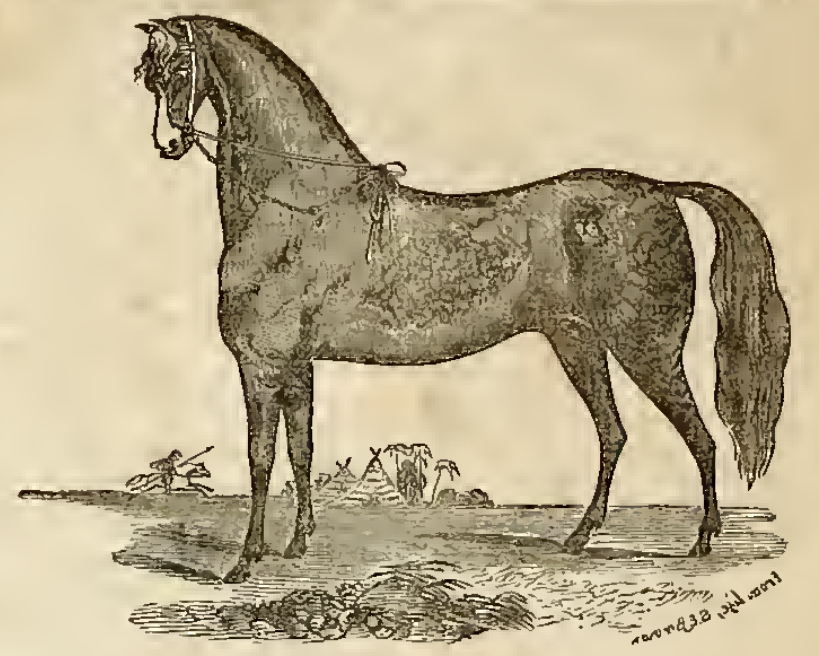
"Had we much greater apprehensions of actual war, (says an English journalist,) than we have, we should have none of our obtaining supplies of grain from those parts of Russia, and from those countries bordering upon it, whose produce is usually shipped from the Black Sea, by one means or another. The best Polish Odessa wheat, which is shipped from the Black Sea, is removed many hundreds of miles from the place of growth to that place of shipment. Let a journey of the same length be taken in another direction, and it will find its way through entirely different channels to the English market, as long as it is the most profitable and most certain."

"In 1846 out of an entire import of wheat and flour of 2,341,000 qrs., America, including Canada, supplied 1,150,000 qrs.; and in 1847, out of an entire import of 4,464,000 qrs. the same countries furnished 2,233,000 qrs., or both years as nearly as possible one-half of the entire quantity, while Russia furnished less than 20 per cent. And what the United States and Canada will be able to furnish at the present high price with the extended cultivation, but above all with the remarkably increased facilities for transportation, no one can pretend to predict."

Thus we see, even although war should cease, that the eyes of Great Britain are directed America-wards for the extra supplies of breadstuffs. They will require large supplies from us, not only to meet the exigencies of the present year, but also the demand of the next, as all in anyway acquainted with the British markets know that the effects of one year's failure are not removed for two or three years to come. American wheat, we have no hesitation in saying, will command, during the current year, a higher range of prices, and in the year to come (even allowing British crops to be more than an average) prices that will amply remunerate American skill and enterprise. Ever since 1846 the English are habitually and every year importers of no less than 32,000,000 bushels of breadstuffs, one moiety of which is derived from our shore. John Bull must be content, therefore, that the Americans and not the Russians, "rule the roost."

N. Davidson Redpath.

Yesterday, (17th December,) having occasion to cut some maple poles, I found that the sap ran as freely as any time last spring. The fact may be worthy of record.—r.



ARABIAN HORSE "TARTAR."

In 1842, a pure blood Arabian horse was presented by the Sultan of Muscat to Davis Pingree, Esq. of Salem, Mass, as a mark of distinction and particular regard. He is said to have been selected as one of the best from a stud of one hundred horses. *Imaum*, the horse here alluded to, was the sire of "Tartar," of which our engraving is an excellent likeness. He was bred by Asa Pingree, Topsfield, Mass, and is now owned by J. S. Leavitt, Salem, Mass. He will be eight years old the coming spring. The beauty of the horse is considerably diminished in our view, by the unnatural and cruel manner in which his head, beautiful as it must be allowed to be, is curbed in. His back, too, viewed from above, is rather too low, and is longer than accords with our idea of strength and symmetry. For speed, however, this will not be an objection. The best points which the engraving displays are the *head*, (which we consider superlatively beautiful,) the well arched and exquisitely set on neck, the large, well developed, muscular quarters, and strong flat legs, short from the knee to the fetlock joint.

We need not say that such horses as *Imaum* and *Tartar* are a great acquisition to the stock breeders of this country. The Arabian horses are known to be the swiftest, hardiest and gentlest in the world, and though recent information indicates that a superior Arab mare has never been sold out of the country, yet such as have been imported into Europe, have stamped indelibly their valuable characteristics on the breeds crossed with them. The modern English racer owes some of his best qualities to Arabian blood. According to Mr. Layard, there are five distinct breeds of Arabian horses, which are said to descend from the five favorite mares of Manomet. The pedigrees of their horses are kept with the most scrupulous accuracy. The mares are considered most valuable. A Bedouin parts with everything rather than sell his mare. They frequently fetch as much as $5,000. Their average height is from 14 to 14½ hands high, seldom reaching fifteen. They are never placed under shelter during the intense heat of an Arabian summer, nor protected from the biting cold of the desert winds in the winter. The saddle is rarely taken from their backs, nor are they ever cleaned or groomed. Thus, apparently neglected, they are but skin and bones, and one is surprised at seeing an animal he would scarcely ride home, valued almost beyond price. Although docile as a lamb, and requiring no other guide than the halter, when the Arab mare hears the war cry of her tribe, and sees the quivering spear of her rider, her eyes glitter with fire, her blood-red nostrils open wide, her neck is nobly arched, and her mane and tail are stretched out to the wind.—The Bedouin proverb says that a high-bred mare when at full speed, should hide her rider between her neck and tail.

They are so particular about pedigrees, that when a horse falls into the hands of an Arab, his first thought is how to ascertain its descent. If the owner be dismounted in battle, or if he, even be about to receive his death blow from his enemy, he will frequently exclaim, "Fellan (such a one,) the mare that fate has given you is of noble blood." He then describes her breed, and tells who owned and rode her dam. After a battle or foray, the tribes who have taken horses from the enemy, will send an envoy to ask their breed, and the person so chosen, passes from tent to tent unharmed, hearing from each man, as he eats his bread, the descent and qualities of the horse he may have lost. We may learn a lesson from the uncivilized Arab in regard to purity of blood, which we, with all our boasted knowledge and improvements, are apt to forget.

SUPERPHOSPHATE OF LIME ON TOBACCO.

In our essay on superphosphate of lime in the Transactions of the N. Y. State Ag. Society, we stated that, judging from its effects on turnips, it was *probable* that superphosphate of lime, *applied in the hill*, would be found an excellent manure for tobacco. To test the matter, our friend R. Lindley, Esq., of New York, made the following experiment on his farm in New Haven Co., Conn.:—"Soil, a sandy loam, in good condition but not rich; has been tilled eight inches deep, and had one crop of tobacco and two grain crops taken off in three years. For tobacco we make a deep furrow and fill it with well rotted manure, cover it with soil and set the plants just below the surface. We pursued this plan with sections in the field the present season, and between the sections made small hills and put in about a large table-spoonfull of superphosphate, covering it from one to two inches deep, and set the plants above it.—In other cases, we set the plant without any other preparation, except having the ground well plowed and harrowed, and after the plants had been set two days, we placed around them the same amount of superphosphate as had been placed in the hills. The first of the season the plants on the barn-yard manure grew best, but were not quite so good color; but as soon as the hot weather came on, the plants *on* the superphosphate took the lead and kept it through the season; the leaves were thicker, larger and more pliable, and their greater luxuriousness over the other portions of the field could be seen at a great distance; in fact we thought the crop worth full 15 per cent. more than where the barn-yard manure was used. The top dressing of superphosphate did little or no good, probably because it was so near the surface that it became dry. We are now pulling the tobacco, and the color and general appearance since it was cured is fully maintained in favor of superphosphate."

Prof. Norton has well said that the laboratory alone is pretty sure to go wrong, when it attempts to prescribe rules for practice. The chemist must go into the field and study actual experience, if he would serve the farm effectually. Those who theorize only, rarely become wise or reliable teachers in any department of knowledge.

Communications.

WILL IT PAY TO TAKE THE RURAL?

Messrs. Eds.:—To convince many, that an affirmative answer to the heading of this epistle is correct, is very important, at least I find it so, in canvassing for subscribers. I will relate one circumstance from among the many. Called on farmer N— (one of our big farmers,) solicited his name for the Rural: he objects, says it don't pay, he took the Genesee Farmer a year to no profit. Why, said he, I had rather have a lecture from Farmer S——than all your agricultural papers and Comstock to boot. (About this time the professor was pocketing the hard-earned dollars from the yeomanry of this section of country, in view of which he revealed to them his wonderful secret.) In reply, I told him Farmer S——took two or three agricultural papers, among them the Rural, and that was what made his instructions so profitable.

I will now tell you how I have made taking the Rural pay. The first year I took it I wanted to lay down a quantity of eggs for winter use. I found in it a recipe composed of quick lime, salt and cream of tartar; said recipe was kept by some as a secret in order to sell it, (not as a humbug, but on account of its merits,) and and did sell it as high as $5 per recipe. I tried the method, and found the eggs the next spring fully equal to new laid ones: and the advanced price on what I sold in the winter paid for the Rural. The next year, Terra-culture was a very interesting topic among the farmers in this locality—made the more so, by the puffing of certain Editors, for the sake of the fee. I was somewhat inclined to go in for a share of the humbug, but its exposure (in time,) in the Rural prevented it, thereby saving, in time and money, more than another year's subscription. This year—(the third,) I wanted to paint my dwelling house; cheapness, durability and appearance being desirable. I noticed in the paper a recipe for cheap paint, composed of hydraulic cement two parts, and white lead one part, ground together in oil through a paint mill. I have tried it, and it proves an excellent paint, being as cheap or cheaper than the so-called mineral paint, and, I think, much better; it adheres firmly to the wood, forms a hard surface, and as to its durability, I have not the least doubt; the color is a cream or light drab, and I think it will not fade. Here I find a saving of some fifty per cent. which would pay for more than one year's subscription. So much for the profits arising from small items. The profits arising from the more important instructions on Agriculture, Horticulture, Gardening, &c., &c., it would be a difficult matter to figure up.—Aside from this it is worth its cost for family reading.

I think I have demonstrated *that it pays to take the* Rural. The next thing is to make the many non-subscribers believe it, for, with some, the only motive is the *pocket*. One way, and perhaps the best, is to exhibit the paper; for it carries along with it, its own recommendation, and if any are lost, friend Moore will replace them. S. Eaton.

Lysander, Onondaga Co., N. Y.

STRAY NOTES.—BY S. W.

Analysis of Soils.—An astute, practical farmer writes from Oneida county, thus:—"Greeley went a thousand miles to deliver an Agricultural address. How I envy him his enthusiasm! He tells farmers to 'analyze the soil.' Now, I have seen four or five sorts of soil in one field; and any practical farmer, not a mere animal, would manage such a field without analysis better, perhaps, than Greeley would with it." It is the misfortune of some of our best farmers to mistake all the theory and empiricism of the schools for the true results of scientific discovery; and it must be conceded that the great errors promulgated at times, even by men the most learned in organic chemistry, have done much to shake the faith of farmers in such impracticable theories. Again, the most correct theory gained by experiment in the laboratory, when attempted on a large scale in nature's laboratory, the farm, may fail entirely; because here, time is required to effect those chemical changes, by the aid of the elements, light, air and water, which the chemist quickly effects with his re-agents in his laboratory. Methinks the best single service chemistry has done for farmers, is in showing them how to save that part of their animal manures which is at once the most valuable, as it is the most volatile and certain to be lost, if not saved by those chemical combinations which science has shown to be within the reach of every farmer. It must be admitted that the analysis of a soil, surface or subsoil, so liable to vary in its constituents in so many places in the same field, is rather a bootless experiment to benefit the farmer. Every farmer knows by the water from his well or spring, whether his soil is deficient in the carbonate of lime: by application of wood ashes he may learn its deficiency in potash; further than this, the practical management of his farm, by judicious drainage, with rotation of crops, green clover and plaster, and the best application of his azotized animal manures, will soon give him, under close observation, a practical insight into the capabilities and deficiencies of every lot on his farm. That masterly R. L farmer, Adam Anthony, said that Professor Jackson had analyzed the soil of his farm, but that he got no new idea from it; he had already anticipated the deficiencies in his soil, and had applied the very amendments suggested by the chemist. When science is thus confirmed and endorsed by practice, methinks farmers should at least give up a part of their prejudices.

Farmers' Clubs.—The editors of the *Ohio Cultivator* not only recommend the forming of Farmers' Clubs, but they "suit the action to the word," and give material aid in the premises. They offer to give a complete set, nine volumes, of the *Ohio Cultivator*, from its beginning, to any farmers' club of twenty or more individuals, one half of whom are regular subscribers to that paper, on condition that the club itself has twenty dollars book capital of its own. This is, as the French say, *comme il faut*, another good original example from the great, all-progressive State of Ohio. No one who never belonged to a literary club in his younger days, can estimate the advantages to the dormant or unfolded intellect of boy or man. Solomon says that the face of a man sharpeneth that of his friend; and as the face is only the index of the mind, it is the mind that is sharpened in its collision with mind. Of what use would be those public lectures, so rife at this season in our great towns, but for the face, action and emphasis of the lecturer; how many leaves lie on the table, uncut by either men or women, who, at a public lecture, listen with rapture to the written word, when graced by the pause, emphasis and action of the lecturer? But the effect is better than its cause—curiosity; a laudable thirst for knowledge is excited, books are read, authors are consulted, papers are subscribed for, and habits of intellectual life are acquired, and the character of the man is separated and redeemed from that of his fellow-laborer, the cozy ox.

The President's Message.—The *Agriculturist* has animadverted pretty severely on the President's late message, for having neglected to notice the largest and most important of all the interests of the nation, Agriculture. True it is, that while the fisherman receives his bounty, and the manufacturer sees every other class of the community taxed for his direct benefit, under a discriminating national tariff, our great agricultural interest has had no legislative enactment for its particular advancement, unless it is the privilege of buying wild land at government prices,—land that would be worth nothing but for the hard labor, great privation, and exact economy of the pioneer farmer, who rarely ever realizes the cost of his improvements. But President Pierce was doubtless restrained by the truth of the old adage, that "Hercules should not help a man until he had first put his own shoulder to the wheel." While the professional classes provide first of all for their own liberal education, then clamor loudly for the endowment of educational institutions for their own benefit, farmers, as a class, have done nothing but acquiesce in the trite saying, as false as it is impertinent, that the liberal learning of the schools would be superfluous in the farmer's humble social sphere and calling. The State of New York has already chartered an Agricultural College which, if farmers are true to themselves, will soon be in a state of progress to completion, when it will receive its proportion of the literature fund, and, if farmers *will it*, other State endowments. But if farmers will not put their hands in their pockets, or make any movement to save the intellectual integrity of their own great heritage, they must expect to fall not only beneath the notice of the political head of the nation, but to remain either a nonentity in their country's councils, or the blind instrument of party leaders.

A SENSIBLE COLT.

Friend Moore:—I send you the following for publication, if you think it worthy a place in your valuable paper:

I have a young horse, four years old next spring, that has practised pumping water for himself to drink, for two years past, whenever he was thirsty, and had access to the pump. I have a cistern in my yard, in which is a common cistern pump, with a piston rod and cross bar for a handle. He seizes the handle with his teeth, and forces the rod up and down, till the water comes freely, when he drinks, and thus repeats the operation till he is satisfied. I have thought he sometimes pumped for amusement when he was not thirsty. George Quick.

Mendon, N. Y., Jan. 1854.

Bloody Urine.—Give to the animal once in two days in a quart of water, a table-spoonful of nitric acid. In ordinary cases, a cure may be looked for the first or second dose. I know of three cases where it has cured, and not one where it has failed.

SALTING BEEF.

I have frequently heard people remark, that they could not salt down beef so that it would keep good and tender through the year; and for this reason, purchase corned beef of the butcher by piece-meal. Now, it is just as easy to have beef tender and juicy a year old, as to have it hard and dry. And for the benefit of those who desire it, I will give my mode of management. In the first place I get *good* beef—such as will leave a good thickness of "skimmings" on the pot after boiling; or in other words, beef that will "pay for cooking," as my better half says. I take some pains to have my barrel properly washed, after turning out my last year's brine, and when thoroughly dry, I sprinkle in about two or three quarts of clean, *coarse* salt, and then pack down a lying of beef, covering it completely with salt, and so on, till the barrel is full. I strain my old brine through a sieve, and let it stand till well settled, then turn on till the beef is covered.—In two or three weeks I add a quarter of a pound of saltpetre. This is my rule for two hundred pounds of meat.

I know it is the practice with many to *scald* their brine, but this I seldom do, for it has a tendency to harden the beef. Some, I am told, never use brine a second time, but throw it away as worthless. If the old brine is sweet, it is preferable to new, but if in the least tainted, the quicker it is poured away the better.

In salting down beef, where a new brine is necessary, salt should be used as I have mentioned, and then take as much water as is required to cover the meat, and add as much salt as this quantity of water will dissolve. Some are in the habit of filling their barrel with water (after packing down the beef,) and not converting it into brine. Those who adopt this method, may expect "spoiled beef" before the ending of dog-days.

I have no particular rule as to the amount of salt for a barrel, but I put in *enough*, and what will not dissolve will be found in the bottom, and may be used the next year.

Albert Todd.

Smithfield, R. I., 12th mo., 1853.

ENGLISH LADIES' LOVE OF AGRICULTURE.

G. P. Holcomb, Esq., of Delaware who has recently returned from a tour in Europe, says:

As showing the interest English ladies take in Agriculture, I cannot but relate a casual interview I chanced to have with an English lady in going up in the Express train from London to York. Her husband had bought a book at the stand as we were about starting, and remarked to her that "it was one of her favorite American authors—Hawthorn." I casually observed, "I was pleased to see young American authors found admirers with English ladies;" when the conversation turned on books and authors. But I said to myself pretty soon, "this is a literary lady—probably her husband is an Editor or Reviewer, and she handles the "scissors" for him: at all events I must retreat from this discussion about authors, modern poets, and poetry. What should a farmer know critically about such things. If I was only in those fields—if the conversation could be made to turn on crops, or cattle, then I should feel quite at home." I finally pointed out a field of wheat, and remarked it was very fine. The lady carefully observing it, said:—"Sir, I think it is too thin—a common fault this season, as the seeding was late." "Those drills," she added, turning to her husband for his confirmation, "cannot be more than ten inches apart, and you see sir, the ground is not completely covered—twelve, and even fifteen inches is now preferred for the width of drills, and two bushels of seed to the acre will then entirely cover the ground, on good land, so you can hardly distinguish the drills."

If the Goddess of Ceres had appeared with her sheaf, or her cornucopia, I could not have been taken more by surprise. A lady descanting on the *width of wheat drills, and the quantity of seed.*

"I will try her again," said I, "this may be a chance shot," and remarked in reference to a field of plowed ground we were passing, that it broke up in great lumps, and could hardly be put in good tilth. "We have much clay land like this," she replied, "and formerly it was difficult to cultivate it in a tillage crop, but since the introduction of Croskill's Patent Clod Crusher, they will make the most beautiful tilth on these lands, which are now regarded as among our best wheat lands."

The conversation turned on cattle; she spoke of the best breeds of Cows for the pail, (the Ayrshires and Devons,) told me where the best Cheese was made—Cheshire—the best butter—Ireland—where the best milk-maids were found—Wales. "Oh!" said I, "I was mistaken; this charming intelligent woman, acting so natural and unaffected, dressed so neat and so very plain, must be a farmer's wife, and what a help-mate he has in her? She is not an extravagant wife either, not an ornament about her—yes, a single bracelet clasps a fair rounded arm—that's all." The train stopped at York; no sooner had my traveling companions stepped upon the platform, than I noticed they were surrounded by half a dozen servants—men and maids—the men in full livery. It turned out to be Sir John and Lady H. This gentleman I learned was one of the largest landed proprietors in Berkshire, and his lady the daughter of a Nobleman, a Peeress in her own right; but her title added nothing to her; she was a noble woman without it.

Dr. J. H. Salisbury found in the ashes of the grain of maize 20.73 per. cent. of potash, and in the grain of wheat 10.83 per. cent. In the stalks of maize he found 7.33 per cent of potash, and in the straw of wheat 7.20 per. cent.

Agricultural Miscellany.

ANNUAL MEETING OF STATE AG. SOCIETY.

The annual meeting of the New York State Agricultural Society, takes place at Albany, on the 7th, 8th and 9th of February, 1854. The first day will be devoted to the entering and arranging of cattle, products, &c. The exhibition will be open to the public on Wednesday, the 8th, and continue open two days. Admission, 25 cents. There will be an address on Wednesday evening, by Prof. Cabe, of the Albany University, and on Thursday evening, by L. G. Morris, President of the Society. We subjoin the premiums to be awarded, and the regulations to be complied with by competitors:—

FAT STOCK.

Best fat ox, 4 years old and upwards, $30; 2d do. 25; 3d do. 20.
Best fat steer, 3 years old, $25; 2d do. 20; 3d do 15.
Best fat cow, 4 yrs and upwards, $20; 2d do 15; 3d do 10.
Best fat heifer, 3 years old, $15; 2d do 10; 3d do 5.
Best spayed heifer, 3 years old, $15; 2d do 10; 3d do 5.
Three best long-wooled sheep, 2 years and upwards, $10 2d do 8; 3d do 5.
Three best long-wooled sheep, under 2 years, $8; 2d do 5; 3d do 3.
Three best middle-wooled sheep, 2 yrs. old and upwards, $10; 2d do 8; 3d do 5.
Three best middle-wooled sheep, under 2 years, $8; 2d do 4; 3d do 3.
Three best cross-breed sheep, 2 years and upwards, $10; 2d do 8; 3d do 5.
Three best cross-breed sheep, under 2 years, $8; 2d do 5; 3d do 3.

GRAIN AND SEEDS.

Best 5 bushels winter wheat, $8; 2d do 5; 3d do 3.
Best 5 bushels spring wheat, $8; 2d do 5; 3d do 3.
Best 5 bushels rye, $5; 2d do 3; 3d do 2.
Best 5 bushels four-rowed barley, $5; 2d do 3; 3d do 2.
Best 5 bushels two-rowed barley, $5; 2d do 3; 3d do 2.
Best 5 bushels oats, $5; 2d do 3; 3d do 2.
Best 5 bushels yellow corn, $5; 2d do 3; 3d do 2.
Best 5 bushels white corn, $5; 2d do 3; 3d do 2.
Best 5 bushels peas, $5; 2d do 3; 3d do 2.
Best 5 bushels white beans, $5; 2d do 3; 3d do 2.
Best 5 bushels large clover seed, $5; 2d do 3; 3d do 2.
Best 5 bushels small clover seed, $5; 2d do 3; 3d do 2.
Best 5 bushels timothy seed, $5; 2d do 3; 3d do 2.
Best 5 bushels flax seed, $5; 2d do 3; 3d do 2.
Best 5 bales of hops, $5; 2d do 3; 3d do 2.

DRESSED MEATS AND POULTRY.

Best carcass of long-wooled sheep,* $5; 2d do 3.
Best carcass of middle-wooled sheep, $5; 2d do 3.
Best carcass of cross-breed, $5; 2d do 3.
Best dressed hog, weighing over 350 lbs., $5; 2d do 3.
Best dressed hog, less than 350 lbs., $5; 2d do 3.
Best pair of dressed turkeys,* $2; 2d do 1.
Best pair of dressed geese, $2; 2d do 1.
Best pair of dressed ducks, $2; 2d do 1.
Best pair of dressed capons, $2; 2d do 1.
Best pair of dressed fowls, $2; 2d do 1.

*To mutton and poultry, when dressed, to have head and feet left on.

DAIRY.

Butter—Best 3 lbs or firkins of butter, cup, value $15; 2d do, cup, value 10; 3d do 5; 4th do, Transactions.
Cheese—Best 3 cheese, cup, value $15; 2d do, cup, value 10; 3d do 5; 4th do, Trans.

To be accompanied with a particular statement of the manufacture and preservation of the Butter or Cheese.

A statement of the manner of cultivating the crops of grain, the manures used, and the variety of the grain on exhibition, should accompany the samples offered for premiums; and samples of corn *in the ear* should be presented.

Persons competing for premiums on Live Stock, must give a full and detailed statement of the time and manner of feeding the animal; the materials of food consumed, in quality, quantity, and value; the breed of the animal, if known; the weight, if practicable, when the feeding was commenced, and the weight at the time of the exhibition. In the case of Dead Meats, statements must also be furnished.—Blank forms will be furnished at Agricultural Rooms.

Persons intending to compete for the premiums on Fat Stock and Grain, should give notice to the Secretary by the 1st of February.

The exhibition of Fruits and samples of Field Crops, will be held, as usual, at the Society's Rooms, in the Old State Hall.

Persons intending to exhibit Stock, will find the most extensive accommodations at Mr. Woolford's, large additions having been made to his yard and sheds since last year, with warm stables, good water in the yard, and attendants ready to give every necessary assistance; charges reasonable.

It is expected that there will be in attendance persons from the New York, Boston and Philadelphia markets, desirous of purchasing fat cattle; and it is hoped the show of Live Stock, as well as of Dressed Meat and Poultry, will be such as to do credit to the State.

There will be an opportunity of disposing of the Grain on exhibition; and the occasion will be improved, undoubtedly, by Farmers to make exchanges of Seed, which is so desirable.

Persons exhibiting must become members of the Society. Pamphlets, containing the List of Premiums and Regulations, will be furnished by the Secretary, B. P. Johnson, on application at the Agricultural Rooms, Albany.

MANAGEMENT OF POULTRY.

We condense the following hints on the management of poultry, from a recent English article on the subject:—The floor of the poultry house should be cleaned at least once a week. It should be sprinkled with ashes (coal ashes we presume,) sawdust, peat, or best of all, peat charcoal. The yard should contain a grass plot, some fine gravel, slaked lime, dry ashes, and pure water. The nests should be lined with moss health, or short straw. Evidently the Dorkings are the best breed; they will lay an average of 185 eggs each, per annum. Fowls with black legs are best for roasting, while those with white legs are best for boiling. If you want them to sit early, leave the eggs under them. Fowls in their native habits, never lay more eggs than they can hatch. Remember that no success can be expected from poultry keeping, if their houses be damp, cold, unclean, or badly ventilated; if their food does not approximate to that which they get in a state of nature, viz., a mixture of animal and vegetable food; if the water they drink be stagnant, the drainage of the manure heap, &c., or if the strongest and handsomest be not bred from.

Professor Way finds that some soils when added to fresh urine accelerate fermentation, while clay retards, or prevents it altogether.—This fact opens a new and a most interesting field for future investigation.

BROOM CORN.

Strange to say, the census does not give any statistics respecting broom corn, and though it thus ignores the crop, yet it is of great value, occupying much land, labor and capital.—Broom Corn is a native of India, and is said to have been first introduced by Benjamin Franklin, who saw a wisp of it in the hands of a lady in Philadelphia. He examined it with the curiosity and attention of a philosopher, and discovered on it a single seed which he planted, and from this is derived all the broom corn of the continent. Had Franklin done nothing else, this single fact would have been sufficient to emblazon his name on the annals of all coming time. The value of the broom for sweeping purposes is here well known, and in Europe its advantages over every other substance used for this purpose are admitted wherever it is tried. At present we believe there is a large export trade to England, which cannot but increase, though the *bulk* renders freight rather expensive. Our climate is well adapted to the cultivation of broom corn, and we have abundance of land that will pay better with this crop than any other.

Sewerage.—We observe by the late English papers that much discussion is still going on as to how the offal of large cities can be converted into a portable manure. Anticipating the "good time" somewhat, a writer proposes the following alteration in the nomenclature. He does not consider the terms "*night-soil*" and "*water-closet*" as at all appropriate; he would therefore substitute the soft monosyllable *gu*, for the meaning-less compound "*night-soil*." The little word *gu*, coming in the wake of its foreign friend *guano*, would sound well; and might be of service in a variety of combinations, such as gu-jars, gu-depots, gu-cars, gu-merchants, gu-companies, gu-trains, gu-truffle, gu-dribbles; London-gu, Liverpool-gu, Leeds-gu; and if at some future time any further designations should be needed, the terms shamble-gu, sty-gu, &c., might be used.

Urine.—Sink an oil cask, in an out of the way corner, and preserve all the urine of the house. In every 100 lbs there is 72 per cent. of nitrogen, and many other valuable salts besides. Dilute before using, with an equal quantity of water.

We find the above in one of our best exchanges—the *Farm Journal*. What profound and careful chemist originated it, we do not know. He must have been a genius.

"In every *hundred* pounds there is 72 *per cent.* of nitrogen. Urine usually contains about 37 per cent of *water*. When evaporated with an acid, the *dry matter* contains about 18 per cent. of nitrogen; 1000 lbs of fresh urine, therefore, contains about five lbs. of nitrogen, or about the same as common barn-yard dung.

Reaping Machines.—Thanks to the "Worlds Fair," and Hussey and McCormick, the British agricultural implement makers are waking up. During the first six months of 1852, upwards of *thirty patents* were taken out, either for original reaping and mowing machines or improvements on the old ones.

Preserving Grain and Vegetables.—A patent has been taken out in England for preserving grain or vegetables as follows:—The substances to be preserved are placed in air tight boxes or India rubber bags, and chlorine and sulphurous acid gas are introduced by means of a tube.

FALL AND WINTER PLOWING.

When sod ground is plowed in the Fall or Winter, we do not expect to plow it again in the Spring, and therefore, as a security against worms, the latter part of November, or in December, January or February, if the ground is not frozen, is as good a time as Autumn. In December, 1852, I plowed a field for corn, with round furrow slice, and to the depth of ten to fourteen inches: and although snow covered the ground of most of it to the depth of three or four inches while I was plowing, the operation was so well performed, that a friend of mine, one week after the work was done, tho't it appeared more like a summer fallow that had just been cross-plowed than like sod. Altho' the worms were numerous in the soil, thousands were seen perished in the cold. Their winter retreat was broken up, and I lost but a few hills of corn by them.—*Country Gentleman.*

Great Corn—Pickaway vs. Ross.—We are informed by Mr. Robert H. Lansing, Secretary of the Ross County Agricultural Society, that Mr. John P. Barger raised on a field of eighty acres an average of one hundred and twenty bushels of corn to the acre, and sold to Mr. Enos Prather at that average. Can any body beat that?—*Scioto Gazette.*

Yes-sir-ee! Ohl Pickaway can beat it all to pieces! Dr. P. K. Hull raised *one hundred acres of corn* on Mr. Ezra Florence's farm, on the Darby bottoms, in this county, which averaged *one hundred and thirty-six* bushels to the acre, and G. B. Dresbach, Esq., of this city, took it at that average.—*Circleville Watchman.*

Good Pigs.—Mr. T. H. Austin, of New Haven, Oswego Co., recently slaughtered seven pigs of one litter, 16 months old, which weighed as follows—400, 404, 404, 416, 476, 511, and 557 pounds—total 3,168 lbs. This shows that Mr. A. knows how to make pork.

Orchard and Garden.

WONDERS AT KEW GARDENS.

The Royal Botanical Garden at Kew, (Eng.) probably contains the greatest variety of trees and plants ever collected together, and below we have gleaned from an article in the Quarterly Review, a few items relative to several curious specimens, which will amuse and instruct our readers:

The MOVING-PLANT, *Desmodium gyrans*, should have been dedicated to St. VITUS. It has got the fidgets incurably. Night and day, from its seed-bed to its repose in the compost heap, it twitches and twists the two little leaflets that grow out on each side of the larger oval leaf. Without perceptible cause or motive—except the indulgence of its own caprice—its antics go on unceasingly.

The HUMBLE PLANT, *Mimosa pudica*, with other beauties in this boudoir (the forcing house or stove) have taken lessons of the posture-master. The Director snips with his scissors the tip of a pretty leaf, whose divisions seem made up of scores of little leaflets—and mark!—each leaflet folds itself close to the midrib, like the sticks of a shut fan, the footstalk itself of the leaf has a joint at the axilla, by which it drops and stands at ease. This is very different from the Sensitive Plant, *M. sensitive*;—and though both are so curious, and one so pretty here at home, in Brazil and the West Indies they are nuisances to be exterminated by fire. Their prickly stems choke the growth of sweeter herbage;—neither is it clear that the cattle like to have their noses tickled by the motions of living plants that *writhe* when they begin to be eaten.

The AMERICAN FLY-TRAP, *Dionea muscipula*, has as its name implies, a veritable living trap at the end of its leaves. A small bell-glass is lifted; the scissors touch a pair of scaly leaves fringed with green bristles, and they close. It is thus remarked upon:—"The moment an insect (or any extraneous body) touches the hairs on the disc, the two lobes close firmly and press the luckless intruder to death;—the struggles of the victim indeed, necessioning the lobes to shut more firmly, hasten its own destruction. As soon as the insect ceases to struggle, and dies, the trap opens, ready to continue the work of destruction; but there is no reason whatever to suppose that the dead insects in any way nourish the plant." What, then, (adds the reviewer,) can be the object of the contrivance, unless the checking of a superabundance of insect life? The facts are not novel, but are too wonderful ever to become stale. Gigantic plants existed in pre-Adamite times, and there was then, perhaps, a fly-trap large enough to catch a man!

The *Caricature Plant* is another wonder. Observe this specimen, with bright green leaves something like those of the Bay-tree, but marked down the middle with yellow blotches, the outline of many of which bears a very accurate resemblance to the human face, more or less divine. Here is the Duke of Wellington and Lord Brougham, *dos a dos*, on the same leaf; there is PITT, and Punch and Judy seem the principal characters on the next.

The *Dorstenia*, a little pot-plant, shows a curious fructification. It is something like a flat piece of green leather growing at the end of a flower-stalk, and is, in fact, a flat, *open* receptacle of minute flowers visible with a magnifier. It is a strange, intermediate form; for roll it up with the flowers outside, and it is a bread-fruit; with them inside, and it is a fig.—Were the ripened receptacle large and juicy enough to be eaten, it would be literally a *fruit-cake*.

The *Dumb Cane, caladium sequinem*, is among the "banes and poysons of pernitious and malignant temperature," and had better not be bitten, or it will bite in return, depriving lips and tongue of all power of speech.—Instances of its virulence have occurred at Kew.

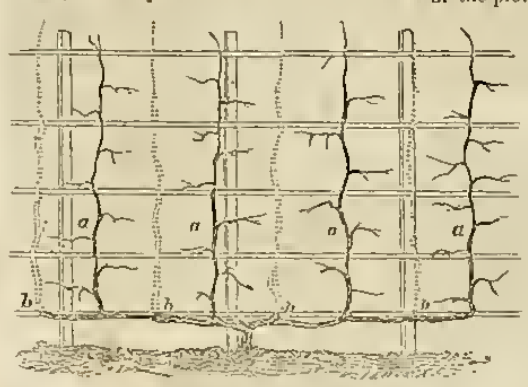
The SCYTHIAN LAMB, or vegetable lamb of Tartary, the *Cibatium Baromety*, is a plant of some notoriety, which—according to writers of the olden time—ate up all the herbage within its reach, but, being itself rooted to the ground, eventually perished of hunger. The proof of the story was the presence of this lamb in the cabinets of the curious. Seeing, it was thot, must be believing. *Our* plant reveals the mystery. The woolly rhizoma (of which the hare's-foot fern is an analogous example,) is of considerable substance, and grows into curious contortions and nodosities. Four shortened frond-stalks left for the dried specimen to stand on when turned upside down, completed the verity of a vegetable lamb!—B.

A CITRON MELON.—A correspondent of the *Boston Cultivator* tells a large story of a single melon vine which sprang up spontaneously in a carrot bed late in June. The vine was 2,370 feet in length; and spread over three rods square. It had on it 48 large melons, besides innumerable little ones which the shortness of the season prevented coming to maturity. The aggregate weight of the fruit was 307 lbs.

GRAPE VINES.—WINTER PRUNING.

When it is considered that "the grape vine bears its fruit on *shoots of the current year*, produced from eyes on the *previous year's wood*," the necessity is at once apparent, of keeping up a supply of young wood in all parts of the vine where we desire the production of grapes. This is done by winter pruning and summer pinching. The first of these is now in season—as it is during the three winter months that it is best performed.

In the opening number of the last volume, we gave particular and illustrated instructions for the pruning and training of hardy grape vines, to which we would now refer our readers. But for the benefit of many new subscribers, we will here present the general principles of the "renewal system,"—that usually practised by our most successful gardeners. All standard Horticultural works describe the process,—our engraving is from THOMAS' "Fruit Culturist."—It represents a vine trained for three years upon a trellis, on this system.



About three years from the planting of the vine is necessary to produce the horizontal shoots shown at the bottom of the trellis.—Then two upright shoots may be allowed to grow and produce grapes. Other horizontal branches should be encouraged until the width of the trellis is covered—keeping them in their proper places by cutting back in winter, or better by pinching the ends of the vines in September should they reach too far. The fourth year from planting, four shoots should be trained upright—the fifth year, six, and so on,—having them about two feet apart, and cutting back to three buds, (allowing only the stoutest one to grow,) every alternate upright shoot after it has borne fruit. These buds will produce the dotted shoots *b, b, b, b*, which should not be allowed to bear the first season, but their strength reserved for the next, when, becoming like *a, a, a, a*, they will produce an abundant crop. The shoots *a, a, a, a*, having been cut back, will be producing new branches like *b, b, b, b*, and so on alternately.

Various plans of training may be followed, suited to the situation of the vines and the taste of the gardener, but the main principles are ever the same;—to encourage the renewal of the vine so as to keep a good supply of fruit-bearing wood in all parts of it; and to provide for the *foliage* and the *fruit* plenty of room, light and air for their perfect development. And "it must never be forgotten," says THOMAS, "that the *full growth and perfect ripening of the* FRUIT, depends wholly on healthy, well developed LEAVES, to furnish food for the forming berries." Every owner of a grape vine should now attend to its proper pruning, keeping in view these facts, and remembering to remember the frequent attention needed as the season advances. The fruit will repay by excellence in quality, and increase in quantity all the properly directed care which may be given it, and no one shall fail of a satisfactory reward who rears a grape vine of a good variety—B.

TOMATO WINE.

I was presented by Wellington Rose, of the United Society at Hancock, with a specimen of wine manufactured from the juice of tomatoes, which so closely resembled old Madeira that it would have troubled an amateur to detect the difference. This wine was of the manufacture of 1851—so it was two years old. How far greater age would affect it we can not say; but as it is now we think it must be a valuable article for invalids, if we take into account its agreeable flavor and the undeniably great medical qualities of the fruit from whose juice it was manufactured.

The precise process of making this wine we have not fully learned, as the manufacturer claims he shall probably make improvements in the business. When this is done, from his known philanthropy, we have no doubt he will communicate to the public all the facts in the case, and become a greater benefactor to the sick and infirm, not only by furnishing the article ready made, but by telling others how to manufacture their own.—W. BACON, *Richmond, Mass., in Horticulturist*.

PRINCE ALBERT GRAPE.—"This new grape which, with many cultivators around Boston, has not proved a very abundant bearer, seems to succeed better in Western New York. Mr. J. W. Bissell, of Rochester, writes: "With me such is not the case. The bunches on my vines have always been large and loose, and would average at least three pounds; some of the largest would reach nearly five. I think the variety inferior in flavor to the Victoria or Black Hamburg."—*Hovey's Magazine*.

THE PHILOSOPHY OF SPADING.

SPADING, or turning up the earth by some instrument resembling, in some measure, the present spade, was probably the original method of preparing the soil for the seed; and this implement, properly directed, will still perform the work most thoroughly and perfectly.—There is, therefore, a Philosophy of Spading—a best way of doing it, founded on scientific principles. The *best way* is described, at some length, in a report on the subject, by a committee of the Norfolk, (Mass.) Ag. Society, published in their Transactions for 1852. We gather therefrom the following paragraphs:

There are two ways of commencing the operation of digging a plot of ground—the parallel and the diagonal. In the first, a trench is opened along the side of the piece, and the earth carried to the opposite side of the same, so that the earth from the second row or trench dug, may be inverted in the first; that taken from the first serving to fill the last row of the plot. In the second method, the gardener commences at a corner and digs along in diagonal lines, by which the labor of carrying the earth from the first trench is avoided. The spade should be pushed into the ground nearly perpendicularly, in parallel rows; their distance from each other depending on the nature of the soil, but never in any case exceeding eight inches. It should be carefully lifted, and the load turned over, so that the earth from below may lie on top; the large clods should be coarsely broken.

In careless or imperfect spading, the spade is pushed down at an angle, say of forty-five degrees; doing the work in much less time, but stirring the earth only half as deep, and leaving a greater portion of the upper surface, exhausted by the previous crop, at or near the top.—Sometimes the spade is only inserted half way down, and after giving it a *knowing* twist, to loosen the soil so that it may be raked even, it is again withdrawn. Another error is breaking the clods too fine. This beautiful dressing, which makes the surface look so handsome and even, is by no means desirable; the earth should be left as open and light as possible, so that air and moisture may have free access.

The advantages of spading are, that it turns the soil upside down much more completely than by any other process. The grass and other vegetation is thus so completely covered, that its decay is certain, and it serves to feed the plants instead of sprouting and feeding upon the nutriment prepared for them.—The soil at about eight or nine inches below the surface is always the richest in light lands, as the pieces of manure, leached down by rains are generally retained there; and hence the value of having it brought near the surface. The soil is more completely pulverised and broken up by spading, than it can be by plowing or any other process, and the cost, compared with the benefits, is not at all excessive. For gardens, and most root crops, it is the best and cheapest mode of cultivation.—B.

TARRING FRUIT TREES.—Having seen an inquiry in a recent number of the RURAL, in regard to tarring fruit trees, I would state that a few years since, a neighbor of mine, wishing to put sheep into a field in which there were several young peach trees, covered the body of the trees with tar to prevent the sheep from gnawing the bark. This was done, I think about the first of September. The next spring those trees were all dead; and they presented the appearance of the fur having penetrated the wood. I mention this to prevent losses from a similar cause. J. S. B.

Perinton, Dec. 15, 1853.

PEACH TREES FOR FUEL AND DRIED PEACHES.—The New York Tribune states that H. L. Ellsworth, ex-Patent Commissioner, is gathering peach stones for which he is paying fifty cents per bushel, and will plant fifty bushels of them in the centre of a great prairie which he is breaking up. There they will grow luxuriantly and soon bear, when he will have the peaches gathered and dried by women on shares; and so for four or five years, growing corn or some other crop among them, and thus keeping the land in good condition. Then he will cut down the trees for fuel and have a new growth from the roots. This he believes the cheapest and quickest way to get fuel where it is most needed, besides producing an abundance of dried fruit, of which there has never been half enough in the country.

ANOTHER RARE PLANT.—We saw on Saturday, in the green-house of O. F. Winchester, Esq., Court street, the most beautiful flower that has ever come under our observation. It is a tropical plant, called by the natives "Espiritu Santo" (or Holy Ghost,) was sent to Dr. Totten, of this city, by his brother, Col. Totten, of the Panama Railroad—a duplicate of which was also given Dr. Cope, of Philadelphia, last spring. It is a most remarkable exotic. The blossom is of a delicate waxy appearance, the interior of which represents a pure white dove, with outstretched wings beautifully mottled.—Its delicious fragrance, and long period of remaining in blossom, combine to render it a most desirable plant.—*New Haven Register*.

Mechanic Arts, &c.

PATENT LIST OF CLAIMS

Issued from the United States Patent Office,

For the week ending December 20, 1853.

J. E. Brown and S. L. Bartlett, of Woonsocket, R. I., for improvement in grain and grass harvesters.

Wm. G. Creamer, of New Haven Co., Conn., for improvement in operating brakes by signal cards.

B. H. Franklin, of Worcester, Mass., for improvement in manure and other forks.

Uriah H. Goble, of Springfield, Ohio, for improvement in grain and grass harvesters.

Joseph & James Montgomery, of Lancaster, Pa., for improvement in shoes to trimmers.

T. F. Nelson, of Clark Co., Va., for improvement in manure crushers and sowers.

Wm. and Thos. Schnebly, of New York city, for improvement in grain and grass harvesters.

H. N. Tripp, of Alfred, Me., for improvement in power rakes.

R. P. Walker, of New York city, for improvement in hulling and scouring coffee.

J. B. Armstrong, of Barnwell, S. C., for improvement in cotton presses.

Chas. Atwood, of Birmingham (Derby,) Conn., for improvement in attaching hooks and eyes to cards.

D. E. & M. Battershall, of Troy, N. Y., for improvement in candle mould machines.

James Baxendale, of Providence, R. I., for improvement in stamping patterns on rollers.

James Hulton, M. D., of Richmond, Va., for improvement in hot-air furnaces.

Lazare Cantel, of New York city, for improvement in metallic trunk frames.

David Carroll, of Baltimore, Md., for improvement in shuttles.

John D'hunergue, of New York city, for improvement in car brakes.

Alex. Frankenberg, of Columbus, Ohio, for improvement in soda water fountains.

W. J. Hatfield, of Dayton, Ohio, for improvement in jointing table tops.

L. O. F. Meyer, of Newtown, Ct., for improvement in vulcanizing caoutchouc compounds.

J. A. Mitchell, of Ringgold, Ga., for improvement in hand looms.

Ephraim Parker, of Rock Island, Illinois, for improvement in sawing and planing clapboards.

Godfrey Simon, of Reading, Pa., for improvement in carriages with shifting seats.

Solon Staples, of Topsham, Me., for improvement in screw for planking ships.

H. L. Sweet, of Foxborough, Mass., for improvement in guides for sewing on binding.

Wm. H. Towers, of Philadelphia, Pa., for improvement in horse-shoes.

Elias Unger, of Dayton, Ohio, for improvement in polygonal surfaces in timber.

Wm. Wisdom, of Cleveland, Ohio, for improvement in cleansing hair and feathers from insects, etc.

E. H. Bard and H. H. Wilson, of Philadelphia, Pa., for improvement in gold pens.

B. F. Greenough, of Cincinnati, Ohio, for improvement in separating alcohol from water and other heavier fluids.

B. F. Stevens and Walter Kuhler, of Lowell, Mass., for improvement in shingle machines.

A. E. Potter, of New York city, for improvement in folding bureau or wardrobe bedsteads.

I. D. Garlick, of Lyons, N. Y., for improvement in self-acting machines for weighing grain.

C. F. Sibbald, of Philadelphia, Pa., for improvement in steam boilers.

S. C. Blodgett, of Georgetown, Mass., assignor to Chas. Morey, of Boston, Mass., and Morey, assignor to Nehemiah Hunt, of Boston, Mass., for improvement in sewing machines.

Wm. H. Akins, (assignor to W. T. Huntington,) of Ithaca, N. Y., for improvement in time registers for shewing the day of the week and month.

J. C. Conklin, of Peekskill, N. Y., (assignor to D. Tompkins, of North Harrestaw, N. Y., and D. F. Tompkins, of New York city,) for improvement in pick axes.

Wm. A. Martin, of Brooklyn, N. Y., (assignor to W. Watson and Peter Van Zandt, of New York city,) for improvement in folding seidlitz powder.

THE PATENT OFFICE AT WASHINGTON.

We give in this number (see next page,) a very truthful and fine illustration of the PATENT OFFICE building at Washington,—which will be, when completed, one of the most superb architectural monuments in this country. The *People's Journal*, in describing this edifice, among other things, says:

"The principal (south) front extends, on F street, 270 feet, and is 70 feet deep. Vertically, it is divided into a high basement and two stories above. The municipal portico of this front faces down Eighth street, and is in all respects, a *fac simile* of the celebrated portico of the Pantheon at Rome, forming the most striking feature of the edifice, as seen on that side. The grand entrance to the building is, of course, that through this portico, which is reached by a flight of granite steps. The visitor passes from the portico into a large hall, from whence, in the rear, by a splendid flight of marble steps on each side, he may ascend into the grand galleries above, which occupy the whole of the upper story. Midway of the depth of the building, ere reaching those steps, doors lead into spacious passage-ways, running east and west. The chambers communicating directly with the eastern passage-way have long been occupied as business offices of the Commissioner of Patents, and his various assistants; and the passages to the west communicate with the large and main model room, wherein some of the specimens of American mechanical genius which have been patented, are stored in ranges of glass cases, with passage-ways between them.

"The basement is designed precisely after the story above, and is used for business offices of the establishment, and of the National Institute, which is afforded a place there by order of the Government. The uppermost story of the north wing is thrown into one grand saloon, and, being used for the safe keeping of various specimens of home manufactures, subjects of natural history, and works of art, brought hither by the late American exploring expedition, commanded by Captain Wilkes of the United States Navy, is very properly styled the National Gallery. This magnificent hall is 204 feet long and 64 wide, with a general height of 30 feet. For ornaments, this hall has a double row of huge stone doric columns, which, with their entablature, are twenty feet high to the spring of the arches resting on them, which, in turn, reach in height to the ceiling of the chamber, and then form a beautiful platform.

"Precisely in the centre of the grand gallery, a cylindrical arch or dome, of forty feet span, rises above the rest of the chamber, from the top of which the light of heaven is admitted by an aperture thirteen feet in diameter. Besides the contents of this hall mentioned above, it is the repository of much valuable property belonging to the several departments of the government—treaties, jewels, military and naval relics, &c,—which, with the rest of its treasures, are arranged in glass-cases, for the inspection of the curious. Recently the east wing of the edifice has been erected, and it is just being finished. It is also 270 feet long, by 64 deep, and of the hight of the front described above; being divided into as many stories, each of which are again divided and finished as are the stories of the building we have explained in detail. The grand gallery of the highest story of this building connects with that of the other by a lofty archway. As this wing is constructed entirely of white marble, (the other being built of granite and sandstone,) its appearance is much more pleasing. It is being devoted, also, to the accommodation of the business of the Patent Office, which is so rapidly increasing its legitimate demands for space. An effort was made at the last session of Congress to have it permanently appropriated for the accommodation of the Department of the Interior, which, fortunately failed, though, unfortunately, the department named was permitted temporary occupation; and as "possession is nine points of the law," it will probably not be removed for a long time. The foundations of the west wing have been commenced, and its erection, on a plan similar to that of the others, will be completed in a few years, when the grand gallery in the uppermost story will extend quite a quarter of a mile in length, forming an architectural promenade such as is to be found nowhere else on this side of the Atlantic. When completed, the Patent Office edifice will entirely cover the double block bounded by F, 7th, G, and 9th streets.

PRAIRIE PLOW.—Gardner A. Bruce, of Mechanicsburg, Illinois, has invented an improved Prairie Plow, on which he has applied for a patent. His improvement consists in connecting the axles of the wheels upon the beams, loosely with it and the adjusting lever, by means of a jointed revolving rod, over which the beam can be adjusted freely, and upon which the adjusting lever is sustained. This rod passes loosely up through the beam, being connected to the adjusting lever by a loose joint, which allows the axle to have the necessary movements in the path of a horizontal circle, independent of the beam and lever while changing the line of draught or turning curves.—*Sci. Am.*

IMPROVED CAR SEAT.—John H. Bloomfield, of Albany, N. Y., has invented an improved car seat, which has a peculiar manner of attaching the backs of the seats to the arms, whereby they may be made to revolve or turn over the seat, and may also be placed at any desired angle with it. A segmental slide is placed underneath, capable of being shoved out when desired on either side of the seat to serve as a support for the lower extremities of the person occupying it. A patent has been applied for.—*Ib.*

Domestic Economy.

PREPARING POULTRY FOR MARKET.

"How shall I dress and pick my turkeys, geese, ducks and chickens for market?"

That question is easily answered.

Hang your turkeys up by the heels and cut the jugular vein. Pick them dry, remove the intestines and wipe inside dry. If you use water at all, do it by holding the bird by the legs and letting an assistant pour the water through them. Wipe and hang them up in a cool place twelve hours, or till thoroughly dry. Serve geese, ducks and chickens the same way. Do not scald them, unless you would like to have them spoiled. Take a box that will hold 250 chickens close packed. Put only 200 in it. The remainder fill with RYE straw—clean rye straw—no chaff. Do not use wheat straw, or oat straw, if you can avoid it. You may use clean, marsh hay. A wisp of straw in each bird would be advantageous. Nail up your box tight, and hoop strong and mark plainly what is in it, and to whom it is sent. Send only in cold weather.

PARSNIP STEW.—Cut a half pound of fat salt pork in slices, and a pound of beef or veal in bits; put them in a dinner pot, with very little water. Scrape some parsnips, and cut them in slices an inch thick; and put them to the meat; pare and cut six small sized potatoes in halves. Cover the pot close and set it over a bright fire for about half an hour; then dredge in a table spoonful of wheat flour; add a small bit of butter, and a small tea spoonful of pepper, stir it in, and set it over the fire to brown for fifteen minutes. Take the stew into a dish and serve.

RECIPE FOR OUT-DOOR WHITEWASH.—Make a barrel of whitewash in the ordinary manner, and while hot dissolve ten pounds of salt and ten pounds of sugar, or an equivalent quantity of molasses, and stir it with your whitewash—some add also an equal quantity of glue. This can be colored by ochre, umber, &c., to any desirable tint; it is better if applied hot.—*Sci. American*.

A GOOD FAMILY OIL.—Melt together over the fire a pint of oil of sweet almonds; and an ounce of spermaceti; the latter should be broken into little bits. When cold, stir in a tablespoonful of oil of bergamot rubbed with two grains of civet.

THE UNITED STATES PATENT OFFICE AT WASHINGTON, D. C.—[SEE PRECEDING PAGE.]

Educational.

[For the Rural New-Yorker.]

SUCCESS.—AN ESSAY.

One of the principal obstacles to a prosperous conduct of business, is the difficulty many persons experience in finding their true places in life. Whether the cause of this embarrassment lies chiefly in a false construction of society, whereby one seeking the field of labor too often finds closed against him the avenues to that for which both taste and aptitude peculiarly qualify him, or whether in a mischievous eagerness to enter upon whatever vocation promises to yield the quickest return, regardless of its comparative usefulness, or his own fitness for it, the result is the same; and the world presents the sad spectacle of vast energies wasted for want of congenial employment, or rendered inefficient by perverse misapplication. Great as is the evil resulting from the above causes, that arising from sloth and vacillation, (defects not of society but of the individual,) perhaps equals, some might say overshadows it; for, though circumstances are important in so far as opportunity is dependent on them, yet the latter, when afforded, avails little in the hands of the indolent or the infirm of purpose. Evidences of the truth of this in active life are so abundant as to make illustration unnecessary, and it is perhaps equally superfluous in the life of study or preparation for action.

The scholar who sighs for easy tasks, and is careful never to go beyond those assigned him; who shrinks from the toil Science imposes on those who would win her treasures, and who would sooner abandon the pursuit of knowledge than cope with its difficulties, must come to naught; for, though he manage to pass muster among his fellows, and perhaps gain with superficial observers the reputation of genius, which is considered excusable for its impatience of slow and laborious processes, yet any occasion that thoroughly tests him will prove a woful lack of the most necessary requisite to excellence, namely, voluntary and steadfast application.—Commend me to the student whose ambition spurns a task-master, and with whom ability alone sets the limit to performance. Such an one, with an eye single to the end in view, will regard with comparative indifference, the minor appliances; content if only the essentials to a prosecution of his studies are furnished to forego those little niceties and daintinesses which so far from aiding, form many times a hindrance to profound acquirements.

Nature knows no proxies—no "changing work." Not an atom waits in expectation another's effort may be substituted for its own; but each, after having performed full duty toward bringing to completion the task in hand, quietly enters the list of recruits for another service. Its course is, therefore, a succession of glad but modest triumphs. Each agent executes its own office, and the result is progress. So, to decide whether an individual has been successful or otherwise, needs not that we compare him with others; the measure of success which one gains is no guide in our demands of another, either as to the kind or degree of excellence we may expect him to attain; we have only to know whether he has been all that nature meant him to be—all she made him capable of being; she loves that all men be great, but not all in the same way nor in the same degree; though it is not proper to introduce terms of comparison, where each answers fully the design of his existence. The friends of the Rev. Mr. M———. say he is an excellent good man and a good preacher; but, they add, as if the fact were a disparagement to him, not a Theodore Parker nor a Henry Ward Beecher. To be sure he is not; tho' he is entitled to equal credit with them if he lives out as truly his own life. Perhaps he made as much effort to become what he is, as they did to make themselves what they are.—Is it not as easy for a mountain to be large as for a molehill to be small? And could either answer the purpose of the other? Nature is jealous of substitution in her intellectual no less than in her physical domain. An instructor of youth tells me, in effect, that his enthusiasm is much abated since he commenced teaching, and that he has learned to be content with more moderate success than he at first anticipated. His discovery of the rationale of many things whereof only the processes were taught him, had led him to believe that if he could impart to others what he had gained by earnest study and with little outward aid, he might reasonably look for extraordinary progress from them. By this system he would have made each pupil a dull repetition of himself, instead of helping him develop his own capacities. An institution of learning is not to be regarded as a furnishing establishment where the ease of obtaining articles ready made precludes the necessity of applicants performing any other labor than that of receiving them.

Men are too often dazzled and deceived by artificial results. A pine in America would have been nothing essentially different in France, though from it might have been fabricated more elegant articles than will be made of one cut down yesterday in the forests of Steuben. An ambitious youth leaves Boston or New York for the west, and by and by we hear of him as a governor, or perhaps a member of Congress. Now, it is of course impossible to determine whether had he remained in his native place he would have been called to high official station or not, but it is quite safe to declare that whatever elevation he has gained beyond his desert is only a factitious success; and if he has won it by treachery or indirection it is a thorough and most disgraceful failure. Again, it is well known that in a political contest, other things being equal, a new man excites more enthusiasm than an old-tried candidate; but shall we account him, if elected, really more successful, since he owes his good fortune to the charm of novelty rather than to superior merit? The mere achievement is not success, neither is it praise merely to have escaped censure; but not to have merited reproach constitutes the highest claim to commendation, and to have deserved success is to have been eminently successful.

There is a feeling hardly describable, experienced by earnest souls, even in the hour of exultation and acknowledged triumph, awakening them to a consciousness of having still come short of their ideal, and rousing them to renewed and more vigorous efforts. It is this consciousness that makes an author the most unsparing critic of his own work—thus contrasting the embodiment before him with the idea of which it is an expression, that enables the sculptor to see defects where others are content to admire. The performance of the true artist never equals his conception of his subject. I doubt whether Shakspeare was satisfied with his Hamlet—the prince of sculptors with his master-piece of statuary, or Raphael and Angelo with their greatest creations on canvass. Let ambitious youth reflect on this, and not suffer aspiration (which is one of the best indications of ability,) to be quenched in their bosoms by those seasons of depression and discouragement to which even the strongest souls are subject. The mere fact that a beginner detects the presence of blemishes in his work, though he may not be able to specify them, is, in some sort, an augury of future success; for it is an indispensable condition to the ultimate attainment of excellence in any pursuit, that one be dissatisfied with his own first efforts. Nor need repeated failures, or, more truly, short-comings, beget despair of final success; for though the hand be unable to portray with entire faithfulness such glimpses of beauty as the spirit catches from afar, the hints and suggestions of completeness with which the earth abounds, whisper that they are a prophecy whose fulfilment shall yet be realized. A.

So. Livonia, Jan. 3, 1854.

[For Moore's Rural New-Yorker.]

LETTERS AND LETTER WRITING.

Waiting "Letters from Home."—Friends, dear friends, you scarcely know how prized and valued are "Home Letters," by the far-away and lone one. You do not—or the heart of the absent would not so often be made "sick" by the "hope deferred."

Oh, we long for frequent tokens to prove we are remembered, and when afar from friends, ask many messages of love. And when they come not—we know not why—the disappointment is hard to bear. The mind busies itself to frame excuses for the delay—to fancy the mischances which have prevented the reception of the expected letter. Many and kind are its thoughts of home. And it clings to Hope, who whispers soothingly, "To-morrow, and sweet words, warm from friendly hearts, shall greet thee, and cheer and gladden thy loneliness."

And so the heart soothes itself with the thought of words of cheer, to-morrow!

To-morrow has become to-day, and as the hour which shall decide for us hastens on—the heart throbs anxiously—doubtingly—but the hope yet lives. The mail has come, and we find—no letter! and disappointment, lifted yesterday, settles back with double weight upon us. We seem paralyzed for the moment—we turn away from all employment—and the thought *will* come up, that a thousand other interests occupy our friends—that they do not remember our loneliness and longing for their words of sympathy—words which prove to us the place—the precious place—we yet hold in their hearts.

But we love them too well to doubt their affection, and anew, seek reasons for the delay. So passes day after day, until we almost dread the hour which decides so often against our hopes—decides that we must still *wait*.

—Ah, how few are brave to bear anything which proves that they are forgotten by friends they love!

Writing Real Letters.—It is much of an accomplishment, and one which can give great pleasure—to be able to write a true letter—interesting, graceful and gossiping—touching on the topics of the times and the occasion, with an easy, off-hand style, just suited to the subject. The ladies are said to succeed best in this,—and one reason, aside from aptness of mind for this species of writing, is, perhaps, that they take more care to do it properly, and set a higher value upon friendly correspondence.—There are few who do not like to *read* good letters, but there are many who, possessing the ability to write them, think it too much of a task to exercise it.

Answering Letters.—Letters are generally best answered when replied to immediately.—At their first reading, one usually has some distinct thought of what they will say in reply, which, if not then written is lost in the multiplied cares of daily life. It takes less time too, and unless something important causes it, we are almost certain to lose by delay.

Letters of Friendship.—A friendly letter is valuable in proportion to the picture it furnishes of the thoughts and employments of the writer. Here one is scarcely allowed to take a grave subject behind which to hide, but the familiar hand must appear and the feelings flow from the heart to the pen and speak along the page, or the great end of social correspondence is forgotten.—B.

The Teacher's Auxiliaries.—Unless parents lend their influence as auxiliary to the teacher, much of the labors and earnest efforts of the latter will be paralyzed and rendered of no avail. Gabriel, powerful as he was in overthrowing the rebellious hosts in heaven, was assisted by legions of other sinless spirits in vindicating the majesty of Omnipotence. United action is potent in doing good, as it is also pregnant of evil consequences when perverted to the aid of a wrong cause.

Early Training.—People must be educated while they are children, or generally speaking, they will not be educated at all. The first things, too, that children should be taught, are industry and perseverance; they should also be made to know that their happiness, influence, and respectability in life, depend upon these things. Children do not understand the value of intelligence and industry, and therefore they should in early life be stimulated by every proper means; and we may regard it as the worst feature of our existing institutions of education, that they offer no stimulants to excite or encourage industry, energy, and improvement in artistic skill. The young find everywhere temptations to do evil, and nowhere *temptations* to do good.

Sunday Reading.

[Written for the Rural New-Yorker.]

THE WATCHER.

BY J. G. MILLER.

The shadows gloom darkly, and deep is the dread
Which o'er the poor mother is creeping,
As she watches at midnight, alone by the bed,
Where her death-stricken daughter is sleeping.

Not a faggot burns bright on the desolate hearth,
And no lamp on the darkness is shining;
For friendless, forsaken, and poor upon earth,
Is she, on her death-bed reclining.

Her father, her husband, and brother are gone—
They all to the grave have departed,
And now, save her mother, she dies all alone,
That mother to leave broken-hearted.

Oh woe for the doom of the early dead,
And woe for those daily dying,
And woe for that mother, alone by the bed,
Where her death-stricken daughter is lying.

The graves of her kindred are green in the vale,
And the willows are now bending o'er them;
But that marble-browed sleeper, all passive and pale,
On earth, will no longer deplore them.

The shades are retiring, and bright through the gloom
The grey light of morning is breaking,
But dawneth no day on the night of the tomb,
The dead from their slumbers awaking.

There sleep they together and sleep they alone,
No sable-clad mourners around them,
But a banner of glory is over them thrown,
And love-missioned spirits surround them.

They wake not to suffer, they wake not to weep,
They have done with all sorrow and sighing,
For soft is their slumber, and dreamless their sleep,
Where the loved and the lost, are all lying!

Cleveland, Ohio, 1854.

INFLUENCE OF THE SCRIPTURES.

In order to try to form some conception of the influence of the Scriptures upon the minds of the millions who have read them, let our readers ask each of himself the question, "What have I gained from their perusal?" And if he has read them for himself, and with an ordinary degree of intelligence, there must arise before his memory "a great multitude which no man can number" of lofty conceptions of God, of glimpses into human nature, of pictures, still or stormy, passing from that page to the canvas of imagination, to remain for ever; of emotions, causing the heart to vibrate with a strange joy, "which one may recognize in more exalted stages of his being; inspirations, raising for a season the reader to the level of his author; and of perpetual whispered impressions, "This is the highest thought and language I ever encountered; I am on the pinnacle of literature." And then, besides, he will remember how often he returned to this volume and found the charm remaining, and the fire still burning, and the fountain of thought and feeling (thought suggestive, feeling creative) still flowing; how every sentence was found a text, and how many texts' resembled deep and deepening eyes, "orb within orb," deeper than sleep or death; how each new perusal showed firmament above firmament, rising in the book as in the night sky, till at last he fell on his knees, and forgetting to read, began to wonder and adore; how, after this trance was over, he took up the book again, and found that it was not only a telescope to show him things above, but also a microscope to show him things below, and a mirror to reflect his own heart, and a magic glass to bring the future near: and how, at last, he was compelled to exclaim, "How dreadful is this book! It is none other than the book of God; it is the gate of heaven." Multiply this experience of one, by an unknown number of millions, and you have the answer to the question as to the direct intellectual influence of the Scriptures upon those who have really read them.—*Universal Magazine.*

THE LOST OF GREAT CITIES.

The editor of the Albany *Register* has been to New York. Here is one of his descriptions of character: "Let us pause here for a moment and look upon the faces of some of these people who never seem to stop, by the bright light of a 'corner lamp.' Here comes one with a queenly step in a robe of costly silk. There is bloom upon her cheek, but her eye looks boldly into those of all she meets. Look not upon her! Lost! lost! The bloom on her cheek is a lie. The smile on her lip is a falsehood.—Lost! lost! A mother's tears have blotted her name from the book of life, and angels wept over the sentence of her condemnation. Lost! lost! was whispered in heaven, when the pleading spirit turned sadly away from her, and hope closed the volume of her eternal destiny. Lost! lost! And yet here in this city, within the sound of these church bells, under the very droppings of the sanctuary, are ten, some tell us twenty thousand like her, all hurrying downward, with an ever accelerating velocity, sinking lower and lower, plunging deeper and deeper into the abyss of shame and vice, and crime, to find graves at last in the Potter's field, and beyond that grave of infamy,—what then?—Who in the judgment of God, in the retributions of eternity, shall be held responsible for the destruction of these twenty thousand souls? Man of the world, man of pleasure, sensualist, beware! At whose hands will Heaven require an account of these twenty thousand lost souls? Mothers, whose duty it is to watch over the opening intellect, the expanding mind, to guide the children God has given you in the right way; fathers, to whom your little ones look for example in that which is right; brothers, on whom younger sisters have a right to lean, sisters to whom is entrusted the care of the weak and inexperienced, the confiding, beware!—There is a record above that cannot lie, where hidden things, every secret transgression is written, and God who looks upon it, will measure out a just and holy retribution."

The evil men do lives after them; the good is often interred with their bones.

Miscellaneous.

A BALLAD.

BY JOHN GODFREY SAXE.

There lived an honest fisherman,
I know him passing well;
He dwelt fixed by a little pond,
Within a little dell.

A grave and quiet man was he,
Who loved his book and rod;
So even ran his lines of life,
His neighbors thought it odd.

For science and her books, he said
He never had a wish;
A school to him was worth a fig,
Except a "*school of fish.*"

This single-minded fisherman
A double calling had;
To lend his ducks in winter time—
In summer, fish for shad.

In short, this honest fisherman
All other toils forsook,
And, though no vagrant man was he,
Is lured by "*hook and crook.*"

All day that fisherman would sit
Upon an ancient log,
And gaze upon the water, like
Some sedentary frog.

A cunning fisherman was he,
His *angles* were all *right;*
And when he scratched his aged *poll,*
You'd know he'd got a *bite.*

To charm the fish he never spoke,
And though his voice was fine,
He found the most convenient way
Was just to "*drop a line.*"

And many a "gudgeon" of the pond,
If made to speak to-day,
Would vow with grief this angler had
A mighty "*taking way.*"

One day, while fishing on a log,
He mourned his want of luck;
When suddenly he felt a bite,
And jerking—caught a "*duck.*"

Alas! that day, the fisherman
Had taken too much grog,
And being but a landsman, too,
He couldn't "*keep the log.*"

In vain he strove with all his might,
And tried to gain the shore;
Down, down he went to feed the fish
He'd baited oft before!

The moral to this mournful tale
To all is plain and clear;
A single "drop too much" of rum,
May make a watery *bier.*

And he who will not "sign the pledge,"
And keep the promise fast,
May be, in spite of fate, a *stiff*
Cold-water man at last!

NEW-YEAR'S CALLS, IN THE CITY.

The time-honored custom of making New-Year's calls is highly commendable when properly observed. It is especially pleasant to meet and congratulate neighbors and friends, "for auld acquaintance sake," but we submit that the thing is being overdone in this and some other cities by the representatives of Young America. On the recent anniversary of New-Year, the juvenile generation of this city—the young gentlemen from six to early teenhood—were the most numerous and active participants in what has heretofore very appropriately been performed and enjoyed by those who had at least arrived at the age of discretion; while the "grave and reverend seigniors"—the "governors," par excellence—were exceedingly "few and far between." The latter probably considered their former occupation gone—the rapid progress, not to say audacity, of the juniors rendering a good old custom "more honored in the breach than in the observance."

The custom is also being brought into disrepute by many older "young men about town"—including sundry clerks, apprentices, &c.—who seem bent on making the greatest possible number of "calls," not so much to see friends or make valuable acquaintances, as to accomplish a glorious achievement in traveling and registering. The manner in which this is "done and performed" is cleverly hit off in the following brief extract from a New York paper:

Mrs. Pego, and drawing-room, are all laid out in state to receive calls. Thirty-two young gentlemen make a brief appearance at the door and recite the following shibboleth:—"How d'ye do, Mrs. Pego, Happy New-Year. Can't stay a minute; made seventy-six calls this morning; got thirty more to make. *Adoo! Adoo!*"

But the custom is outrageously abused, of late years, by the manner in which the Mayor and other city dignitaries are made to suffer martyrdom for position's sake. We understand, for we were *not* "there to see," that the domicil of our Mayor was so besieged on Monday week that the assistance of the police was necessary to preserve order, and check the hundreds of hungry expectants, nearly every one of whom seemed determined to pronounce the Russian bear and carry the devouring war into *Turkey.* This must not only be excessively annoying, but a positive nuisance, and one which should be abated. It's none of our business, perchance, but for the credit of the city, and his own protection, we trust the next Mayor of Rochester will take some action in the premises—"reform it altogether." In our humble opinion, it would be far preferable for the Mayor to discontinue the practice altogether—donating a part or all the usual expense to our charitable institutions. This course would avoid a vast deal of vexation and abuse, and be the means of accomplishing some good,—and certainly no well disposed citizen would object to its adoption.

[Translated from the French for the Rural New-Yorker.]

THE THREE FRENCH ORATORS.

Who does not admire the majesty, the dignity, and the enthusiasm of Bossuet? His genius was vast in extent, impetuous, imaginative, sublime. Who can consider without astonishment the incredible sublimity of Pascal, his invincible reasoning, his extraordinary memory, his universal and premature knowledge?

The first elevates the soul; the other confounds and troubles it. The one launches forth like a thunderbolt in a tempestuous whirlwind, and by his sudden boldness overwhelms the timid; the other astonishes, illumines and enforces conviction of the ascendency of truth.—Like a being of superior nature, his lively intelligence unfolds all the conditions, all the affections, and all the thoughts of men. His conceptions ever appear superior to those of ordinary minds. His genius, simple and powerful, combined in itself qualities apparently incongruous: vehemence and moderation, enthusiasm and calmness, brilliance and sublimity.

Bossuet had more of fertility; Pascal more of invention. Bossuet is more impetuous; Pascal more ascendant. The one excites the imagination by frequent sallies of wit; the other, always full and solid, represses and checks it by a character more concise and sustained.

Fenelon, illustrious and amiable genius, surpassed them both in sweetness and grace. His piety caused virtue to triumph. His expression was eloquent and charming. Born to cultivate wisdom and humanity in kings, his ingenuous voice re-echoed at the foot of the throne the misfortunes of the human race oppressed by tyrants, and defended against the artifices of flattery the despairing cause of the people. What goodness of heart, what sincerity do his words express! What a brilliancy of images adorns his discourses! Who ever scattered so many flowers in a style so natural, so tender, so melodious? Who ever arrayed reason in so pleasing and chaste an attire? Ah, what treasures of love, truth and goodness in his rich simplicity! Names consecrated by the love and respect of all who cherished the honor of letters: restorers of the arts, fathers of eloquence, lights of the human mind! had we but one ray of the spirit and enthusiasm which animated your sublime discourses, then we might presume to speak of your virtues and twine the sacred garland of holy remembrance around your venerated names. A. J. E.

University of Rochester, Nov. 26, 1853.

JOHN HOWARD.

This celebrated philanthropist, was born in 1726, at Hackney, and was bound apprentice to a grocer by his guardians; but, being possessed of a fortune, he purchased his indentures, and made two tours on the continent; one of them for the purpose of viewing the ruins of Lisbon. Having lost his first wife, who was much older than himself, and whom he married out of gratitude for her attention during sickness, he made a second choice in 1758. For several years he resided on his estate at Cadington, near Bedford, occupied in educating his son, and in executing plans to render comfortable the situation of his tenants and laborers.—Nor was his kindness limited to worldly benefits; it extended to eternity; watching over their morals, and inculcating the principles of vital Christianity in their hearts; in short, he was a universal blessing. He had already obtained experimentally some knowledge of a prison, having been captured on his return to Lisbon, and confined in France; but his appointment, in 1773, to the office of high sheriff of Bedford, induced him to look more narrowly into the subject, with the hope of ameliorating the condition of the captive. Here, then, commenced that philanthropic career which closed but with his life. Not only were all the prisons of his country repeatedly visited, but, in several journeys, he examined minutely those of the continent, "to remember (as Mr. Burke beautifully expresses it) the forgotten, to attend to the neglected, to visit the forsaken, and to compare and collate the distresses of all men in all countries." His glorious course was terminated by fever, at Cherson, in Russia, Jan. 20, 1790.

The humanity and the benevolence of a man who, at the expense of thirty thousand pounds, travelled between fifty and sixty thousand miles, enduring the fatigue, and dangers, and changes of heat and cold, rain and snow, is indeed above all praise. Yet it was sustained by pride. The love of God, the love of Christ which ruled his heart in life, led him to request that no other inscription might be put on his grave than this:—"Christ is my hope."

He wrote the State of the Prisons in England and Wales: and an account of the principal Lazarettos in Europe.

Good Counsel.—Might I give counsel to any young hearer, I would say to him, try to frequent the company of your betters. In books and life is the most wholesome society; learn to admire rightly; the great pleasure of life is that. Note what the great men admired—they admired great things; narrow spirits admire basely, and worship meanly.

Act Right.—Would you be exempt from uneasiness, do nothing you *know* or *suspect* to be wrong; and if you wish to enjoy the purest pleasure, do everything in your power, that you are convinced is right.

Matches differ. The sort that is got up at the parson's is apt to have the most flame before it is struck; while those made at the factory, the most after it.

AN AFFECTING STORY.

The following affecting story was related by Mr. Dudley, an agent of the British and Foreign Bible Society, at the anniversary of the Birmingham Sunday-School Union:

In the county of Kent lives, or lived, a clergyman and his lady who took a very active part in the Sunday-school connected with his church. They had in the school a boy, the only son of a widow, who was notoriously wicked, despising all the earnest prayers and admonitions of the clergyman, who, out of pity for his poor widowed mother, kept him in the school eighteen months; at length he found it absolutely necessary to dismiss the lad, as a warning to others. He soon after enlisted as a soldier in a regiment that was soon ordered to America, it being during the last American war. Some time after, the poor widow called upon the clergyman to beg a Bible of the smallest size. Surprised at such a request from an individual who was on the verge of eternity, and who he knew had one or two Bibles of large print, which she had long used to good purpose, he inquired what she wanted it for. She answered, "A regiment is going out to America, and I want to send it to my poor boy; and oh! sir, who knows what it may do?"

She sent the Bible which the clergyman gave her, by a pious soldier, who, upon his arrival at their destination, found the widow's son the very ringleader of the regiment in every description of vice. After the soldier had made himself known, he said, "James, your mother has sent you her last present."

"Ah!" he replied in a careless manner, "is she gone at last? I hope she sent me some cash."

The pious soldier told him he believed the poor widow was dead; "but," said he, "she has sent you something of more value than gold or silver, (presenting him the Bible,) and, James, it was her dying request that you would read one verse, at least, of this book every day; and can you refuse her dying charge?"

"Well," said James, "it is not too much to ask, (opening the Bible,) so here goes."

He opened the Bible at the words, "Come unto me, all ye that are weary and heavy laden, and I will give you rest."

"Well," said he, "this is very odd. I have opened to the only verse in the Bible that I could ever learn by heart when I was in the Sunday-school; I never could for the life of me commit another. It is very strange! but who is this 'me' that is mentioned in the verse?"

The pious soldier asked if he did not know.

He replied that he did not.

The good man then explained it to him; spoke to him of Jesus, and exhibited the truth and invitations of the gospel. They walked to the house of the chaplain, where they had further conversation; the result was, that from that hour he became a changed man, and was as noted for exemplary conduct as before he had been for his wickedness.

Some time after this conversation, the regiment in which he was, engaged the enemy; at the close of which the pious soldier, in walking through the field of blood, beheld, under a large spreading oak, the dead body of James, his head reclining on his Bible, which was opened at the passage, "Come unto me, all ye that are weary," &c. Poor James had gone to his eternal rest.

Mr. Dudley said he had frequently held the Bible in his hand; there were no less than fifty pages stained with the blood of poor James.—How encouraging, said Mr. Dudley, is this for Sabbath-school teachers to persevere! for should there be but one seed sown, it might, as in the case of the widow's son, produce a plentiful harvest. The only verse he ever committed to memory was the means, in the hand of the Holy Spirit, of bringing him out of darkness into marvellous light; and James is now, we trust, joining the song of the redeemed in heaven.

GREELEY ON A HAND CAR.

Horace Greeley, while on his visit to the Indiana State Fair, was obliged to travel over forty miles on a hand-car, in order to be in time. Read what he says about it:

The full moon rose bright over the eastern woods, as with the north star straight ahead, we bid adieu to the embryo city of Brookton. We were seven of us in a hand car, four propelling by twos, as if turning a two-handled grindstone; but we left off one passenger after traveling a few miles. The engineer and I made up the party; and the car, about equal in size to a wheelbarrow and a half, just managed to hold us and give the propellers working room. To economize space, I sat a good part of the time facing backward, with my feet hanging over the rear of the car, knocking here and there on a tie or bridge timber, and often tickled through my boots by the coarse, rank weeds growing at intervals between the ties, and recently-stiffened by the hard October frosts. As a constant effort to hold on was required, the position was not favorable to slumber, however it might be to cogitation.—Our Irish steam was developed from Yankee muscles, and proved of capital quality. We made our first five miles, heavily laden as we were, in twenty-five minutes; our first ten miles in an hour; but our propellers grew gradually weary; we stopped twice or thrice for oil, water, and perhaps some other liquid, so that we were five hours in making forty-three miles, or from 7 o'clock to midnight. I only tried my hand at propelling for one short mile, and that experience sufficed to convince me that, however it may be as a business, this species of exercise cannot be conscientiously commended as an amusement.

A cabin boy on board a ship, the captain of which was a religious man, was called up to be whipped for some misdemeanor. Little Jack went crying and trembling, and said to the captain:

"Pray, sir, will you wait until I can say my prayers?"

"Yes," was the stern reply.

"Well, then," replied Jack, looking up and smiling triumphantly, "I'll never say them!"

For the Ladies.

ADVICE TO LADIES.

Better disguise. Remember 'tis your part,
By gentle fondness, to retain the heart:
Let duty, prudence, virtue, take the lead,
To fix your choice, but from it never recede.
Abhor coquetry. Spurn the shallow fool,
Who censures but dull compliments by rule:
And, without meaning, like a chattering jay,
Repeats the same dull strain throughout the day.
Are men of sense attracted by your face,
Your well-formed figure, or their compound grace;
Be mild and equal, moderately gay,
Your judgment, rather than your wit display:
By aiming at good breeding, strive to please;
'Tis nothing more than regulated ease.
Does one dear youth among the sylvan train,
The best affections of your heart obtain;
Receive his love, and, by a kind return,
The truest affection will the brighter burn.
Bladin duplicity; from pride be free:
What every woman should—you then will be.

[Written for Moore's Rural New-Yorker.]

THE MOTHER'S GIFT.

And I weep, innocent one; pour forth your tears in the fullness of child-sorrow for her, your dearest and kindest friend. You cannot now realize the loss you sustain in being deprived of a mother's care and affection. But when you hear no more that mother's kind words, falling sweetly and softly on the ear; no more feel her warm caress as she presses you to her bosom, and imprints on your cheek the affectionate kiss of devoted love; when coldness and scorn chill the tender feelings fostered by maternal regard,—then indeed, will you be desolate and realize in deep sadness of heart your indescribable loss. Often in the dreary pathway of life, the form of that departed one, radiant in beauty and loveliness, will appear, watching over the beloved of earth. As the star in the azure vault pours its light and mellow beams on the earth, so thy sainted mother, from the deep serenity and holy loveliness of celestial realms, will look down on her cherished ones left behind, and breathe over them a spell tranquil and sacred. You will recall the fondness with which she ever greeted you, and contrast it with the cold reception of others. Those pure precepts impressed on your heart, purifying the fountain of child-feeling, and refreshing the fine tendrils and snowy blossoms of youthful love, as the soft dew falling on vernal flowers, will ever be embalmed in sacred recollection.

Leave for awhile the bright world—its gay and joyous scenes, and enter the chamber of death. Drive from your mind all thoughts of the busy world without, and realize the impressive solemnity of the scene. Hush that voice, and be awed by the deep silence pervading the room, and reflect it is as the stillness of the grave. See the shadows on the wall, the fitful, glimmering rays weaving themselves into frightful shapes; these are death's symbols.—Listen to that ticking, heard ever and anon; it is the death-watch beating off the time of mortal existence. Look on that taper burning dimly with a faint, boding light, slowly yet continually sinking in its socket; then turn your eye upon that couch and see the taper of life, flickering and burning still more dimly, even to expiring.

Beside the couch of the dying one stands a boy thoughtful and silent. Though of scarce ten summers, his demeanor bespeaks intrepidity, a flow of feeling, and an energetic emotion, beyond his years. The forehead high and pale, marbled with the animation of life, is shaded by locks of dark brown hair. Those grey eyes, full of expression, yet sad from weeping, in their depth of reflection disclose tenderness and ardent passion. The countenance, the seat of thought, where every impassioned feeling of the soul is traced in perceptible lines, reflects the intensity of anguish torturing the heart.—And as the boy gazes upon that emaciated form, that pallid countenance, and listens to the faint breathings, now short and quick, what must be the depth and keenness of his sorrow! None but those who have stood by a dying mother's bed, and felt the silken tissue binding them to the best and dearest friend of life, break thread by thread, can realize the severity of his grief.

Suddenly the invalid opens her eyes and looks upon the boy. How full of meaning is that look! How her thoughts run back and rest on the slopes of time! Busy memory calls up many a varying scene. The sweet associations of early life come thronging on her mind—happy days of blissful reality and delightful anticipations. But these are gone, all vanished as a dream. The soft mellowing shadows of early affection and cherished hopes have fled. The sunshine of a golden period has departed, and dark clouds shroud the sky of existence.—And now, as she gazes pensively on her only child, how heart-rending the agony to think she must soon die and leave him to meet alone, the scorn and contempt of an unfeeling world.

She motions him to her side and looks more steadfastly on his dejected countenance. She parts the fine locks from his pale brow, and impresses the last kiss of undying affection.—Placing in his hand a Bible, the testimony of holy thoughts and desires, the pledge of anxious solicitude for his eternal welfare,—then, turning her eyes to heaven she offers in the fullness of her heart, a silent prayer, and breathing a parting blessing, sweetly sleeps in the embrace of death.

How slowly pass the remaining hours of the night to that boy; slowly—no, he heeds not the flight of time. He thinks not of the bright morning, the clear sunshine, the singing of birds, the sports and joys of his childish hours. No, a deep gloom overwhelms his heart. It is a keen pang and pierces deeply. Never before has he felt such sorrow. He had seen a loved and gentle sister, whose countenance beamed with the expression of gratitude, whose heart was warm and overflowed with affection for him, torn away as the flower by the rude blast. But a mother's consoling words supported him and told of a brighter land, where the afflictions of this life are not known. She pointed to a heaven above, where the pure and good of earth live in eternal happiness—where bands of angels, clad in shining robes, with golden harps in their hands, tune celestial melody.—There his little sister was at home—and there too he longed once more to hear her silvery voice, feel the warm pressure of her soft hand, and see the smile beaming on her lovely countenance.

But no mother now,—she too is gone. No one was there to comfort him—no one to soothe his troubled feelings. Then did he wish that he too might die, and meet his little sister and beloved mother in that bright heaven.

The morning dawns. The sunlight plays in mellow beams through the lattice. The soft rays dance on the glassy surface of a sylvan stream, and fall lightly on the rich foliage of the grove. The sweet carol of birds, piping their melodious notes in choral symphonies, is heard in the leafy boughs. The mild breeze, cooled by the fresh dew, gently sweeps along. But these pleasures, this richness of early dawn, is enjoyed not by the mourning boy. He opens not his heart to there mild and tranquilizing influences. His is a severe grief, and he cherishes it in the depths of his bosom.

Night again shadows the earth, and the glorious beauties of the day are lost in the silent gloom. Melancholy thoughts creep into solitary meditations. It is the time for reflection—the time for dwelling on the past, and reviving the living remembrance of the departed. The child longs to see once more the face of his mother, though cold in death. He wants to be alone with the dead, to look on those placid features, with no human eye to observe him. He takes a lamp and approaches the door of the room in which she lies. Why does he pause? Why does his little hand shake as if in fear? We all feel that dread—it creeps over us as we stand beside the remains of the dead, however dear they may have been. He hesitates, however, but a moment, and then enters the still room. A moment the door stands ajar,—his ear catches the sound of a hollow and solemn wind blowing mournfully and low. It is a wind that has swept the fields of mortality for ages. Its moaning is ever heard, sighing the requiem of the departed. In this world it is the one sole, audible symbol of eternity.

He draws near that shrouded form and carefully lays aside the covering from the face, and looks upon those calm, cold features—sweet and tranquil, even in death. Can it be that she is dead—that she lies before him? He shudders at the thought. But it is so, for she is cold and still,—the frozen eyelids, the serene forehead, the marble lips, the stiffening hands, laid palm to palm,—how changed! He gazes thoughtfully, silently, and then turns away!

He follows her to the grave,—the last sad rites of sepulture are performed. He hears the clods fall heavily on his mother's coffin, and feels their pressure on his heart. No tear starts from his eye,—his sorrow is too deep for utterance. Slowly he returns to his now desolate home. In the silence of his chamber he sits in pensive mood,—mournful reflections are interwoven in his thoughts. His eye, by chance, rests on a sacred memento—the gift of his mother, at her dying hour. He takes it in his hand, kisses it, and presses it to his heart as a sacred relic—a sweet influence connecting him with other and holier scenes. In this exquisitely illuminated book, is a letter attached, by some pretty silken artifice, to the blank leaf at the end. It was composed when the consciousness of death had become fixed, and was the means of a departed mother's communion with her child, when all things had faded from the sight. It was a simple tribute of kindness and love, of maternal anxiety, burning strong in death. In it she besought, as a dying request, a diligent perusal of the sacred volume, and a careful attention to its inspired precepts.

University of Rochester, 1850. A. J. E.

A Sister's Influence.—The influence of a kind and gentle sister upon the associations and conduct of young men, is much more potent than is generally supposed. For himself the brother frequently cares much less than for his sister, and the thought that any disgrace resulting from his actions will inflict double pain upon her confiding spirit, will frequently deter him from evil when all other influences fail.

MOORE'S RURAL NEW-YORKER

ROCHESTER, JANUARY 14, 1854.

Our Own Report.

Over Seven Thousand Subscribers in one Week!

Whereas certain largely circulated eastern weeklies exhibit of late a proclivity to enumerate and publish the increase of their respective subscription lists from week to week — and whereas we believe the recent additions to the subscription list of the Rural will compare favorably with, if not considerably exceed, those of any other journal, not excepting the *N. Y. Weekly Tribune*, or *Phila. Saturday Post*—therefore we beg, with a heart overflowing with gratitude, most respectfully to report, that—

During the week ending on Thursday evening last, (as late as we have counted at the time of writing this,) we received *Seven Thousand Two Hundred and Seventy-Four subscribers!* This is glory enough for *one* week—averaging over 1,200 names for each business day—and far exceeds any estimate we have seen in other journals.—In this estimate we of course count new subscribers and renewals,—but our figures are *exclusive* of all subscriptions (several thousand) which did not expire with the last volume.

— This most unexpected "rush" overworked and almost overwhelmed our entry and mailing clerks—and caused some detention in issuing and mailing our first number. This number will be mailed more promptly, if possible, and probably we shall be fully "up to time" in a week or two. Meantime agents and friends will please exercise patience, if necessary, though we hope to give them little occasion for the practice of that cardinal virtue. We are so arranging our mailing books, and forces, that we shall be able to mail our whole edition—which is now just twice what it was last year—in less time than formerly; and hence, as soon as we get under headway, our subscribers will receive their papers more promptly than heretofore.

To Correspondents.

Our acknowledgements are due many former and several new correspondents for recent favors. Those written on practical and useful subjects will receive early attention—such being always most acceptable. We hope many of our thousands of new subscribers will become correspondents as well as readers of the Rural. Our desire is to have practical and experienced men "teach one another" through these pages. Let that be remembered.

Those who send us articles on literary topics must exercise patience. We have such an efficient corps of editors and regular contributors, to whose articles preference is given, that we only insert a small portion of the many contributions on miscellaneous subjects. The consequence is we select those which (in our poor judgment) possess the most merit, and are properly written, punctuated, &c. Articles containing very good thoughts are often omitted or rejected, on account of the carelessness of the authors—their neglect to write legibly, and non-attention to other important essentials in newspaper composition.

— We cannot become responsible for the safety or return of communications intended for the literary department.

Cheap Ocean Postage.

A meeting was held in New York, Jan. 6th, for the purpose of bringing about a reform in the matter of ocean postage. The Evening Post says, if the governments of this country and Europe had never meddled with the conveyance of letters across the Atlantic, we should have seen, before this time, letters carried from one continent to another for the smallest reasonable compensation. But for the governments, there would have been nothing for the post-office reformers to do; no occasion for the labors of Mr. Bates, or Mr. Spooner, or Mr. Benatt, who has now taken up the cause of ocean penny postage with a zeal which we hope will not be fruitless. In all those undertakings which are within the compass of private enterprise, governments do not keep pace with the advancement of society, and require what is sometimes called a pressure from without; they require to be stimulated to their duty by importunities, complaints, and expressions of dissatisfaction and impatience, uttered by multitudes.

Legislative Proceedings.—Our Albany correspondent will furnish accurate and life-like sketches of the progress of Legislation at Albany. His facilities for obtaining information are unsurpassed, and they will be improved to the best advantage for the benefit of our readers.—Should our Summary of Proceedings be omitted at any time, it will be for the reason that the matter is embraced in the correspondence.

Correction.—In our Special Notices, last week, we said, or the compositor made us say, that "persons who have forwarded $15 for a club of ten, can extend the number to *twenty-five* for $10"—whereas we of course *intended* to say, they could extend the number to TWENTY, which would make the whole number in accordance with our published terms. Please note.

Deferred.—Several notices of books, &c., are necessarily deferred. A number of books, magazines, &c., yet unexamined for want of time, will ere long receive attention.

Our Albany Correspondence.

Albany, Jan. 9, 1854.

"The people of the State of New York, represented in Senate and Assembly," convened on Tuesday last, as per Constitution, and after perfecting their organization, as indicated in my last, proceeded to hear the Governor's Message, and to commence their winter's work. Both houses made a speedy and almost simultaneous movement to pass the resolutions relative to the canals of the State, which resulted in their unanimous adoption, wanting one vote in each house.

The following is the proposed Constitutional Amendment:

Whereas, the following amendment to the Constitution of this State was proposed at the last session of the Legislature, viz:

Substitute for section three of article seven the following:

After paying the said expenses of collection, superintendence and repairs of the canals, and the sums appropriated by the first and second sections of this article, there shall be appropriated and set apart in each fiscal year out of the surplus revenues of the canals, as a sinking fund, a sum sufficient to pay the interest as it falls due, and extinguish the principal within eighteen years of any loan made under this section, and if the said sinking fund shall not be sufficient to redeem any part of the principal at the stipulated times of payment, or to pay any part of the interest of such loans as stipulated, the means to satisfy any such deficiency shall be procured on the credit of the said sinking fund. After complying with the foregoing provisions, there shall be paid annually out of said revenues into the Treasury of the State two hundred thousand dollars, to defray the necessary expenses of government. The remainder shall, in each fiscal year, be applied to meet appropriations for the enlargement and completion of the canals mentioned in this section until the said canals shall be completed. In each fiscal year thereafter the remainder shall be disposed of in such manner as the legislature may direct, but shall at no time be anticipated or pledged for more than one year in advance. The legislature shall annually, during the next four years, appropriate to the enlargement of the Erie, the Oswego, the Cayuga and Seneca canals, and to the completion of the Black River and Genesee Valley canals, and for the enlargement of the locks of the Champlain canal, whenever from dilapidation or decay it shall be necessary to rebuild them, a sum not exceeding two millions two hundred and fifty thousand dollars. The remainder of the revenues of the canals for the current fiscal year in which such appropriation is made, shall be applied to meet such appropriation; and if the same shall be deemed insufficient, the legislature shall, at the same session, provide for the deficiency by loan. The legislature shall also borrow one million and five hundred thousand dollars to refund to the holders of the canal revenue certificates issued under the provisions of chapter four hundred and eighty-five of the laws of the year one thousand eight hundred and fifty-one, the amount received into the Treasury thereon. But no interest to accrue after July 1st, one thousand eight hundred and fifty-five, shall be paid on such certificates. The provisions of section twelve of this article requiring every law for borrowing money to be submitted to the people, shall not apply to the loans authorized by this section. No part of the revenues of the canals or of the funds borrowed under this section, shall be paid or applied upon or in consequence of any alleged contract under chapter four hundred and eighty-five of the laws of the year one thousand eight hundred and fifty-one except to pay for work done or materials furnished prior to the first day of June one thousand eight hundred and fifty-two. The rates of toll on persons and property transported on the canals shall not be reduced below those for the year one thousand eight hundred and fifty-two, except by the canal board, with the concurrence of the legislature. All contracts for work or materials on any canal, shall be made with the person who shall offer to do or provide the same at the lowest price, with adequate security for their performance.

And whereas, the said proposed amendment was agreed to by a majority of the members elected to the last two Houses, and entered upon the journals with the ayes and noes taken thereon, and referred to the legislature to be chosen at the next general election of Senator, then ensuing.

And whereas, the said proposed amendment has been duly published for three months previous to making such choice, in pursuance of the provisions of the first section of the thirteenth article of the Constitution,

Resolved, (If the Assembly concur,) That the Senate do agree to said proposed amendment.

So this preliminary matter is disposed of. It now remains for the Legislature to pass a law submitting this amendment to the people. This will probably be done immediately, and a special election called for that purpose. If the vote is favorable, which of course it will be, the present Legislature will be able to pass a law for the execution of the work, and the *digging* will commence early in the Spring. This is making quick work of it, and it is just what might be done with other questions. Forty days would be ample time to legislate for even the Empire State, if the servants of the people would only be true to their trusts.

The amendment to the Constitution designed to prevent bribery at elections, which was passed last session, has been re-passed with entire unanimity by the present Legislature, and will probably be submitted with the Canal Amendment. The readers of the Rural will remember that said amendment changes the oath of office so that every candidate *must swear* that he has paid nothing directly or indirectly to aid in his election. Should this proposition be fully carried out, it would do much to purify the government.

The Standing Committees have not yet been appointed. It is so difficult to keep the balance of power nicely adjusted, that much time is consumed in the preliminaries. The time may come when committees shall be formed by selecting the best men, instead of mere partisans. As the Lieut. Gov. is opposed in politics to the Senate, over which he presides, the Whig majority] take the appointment of committees into their own hands. Speaker Brown, of the Assembly, is hard at work arranging his programme, and the announcement is expected to-morrow morning. He has already appointed a select committee on the Temperance question, as follows: Messrs. Leigh, Harris, Mitchell, Hall, Gibbs, Dewey and Odell; the two latter being opposed to the passage of the Maine Law. It is supposed that the prohibitory law will be passed subject to the vote of the people, perhaps at the next election. The Senate committee on the Temperance question, consists of Messrs. H. M. Clarke, Cagsay and Halsey. Most of the other business transacted during the past week was of a local nature. The members took advantage of an adjournment on Saturday last to visit their homes, but were quite promptly on hand again this morning.

It is a little instructive to see how zealous the country members are on the subject of useless expenditure. They protest stoutly against squandering the people's money, but a few galvanic *passes* of the magician and astrologers of this corrupt capital, generally render them passive subjects for the remainder of their terms.—This should not be the case. The *people* should send their plain and potent instructions on that point. Why should men filling such important offices be transformed into thieves and villains? Some of the dissatisfied office-seekers say that Albany has the lion's share of the offices, and so she has; but that is nothing new or strange. Keep still and look out for next time, is the advice they will probably follow.

Great complaints are made against the old State officers. It is said that the State House was never so completely skinned as it was by the last administration. The marble walls and iron doors remain, and that is about all. This is made the subject of general comment both in and out of the Legislature, and resolutions of inquiry have been passed to find out the number of Documentary Histories distributed, the number of acres of land sold from the school lands of the State to pets and favorites, &c. I cannot say how far these charges may be true, but when one party gets so much outgeneralled in stealing from the public crib, as to *tell* of the other, something *dreadful* may be reasonably suspected. "Owe."

Congressional Proceedings.

In the House.—Mr. Hendricks, of Ia., presented the proceedings and memorial of a large meeting held at Indianapolis relative to the obstruction of travel and commerce by citizens of Erie. He said he had not filed the paper, with the Clerk of the House, because of the distinguished character of persons who took part in the proceedings, and the importance of the subject.

The subject of the memorial was discussed by various members and then referred to the Committee on Military Affairs.

Mr. Bennett, of N. Y., introduced a bill granting land to the States to aid in the construction of railways, and for the support of common schools. He moved that it be referred to the committee on public lands.

Mr. Cutting, of N. Y., offered resolutions calling for the correspondence between Mr. Guthrie, Sec. of the Treasury, and Mr. Bronson, late Collector at New York. After being made the subject of a spirited debate, were laid on the table, by a vote of 104 to 66.

Mr. Washburn, of Me., made a speech in favor of the annexation of the Sandwich Islands. Mr. Dean, from the Committee on Foreign Relations, reported a resolution of thanks and a gold medal to Capt. Ingraham. A communication was received from the Treasury Department, enclosing estimates for revenue cutters for the coast of South Carolina, Texas and California. Also asking an appropriation of $75,000 for the erection of Custom House buildings at San Francisco.

In the Senate.—Mr. Douglas, from Committee on Territories, reported back the bill providing a territorial government for Nebraska, with a substitute for the same. The right of Mr. Foote, of Vt., to a seat in the Senate, was discussed. He was appointed by the governor to fill a vacancy until the action of the legislature thereon, but they failed to elect during the recent session. Mr. Foote consequently holds over.

Mr. Shields, from the Committee on Military Affairs, reported back the House resolution giving a sword and the thanks of Congress to Gen. Wool. It was taken up and passed.

Mr. Foote gave notice of bill for a Railroad to the Pacific.

Mr. Cass moved that the message of the President relative to the Clayton and Bulwer treaty be made the order for Tuesday. Agreed to.

Mr. Chase of Ohio, presented proceedings of the public meetings at Cincinnati, relative to the interrupting of the mails by the riotous proceedings at Erie.

Mr. Badger introduced a bill allowing a credit on duties on R. R. iron. Referred to Finance committee.

Mr. Benjamin offered a resolution calling for correspondence with Mexico relative to the Tehauntepec right of way. Adopted and adjourned.

The Cincinnati Riot.—The riot at Cincinnati, which was occasioned by the attempt of a society of Germans to burn the Pope's Nuncio, Bedini, in effigy, in the market place, and which resulted in the death of one of the Germans, was an unfortunate affair. Sixty of their number who were arrested by the police, have all been discharged. They declare that no hostile demonstration was intended on their part, the only object being to manifest their abhorrence and contempt of one, (Bedini) who assisted in strangling Liberty in Italy, and murdering her sons. They appeal in a card to the public, and condemn the police of the city for perpetrating upon them a high-handed outrage. They were marching through the street, they say, molesting no one, when the police made a descent upon their procession with deadly weapons, without reading the riot act nor commanding them to disperse.

The Cincinnati Enquirer states that a very large meeting of citizens was held there on the evening of the 5th, to consider the late disturbance in that city, growing out of the Bedini affair. Strong resolutions were passed by the meeting, declaring that the attack by the police, on the Freemen was an unwarrantable assault; that the Mayor is censurable for absenting himself and not directing the police to take milder measures before resorting to bloodshed; that the Judge of the Police Court is censurable for not using his influence to have the prisoners relieved from their suffering condition, while stifling in the cells of the watch house, &c.

One hundred and nine policemen have been arrested and held to answer for an alleged assault upon the Freeman's Society.

Agents and other active friends of the Rural will please read Publisher's Notices, next page.

Small Change.

During the past season, the foreign demand for silver coin, and the high premium that was paid for it to export, produced a great scarcity of small coin. As a remedy for the difficulty in making change, individuals in this city and elsewhere, issued shin-plasters, irredeemable in coin, but redeemable in bank bills; and based only on the personal responsibility of the drawer.—The mint has now fully overcome the complaint among small dealers of a want of *silver change*. There is now lying at the mint in Philadelphia, subject to the call of all who may desire it, over *one million of dollars* in *silver coin!* This coin is given out, not as formerly, only in exchange for bullion, *but also in exchange for gold.*

Under this state of the case, the shin-plaster currency ought to be driven from circulation forthwith; and if it is not immediately called in, the legislature should pass against it a prohibitory law. It answers at the best, for a local circulation only, and while allowed to pass, will in the very nature of the case drive away small coin. A traveler will carry away the *silver quarter*, because it is current everywhere, and leave the *shin-plaster*, because it is good nowhere except where it is issued, and too frequently not even there.

Another Great Fire in New York.

The immense pile of buildings on Broadway, known as Metropolitan Hall, including the splendid Lafarge Hotel, was totally destroyed by fire on the 9th inst. Several adjoining buildings on Broadway and Mercer street, were also greatly damaged. The hotel had a large frontage on Broadway, built in the costliest style of marble, and extending back to Mercer street. The Metropolitan was formerly known as Tripler Hall.

The fire commenced in the Hall, at 1 o'clock, A. M., and in about two hours the whole edifice was in ruins. The loss must be very heavy, as next to the St. Nicholas—the Lafarge Hotel was the most costly in the city. The Hotel was unoccupied, not being entirely finished.

The weather was intensely cold, and the firemen worked to much disadvantage. Nothing was left of the hotel and hall but the walls, and they have been entirely leveled by the firemen.

The aggregate loss by the fire at the Lafarge House is estimated at $755,000.

Great Fire at Portland.

A fire broke out in the Custom House building on Washington street, Portland, Me., Jan. 7, and the entire edifice is in ruins. Besides the offices of the Customs, the building contained the Post Office, Reading room, Atlantic Bank, the U. S. Court Rooms, &c.

The contents of the custom offices, a splendid collection of the Natural History Society, Judge Ware's law library, reading rooms, court rooms, and all the other offices, were entirely destroyed. The loss is very heavy, but will mostly fall on government.

The edifice was formerly a merchant's exchange, but was some years since sold to the U. S. for $120,000. It will probably cost as much as $300,000 to rebuild it.

Great Snow Storm.—Last week Friday, the New England coast was visited by one of the most severe snow storms lately experienced in those regions. The streets of Boston and other cities were rendered impassable, and the Railroads in all directions completely blocked up. Trains on several of the roads were stopped on the way, and the passengers compelled to remain all night in the cars, almost buried in the drifts. One train with five locomotives attached, could only proceed five miles out of the city.—Men who live a few miles out and do business in the cities, were unable to get in, and stores remained closed, banks were left locked, and street doors blockaded by the riotous snow-drifts. Many shipwrecks and other disasters occurred on the coast.

The Soule Duels.—Our foreign advices state that the American Minister at the Court of Spain, Mr. Soule, and his son, have both been engaged in fighting duels, in consequence of the difficulties which arose between Soule, Jr., and the Spanish Duke of Alva, as heretofore related. Various and contradictory accounts of the combats are abroad, but none reliable. They agree, however, on the main point, that not much damage was done to any of the parties. If a little very bad blood had been let out all round, it would undoubtedly have cooled the fever in their veins.

Ambiguity.—A correspondent of the *Boston Journal* informs that paper, that Walter Manning, of Wilmington, Mass., recently cut nine cords of wood, from the stump, into four foot lengths, between the hours of sunrise and sunset of a short winter day. "Beat that who can!" says the *Journal* man. Does he mean, beat Walter Manning cutting wood, or beat the *Journal's correspondent in telling a story?* In either case there will probably be no competition.

Large Steamer.—The steamship Persia, to be built by Robert Napier, of Glasgow, for the Cunard Company, to ply between Liverpool and New York, will be about 45 feet wide in the beam, and extend in length to 360 feet; and the tonnage will be 3000. The engines will be hundred inch cylinders with a ten feet stroke. Although no part of this immense vessel has yet been set up, the frame work is in rapid progress, and it is believed that she will be ready twelve months hence.

☞ The Female College at Albion, Mich., was burned Jan. 4th, while the students were at breakfast. The ladies and most of their property were saved. Loss $15,000, no insurance.

News Brevities.

— In Wisconsin, a homestead worth $1,000 is exempted from execution.

— Apples are selling in Washington at forty to seventy-five cents per peck.

— First Assistant Postmaster-General Hobbie is severely ill.

— Rev. Lewis Weld, Principal of the Deaf and Dumb Asylum at Hartford, died at his residence in that city, on the 30th ult.

— The ship England, at New Orleans, from Bremerhaven, lost 70 out of 500 emigrants by disease.

— In ten counties of Pennsylvania there are 263 iron works, and over $11,000,000 of fixed capital employed in the manufacture.

— By order of the Secretary of the Treasury, the new custom-house at St. Louis is to be built of marble.

— The ladies of Rush county, Texas, have sent a petition praying the prohibition of intoxicating drinks.

— There are indications that the copyright question will receive considerable attention during the present Congress.

— Apples in Texas sell at prices ranging from four to six shillings per dozen. They come mostly from Arkansas.

— In the Tennessee Legislature, Mr. Thompson has introduced a resolution nominating the Hon. John Bell for the Presidency.

— A proposition is before the Legislature of Tennessee, to add to the common school fund seventy-five thousand dollars annually.

— In one day, a week or two since, more than four hundred thousand letters and papers passed through the New York Post Office.

— An enterprising man from the West, lately brought into Milwaukie four elks, which he has trained for harness, and offers them for sale.

— Advices from Paris state that another plot against the life of the Emperor had been discovered, and a large number of arrests made.

— It is stated in the Philadelphia Ledger that General Foote is about to leave the State of Mississippi, to settle in New York!

— Accounts from Michigan represent that the liquor law is working admirably, in the suppression of grog-shops and tippling-houses.

— Mr. Bates, of Bellingham, Mass., has succeeded in cultivating the Cranberry on upland soils.

— The Cars on the Buffalo, Corning and New York Railroad now run from Corning to Batavia.

— The Tribune says it is settled that the Crystal Palace in New York is to be a permanent institution.

— The Louisville and Nashville Railroad Company is cutting a tunnel 2,100 feet in length in solid limestone rock.

— The Legislatures of California, Michigan, Mississippi and Wisconsin met on Monday.—Those of Delaware and Pennsylvania, and New York met on Tuesday.

— During the year just closed, there were forty-three sailing vessels and thirty-seven steamers built at the several ship yards of New York, of an aggregate of 56,644 tons.

— Wm. Hendry, tried in Providence, last week, for kissing three ladies in the street, against their consent, was fined $3 and costs on each complaint, amounting to $7,99 per kiss.

— The Montreal Harbor Commissioners recommend that a new harbor, deep enough to accommodate sea-going vessels, and of 18 to 20 acres superficies, be constructed.

— Washington grows steadily, though not rapidly. Having no trade or manufactures of its own to build it up, it increases just in proportion to the increase of the Central Government.

— The new ocean steamer Nashville, will take the place of the Humbolt, and leave for Havre via Southampton, on Saturday of this week.

— It is announced that rich gold placers have recently been discovered in the mountains skirting the Colorado river, and lying contiguous to Fort Yuma.

— The Legislature of Maine organized at Augusta on the 9th inst. by the election of Democratic Officers in the Senate, and Whig and Maine Law men in the Assembly.

— The Fremont claim to ten leagues of land in Mariposa County, Cal., appealed from the Board of Land Commissioners, is under argument before the U. S. District Court.

— The number of Indians in the U. S. is stated in the Report of the Secretary of the Interior, to be 400,000, of which 18,000 are east of the Mississippi.

— A fine of $100 has been imposed by the U. S. Court of Boston, upon a man who inscribed the word "patent" upon an article that was not patented.

— The Rev. Dr. McLean, President of the Lafayette College, has received a donation of $100,000 towards the endowment of that institution.

— Mr. Edwin Croswell, senior editor of the Albany Argus, has been prostrated by an attack of paralysis, and but faint hopes are entertained of his recovery.

— The editor of the Albany Journal, (Mr. Weed) having traced his descent to the Grass family, the Atlas christens him "Old Pepper-grass."

— The Journal of Commerce states that the proceeds of the U. S. stocks received from Europe for redemption, have mostly been re-invested in first-class R.R. bonds.

— A proposition has been made to consolidate all the railroads on the line from Pittsburgh to Chicago, through Ohio and Indiana, a distance of 470 miles.

— The value of the articles which have passed over the Erie canal the present year, is estimated at $39,626,362—being $5,242,443 more than the value of the freights last year.

— The exports of specie from the port of New York in 1853, were— $26,535,237
In 1852, 25,096,255
In 1851, 43,743,209

— Preparations are making for the raising of the hull of the ship Great Republic. The bows, for some distance back, scarcely bear the marks of fire, as viewed from the exterior.

— Ninety-three suits were brought in one Court in New York last week, against persons for encumbering the sidewalks, and some of them fined to the extent of the law.

— A company of five men shot 900 pigeons in one evening at the great roost in Tishomingo county, Mississippi; and John Ross and William Duncan shot and killed each other in a fight on the occasion.

Foreign Intelligence.

Arrival of the Canada.

The steamship Canada, from Liverpool, Dec. 24th, arrived at Halifax, Jan. 4th.

She had 50 passengers for Boston.

The political and general news by the Canada has no feature of marked importance.

It is asserted that the British, French and Turkish fleets entered the Black Sea the 10th ult.—supposed destination Sebastopol.

Three vessels of each squadron were left to guard Constantinople.

The Czar having frequently declared this entry into the Black Sea, would be considered by him, equivalent to a declaration of war; the withdrawal of the Russian Ministers from Paris and London was looked for.

Several skirmishes on the Danube had taken place.

The Russians attacked Kulafat on the 4th of December, but were repulsed with great carnage on both sides.

On the 13th, two Russian steamers with guaboats, made an abortive attack on Matchin.

There is nothing really later from Asia.

The general tenor of the advices indicate that the operations during November, were unfavorable to the Turks.

It is said that Persia's declaration against Turkey was caused by a direct promise from the Czar to remit the debt and disputed territory to Persia.

The Shah had placed 30,000 troops at the Czar's disposal.

The relations between the Austrian Minister and the Divan were daily becoming colder, on various pretexts.

ENGLAND.—The vacancy in the Cabinet, caused by the resignation of Lord Palmerston, remains open.

It is said that Lord Palmerston, was invited to resume office—the reason being that Lord Clarendon would resign if Palmerston was ejected from the Cabinet.

The people seem anxious that Lord Aberdeen should resign, and that Parliament should be convoked.

SPAIN.—Mr. Soule, the United States Minister, had fought a duel with the Marquis De Turgot, the French Minister, owing to certain remarks of the latter, on Mrs. Soule's dress before referred to.

Lord Howden acted as the second of the Marquis De Turgot.

A duel had also been fought between young Soule and the Duke of Alba—growing out of the same affair. In neither case had any harm been done.

INDIA AND CHINA.—The overland India mail was telegraphed via Trieste, on the 23d ult.

The accounts from Burmah are more satisfactory.

In Pegu tranquillity is established, and famine no longer prevails.

The Peshawur force has been strengthened.

The Chinese insurgents keep firm possession of Shanghai, but had been defeated by the Imperialists at Amoy.

California News.

Arrival of the Illinois.

The steamer Illinois arrived at New York, January 5, with California dates to December 8.

One million in gold on freight, and $200,000 in the hands of the passengers.

We notice in the California papers an account of the murder of Benj. S. Twitchell, of Chenango county, N. Y., by Samuel Gilmore.

The British steamer Lima arrived at Panama from Valparaiso. Business there was very dull, and prices tending downward. Flour $1 12½ per cwt.

Pacific dates from Melbourne are to the 17th of October. Trade dull. Flour quoted at 30 a 33s per ton.

The mines yield favorably. A nugget weighing 136 pounds had been taken out at Sailor's Gulley—126 pounds larger than the monster nugget.

It is reported that the steamship Empire City from New Orleans via Havana for this port, is ashore off Barnegat.

The Panama Railroad was completed to Gorgona, and the river boating is now done away with. For the present, passengers leave in the cars at Gorgona, and from thence have about 20 miles travel to Panama.

The transit from ocean to ocean is now accomplished in about 12 hours. The company have commenced operations in Panama with a force of 2,000 men, who are enjoying excellent health.

A bill was before the Council of San Francisco, to prohibit gambling in the city.

The U. S. Land Commissioner had decided a number of claims lately—in all 49 cases, confirming 21 containing 267,000 acres, and rejecting 20 containing 291,000 acres.

The Supreme Court had decided that the State cannot force gamblers to pay a license for gambling.

Among the deaths in California, we notice that of James C. Ireland, aged 18, son of John Ireland, of Rochester.

Arrival of the George Law and Star of the West.

The steamship George Law, from Aspinwall, and the Star of the West from San Juan, arrived at New York, Jan. 9, the latter with 430 passengers and $1,300,000 in gold, the former, 250 passengers and $540,000 in gold.

NUMERICAL LAWS OF THE SEXES.—The last census develops some curious facts. It fixes the numerical laws of the sexes thus:

1. There are more males than females born by about 4 per cent.

2. At 20 years of age, this preponderance is entirely lost, and there are more females than males.

3. At 40 years the balance is again the other way, and there are more males than females.

4. At 70 the sexes are about even, and the ultimate age of the human being is reached without any decided advantage to either sex.

PRESENT FROM BOSTON TO CALIFORNIA.—The First Orthodox Church in San Francisco has recently received from friends in Boston, a large and very superior organ, which is now put in order in their church, corner California and Dupont streets. It was generously presented to the society by Messrs. John Bertram of Salem, and Messrs. Twombly & Lamson, and Messrs. Glidden & Williams, of Boston.

News Paragraphs.

☞ The Woodstock (Vt.) Standard says, a poor fellow has been lying in jail in that village for three months and a half, as a witness on the part of the government, in a case of theft. "Being poor and a stranger, he was unable to procure the required bail, and was accordingly committed to jail, to remain in close confinement three months long months and a half, simply for being a witness, destitute of friends and money!"

☞ In Pittsburgh, on Wednesday, of last week, Kirkland, the street preacher, held forth to a numerous audience, on Catholicism. During his remarks, several Irishmen assembled armed with bricks and boulders, and commenced an assault on Kirkland, who retreated without receiving any injury.

☞ A late arrival from Cuba brings intelligence that the new Governor General has a determination to do all in his power to prevent the landing of slaves, and also to capture slavers approaching the island; but he says he can take no action after slaves have been placed upon the estate of their owner.

☞ The Attorney General has commenced, before the U. S. Supreme Court, the great law case of Chouteau against Blank, involving the title to the city of Dubuque and neighboring lands. The Court allows four days for the argument. The United States defends its title as original grantor of the lands.

☞ A California paper gives the following as the bill of fare at a Chinese restaurant in that city:—

"Cat Cutlet, 25 cents; Griddled Rats, 6 cents; Dog soup, 12 cents; Roast Dog, 18 cents; Dog Pie, 6 cents.

☞ The three sons of the Rev. Mr. Lindsay, of Cornwall, Canada, aged 15, 14 and 12, broke through the ice while crossing the canal at that place a few days since. The eldest could have escaped; but in trying to save his younger brothers he went down with them.

☞ The Marchioness Wellesley died on the 17th ult., at Hampton Court, after a short illness. She was a daughter of the late Richard Caton, Esq., of Maryland, and grand-daughter of the celebrated Charles Carrollton, one of the signers of the Declaration of Independence.

☞ By a new law of Vermont, all baggage masters and station agents, on the Railroads of the State, are required to give "checks" to the owners of baggage, when delivered to their keeping for transportation, under a penalty of $10 for each neglect to do so.

☞ Eighty millions of dollars are invested in the sugar business in Florida, Louisiana and Texas, the only States where sugar is made from cane. The production is over 300,000 hhds. annually. The importation of foreign sugar amounts to 350,000 hhds.

☞ The American clipper ship Staffordshire, bound from Liverpool to Boston, was wrecked on Broad Rock, Cape Sable, on the 30th ult., and the captain, first, second and third mates, the boatswain, 29 seamen, and 146 passengers perished.

☞ The Buffalo Republic says—A citizen of Harbor Creek was in town lately, purchasing goods. Among other articles he purchased ten pair of double barreled pistols, which he stated were for sundry citizens of Harbor Creek.

☞ The Albany Journal states that the lumber trade in that city during the past year, has amounted to no less than $8,000,000. Business has advanced within the same period, $1,000,000.

☞ Workmen are now generally engaged in Westminster Abbey in taking a plaster cast of the tomb of Mary, Queen of Scots, to be placed among the statues at the new Crystal Palace at Sydenham.

☞ The New York Herald has a rumor from Washington that a challenge has been sent by Col. Jefferson Davis, Secretary of War, to Mr. Toombs, United States Senator from Georgia, and has been accepted.

☞ The Boston Times, having the largest circulation of any paper published in New England, refuses to publish the Boston list of uncalled-for letters at the present low rate, the price being only one cent a name.

☞ The ship Sea Serpent, in which Bayard Taylor came back from China, experienced a violent shock of a submarine earthquake, when in the Indian Ocean, about 200 miles west of Java.

☞ Miss Elizabeth Blackwell, M. D., is to have charge of a dispensary and infirmary at New York, now going up in the eleventh ward. The recipients of the charities of the new medical dispensary will be women and children.

☞ The Buffalo Republic says that a delegation of over fifty Indians from the Onondaga, Oneida and Tonawanda Reservations were in Buffalo, on Wednesday, on their way to visit their brethren in Cattaraugus.

☞ The American says, good ice, clear and clean, is obtained from the river above the dam, and many loads of it are being stowed away for use next summer. The crop bids fair to be abundant.

☞ The Pennsylvania Central Road was completed throughout the 5th of January, and the planes on the mountain avoided. The time from Pittsburgh to Philadelphia will be but 12 hours.

☞ Each of the four steamers of the Collins' line have crossed the Atlantic about forty times, conveying in the aggregate, from fifty to sixty thousand persons, and not a life has been lost by neglect, carelessness or accident.

☞ Mr. George N. Saunders, U. S. Consul at London, writes to the New York Herald, that upon an invitation from the Portr, Kossuth was immediately to leave London in a steamer for Constantinople.

☞ Three of the defendants in the Martha Washington conspiracy case have brought suits against the proprietors of the Cincinnati Gazette and the Commercial for libel—the damages laid in each case at $60,000.

Marriages.

In Carlton, on the 18th inst., by the Rev. J. McCreery, Mr. E. S. SIMPSON and Miss MARY A. THOMPSON, both of Carlton.

In Yates, Orleans Co., N. Y., Dec. 23d, by Elder Stephen Salsbury, Mr. CHAS. WAHL, of Yates, and Miss HANNAH DYBALL, of Carlton.

By the same, at the same place, Jan. 2, 1854, Mr. BENJ. WEST, of Yates, and Miss MARANDA LEWIS, of Ridgeway.

In Hornby, Dec. 30th, by Rev. Jas. Parker, Mr. JUTSON STANTON and Miss MARY MILLER, all of Hornby.

Commercial.

BUSINESS AND FINANCE.

AN unusually large amount of gold has been brought forward by the last California steamers, three of which have arrived during the interval, since the publication of our last financial article. The Illinois had on board $1,200,000, and the George Law, and the Star of the West had together, a couple of millions more. After deducting the amount which has moved Europe-ward, the N. Y. Evening Post estimates that there has gone into general circulation by the late arrivals, and by disbursements from the Sub-Treasury, &c., a sum not less than $6,000,000. The balance remaining in the Sub-Treasury at New York, is now reduced to but little over $2,000,000.

The amount of U. S. Government indebtedness on the 31st of December, was $54,746,077.34. The canal debt of this State, according to the Auditor's report, amounts in the aggregate to $17,001,265 10. Canal receipts, $3,168,540-51; Expenses, $1,098,476.94. Amount set apart by Article 7 of the Constitution, to pay the interest and redeem the principal of the State debt, and for the support of Government, $1,850,000.00. The "Remainder of the Revenue" of the fiscal year, applicable to the completion of the Canals, $220,060.50.

The directors of the New York Central railroad are about declaring a dividend out of the earnings of the road for the last nine months; but are divided whether to make it 4 or 6 per cent. The advocates of the former rate thinking that the extraordinary expenses of the road, for equipments, repairs, and enlargement, &c., which followed the consolidation ought to curtail the dividend to the minimum limit. When fairly under way, the annual dividends ought to be 8 or 10 per cent., and probably will be, to warrant the price at which the stock has been selling.

Stocks have declined since last quotations. N. Y. Central 113, Erie 78, Michigan Central 93, Southern 118. The New York and New Haven road have again decided to pass their January dividend, not having yet sufficiently recovered themselves from the extraordinary expenses attendant on the Norwalk tragedy. It will be hereafter as heretofore a paying road, and the directors do right in repressing all talents until such time as they can be made out of the surplus earnings.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Jan. 11th, 1854.

FLOUR, Wheat and the other grains, remain the same as last week, very little being done in Wheat, but prices are stiff at quotations.

Pork is a quarter of a dollar higher and tending upward. Quoted to-day at $5,50@5,75. Lard is lower and sells at 9c for tried, and 10c for leaf. Tallow 11c. Eggs are higher and sell at 18@20c. Other things remain nearly unchanged in prices.

NEW YORK MARKET—Jan. 10.

FLOUR—Fair demand for Western and State, and prices 6¼c better, with little arriving. Decline in freights induces firmness. Better grades more saleable for the east and home trade, at improved prices. Canadian quiet and held with more firmness at $7,62½@7,68¾. Sales Western canal at $7,65¾@7,75 common to straight State, mixed to fancy Michigan and common to good Ohio. Some State delivered latter part of this month at $7,75.

Corn meal firm. Inquiry fair; sales Jersey $3,15.

Grain—Wheat better—demand quite active for export.—Sales good white Southern $1,90; good red Jersey $1,79; good white Genesee $2.

Rye firm. Large parcels in demand for export. Sales given $1,16@1,19 at depot; $1,23 delivered.

Oats plenty and dull, at 49@53c. State and Western.

Barley very firm with little here 88@91c.

Corn scarce and market 2c. better for new; old not offered. Sales at 80½@82c new Southern white and yellow in store; 82c old do, 83c Western mixed in store; 83@84c round yellow; 80c new damp Jersey, closing firmer.

Provisions—Our pork market heavy and rather lower for mess, but buoyant for prime. This is very scarce; sales at $13,25@13,37½ for old mess; $14,37½ new do; $12,37½@12,50 old prime—$12,85@13 new do; latter nominal.—Included in the sales are 1,000 bbls. new mess for March delivery at $14.

Dressed hogs dull at $6@6,25.

Lard without change.

Butter in fair demand and plenty, at 10@13c Ohio; 16@19c State.

Cheese saleable at 9@11½c.

ALBANY MARKET—Jan. 10.

Flour remains steady, with a moderate home and Eastern demand, but mainly for the better grades of State. The market for all kinds of Grain is decidedly better, but the transactions are confined to small lots. Sales Rye 103@104. Oats 41@42. Corn, 71@73 for new, and 82 for old, with but little of the latter offering. Barley, 80@87, as to quality.

Dressed Hogs are steady, but not active. Sales to a moderate extent have been made at 6@6,44, but mainly at 6,25@6,37. Some holders are asking 6,50, which has not yet been realized.

Buckwheat Flour has further improved in value. Sales 2,12@1,19 per cwt.

NEW YORK CATTLE MARKET—Jan. 3.

At Washington Drove Yard—Offered this day 1,710 Beef Cattle; offered during the week 1,721. Prices 7 to 9½c per lb., with some extra at a higher figure.

10 Cows and Calves at from $30 to $55.

Sheep and Lambs—2,141 at market—sales at from $2 to $6 for Sheep; Lambs at $3@5.

At Chamberlain's—(Hudson River Bull's Head.)—At market 300 beef cattle, 30 cows and calves, and 2,800 sheep and lambs.

Prices—Beef cattle ranged from 7@10c

Cows and Calves—$25, 30@35. Calves, 5@7c ₩ lb.

Sheep, $3,16, 4@7. Lambs, $4,50@5,50; all sold.

At O'Brien's—(No. 9 Sixth street)—On sale 100 Beef Cattle, and 30 Cows. Sold at $6@9; as to quality; and the latter at from $30@45.

ALBANY CATTLE MARKET—Jan. 9.

At W. Woolford's Bull's Head, Washington street.—Beef Cattle—700 at market. Prices are as follows:—Extra $7,50; first quality $7; 2d do, 6,50; 3d do, $5,50@6.

Cows and Calves—12 in market. Prices at from $25, 30 @50.

Sheep and Lambs—1,240 in market. Prices at from $2,50, 3@5.

Swine—690 in market. Prices at from $6@6,87.

Calfs and Sheep are selling very readily at the above prices, but five left over unsold.

CAMBRIDGE CATTLE MARKET.—Jan. 4.

At market 775 Cattle—all Beeves, no Stores—consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

Prices—Market Beef.—Extra $7,25@7,50; first quality $7; do, $6,25@6,50; 3d do, $6; ordinary $5@5,50.

Hides—$6,50 ₩ cwt. Tallow, $8,50@9.

Pelts $1@1,37. Calf skins 12c ₩ lb.

Veal Calves—$6, 7@8.

Barreling Cattle—$3,25@6.

Stores—Working Oxen—$92, 112, 124, 130@190.

Cows and Calves—$24, 25, 30, 41, 45, 52@68.

Yearlings—None.

Two years old—$22, 24@31.

Three years old—$32, 36, 39@61.

Sheep and Lambs—2,335 at market. Herd of 500 ordinary left over last week. Extra $5¼, 5½, 6, 7, 8@9. By lot—$2¼, 2½, 2¾, 3@4½.

Swine—320 large, fat hogs to A. Pierce, Esq., at 5c, and 4¾ ₩ lb. wholesale.

BRIGHTON CATTLE MARKET—Jan. 5.

At market 700 Beef Cattle, 125 Stores, 2,500 Sheep, and 600 Swine.

Prices—Beef Cattle; extra cattle are scarce. Extra $7,50@8; first quality $6,75@7,25; 2d do, $6@6,50; 3d do, $4,25@5,25.

Working Oxen—Sales at $60, 75, 86, 92, 110@115.

Cows and Calves—Sales at $20, 25, 27, 38@42.

Sheep—Some of which were left over last week, $1,75@2; better qualities, 2,75, 3,25, 3,50@3,75.

Swine—Several lots at 4c; selected barrows at 5½@6c; a lot 6¾c; retail 5@6½c.

PHILADELPHIA CATTLE MARKET—Jan. 4.

Beef Cattle—The offering the past week shows a material falling off, amounting to over 1,200 head of Beef Cattle, of which number, about 600 were driven to New York. Prices range from $7,50 to $8 per 100 lbs., but as usual, during the holidays, the demand has been limited, and a number were left over unsold.

Cows range at from $12 to $50 each.

Hogs are moving freely; about 1,500 sold at $6,25@6,88, which is a slight improvement. Prices of killed hogs are also looking up.

Sheep and Lambs come in slowly, and command $3 to 6,50 each, according to quality.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ TO CANADIANS.—Who are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—send no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Woo Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Mr. C. MOORE, is duly authorized to act as Agent for the RURAL NEW-YORKER in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

☞ PERSONS who have forwarded $15 for a club of ten, can extend the number to TWENTY for $10, but all the subscribers must begin at one date.

☞ IT is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ THE postage on the RURAL is but 3½ cents per quarter, payable in advance, in any part of the State—and 6¾ cents to any part of the United States,—except Monroe County, where it goes free.

☞ PERSONS entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ ALL business letters, communications, &c., should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

AS heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved. The Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $3 in Ag'l Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to name forms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, on some extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($15,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies ($10,) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

ALL competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

Advertisements.

OUR ILLUSTRATED JOURNALS.

FOWLERS AND WELLS publish the following Periodicals. They have an aggregate circulation of about One Hundred Thousand Copies.

These Popular and Professional Serials afford an excellent opportunity for bringing before the Public with Pictorial Illustrations, all subjects of interest, Physiological, Educational, Agricultural, Mechanical, and Commercial.

THE WATER-CURE JOURNAL AND HERALD OF REFORMS. Devoted to Hydropathy, its Philosophy and Practice, to Physiology and Anatomy, with Illustrative Engravings, to Dietetics, Exercise, Clothing, Occupations, Amusements, and those Laws which govern Life and Health. Published monthly, in convenient form for binding, at One Dollar a Year in advance.

"Every man, woman and child who loves health; who desires happiness, its direct result; who wants to 'live while he does live,' 'live till he dies,' and really live, instead of being a mere walking corpse, should become at once a reader of this Journal, and practise its precepts."—[Fountain Journal.

THE AMERICAN PHRENOLOGICAL JOURNAL.—A Repository of Science, Literature, and General Intelligence; Devoted to Phrenology, Physiology, Education, Magnetism, Psychology, Mechanism, Agriculture, Horticulture, Architecture, the Arts and Sciences, and to all those Progressive Measures which are calculated to Reform, Elevate, and Improve Mankind. Illustrated with numerous portraits and other engravings. A beautiful Quarto, suitable for binding. Published Monthly, at One Dollar a Year in advance.

"A Journal containing such a mass of interesting matter, devoted to the highest happiness and interests of man, written in the clear and lively style of its practised editors, and afforded at the 'ridiculously low price' of one dollar a year, must succeed in running up its present large circulation (50,000 copies!) to a much higher figure.—[New York Tribune.

THE ILLUSTRATED HYDROPATHIC QUARTERLY REVIEW.—A New Professional Magazine, devoted to Medical Reform, embracing articles by the best writers, on Anatomy, Physiology, Pathology, Surgery, Therapeutics, Midwifery, etc., Reports of Remarkable Cases in General Practice, Criticisms on the Theory and Practice of the various Opposing Systems of Medical Science, Reviews of New Publications of all Schools of Medicine, Reports of the Progress of Health Reform in all its Aspects, etc., etc., with appropriate Illustrations. Each number contains from 160 to 200 octavo pages, at Two Dollars a year.

"In addition to the widely circulated monthly journals issued by these enterprising publishers, we have the New Hydropathic Quarterly Review, edited by the most distinguished members of that school. It is filled with articles of permanent value, which ought to be read by every American."—[New York Tribune.

Communications, New Books for notice or review, Advertisements, and Subscriptions, should be addressed to the Publishers, FOWLERS & WELLS, Clinton Hall, No 131 Nassau street, New York. 210-2t

THE YOUTH'S CASKET,

An Illustrated Magazine for the Young. Monthly; Fifty Cents a Year, invariably in advance. E. F. BEADLE, *Publisher, Buffalo, N. Y.*

THE Third Volume of the *Youth's Casket* commences with January, 1854. The publication has now become well established in the public confidence and estimation, and it is our intention to spare no pains to make it worthy of increased patronage and support. The Casket is devoted to the best interests of the young, combining instruction and amusement, in a style suited to the capacities of those for whom it is designed. Useful knowledge is made attractive by being presented in a pleasant garb, and moral lessons are enforced, not in hard, didactic sentences, but in the form of tales and stories, toward which the youthful mind is instinctively drawn. And the Pictorial Illustrations, which are in profusion in every number afford great aid in interesting and fixing the attention of the young reader, and in impressing what is read, upon the memory.

The Casket is printed on good paper, from clear type; and is published in monthly numbers of twenty-four pages each, making altogether, at the close of the year, a handsome volume of nearly 300 large magazine pages.

The January number, which commences the volume for 1854, is now ready for mailing; it contains a splendid tinted engraving, entitled, "*Going to School;*" which will form a beautiful frontispiece to the volume.

Terms to Clubs.—Invariably in advance.—Seven copies, one year, $5; Fifteen copies, one year, $8; Twenty-four copies, one year, $10.

AGENTS WANTED.—Respectable and responsible persons wanted, to canvass for subscribers for the Casket, in every town in the United States and Canadas. To whom a liberal percentage will be paid. Specimen numbers supplied gratis. Address, post-paid,
210-3t. E. F. BEADLE, Buffalo, N. Y.

FARM FOR SALE.

A FARM, containing 145 acres, six miles from the Court House, on the Chili road. There is on the premises a frame dwelling house, two barns, and other necessary outbuildings, nearly new—fruit trees of all kinds, and three never failing wells, one of which discharges in a trough in the barn-yard. For particulars, inquire of the subscriber on the premises. [210-2t] A. McMATH, Chili, N. Y.

FARM FOR SALE,

CONTAINING 200 acres of good land, situated in the town of Barrington, within six miles of Penn Yan, and on the stage road leading from Penn Yan to Bath. This farm is in a good state of cultivation, well watered, admirably adapted to grazing or grain growing; about 150 acres of cleared land, and 50 of heavy timber. The house is mostly new, 2 good barns, good sheds and out-buildings, all sufficiently large for the farm. A large orchard of fruit trees bearing a great variety of choice fruit. It is conveniently situated to be divided into two farms, each embracing an average proportion of cleared and timbered land. Terms easy. Possession given at any time to suit the purchaser. The price is $50 per acre. For further particulars, inquire of the subscriber on the premises.
[209-3t.*] DELIA HATHAWAY.
Barrington, Yates Co., N. Y., Dec. 21, 1853.

BUFFALO AGRICULTURAL WAREHOUSE AND SEED STORE.

White & Co.*, successors to Mason & Lovering, wholesale and retail dealers in all kinds of Agricultural Implements and Machines, Field, Garden and Flower Seeds; Fruit and Ornamental Trees, Shrubs and Flowers; Oriental Poultry, &c. Also, Agents for the Boston Belting Company's Vulcanized India rubber goods, Belting, Hose Packing, &c., &c.

Orders solicited, all of which shall receive prompt attention at lowest market rates, and all articles warranted as represented. HIRAM C. WHITE & CO.
HIRAM C. WHITE, [195tf.] AMARA MASON.

SCRIBNER'S READY RECKONER,

For *Ship Builders, Boat Builders, Lumber Merchants, Farmers* and *Mechanics*. Being a correct measurement of Scantling, Boards, Plank, Cubical Contents of Square and Round Timber, Saw logs, Wood, etc., comprised in a number of Tables; to which are added Tables of Wages by the month, Board or Rent, by the Work or Day, and Railroad Distances. Also Interest Tables, at seven per cent.

By J. M. Scribner,
Author of "Engineer's and Mechanic's Companion," Engineer's Pocket Table Book, etc., etc.

Scarcely is it possible to add to the recommendations of the above book, more than to give its title page. Every one who is engaged in buying, selling, measuring or inspecting Lumber of any kind, will at once appreciate a work of this kind. No pains or expense has been spared in revising and enlarging this edition, to make it in every respect convenient and accurate.

The Log Table was compiled by drawing diagrams for each and every log, from 12 to 44 inches in diameter, and the width of each board taken, after taking off the wane edge. The sum total of each board constitutes the amount each log will give, and if there can be any dependence placed upon such strictly mathematical accuracy, no one will hesitate for a moment to abide the results here given, as the method adopted by the author can result in nothing else than strict honesty and mathematical accuracy, to the parties interested.

The best evidence of the usefulness and popularity of this book is the rapid and extensive sale of nearly one hundred thousand, since its publication. We do not hesitate to say that no book of its size and price contains more useful or correct tables.

In all new and lumber countries the book will be found very convenient, as it comprises much that is useful for the farmer, mechanic, and business man.

Orders solicited, and a liberal discount made to wholesale purchasers.

Price, 25 cts. at retail, 6 copies for one dollar, sent postage paid, on receipt of the amount.

Poetical.

[From Putnam's Monthly Magazine.]

PHANTOMS.

All houses wherein men have lived and died,
Are haunted houses. Through the open doors
The harmless phantoms on their errands glide;
With feet that make no sound upon the floors.

We meet them at the doorway, on the stair,
Along the passages they come and go,
Impalpable impressions on the air,
A sense of something moving to and fro.

There are more guests at table, than the hosts
Invited;—the illuminated hall
Is thronged with quiet, inoffensive ghosts,
As silent as the pictures on the wall.

The stranger at my fireside cannot see
The forms I see, nor hear the sounds I hear;
He but perceives what is; while unto me
All that has been is visible and clear.

We have no title-deeds to house or lands;
Owners and occupants of earlier dates
From graves forgotten stretch their dusty hands,
And hold in mortmain still their old estates.

The spirit-world around this world of sense
Floats like an atmosphere, and everywhere
Wafts through these earthly mists and vapors dense
A vital breath of more ethereal air.

Our little lives are kept in equipoise
By opposite attractions and desires;
The struggle of the instinct that enjoys,
And the more noble instinct that aspires.

The perturbations, the perpetual jar
Of earthly wants and aspirations high,
Come from the influence of that unseen star,
That undiscovered planet in our sky.

And as the moon from some dark gate of cloud,
Throws o'er the sea a floating bridge of light,
Across whose trembling planks our fancies crowd,
Into the realm of mystery and night;

So from the world of spirits there descends
A bridge of light, connecting it with this,
O'er whose unsteady floor, that sways and bends,
Wander our thoughts above the dark abyss.

Rural Sketch Book.

[Written for Moore's Rural New-Yorker.]

THE YOUNG VOLUNTEER.

A TALE OF REVOLUTIONARY TIMES.

BY EDWARD WEBSTER, ESQ.

[Concluded.]

When young Ashley left his mother's dwelling, in the manner previously related, he hurried on, hour after hour, without pausing to take breath, in the direction of the company's previous march; nor did he once abate the rapidity of his movements until almost the dawn of day. At length, exhausted by the intensity of his passions, and the over exertion of his physical powers, he sat down by the wayside to rest and to collect his scattered thoughts. The cool night air, as it fanned his burning temples, quieted the fiery tide that was rushing through his veins, and his anger, rarely excited in one of his naturally quiet and peaceful temper, gradually subsided somewhat to its normal tone. He reflected upon the exciting scene that had lately passed between him and the girl of his heart, and the conviction, which came stealing over him in spite of himself, that after all he was really dear to her, created such soothing and pleasurable emotions that a half regretful feeling arose in his mind for having given such loose reins to his passions, and treated her so rudely; but then he felt that the provocation was beyond mortal endurance, and he justified himself in the course which he had taken. Still, the expression, "Daniel — *dear* Daniel!" rung in his ears like a chime of silver bells, and before he was aware of it, the image of her he loved stole back again to the secret niche from which it had been so rudely torn, and was again enshrined in the recesses of his inmost heart. "She shall never again reproach me with cowardice, at all events," he said with energy. "I have sworn to it, and I will redeem the oath. May God watch over and protect my poor mother —— and Jenny," he added after a pause; "and if I fall, may she feel that I have not altogether merited her contempt."

So saying, he resumed his journey more calmly, and arrived by early morning at a small village on the wayside. It was nearly deserted of its male inhabitants, for they had gone forward to join the army of Gen. Starke, which was at this time concentrating near Bennington. A few superannuated old men, and a few boys were left behind, some of whom, early as it was, were already astir. The pedestrian stopped at a small house in which there lived an aged man whom he had known for many years, for he had been an old acquaintance and fellow soldier of the grandfather; but he had, in consequence of a wound received in some early skirmish with the Indians, been rendered a cripple for life. The veteran greeted the youth joyfully, but with some surprise, for his grandfather had called the day before on his way through the town, and had hastily related the circumstances of the substitution. Daniel told the old man the whole story, not even reserving the scene of the previous evening; but he resisted all persuasions to turn back.—It would not answer to do so now, even if he desired it, which he did not. Such an act would be, an endorsement of his own infamy, and what before could only be charged upon him by implication, would thenceforth be manifest and undeniable. He would like, however, he said, if possible, to remain undiscovered by his comrades, at least for a time.

The old man therefore called into requisition some half forgotten means of disguise, at which he had been skilled in his early days. He gave the young man's unusually light complexion a dark, half Indian tinge, by means of a decoction of bark which he hastily prepared, and then, with another preparation as efficient as the most potent of our modern whisker and moustache elixirs, his thick brown hair and eyebrows became as black as night. Then dressing him up in a hunting shirt and moccasins, and giving him some instructions as to his manner and carriage, the young man was transformed into as good a specimen of a half-breed, as ever traced one branch of his ancestry to an Indian king. Having then accoutered himself with an old shattered fire-lock to be used until he could find a better, and a few rounds of ball cartridge, he set forward with the good wishes and prudent cautions of his aged and generous friend.

He approached the field of Bennington, on which two successive and desperate engagements were about to be fought, just after the army had been drawn up in battle array, and was awaiting the order of Gen. Stark, to storm the entrenchments, which the Hessians under Baum, had hastily constructed for a partial defence, when they found themselves threatened with an attack from the American forces. As he neared the ranks, a young Aid-de-camp of the commanding General came galloping across the field towards him, and demanded of him why he loitered behind the column. "I have just arrived," he answered; "and am hastening to join my company, the Claremont Volunteers."

"You are just in time," replied the other, "for a battle! Yonder stands the Claremont squad," (for they were too few to be called a company,) "in the front rank, and the post of danger. See to it that you do not deem your black skin so precious as to make you leave the rank as much too early, as you are too late to join it!"

Young Ashley's eye flashed fire, and he looked as if half tempted to knock the pert aid-de-camp out of his saddle, with the butt end of his gun. The same old implication of cowardice seemed to be again cast in his teeth, which he clenched convulsively, and, without uttering another word, hastened to take post in the ranks, where, with his comrades, he awaited breathlessly the order to move forward.

During the awful pause which immediately precedes the conflict, at which moment the last involuntary prayer is mentally repeated — the last regretful thought of home and kindred is for a time banished from the mind — the last wavering doubt and uncertainty are hastily dismissed — and the last fearful looking forward to death and destruction, is indulged in and then excluded from the mind,— let us return again to the old homestead, and ascertain what in the meantime has been going forward there. The wretched girl, half stupefied with terror and self-reproach, was sitting by the fire rocking herself to and fro, and wringing her hands, when the mother returned home. Surprised at the young girl's appearance of distress and her son's absence, she hastily demanded what had happened; and when she learned it, as nearly as she could from the half incoherent recital, she was herself completely overcome.

"Oh! how could you be so unjust and cruel to the noble-hearted boy!" she cried. "It was the bravest deed of all for him to turn back, and it was only at the most sacred call of duty. Driven on now by your unjust imputations upon his honor, he will rush into the battle reckless of life, and if he fall — Alas! Alas! his blood will be upon your head!"

"Oh spare me! Spare me!" cried the unhappy girl, or I shall die! He must not—he shall not risk his life in battle; I will seek him out and bring him back, even from the cannon's mouth!"

She rose to go in the height of her desperation, but the mother restrained her, saying—

"That cannot be. Think of the consequences to yourself, a young, defenceless girl, if you should fall into the hands of the merciless savages or of the infuriated, mercenary forces. Besides, it is too late now; for before the swiftest courier could reach the army, the battle will be over. Let us pray to Heaven to spare the dear boy's life, and if it vouchsafe to hear our prayers, then all the past shall be forgotten."

"And you forgive me, then?" exclaimed Jenny, sinking upon her knees and clasping her hands.

"I do! I do," replied the mother, "for my dear boy's sake, who loves you with his whole heart."

"Oh! how I have wronged him; but I will wrong him no more! Good night; I cannot stay here longer, for the very walls become reproachful at my presence," added the girl, as she hastened from the house—that house, in which age with its ripened joys, and youth with its brightest promises, had so lately dwelt together, making it a home of quiet and domestic peace, but now so lonely and desolate of both.

The next morning, at an early hour, Jenny Hart, with a firm step, but with a cheek as pale as death, came into the widow's house, having a sickle hanging upon her arm. "Where are the little boys?" she inquired.

"In the wheat field, reaping," was the reply.

"I have come to help them," and without another word uttered, she turned away toward the field. For three days thereafter they labored assiduously at the harvest; the wheat was all cut and secured, and they were intending the next morning to commence upon the oats, when, just at sunset, a courier was seen spurring up the road towards the village, the horse covered with foam and dust, and the rider waving above his head a small hand flag.

"Victory! Victory!" he shouted; "we have broken the right arm of the invader, and driven him away from the Green Hills! The whole army of Burgoyne is surrounded and cannot escape!"

The news flew like lightning through the settlement, and women and children, as well as the few men left at home, hastened with anxious faces and palpitating hearts to learn the details of the engagement. The despatch was a brief one from the commanding General himself, hastily prepared, and sent off immediately after the close of the battle. There was no time to prepare duplicates, so the courier was instructed to read in each town the brief details of the engagement, and so much of the list of killed and wounded as belonged to them, and then to speed on to the next town. The crowd assembled in front of the village inn, as the horseman alighted, and after having given hasty directions for refreshments to himself and steed, he mounted the horse-block and read to them the despatch. It stated briefly, what all of us may well know, how the New England militia defeated the detachments of Baum and Breyman in two successive pitched battles on the same field, and ruined thereby, the bright hopes and brilliant prospects of Burgoyne's grand army. The courier, after he had stated this, turned to the list of killed and wounded, and read among the former, with a solemn and distinct voice, the names of Captain Ashley and two of his men.

A wail arose upon the air from the unhappy mother, as the name struck upon her ear like the knell of death; but her voice was drowned by a quick, sharp cry of agony that arose by her side so shrill and piercing as to startle the whole throng; and Jane Hart fell to the earth like a fragile flower, broken from its parent stem by the blast of a tempest. So long and so death-like was the swoon which followed, that for a time it was doubtful if the tide of life would ever again flow back, and a few who were cognizant of the facts, half hoped in mercy it would not; but she revived at last. She did not give way to lamentations, but arose with tearless eyes, and returned to the home of the stricken widow, with whom for a few days past she had taken up her abode. As if nerved with unnatural energy, she set herself about making preparations for the funeral of the fallen heros, for the courier announced that in consideration of the bravery of the volunteers, and at the earnest solicitation of their comrades, the commanding General had given to them a baggage wagon and horses captured from the enemy, and had detailed a portion of the company to bear home the bodies of their dead companions for interment in their native village. The funeral cortege, the courier said, would arrive on the evening of the next day.

Few and humble were the preparations to be made in that quiet and primitive community, but sorrow for the dead and sympathy for the living were none the less intense. The whole people felt an individual bereavement whenever any one of their little number was removed, and doubly so in a case and in a cause like this; all felt that they had lost a protecting arm in each stalwart limb that had been paralyzed by Death. When the slow funeral escort was seen on the following afternoon winding afar off through the Connecticut Valley, the whole village went out in procession to meet it; men, women and children, forgetful of victory, and filled with feelings of grief and sorrow for the slain. The bereaved mother, and the stricken maiden, walked arm in arm with bowed heads and desolate hearts; and as they met the humble funeral car, decked in rustic simplicity with branches of the Fir tree and the Weeping Willow, and preceded by a short double file of the Volunteers on foot and with trailing arms, the whole procession parted on each side of the way and knelt down. No salutations or signs of recognition passed between the returning soldiers and their friends, but as the wagon approached the spot where the chief mourners were kneeling, it came to a halt, at which time the clergyman offered up a brief, but most fervent and affecting prayer.— The widow, who up to this moment had repressed her grief, or at least indulged it in only stilled and half audible sobs, unable to restrain herself longer, cried out, "Oh! let me see him —let me see him! Let me look upon his dear face once more!" and the maiden at her side gave such a beseeching look of mute agony to those having the corpses in charge, that unable to resist the touching appeal, they proceeded at once to uncover the hearse. The whole procession gathered around as closely as possible, to catch a glimpse of the fallen heros, when, as the covering was removed, there appeared lying beside the two privates ——not the lifeless body of *young* Captain Ashley, but the pulseless form of the venerable old man!

"Where is my boy? Oh! where is my dear boy?" cried the mother, "let me see him!"

"Here, mother! here!" he exclaimed, stepping out of the rank; "did you not know that I was here?"

"Not dead! not dead! Oh God be thanked!" she cried, as she fell senseless into the young man's arms.

"No, mother—not there has been a mistake; it was poor grandfather instead of me who was slain. He fell fighting by my side, and breathed out his last sigh in my arms."

But there was another, although up to this time a silent actress in these pathetic scenes.— Jenny Hart, at the first moment of recognition, had fallen upon her knees beside him, and with her hands clasped, was gazing up into his face, her cheeks as pale as ashes; and when the first joyful greeting between the son and mother was over, and the young soldier looked around as if in search of some other dear object, she said in a voice half inaudible—"Daniel, am I forgiven?"

"Forgiven! Jenny, may God forgive us both!" and forgetful of all present, he pressed her to his heart.

At this juncture, the clergyman, who had previously been made acquainted with the circumstances of the young man's joining the army, came forward and said: "It is well thus far, but no farther. It is not meet to rejoice too much over the bier of the fallen soldiers. They have fought the good fight, and have gone to their rest; two of them in the flow of their youth, and the other in the ripeness of his old age. He was a valiant soldier of the Cross, as well as of the Republic, and he has entered at last into the joys of his Lord. Let us strive to imitate his virtues and do honor to his ashes."

The fallen soldiers were consigned to their last resting place amid the tears and heartfelt lamentations of their fellow townsmen; and their memory was most sacredly cherished by their surviving comrades, and grateful countrymen.

After the denouement has taken place, the patient listener is very apt to become restive if the narrator holds him longer by the button; but it is necessary in this instance, to state in as few words as possible, how it happened that the mistake arose in regard to the report of Captain Ashley's death. It appears that when the company had marched away on foot for half a day from their native village, the whole number, both of officers and men, thought it a shame that a man so much their senior as Grandfather Ashley, and one who had been a Captain years before some of them were born, and knew besides more of military tactics than all of the officers put together, should march in the ranks, or even march on foot at all. So he was unanimously installed captain, and the horse of a man notorious for his sympathies with the royal cause was pressed into the service of the veteran commander. When they arrived at the camp of General Stark, the horse was picqueted to be sent back after the engagement in case the, American forces were victorious; and in case of defeat, the owner was to seek his own animals in the camp of his friends. After the line of battle had been formed, and young Ashley had joined his comrades, each was too anxious and too intent upon the issue, to penetrate even a less successful disguise; so he posted himself in the ranks beside his grandfather, undetected even by him. Both of them fought with cool desperation, and it was difficult to tell which of the two was the better soldier. They passed unscathed through both engagements almost up to the very last, when, in a rallying charge of Breyman's cavalry, made for the purpose of covering the retreat of a broken infantry column, the old man received a mortal sabre cut from a Hessian trooper, who at that moment wheeled his horse to fly. But he was too late, for a bullet from the young man's avenging weapon brought the retreating enemy headlong from his saddle; and then, throwing down his gun, for the field was already won, the youth caught the poor old man in his arms as he was about to fall. The latter opened his dying eyes at the cry of "Grandfather!—Grandfather!" and recognizing the voice, he bade the youth hear his last blessing to his mother, and died with the words of a prayer murmuring upon his lips. General Starke, who knew of no Captain Ashley, except the old man commanding, reported accordingly, and the error remained unrectified until the arrival of the funeral cortege.

A lady sitting at the writer's elbow, whose sympathies go strongly with the *Benedictine* order, and to whom these manuscript pages are submitted for criticism before handing them to the compositor, says a very interesting and important item of information has been omitted, to wit, whether or not the Young Volunteer and Jenny Hart were ever afterwards married. Married?—of course they were; for what mortal man ever escaped the matrimonial noose after a lovely woman had once set her heart upon his capture. They were married very soon after the period of the events narrated; were blessed in basket and store, lived long and happily together, fulfilled the Scripture injunction in their day and generation, and their posterity, direct and collateral, are at this day scattered here and there all the way from Massachusetts Bay to Council Bluffs.

Wit and Humor.

A Candid Witness.—In the examination of an Irish case before the Court of Magistrates, in Providence, for assault and battery, counsel, on cross-examining one of the witnesses, asked him what they had at the first place they stopped? He answered, "Four glasses of ale."— "What next?" "Two glasses of wine."— "What next?" "One glass of brandy."— "What next?" "A fight, of course."

When Pat Hogan first arrived in this country, he was told by some Yankee that many things in this country were larger than in Ireland—the rivers, lakes, &c. Soon after, Pat came to a field where a donkey was feeding, and seeing the animal cock up a pair of long ears, Pat exclaimed to his companion, "Och, Teddy, my boy, look, look!—Och, jabers, what a rabbit!"

A printer in setting up the line—

"Hell has no fury like a woman scorned,"

by some oversight left out the *s*, and made it read—

"Hell has no fury like a woman *corned*."

A slight departure from the text, but none whatever from the truth.

A Good Hit.—One of the best "hits" ever made at an impropriety in a lady's dress, was made by Talleyrand. During the revolution, when asked by a lady his opinion of her dress, he replied, "it began too late, and ended too soon."

"I believe," said a very tall representative, "that I am one of the tallest members of the House." "Yes," added a fellow-representative, "and the *slimmest*, too."

A Late religious writer stigmatizes the authors of the yellow-covered novels as "literary scorpions who sting virtue to death with their tales."

A man attempted to seize a "favorable opportunity," a few days ago, but his hold slipped, and he fell to the ground, considerably hurt.

The man who was "struck by a remark," had his skull fractured. It is his intention to bring an action for assault and battery.

Foolish.—To spend eighteen-pence for liquor when you are uncertain of a night's lodging.

Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS NO. 5.

☞ Answer in two weeks.

We will forward the Rural three months, free of charge, to *each* of the first *four* persons (residing out of the city) who send correct answers to the above Rebus previous to the publication of the solution.

[For the Rural New-Yorker.]

PHILOSOPHICAL ENIGMA.

I am composed of 67 letters.

My 32, 33, 29, 53, 61, 60, 55, 54, 8, 66, 59, 36, 65, is a mechanical power.

My 8, 7, 36, 15, 12, 66, 12, 31, is the means of ascertaining the figure of the earth.

My 41, 35, 50, 26, 12, 31, 8, tests the mechanical properties of air.

My 54, 45, 24, 32, 39, 3, 16, 21, 66, 53, depends for its efficiency upon the impenetrability of air.

My 16, 5, 6, 2, 31, 7, 20, 21, 22, enables us to study the properties of the entire body of air.

My 4, 17, 26, 47, 52, 36, is sometimes used in carrying water over a hill.

My 61, 62, 65, 41, 31, 14, 33, 34, 61, 60, 55, is the most valuable present ever made by Philosophy to the arts.

My 55, 53, 7, 13, 20, 9, 45, 37, 49, 57, 23, a is motive power.

My 9, 19, 49, 39, 16, 27, 44, is one of the most striking and magnificent of Nature's works.

My 31, 59, 3, 60, 14, 62, 61, 63, 31, is the most recent of all the physical sciences.

My 31, 5, 29, 47, 45, 10, 65, 56, 23, among the ancients was confined chiefly to the purpose of architecture and war.

My 16, 19, 66, 41, 39, 51, 14, a lever with equal arms.

My 26, 33, 65, 12, 31, 59, 43, 35, 13, 64, treats of rest and motion of fluids.

My 8, 12, 53, 66, 14, 17, affords a means of changing the direction of the power.

My 46, 47, 55, 4, 13, 6, 14, 18, is a modification of the inclined plane.

My 44, 61, 33, 11, 4, all produced by rarefaction and condensation.

My 67, 38, 34, 64, are phenomena of cold climates.

My 58, 59, 61, 53, 4, 20, 2, 56, 31, 63, occur chiefly in the temperate zones.

My whole is an important proposition of Pneumatics. C. L. S.

Hunts Hollow, Dec., 1853.

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, Illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

DO WE WANT A MODEL FARM?

The necessity for a model farm is constantly asserted by many of the best and truest friends of Agricultural Improvement in this country; while, at the same time, many who look to it in the hope of obtaining good fat situations, are equally urgent of its claims on the people. With the latter, we have no controversy; they are beneath notice. With the former, we disagree, and will briefly give the reasons for our opinions. First, a model farm could be useful only in a certain district; for it is well known, that the same system which would deserve the name of model in one district, would be wholly unsuited to another, with different soil, climate and circumstances. In many of the Western States a model farm would be *primarily* a stock farm. In the Southern States, a cotton or tobacco farm; in New England, and the eastern counties of this State, a hay farm; in Western New York, Ohio, Pennsylvania, &c., it would be a wheat farm; while in some districts it would be a dairy or sheep farm. We would not be understood to say that we recommend an exclusive system of farming; on the contrary, we believe, to make farming profitable, you must have rotation, but in different districts the growth of different crops will be the *main object* of the farmer. There are, too, at present, model farms in every county of the Union, where as good systems of cultivation and management are adopted as any association of sarans could successfully carry out in practice. A model farm, in a restricted sense, would be one that yields the most profit; and, consequently, no system of management could be pursued but such as it was *known* would pay,—and the managers of such a farm would be no more likely to know what would pay than any of our intelligent farmers. It is plain then, to our minds, that a model farm, supported by the State, or an association, would be of little benefit to the cause of agricultural improvement.

What, then, do we want? Certainly not the means of *diffusing* knowledge. We have already more agricultural and horticultural papers than all the rest of the world put together. If a man has a valuable idea, or adopts a successful practice, or discovers an improved method of tillage, &c., it is soon in the possession of all the intelligent agriculturists in the country. What we want, in our opinion, is a farm devoted to trying scientific and practical experiments; where theories could be tested; new manures tried, and, above all, where new *principles*—principles which will be world-wide in their application—could be brought to light. How can such an experimental farm be best carried on? Judging from the past, we should say, by private gentlemen of large fortune and great scientific attainments. There are many such in the country—men who could afford to spend $5,000 a year in such a cause, if they were only imbued with a love of it—such men as Boussingault, in France, or Lawes, in England—men who would immortalize themselves and render infinite good to the science and the art of agriculture. But if such men cannot be found, able and willing to devote themselves to this work, can we not associate together and employ scientific and practical men to do this work for us? Perhaps we may: we have no objection to seeing the experiment tried. Nay, more, we will do all we can to make such an institution effective and prosperous. It is republican in its principle, and would be successfully carried out here, if any where. But we cannot close our eyes to the fact that such associations have never yet done much for agricultural improvement. What has the Royal Agricultural Society of England, of Scotland, or of Ireland, done in this line? Certainly very little. What have the experiments made at the Royal Agricultural College at Cirencester, England, ever demonstrated, unless it be that such institutions cannot make and successfully carry out, satisfactory field and laboratory experiments? The truth is, we apprehend, that the conductors of such institutions are obliged to do *too much*, in order to satisfy the public demand for something new and startling; and, instead of laboring and waiting year after year, till they have demonstrated, by induction, some new truth, they no sooner commence experimenting than they begin to theorize and proclaim their deductions to the world, with as much assurance as if they were established truths. The consequence is, that practice, the best of all tests, soon shows their conclusion erroneous—faith in science is weakened, and the institution does as much harm as good.

We come to the conclusion, therefore, (rather a conservative one, perhaps,) that we have already model farms successfully managed, by practical and scientific farmers, and therefore do not want one supported by the State, or any association; that we very much need an *experimental* farm, but that there is little probability that such an institution could be carried out, successfully, by shareholders and a board of directors.

THE DEVONS AS MILKERS.

Some time since, Mr. Buckminster, the editor of the *Massachusetts Ploughman*, stated that he had Devon heifers which gave milk of such richness that one gallon yielded one pound of butter. Many have doubted the correctness of this statement, thinking there must be some mistake; so, at the last meeting of the Agricultural Society at Framingham, Mr. B. gave the particulars of the trial, which to our mind, are quite satisfactory. The heifers were three years old last spring, and had not produced calves before; one calved the 22d of April, and the other the 22d of June. On the 22d of October, he took the milk which these two heifers gave in twenty-four hours—not quite twelve quarts—"which produced three pounds of sweet butter, and yellow as one could wish." "Several trials were afterwards made of the milk of these heifers, and with like results." He also sent some of the milk to different friends, whose names are given, and they obtained at the rate of a pound of butter from each four quarts of milk. Since these trials, Mr. B. had set apart the milk of all his full-blood cows that were in milk, and had churned the cream from each, except one whose milk he tested in a lactometer—*and in every instance the proportion of the butter to the milk was the same as at the first trial.*

We have kept Alderneys whose milk, we believe, would yield more than a pound of butter to the gallon, *but the quantity of milk given was exceedingly small.* "All the milk she gives is cream," was the warrantee given by a friend, on selling one of these cows. "That assertion is strictly correct," said the purchaser, a few days after, "*but she does not give any milk.*" Six quarts of milk, or a pound and a half of butter per day, from a three year old heifer, is not much to boast about. We published a statement, a few weeks since, of a *two year* old heifer that gave eight pounds of butter per week; and the mother of this heifer, a cross between a Devon and native, gave eighteen pounds of butter per week.

Mr. James Brier, of New Scotland, has a cow which yielded 46 lbs. 14 ounces of butter in the month ending December 19th. The cow was four years old.

CLEANING AND IMPROVING MARSHES.

Very many farms are disfigured by portions of wet, swampy and unproductive land, of various extent and characteristics, but alike in being nearly valueless, in their present unimproved condition, for all the purposes of agriculture. They may afford a covert for birds, and a haunt for reptiles, and, perhaps, some wild berries and coarse grasses; but their growth, unlike that of the forest, deteriorates rather than increases in value with each succeeding year. Yet, when drained and cleared, these wastes and eye-sores of the provident husbandman become the most easily cultivated and productive part of the farm. The process is an expensive one, perhaps, yet a very few years will repay the outlay, and bring in a handsome profit in return.

The Housatonic Ag. Society offered several premiums in 1850 for experiments in improving such lands, and at their last Anniversary published a report thereon. It is interesting, as showing the cost of bringing boggy marshes into cultivation, and also, as the views of practical and well informed men, upon the best means of accomplishing the same. There were eleven entries of lands which were viewed by the Committee in 1850, and again in 1853, when three premiums were awarded for the most satisfactory experiments.

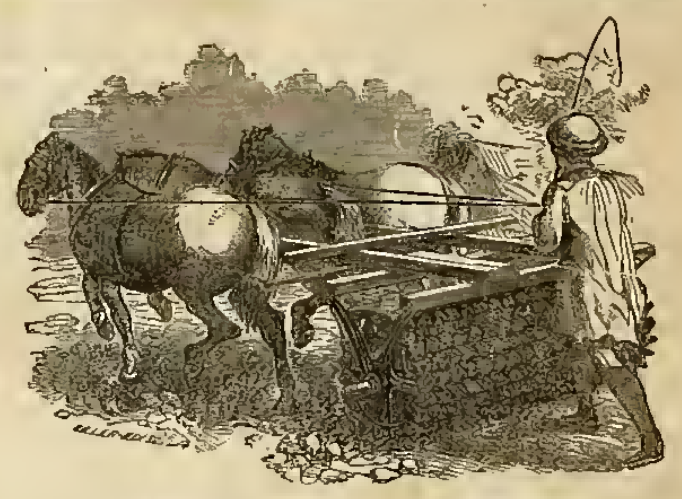
After a careful examination of the different lands entered, the committee came to the conclusion that the most effectual and thorough process, on very wet soils with a vegetation of small bushes and coarse grasses, was 1st, to thoroughly drain the land as far as it could be done by frequent ditches; and 2d, to flout or cut off the whole surface of the ground, and, piling it in winrows, let it dry, and then burn the whole to ashes. This method, taking all things into account, they believed to be more economical than that generally practised, of cutting off the bogs and brush and then subduing the coarse vegetation by frequent plowings and harrowings. It was found exceedingly difficult to reclaim the soil from its original products by this latter process. By paring and burning, on the contrary, the coarser materials of the land were at once reduced by fire, and afforded a valuable and much needed amendment in their abundant ashes. The surface with slightly plowing or thoroughly harrowing, was much earlier prepared for a crop than by the other method, gaining one or two years out of three or four, in the use and production of the land, over that of subduing by the plow.

The first premium was awarded on 9 acres of reclaimed land. The cost of draining the land, cutting off the brush and bogs, digging and carrying off the stumps and roots, plowing and harrowing, and the seeds sown during the time, amounted to about $25 per acre. The crops already produced left about $15, yet to be repaid, which, as the land was well subdued and seeded to grass, would soon be effected.

The second premium was awarded on three acres, part of a swamp of 30 acres, which the owner had under process of reclaiming. This was performed in the same way as the first, but at a cost of $16,75 per acre, and the crops during the time had repaid the outlay, and some $4,37½ per acre, over.

The third premium was given on one and a half acres, which had borne but one crop, and which was reclaimed by paring and burning, as heretofore described. It was a deep muck, thickly covered with white bush, coarse grasses, and brakes, and wholly unproductive. After draining, the whole surface was pared and burned, and the ashes spread upon the land, which was plowed and sown to grass seed.—The cost of doing this was $17 per acre, and the first crop of hay has returned $7,50 of the outlay. Succeeding crops promise to be very heavy, and the land was more thoroughly subdued than any other visited by the Committee.—B.

The late King of Prussia, invited Thaer, the celebrated German agriculturist, to settle within his kingdom, and introduce agricultural schools. The other monarchs of Germany followed this example, and Germany had, in 1847, 62 large institutions. Austria then had 9; Prussia, 12; Saxony, 5; Bavaria, 16; Hanover, 2; Wortemberg, 8; and other States, 10; in all 62.



CROSSKILL'S PATENT CLOD-CRUSHER.

Of all modern agricultural inventions, we believe the Clod-Crusher, represented above, is the best. It consists of some twenty cast-iron discs or wheels, about four inches thick and thirty inches in diameter, placed loosely on an iron axle, so as to revolve independently of each other. The outer edge of each disc is serrated or toothed like a saw. Each alternate disc is made larger in the eye, so that in revolving, an up and down motion is allowed which prevents clogging, while it increases the crushing or grinding power of the implement. There are two kinds, one with wheels *attached* which are lowered when the roller has to be taken along a hard road, or in moving it from place to place. In the one represented by our engraving, wheels are put on the projecting axles when required, and taken off when at work. The lowest cost of the Clod-Crusher is $75, and some are as high as $150, according to size and fixings.

Those who have never seen one at work, can form but a very inadequate idea of the effectual manner in which it breaks up the largest clods of the stiffest and hardest clay. But for it, many heavy land farmers would find it impossible to prepare their land for turnips or barley, requiring as they do, a very fine tilth. To such farmers, Crosskill's Clod-Crusher is an indispensable implement. To the light land farmers, it is also of great value. It is well known that the wheat plant delights in a hard, compact soil, and that many of our sandy soils are so loose that wheat winter-kills, or is blown away. On such soils, the Clod-Crusher is an invaluable implement for consolidating the wheat fields in spring. It leaves the land with the appearance of having been trodden with sheep. Certainly nothing except sheep will so consolidate sandy soils. We have seen wheat crops benefited at least ten bushels per acre, by the use, in early spring, of this implement.

One of the Clod-Crushers has been for some time on exhibition, at the Crystal Palace, in New York; and we were in hopes that some of our spirited and wealthy farmers would have purchased it. But they did not, and we believe it has been re-shipped to England. What opinion Mr. Crosskill, who himself attended the exhibition, will have of the intelligence and enterprise of American agriculturists, we leave our readers to judge. The implement on no account, should have been suffered to leave our shores. But we trust that some of the many intelligent mechanics, who visited the Crystal Palace, have examined the principles of the implement, so that they can, and will, set immediately to work and make one cheaper and more efficient than the original. We should be disappointed if such does not prove to be the case. If such an implement could be made for $10 or $50, as we think it might, the sales would be enormous, for there can be no doubt that the Clod-Crusher will prove at least, as equally beneficial in our dry, hot, baking climate, as in the humid atmosphere of the British Isles.

It has been said that a good cow worthy of the name should yield, on an average, for first 100 days after calving, 7½ quarts at a mess, or 15 quarts per day, amounting to 1,500; for the next 100 days she should average 5 quarts at a mess, 1,000 quarts; for the succeeding 100 days she should average 4 quarts to a mess, 800.—Total number of quarts, 3,300.

A PENNSYLVANIA BARN.

Ens. Rural:—Enclosed I send you a rude draft of my barn. It is a bank-barn, on the level ground. I dug down three feet below the surface for the foundation, and in this way got earth for the embankment. The barn is 44 by 64 feet; entrance to both stories from the south.

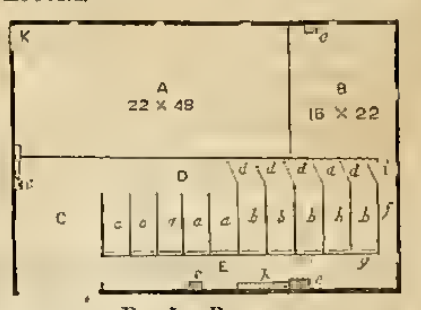


Fig. 1.—Basement.

Fig. 1 is the basement; A, manure cellar; B, straw mow; C, entrance, open the whole width on the south side; D, stables, containing 10 stalls; E, feeding room 8 ft. wide; *a a a a a*, horse-stalls; *b b b b b*, cow-stalls, with a door to each, opening back, as seen by dotted lines, *d d d d d*; *c*, water trough and pump; *c c c*, stairs, and holes for throwing down provender; *f*, narrow passage from feeding room to straw mow, with doors into cow-stalls at *i*; *g*, mangers for feeding; *h*, corn crib, with trap-door above for throwing down corn; *k*, door into manure cellar, for the entrance of hogs and sheep.

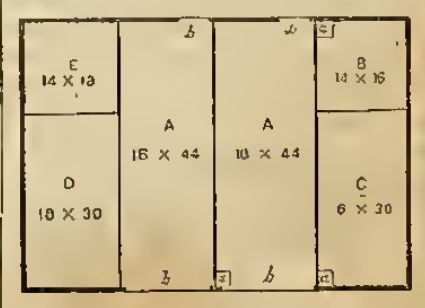

Fig. 2.—Second Story.

Fig. 2 is the second story; A A, barn floors; B, straw mow, goes to the lower floor; C, hay bay; D, wheat bay; E, granary; *a a a*, places for throwing down provender; *b b b b*, are barn doors.

The basement story is eight feet high, surrounded by a stone wall, except sixteen feet at the entrance. By taking away the partition between C and A, a wagon may be backed into the manure cellar. The upper part is sided up like a house, painted with a composition of one-fourth white lead and three-fourths waterlime, and has twenty venetian blinds. The whole cost is about eight hundred dollars.

Isaac Eaton.

Fairview, Erie Co., Penn.

At the late Smithfield cattle show, the gold medal was awarded for a short horn ox. At the Birmingham show, the week after, "it went honestly to a Hereford, while the Herefords generally were unquestionably the best lots of beasts in the yard." The Dorking and Spanish were the best classes of poultry. The Chinese varieties were as plentiful as ever, "but never did they appear to attract so little notice, and never, certainly to command so little admiration."

Communications.

COST OF RAISING CORN, PARSNIPS, &C.

Mr. Emtor:—I was surprised at reading a statement relating to a crop of Indian corn raised by C. K. W. at the very low cost of 9½ cents per bushel of ears. I have raised a first rate crop the past year, but it cost me more than double this sum. He says the crop was manured with 20 double loads of manure from stables, &c. Now, friend C. K. W., was it 20 per acre, or on the 18 acres? Did the manure cost anything, and if so, how much? and how much was the hauling worth? What is the use of land worth in Le Roy? What is it worth to market the crop? If you will answer the above and add the cost to the crop, it may increase the cost per bushel. I hope you will not accuse me of fault-finding. I deem it of great importance when statements are made public, that they should be as exact as possible. I have not the least doubt that your crop was good and paid well for the labor expended. I should be pleased if every farmer would keep an exact account of the cost of all his crops, and make it known to the public. There can be no better way to improve than by comparing our crops with those of others, raised under like circumstances. You say corn requires no stimulants for its growth, except what amounts to a thorough manuring. There I agree with you exactly. The corn crop prepares the ground for wheat, if the land is rich and the corn be well cultivated. The only objection is that much labor is required to remove the corn in time for the succeeding crop. I always sow wheat after other crops, and generally have a good crop. I cannot afford to summer fallow. Some may think strange of that, but I believe it to be cheaper to keep the land in good condition by manuring. I think our friend right in regard to planting corn on soil. If the soil is infested with the wire worm, the corn will most certainly be destroyed on any except soil land. I think that the corn crops under ordinary culture will pay as well as any other farm crop. The stalks are worth from 8 to 10 dollars per acre.

I think every farmer might raise a good supply of roots of the various kinds, and feed them with stalks and keep the farm stock in first rate condition. I have had some experience in raising all kinds of roots. I. W. Bingrs says, he never had but one good crop of parsnips, and those he sowed in the fall. I have invariably had good crops, sowing them in the spring, and think it preferable to fall sowing for this reason; if sown early in the fall, they will run to seed, and if late they will be small, the ground will be very hard, and the plants appear stunted in the spring. Sow as early as possible in the spring, say 1st of April, if the ground and weather will permit. If the ground is light and dry, tread in the seed, or roll after sowing. I think friend Bingrs mistaken in regard to sowing black radishes. They should be sown early in July to be sure of a good crop. My experience is, they will not produce a good crop if sown later than turnips. They do not mature as quick, but they will stand the winter as well as the parsnips. They make good feed for horses and cattle.

I think the most profitable root crop a farmer can raise is carrots. A good yield is 8 or 900 bushels per acre, and they are universally admitted to be excellent food for cattle, horses and hogs. The latter may be wintered entirely on them, and thrive well. The cost of cultivating depends much on the condition of the soil, the time the work is done and the price of labor. My crops usually cost from 8 to 15 cents per bushel, counting all expense, including use of land, manure, &c.

The great secret in raising good crops is, good seed, good soil and careful cultivation.—The mangel-wurtzel and sugar beets are first rate crops to raise for stock. They are good to feed fat cattle with meal, and also milch cows. They may be raised at a little less expense than carrots, and are less valuable. I think ruta-bagas the best for fattening purposes, and they can be raised cheaper than any other roots except round turnips. I once raised a crop of 600 bushels at a cost of less than 4 cents per bushel. Beef that is fed entirely on ruta-bagas, will taste of them, and so with some other things, onions in particular.—I had some cattle running in a field where they had access to a lot of onions where I had raised seed and left the stalks and onions in the ground. The cattle ate them freely. I noticed them daily, without thinking they were doing any harm. A few days after they were sold to the butcher. The beef was so strongly scented with onions as to make it unsaleable.—The first onion a milch cow gets will taste in the milk. Carrots are the favorite root for cows. I think root culture as a branch of farming is generally too much neglected. Onions are a remunerative crop to the farmer.—The high price they have sustained for the last few years has paid for bending the back and pulling weeds. The best kind is the English potato onion which may be found at Seed Stores. The greatest trouble is to keep them till spring. If they sprout from the tops, two inches, they are worthless. My method of keeping them, for the last ten years, has been to have them perfectly dry, sort them over late in the fall, and put them in a bin in the barn and cover them with straw. A layer of onions, then dry straw, and so on until all are packed, or put them in boxes or barrels and cover them well on top. Seed onions may be kept in the same way. Freezing will not hurt them if they keep froze and are not exposed to the air. I saw a statement some time since which said pack them in dry sand. I should think it impossible to keep them in that manner; besides it would be quite tedious to put up 75 or 100 bushels in this way, at the least it is entirely unnecessary.

This article is too long, but if what I have written will be the means of saving brother farmers trouble or of stimulating them to do what they have not done before, I shall be well paid. E. S. H.

Rochester, Jan. 10th, 1854.

REMEDY FOR SNOW-DRIFTS, &C.

Mr. Moore:—I noticed in the Rural of the 17th of December last, that you ask every one that has a new idea on practical subjects connected with farming, to communicate it for publication. Now it may not be known to all your numerous readers, that a very cheap, durable and neat looking board fence may be built, which will prevent the snow from drifting beside it—being a very desirable object for any one situated as I am, where the snow drifts into the road even with the tops of all common fences. Knowing that wire fences were good against snow-drifts, but disliking them on many other accounts, I concluded to try a cheap board fence with very narrow boards.

I built about 20 rods one year ago last April, which works admirably; not a sign of a snow-drift beside it, while other fences in close proximity, have been entirely covered.

My method of procedure was this:—I drew some oak, elm and hickory logs to mill and had them sawed into boards one inch thick, four inches wide and twelve feet long; and used five such boards to the length, leaving a space of 2½ inches under the first or bottom board, 4 inches between the first and second, 5½ inches between the second and third, 7 inches between the third and fourth, and 9 inches between the fourth and fifth boards; making my fence four feet high; high enough for anything that runs in the road about here; while geese oxen, do not get through it without yokes on.

I used butternut posts, having plenty on my own land, and knowing, from experience, that they would last 12 years at least. The posts were set 3 feet deep, and the boards nailed on with twelvepenny nails, 5 to each board. Now the cost of such a fence, reckoning the price I should have had to pay for each item would be:

For 20 feet of boards to each length at $6 per M feet, 12 cts; 2 butternut posts to each length at 6 cts. each, 12 cts; 30 twelvepenny nails (about ½ lb.) at 4 cts. per lb., 2 cts; cost of putting up fence at 10 cts. per length. 10 cts.;—making the whole cost of fence, 36 cts. per length of 12 feet, or 49½ cts. per rod.—The advantages of such a fence, when compared with a crooked rail fence, are very great; for the extra amount of timber required for rails would sell standing in the woods, for enough to pay the expense of such a board fence. Then the neat appearance of the fence, with no snowdrifts beside it in winter, gives the owner the satisfaction of knowing that he is not entirely excluded from the rest of mankind.

Let us now compare the cost and durability of such a fence, with that of good stone wall. If a man has a good stone quarry on his own farm, digs down for a foundation and builds a good substantial wall, it will cost him, at least, two dollars per rod; besides it should be 2½ feet thick at the bottom, which will take up considerable more land in fencing the farm than a board fence. But say nothing about the land, allow the board fence to last only 12 years, and we shall then have something left in favor of the board fence. Let us see:—One rod of my board fence cost 49½ cents, or in round numbers 50 cents; the simple interest on 50 cents for the twelve years, which the fence is supposed only to last, would be 42 cents; making the whole cost of board fence for 12 years, with simple interest 92 cents.

The cost of stone wall, 2 dollars, and simple interest on it only for 12 years, would be $3,08; but say nothing about the 2 dollars, excepting the interest on it for 12 years, which is $1,68, from which we deduct the cost and interest of board fence, 92 cents, will leave us 76 cents; with which we can build a new board fence for 50 cents, and have 26 cents left to add to our two dollars principal on which to receive interest for the next 12 years, &c.; thus, in course of time amounting to a considerable sum in favor of the board fence, even at a 12 years term of simple interest.

Lincoln S. Cummings.

Knox's Corners, Oneida Co., N. Y., Jan., 1854.

A correspondent of the *Mich. Farmer* raised thirty bushels of onions from two ounces of seed on a piece of oak opening land one rod wide by five long.

Agricultural Miscellany.

CARBON IN VEGETABLES, ETC.

Prof. Mapes, in a recent lecture before the Mechanics' Institute in New York, is reported in the *Tribune*, to have said "ninety-eight per cent of the dry material of *every vegetable is carbon.*" According to many determinations made at Rothamstead, and which agree well with Boussingault, the dry matter of turnips contains in one hundred pounds:

Carbon, 42; Oxygen, 42; Hydrogen, 6; Nitrogen, 2; Ash, 8. That is to say, instead of 98 per cent. of carbon, we found only 42 per cent. Boussingault found in the dry matter of the grain of rye 46 per cent. of carbon; in oats 50 per cent.; in wheat 46 per cent.; in wheat straw 48 per cent.; in potatoes 44 per cent.; in clover 47 per cent.; in dried beets 42 per cent.

There are many other statements in the lecture equally at variance with truth, for instance, he says "in the Genesee Valley where thirty bushels of wheat were reaped per acre thirty years ago, there are now only twelve and a half." It is the opinion of farmers who have cultivated land in the Genesee Valley, for upwards of thirty years, that their farms yield more wheat per acre now than they ever did. We do not like to speak of men's *motives*, but it does look suspicious, when such a statement is made, and superphosphate of lime, of which Mr. Mapes is a manufacturer, is recommended in the same lecture, to restore these exhausted soils to their original fertility.

THE JAPAN PEA.

Some description of this Japanese production was given in the last Vol. of the Rural. It is not yet tested sufficiently in this country to speak definitely of its merits. It requires a long season to ripen at full maturity. I received last spring a few seeds for trial—planted them as early as the nature of the ground would admit. They came up well and made a stout growth. Being of an upright, bushy growth, in my ignorance of them, I planted and permitted them to grow too thickly.—They have large, bean-like leaves, small, axillary, inconspicuous flowers—which appeared so late that but a very small portion matured seed sufficiently to plant again. The plants were crowded with the short, downy pods—one plant, standing somewhat apart, having over 200 well formed pods, whilst the least in the thickest part of the drill had 65. I see in the journal of the N. Y. S. Ag. Soc., those who have reported their success to the Secretary, speak of its great prolificness. From this fact, if it can be sufficiently acclimated, it would seem to bid fair to be an important addition to our leguminous crops. But there is another drawback which would debar its general cultivation as a field crop. Its stems are quite large and hard as wood, almost, so that to harvest a field of Japan Peas would be about as easy as to harvest a field of brush. T. E. W.

MONROE CO. AG. SOCIETY.

The annual meeting of the Monroe Co. Agricultural Society, was held in the Court House, in Rochester, Jan. 11th, 1854, when the following officers were elected for the ensuing year:

President.—F. P. Root, Sweden.

1st Vice President—S. L. Sheldon, Sweden; 2d L. D. Mitchell, Pittsford; 3d. Daniel Lee, Rochester.

Corresponding Secretary—A. E. Harmon, Wheatland.

Recording Secretary—Joseph Harris, Rochester.

Treasurer—E. S. Hayward, Brighton.

Town Committees.—Greece—F. W. Lay, J. S. Brown. Parma—J. C. Austin, J. Scrifice. Clarkson—Dr. A. Baldwin, H. P. Norton. Sweden—J. P. Young, S. L. Sheldon. Riga—Dennis Church, Harvey Sprague. Ogden—J. P. Ross, Jesse Dewey. Wheatland—George Sheffer, E. A. Harmon. Chili—J. R. Valentine, Wm. Colt. Gates—W. R. Booth, Calvin Sperry. Ironclequoit—C. K. Hobbie, Benj. Wing. Brighton—S. H. Gould, Willard Hodges. Pittsford—L. D. Mitchell, W. M. Huntington. Mendon—G. W. Allen, W. S. Clark. Henrietta—Stephen Leggett, D. L. Bailey. Rush—D. S. McHardy, H. Barber.—Perinton—J. S. Ramsdell, Geo. Aymult.—Penfield—W. C. Tracy, Charles Wisner. Webster—A. S. Melvin, Joel Sherman.

F. P. Root, E. S. Hayward and John Rapalje were appointed delegates to the annual meeting of the State Society.

A meeting of the Executive Committee was appointed to be held at the Court House, in Rochester, on Tuesday, January 31st, at 10 A. M., for the purpose of reviewing the premium list. The Society will hold two plowing matches, one in the eastern and one in the western district of the county, to be located in the towns that will respectively furnish *the largest number of members of the Society*, previous to the meeting to be held the first Wednesday in June.

Feeding red pepper to hogs with their food is said to be good for the kidney worm. The experiment is worth trying.

NEW YORK STATE POULTRY SHOW.

The first fair of the New York State Society for the improvement of domestic poultry, will be held, simultaneously with the annual meeting, at Albany, on the 7th, 8th & 9th of February, 1854. The following is a list of the premiums to be awarded:—

Class I. Gallinaceous Fowls.—For the best and largest variety of pure breed fowls, bred by the exhibitor, a Silver Cup, valued at $25.

For the second best do., $10.

Best and largest variety of pure breed fowls owned by the exhibitor, a Silver Cup, valued at $25.

For the second best do., $10.

Asiatic Fowls.—For the best pair of Asiatic Fowls of whatever sub-variety, $10.

There will be two premiums or more, bestowed upon all of the following breeds of Fowls, the most of which will be, for the 1st Premium, $5; 2d, $3. The Premium List embraces Red or Buff, Black, White, and Dominique colored Shanghais, Cochin Chins, Brahma Pootras, Chittagongs, White Calcuttas, Black Javas, Hong Kongs, Black Spanish, Dorkings, Hamburghs, Games of different kinds, Dominique, Guelderlands, Polish, all colors, and Bantams, all kinds.

Class II. Turkeys.—Wild and domestic.

Class III. Guinea Fowls.

Class IV. Pea Fowls.

Class V. Ducks.—Aylesbury, Cayuga Black, Muscovy, Top Knot, and Common.

Class VI. Geese.—Bremen Chinese, African and Wild.

Class VII. Swans.

Class IX. Rabbits.—Lop eared, for the best pair, $3.

Second best do., $2.

Common, For the best pair, $2.

Second best do., $1.

Class X. Rat Terrier Dogs.—For the best specimen, $3.

Second do., $3.

Exhibitors must be members of the society. Admission, to others than members of the society, 25 cents. Any person can become a member of the society, by paying one dollar.

David Taggart, Esq., of Penn., will deliver an appropriate address, on Wednesday evening, at the close of which the officers will be elected for the ensuing year.

Arrangements have been made with the New York Central Railroad, by which all coops of fowls, destined for the exhibition, will be conveyed over the road, free of charge. It is expected that similar arrangements will be made with all the other principal roads in the State.

NATIONAL EXHIBITION OF POULTRY.

A number of prominent gentlemen, interested in the improvement of domestic poultry, met at the Astor House, in the city of New York, on the 5th inst., and organized a National Poultry Society. Several hundred dollars were subscribed, which will be offered in premiums, for the best specimens of fowls that can be produced from any part of the United States. The first show will take place at New York, on the *thirteenth day of February next*, and will continue several days. It will include an exhibition of all kinds of fowls—pen fowls, ducks, geese, swans, fancy pigeons, gold and silver pheasants, &c. Premiums will also be awarded for the best specimens of rabbits, rat-terrier dogs, and deer. Exhibitors will be admitted free at all times during the exhibition.

Food and water will be provided by the Society for all fowls on exhibition, and proper persons will be appointed to regularly feed and provide for them, without inconvenience to the owner. Fowls intended for exhibition may be sent in advance of the time to the Managers, at Adams' Express Office, New York.

P. T. Barnum, Bridgeport, Conn., is appointed President; A. B. Allen, Secretary, and R. B. Coleman, of the Astor House, Treasurer of the Society.

Superphosphate of Lime.—A correspondent of the *New England Farmer*, says that last year (1852), he used guano on young trees *with good result*. This year he was induced to try superphosphate of lime, but instead of making the "vegetables jump, it hardly kept them awake." He tried it "in corn and around corn," and also on potatoes, cucumbers squashes, tomatoes, &c., but *did not perceive any benefit*. The potatoes and tomatoes looked fair, but were not so good as where ordinary manure was used. The corn cucumbers and beans were a little below respectability; and the "poor squashes were not able to keep alive upon it."

Gates.—Reader, have you a set of bars in any place through which you have to pass frequently? If you have, you ought to feel ashamed of yourself. Do repent, and no longer forego the pleasure and advantage of having a good gate, well hung, that swings both ways and that will open easily, and close of itself, by means of a spring. These leisure winter days are just the time, not only to think of how it should be done, but also *to do it!* You can make a gate just as well as not; and we know that if you once make one that hangs well, you will never stop till every set of bars on the farm is replaced by a gate.

Hornblende is the grand *primary* source of lime.

Inquiries and Answers.

MILLET.

With this crop I have not had a great deal of experience, but such as I have, and with what observation I have had in the cultivation of it by others, I will communicate, in answer to the inquiry in a late number of the Rural.

My own experience with it has been on light soil, where the yield was rather light, and somewhat uneven; nevertheless, it was a remunerating crop—yielding a ton and a half, or more, to the acre. I have seen crops of it on river bottoms or alluvium that would yield as high as 4 tons per acre. When it grows stout and heavy there is more wastage in proportion, as the large coarse straws are not so well relished by stock. To obviate this, a thicker seeding is necessary, as then the product is closer and consequently finer.

When grown thus, and well cured, it is relished much by stock of all kinds and is quite as good as hay. For milch cows it is equal to the best corn fodder. The seed ground is equal if not superior to the same weight of wheat bran or shorts, including, as it does, a greater flow of milk. For working cattle it is in my opinion equal to the same weight of corn. As feed for young chickens, it is superior to anything else, and saves all the trouble of wetting up meal—for hens it is also the best of feed.

For soiling, millet must be a first rate crop, on strong rich land. It is a quick growing crop, and can therefore be sown at intervals to insure a succession.

For winter forage it is well to sow sufficiently early to insure good weather at the harvest. For this purpose I prefer the first of June—though it will answer as late as July. Late sowings, however, bring the period of its maturity so near the autumnal frosts, that there is liability of damage from them, for like corn it is a tender plant in this respect, and like corn, too, in another respect, its straw or stem is tenacious of moisture, and therefore requires much care, and some time in curing.

I prefer to let it remain until the seeds are out of the milk, and then cut while they are doughy. The herbage will be still green and succulent at this point, whilst the seeds will be better for feeding, &c. The better method is to cut with a cradle, letting it lie in swath till well wilted, then bind in small sheaves, setting the sheaves in small stooks well capped against rain. In this manner they may remain securely in the field till thoroughly cured, when, if removed to the mow in a dry state, there will be no fear of injurious heating. It is cheaper harvesting with a cradle, whilst there is less after loss in seed shelling, and time in hauling and threshing. It should by all means be thrashed before feeding, unless it has been cut whilst in bloom or just after, which some prefer, as stock will eat the fodder closer, whilst the seed ground into meal will be worth twice as much for feeding as unground. The amount of seed used to the acre varies. I have seen fields sown at four and six quarts to the acre. I have sown from ten and twelve to sixteen quarts. On rich land I think the latter amount none too much. The more seed used to the acre, the finer will be the growth and the more valuable the fodder. I would therefore vary the amount of seed to the strength of the soil. Millet is one of the crops that will tell a generous soil to the passer by. T. E. W.

Sweet French Turnips, Ruta Bagas.—Will you please inform me through the Rural, whether the sweet French turnip (or, as I have seen it marked from some gardens, sweet Russian,) is as good for cattle for laying on of fat, as the Ruta Baga? If so I think they would be more profitable, as on my land, (a light sand,) I can raise about a third more, and I have a sell at the rate of over five hundred bushels to the acre.—J. D. B., *Deerfield, Len. Co., Mich.*

We are not sure that we understand exactly what our correspondent means by the "sweet French turnip." Has it a long yellow root?—If so it is not so nutritious as the Skirvings purple top ruta baga. If, as we suspect, it is a variety of ruta baga, we should be inclined to think it more nutritious than the Skirving's, inasmuch as we have found the Skirving's to contain more water than any other variety of ruta bagas.

Sweet Potatoes.—Can you give me any information respecting the cultivation of sweet potatoes? I should think it might be a profitable branch of farming near large cities.—B. S., *North Chili, N. Y.*

No doubt about it. We can raise as good sweet potatoes here, at the North, as at the South, at least as good as those we generally get from the South. Will some of our readers who have experience in this matter answer the inquiry of our correspondent.

Hydraulic Rams.—I wish to make an inquiry through the Rural, respecting hydraulic rams, where they can be obtained, and what amount of fall of water is necessary to make them work well.—C. S. Pulvs, *Battle Creek, Mich.*

Hydraulic rams can be obtained at almost any implement or seed store; their price varies, according to size, from $12 to $20. They work well with from four to ten feet fall of water.

Orchard and Garden.

PEACHES IN A COLD CLIMATE.

Levi Bartlett, of the *Granite Farmer*, gives an interesting statement in regard to growing peaches in New Hampshire. It appears that in 1840, he sowed some peach pits which came up and made a vigorous growth, but were entirely cut down next winter. And so on for three years, during which time the ground was well tilled and manured. He here gave up the effort to grow peaches where the thermometer fell to 28° below zero, and left the trees to *shift* for themselves. This neglect, by causing a slow growth, has been their salvation; "the trees now stand in the Nursery rows apparently as hardy as the gnarled oak."

"Grass and weeds sprang up among the trees and retarded their growth, and every succeeding winter killed less and less of the new wood up to the spring of 1850, when scattering blossoms appeared on eight or ten of the trees, which produced fruit of various qualities. In '51, there was a much larger show of blossoms, succeeded by two or three bushels of fruit. In 1852, had thirty trees in full bloom, they all produced fruit, ripening in succession for five or six weeks. Last May, we had forty trees in bloom—probably, we had from 50 to 60 bushels of peaches of various qualities, from very good to poor—and of different colors, shape and size, and in time of ripening, embracing a period of five or six weeks. We have grown upon our farm, the hurlock, the mullein and the thistle, also, the peach and the grape; the expense of each, about alike, but have found the two last the most profitable, especially the peach; as we had them in daily eating for weeks, and the gratification of giving bushels to our friends, and selling a dozen dollars, worth, and of giving as many bushels to our pigs, besides making much use of them for pies, preserves, pickles, drying, and mashing up a bushel or two by way of experiment, the juice of which made a fine white vinegar. Judging from our experience in the matter, we do not see, why peaches cannot be raised among us with about as much certainty and ease as any fruit we cultivate."

THE PEAR TREE.—ITS CULTIVATION.

The principal reasons declared by the orchardist for neglecting, or refusing to plant as many pear trees as will bear some proportion to the number of his apples, peach and other trees, are that the first cost of the pear tree is generally more than double that of the apple; it is longer in coming into bearing; it is more liable to leaf or sap blight, &c. These objections may look formidable, but they are not insurmountable.

It is true that the cost at the nursery of one hundred pear, is more than that of two hundred apple trees; and this must continue to be so, for the expense of rising pear trees for a suitable size for market is much the greater; but when planted in the orchard they require no more attention than other fruit trees; in order to make them do their best, they require cultivation and attention far beyond what is usually extended to them.

A well cultivated pear tree is as prolific as an apple tree of the same size, and the fruit always sells at more than double the price of apples, so that the cultivator gets full return for his extra outlay for his pear tree.

It may be said that pears will not bear transportation equally well with apples; but it will be recollected that most varieties of pears improve by being gathered before they are quite ripe and allowed to ripen off the tree; if this course is pursued, the objection falls.

A very popular method of cultivating the pear is by working it upon the Angers' quince stock; by this means the tree is dwarfed and thrown into bearing at an early age.

Some varieties succeed better on the quince than on the pear stock, while others refuse to grow upon the quince unless they are double worked; that is, first work a free growing variety upon the quince, then the refractory one upon the free growing pear.

Many persons appear to mistake the term "Dwarf Pear," thinking small fruit is what is meant. It is not the fruit, but the tree that is dwarf.

The best stock for dwarfing the pear is the Angers quince. The apple is made dwarf by being worked upon the Paradise stock; and the cherry upon the Cerasus Mahaleb.

For the orchard we prefer to grow the pear on its own stock, but for gardens and small enclosures we would select the best varieties that are known to succeed well upon the quince, and grow them as dwarfs.

Varieties of the pear that are late in producing fruit when worked on pear stocks, may be brought into early bearing by judicious pruning and pinching.

If the tree is permitted to branch, say three feet from the ground, and pruned into a pyramid form, leaving the lower branches the longest, and cutting back those above, it will not only bring the tree into a handsome shape, but the pruning that it gets to keep it in this shape tends to throw it into bearing. Pinching the ends of the growing branches the last of August or first of September, so as to stop the growth and ripen the wood, will cause the formation of fruit buds.—*Farmer's Companion.*

It is said that in an instance where the Washington, Imperial Gage and Reine Claude were grafted on a damson plum tree, that the curculio destroyed all the fruit on the damson but left untouched the Washington, Gage and Claude, which bore heavily and matured a fine lot of fruit.

Charcoal, it is said, placed around rose bushes, has the effect to add greatly to the richness of the flowers.

HYACINTHS IN POTS AND GLASSES.

The Hyacinth is a native of South-western Asia, and is said to grow wild, very abundantly, about Aleppo and Bagdat. It was introduced into Europe about two hundred and fifty years ago, and for a time was the passion of the Dutch florists. In 1720 they had increased the number of varieties to over two thousand, many of which are now lost. They are still sufficiently abundant, however, to form a beautiful and varied ornament for the garden and green house.

Hyacinths are propagated usually by offsets from the bulbs, which under proper management, are formed very plentifully. (Out-door culture is usually employed,—of that we do not now speak.) It is now the proper time to start those intended for blooming in pots and glasses in the house. They can be grown in pots of wet sand, moss, mould, or in water in properly formed glasses. In pot culture, care is usually taken to keep the whole bulb covered and moist alike, until the shoots are two inches long. With the upper part exposed to the air and light, the development is said to be unequal, and the shoots sickly and abortive.—It should therefore be covered two or three inches deep with old bark, tan, or half decomposed leaves, so as to retain the moisture and partially exclude the air. When the shoots are of the required height, the covering may be gradually removed, and the sunlight will soon restore them to their proper color. A large portion of sand in the mould, is also requisite. It assists in the proper diffusion of the moisture, and allows of more perfect drainage than can be attained in any other way. When the bulbs are planted, the pots should be kept in a cool room, away from any fire, (but not allowed to freeze,) and watered sparingly, until the leaves appear, when they will need a larger supply. After being thus fairly started, in a cool room, they may be removed to the sitting room windows, and in a few weeks their beauty and fragrance will abundantly repay the care they have received.

The prettiest way of growing Hyacinths in windows, is that represented in the cut—in glasses, without earth, and allowing them the nourishment of pure water only. Fill up the glasses with rain or river water, until the bottom of the bulb will touch it, and constantly fill up the glass as the bulb absorbs it. It has been thought necessary to keep them in the dark for the first few weeks, but experiments have not confirmed this opinion. It is well to keep them cool at first, but the exclusion of the light is not necessary to their perfection.—The water should be changed occasionally, as it becomes impure, which is readily done by taking the bulb and roots out and rinsing carefully both the fibres and the glasses.—Single flowered varieties are generally preferred, as their colors are brighter and their bells, though smaller, much more numerous.

The Narcissus, Crocus, and Early Tulip, all grow well in water, and a very pretty winter show may be made by cultivating several varieties. Most seedsmen have the bulbs and glasses for sale, at different prices according to their form and variety.—R.

LARGE DECIDUOUS CYPRESSES.

We find in the English Gardeners' Chronicle the following as the dimensions of what is quoted as an enormous Cypress tree, quite a lusus naturæ there. It is growing in the vicarage of Boxley, Kent: height 60 feet, the spread of the lower branches, which feather quite to the ground about 45 feet, girth 9 feet 4 inches at 2 feet from the ground, and 7 feet 3 inches at 6 feet. It stands on the edge of a small pond, in which its roots luxuriate, being *natural to swampy ground*. The Cypress growing in the Bartram Garden in Philadelphia, according to the *Florist*, is one hundred and thirty-seven feet high and twenty feet in circumference. In Buxton's Mexico, a cypress is alluded to, which would girth 17 yards, over fifty feet, and there were many others of equal size on the Chapultepec heights, near Mexico, some of which were sadly battered by the American cannon at the time of the storming of the fort. That our English cousins should consider a tree of nine feet girth, worthy of a newspaper paragraph, shows at least that they have not been to America, and reminds us of the Englishman, who was relating with great gusto to his American visitor the *natural* wonders of their Island, and among other things, as a *fact*, whether he believed it or not, that their great river, the Thames, was really 150 miles long. He had never heard of that small stream, the Mississippi, over 2000 miles in length.—*Farm Journal.*

Cultivation of the Peach.—It is generally advisable to set peach trees in the spring, though for most other fruit trees, fall setting is preferable.

If you have a clay or gravelly soil, and no other should be used for the peach, dig the pits for setting them in the fall, at least three feet across and fifteen inches deep. If you throw in and around a little ashes or lime it will be better. Set the trees about twenty feet apart one way, and from twelve to fourteen the other. The land can then be cultivated for two years, which is long enough if you afterwards keep it cultivated around the tree, putting on ashes, lime, and marsh muck, and when the tree shows signs of decay from the "*yellows*" add a little salt and iron scales, filings and cinders from the smith's shop.

"What the Apple Man says in 1853."—Mr. N. P. Morrison, of Somerville, informs us that he has just received ten dollars and eight cents for one barrel and 28 apples of the Hubbardston variety. These apples were sold at 50 to 75 cents a dozen. Mr. M. cultivates about eight acres of land; his fruit crop, this barren year, brought him eight hundred and fifty dollars. For 26 bushels of apples he received sixty dollars. For 136 barrels, he received four hundred and eight dollars. For strawberries and raspberries, one hundred dollars. The balance, to make up the whole sum, $850 00, was for cider apples, sold at 8 to 12 cents a bushel, and for early windfalls sold in July and August. Perhaps some of our young men, will come to the conclusion, that the market for good fruit is not yet overstocked.

Domestic Economy.

Corn Meal Pudding.—Pour over a quart of corn meal sufficient boiling water to scald it, stirring to mix. Add half a tea-cup full of sweet cream, (or a cup full of milk,) and the same of dried cherries, or any other fruit, with a little salt. When milk warm, stir in a cup full of lively yeast—cover close and set in a warm place to rise. When light, stir in flour to make the batter quite stiff, and let it rise again. Put it into a pudding bag which has been wrung from water and its inside dusted with flour or meal, to keep the pudding from sticking. Boil from one and a half to two hours. Serve with sweetened cream. Four or five hours are necessary to prepare this dish.

Corn Bread.—*A New Recipe.*—Everybody who has been at the Mansion House, at Buffalo, New York, has learned the luxury of the corn bread there provided. The clerk is often taxed to write directions for home manufacture, and I thus procured a recipe for domestic use, which I copy for you, so that those who wish may try a piece of bread from the Mansion. It is as follows:—One quart of sour milk, two table-spoonfuls of saleratus, four ounces of butter, three table spoonfuls of flour, three eggs, and corn meal sufficient to make a stiff batter.—*Exchange.*

Steven Apple Pudding.—Cover with apples pared and cored to the depth of two inches, a deep basin or pan; add water sufficient to stew them. Make a crust as for common biscuit, roll to an inch in thickness, cut a hole in the centre and cover with it the apples. Set the dish on the stove or coals to cook, covering closely to prevent the escape of steam.—Twenty or thirty minutes will be sufficient.—Serve with sauce made of water, butter, and sugar, thickened with flour and seasoned with nutmeg.—*Michigan Farmer.*

To take Fresh Paint out of a Coat.—Take immediately a piece of cloth and rub the wrong side of it on the paint spot. If no other cloth is at hand, part of the inside of the coat-skirt will do. This simple application will generally remove the paint when quite fresh. Otherwise, rub some other on the spot with your finger.

Johnny Cakes.—Scald a quart of sifted Indian meal with sufficient water to make a thick batter, stir in a tablespoonful of salt. Flour the hands well, and mould it into small cakes; fry them in fat enough, nearly to cover them. When brown upon the under side they should be turned. It takes about twenty minutes to cook them. When done, split and butter them.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending January 3, 1854.

Alfred C. Cook, of Russellville, Ky., for machine for sawing level surfaces.

Samuel & Thos. Champion, of Washington, D. C., for improvements in feathering paddle wheels.

Isaac Crandal, of Cherry Valley, N. Y., for improvement in running gear of wagons, &c.

John Culbmann, of Silver Creek, Ill., for ruling machine.

Wm. S. Dillehay, of the county of Shelby, Ky., for improvement in straw cutters.

John Dudery, of New York, for method of forming plates for chromatic printing.

F. P. Dimpfel, of Philadelphia, Pa., for improvement in steam boiler furnaces.

Jas. Hamilton, of New York, for improvement in quartz crushing machines.

Michael W. Helton, of Bloomington, Ind., for improved method of hanging and operating saw gates.

Geo. D. Miller, of New Berlin, Pa., improvement in tuyeres.

Lucius Paige of Cavendish, Vt., for improvements in screw bolts and nuts.

Jonathan Russell, of Philadelphia, Pa., for machine for cutting irregular forms.

Matthew Stewart, of Philadelphia, Pa., for improvement in floor plates of malt kilns.

Edward A. Tuttle, of Williamsburgh, N. Y., for improvement in hot air registers.

John B. Terry, of Hartford, Conn., for improvement in machines for sticking pins.

Zina S. Ogden, of Glenn's Falls, N. Y., assignor to Lewis C. Ogden, of Glenn's Falls, aforesaid, for improvement in lowering, raising and fastening carriage tops.

Dexter H. Chamberlain, of Boston, Mass., assignor to himself and Nehemiah Hunt, of same place, for improved mode of banding pulleys for saws.

James H. Loughotham, of Brooklyn, N. Y., for improvement in drying bookbinders' boards.

Geo. A. Hander, of Hamburgh, Pa., for improvement in corn shellers.

Chas. Muller, of New York, for improvement in machines for casting type.

Wm. H. Price, of Philadelphia, Pa., for improvement in bedstead fastenings.

Philip P. Tapley, of Lynn, Mass., for improvement in machines for polishing leather.

Wm. B. Tilton, of New York, for improvement in guitars.

Claude Desbeaux, of Paris, France, for apparatus for turning the leaves of books.

John Shuttleworth, of Frankfort, Pa., for improvement in power looms.

Joseph Mason, of New York, for improved arrangement for cutting screws in lathes.

Reuben M. Hine, of Mentz, N. Y., assignor to Horace C. Silsby, of Seneca Falls, N. Y., and Reuben M. Hine, of Mentz, aforesaid, for improvement in shanks of hay and manure forks.

Thos. W. Harvey, of New York, assignor to John B. Ferry, of Hartford, Conn., for improvement in machines for sticking pins.

Sherburn C. Blodgett, of Philadelphia, Pa., for improvement in hemming and cording umbrella covers.

Patrick Clark, of Italiway, N. J., for improvement in regulating the damper of steam boilers by the pressure of the steam.

Robert H. Collyer, of San Francisco, Cal., for improvement in quartz pulverizer.

Theodore F. Engelbrecht, of New York, for improvement in double acting spring hinges.

Binford Gilbert, of Pittsburgh, Pa., for improvement in corn shellers.

J. Durrell Greene, of Cambridge, Mass., for improvement in breech-loading fire-arms.

Jas. B. Holmes, of Cincinnati, Ohio, for improvement in machines for nailing trash boards.

Samuel Malone, of Tremont, Ill., for improvement in corn planters.

Geo. F. Page, of Baltimore, Md., for improved ratchet catch for head backs in saw mills.

Thos. Rogers, of Philadelphia, Pa., for machine for cutting hand rails.

Henry C. Nicholson and James Spratt, of Cincinnati, Ohio, for improvement in sealing preserve cans.

Oren Stoddard, of Busti, N. Y., for improvement in machines for sawing logs.

Wm. Wright, of Hartford, Conn., for improvement in operating cut-off valves of steam-engines.

RE-ISSUES.

Wm. H. Smith, of Philadelphia, Pa., for improvement in utilizing slags of furnaces. Original patent dated Dec. 7, 1852.

Cornelius W. Blanchard, of Clinton, Mass., for improvement in looms for printing figured fabrics. Original patent dated Aug. 3, 1852.

SUBSTITUTE FOR GUTTA PERCHA.

Dr. Riddell, officiating superintending Surgeon for the Nizam's army, in making experiments on the Mudder plant of India, (*Asclepir Gigantea,*) had occasion to collect the milky juice, and found that as it gradually dried it became tough and hard like gutta percha.—He was induced to treat the juice in the same manner as that of the gutta percha tree, and the result has been the obtaining of a substance precisely analogous to gutta percha.—Sulphuric acid chars it; nitric acid converts it into a yellow resinous substance. Muriatic acid has but little effect upon it: acetic acid has no effect, nor has alcohol. Spirit of turpentine dissolves it into a viscid glue. When taken between the finger and thumb, pressed together, and then separated, it shows numberless minute and separate threads. The foregoing chemical tests correspond exactly with the established results of gutta percha. It becomes plastic in hot water, and has been moulded into cups and vessels. It will unite with the true gutta percha. The Mudder also produces an excellent fibre, useful in the place of hemp and flax. An acre of cultivation of it would produce a large quantity of both fibre and juice. The poorest land suffices for its growth, and no doubt, if well cultivated, there would be a large yield of juice and a finer fibre. A nearly similar substance is procurable from the juice of the *Euphoria Tirucalli*, only when it hardens after boiling, it becomes brittle.—The subject is most important; and if common hedge plants like the foregoing can yield a product so valuable, the demand for which is so certain quickly to outrun supply, a material addition will have been made to the productive resources of the country.—*Journal of the Society of Arts.*

A PAPIER-MACHE VILLAGE.

It appears that a Mr. Seymour—about to take up his abode in the land of nuggets—commissioned Messrs. Bielefield to construct a number of portable houses, mainly with that material which they have been so instrumental in rendering publicly useful, papier-mache! The paper village, when made, was temporarily set up in the grounds of the factory. It consisted of ten houses. One of these was a villa with nine rooms, each twelve feet high; another was a storehouse, eighty feet long, with a sitting-room, kitchen, and two bed-rooms attached; while the rest were small houses varying from two to six rooms each. The villa had a drawing-room and a dining-room, each with a bay window, a hall, several bed-rooms, two closets, and a kitchen. The chief material of all the houses is papier-mache as ordinarily used, but contains an admixture of rags not reduced to pulp, which enables it to solidify as hard as a board. The walls are double, to insure ventilation; and the partitions have a strength and durability which will put to shame the lath and plaster mockeries of too many of the London houses that Jack built. The roofs are nearly flat, just inclined sufficient to throw off the rain water. The flooring, with the joists attached, is made in large square pieces; and, like the walls and the ceilings, is so planned as to be transported with ease and rapidly set up. It was found on trial that one of the smaller houses could be pulled down and re-built in four hours. If, as is stated, this paper and rag building material can be advantageously used for barracks, and park-lodges, and shooting-boxes, and billiard-rooms, we see no reason why Australia should monopolize these paper houses. —*Household Words.*

Horse Power and Steam Machines.—As we have received a number of communications lately respecting the "horse power" of steam engines, we present the following condensed from Bourne, who is held by practical engineers as good authority:

Horse power is an amount of mechanical force that will raise 33,000 lbs. one foot high in a minute. This standard was adopted by Watt as the average force exerted by a strong horse. His engines were made of a certain size, corresponding to their recorded horse power; that is, the diameter of the cylinder afforded a key to the power of the engine, as the steam carried was uniform in pressure, and so was the velocity of piston. At the present day, we cannot say that a certain diameter of cylinder is the key to its power. The steam is the power, and some engines whose nominal horse power is given by the bore of the cylinder may exert double the nominal amount.

The number of pounds pressure on the square inch multiplied by the number of square inches in the area of the piston, and by the number of feet the piston travels in one minute, gives the amount of impelling force. About one-tenth the power so calculated, is deducted in large engines, for friction—the remainder is the effective force, which, if divided by 33,000, gives the actual horse power.—*Scientific American.*

HEN'S NEST.

C. V. Ament, of Dansville, N. Y., has made one of the most astonishing inventions which for many long years has fallen beneath our notice. It is nothing less than a hen's nest so constructed that when the depositing Shanghai or Cochin having arrived at her full time shall have deposited the embryo of a future fowl, the ovum passing through an aperture in the lowermost portion of the nest, and falling upon an elastic cushion beneath, shall pass into a receptacle destined for its protection from the chilling frosts of winter, or the greedy attacks of some egg-eating quadruped. But judge the astonishment of biddy when arising from her seat and looking around her she beholds that the precious deposit has vanished forever from her sight? The inventor having the necessity of the public fully before his eyes, has applied for a patent.—*Sci. Am.*

New Tunneling Machine.—The New York papers describe a new tunneling machine in operation at Harlem. The machine is said to be, in effect, a huge seventeen foot augur, slowly turning at the rate of one revolution per hour, and advancing at the same time from four to eight inches per hour, according to the solidity of the rock perforated. The total weight of the machinery is 150,000 lbs. Sixty horse power of steam, two engineers, and two men to shovel out the broken rock, comprehend the expense of working the machine, which, making allowance for necessary interruptions, may be run twenty hours per day.

India Rubber Beneath Rails.—The New York Central Railroad Company have assumed the expense of laying one or two miles of india rubber under their tracks, intending to obviate materially the present destruction of rails and machinery, and do away with the noise attendant upon the motion of the trains. We are glad to learn that this invention is to be tried in this country. A patent was taken out in England two years ago, but we have never heard of its adoption there.

New Kinds of Boots and Shoes.—Measures have been taken to secure a patent for a new kind of boots and shoes, invented by Albert L. Murdock, of Boston. The soles, and the lower portions of boots and shoes are made of India rubber, or gutta percha, while the upper portions are formed of some textile fabric, such as woolen, cotton, &c. The lower portions of the boots and shoes protect the bottoms and soles of the feet from wet or moisture, while the upper portions form an elastic covering for the upper part of the feet or legs, and keep the lower portions properly adjusted to the feet, and at the same time allow the free perspiration to pass off.

Remember that paint is one of the best known means of preserving implements, wagons, and wooden machines of all kinds.

Educational.

[For Moore's Rural New-Yorker.]

SCHOOL TEACHING.

Having for some time made this occupation a business, and, during that time, been an attentive observer of the organization, arrangement, and government of common schools, and feeling a deep and lasting interest in the well-being and education of the youth of our land; and knowing that by far the greatest portion of them receive their book learning at the District School—I propose now and then to say a few words to the public, through the medium of the Rural New-Yorker on this subject.

Nor is the teacher free from the cares attendant upon his profession, from the commencement till the close of the term. They follow him by day, and at night his mind is not free from them. Any thing that tends to hasten and make more lasting and useful impression upon the minds of his scholars, is full of living interest to him. He sees in them men of future growth and action; whose thoughts and deeds are but the exemplification of his precepts and examples upon the young and susceptible mind. They are, in his hands, as clay in the hands of the potter. He may form their minds at his will,—giving tone and shape to their future course in life. And the thoughts that are so easily impressed to-day, may not be obliterated to-morrow, but remain as indelible as the natural colors of the African race.

And however well the individual may be educated that proposes to enter upon the duties of a teacher, although he may have spent four of the best years of his life in college, and spared no pains to cultivate his mind thoroughly and correctly in all that may pertain to a liberal education, yet, in the true sense of the word he is not fully prepared to enter successfully upon duties of so vast importance, until he has candidly weighed these facts, viz:—that he needs a constitution like iron, a delicate sense of duty, and an unwavering spirit of perseverance in all he finds to do. Without these qualifications, he will find himself unarmed with the necessary instruments, offensive and defensive, to combat all the oppositions, all the coldness, all the prejudices and all the ignorance of those who should be his most zealous friends. I mean the patrons of his school. I have found by long experience, and close observation, that the only course which can be pursued with safety to both teacher and scholar, is for the former to study and know his duty and act accordingly, regardless of the very many different and erroneous opinions often entertained and advocated by communities and districts.

Hunt's Hollow, Jan., 1854.

[Written for the Rural New-Yorker.]

ERRORS IN TEACHING.

Every new specimen of human intelligence, is an item, occupying an original position independent of all present and preceding, except in those influences accessible to reason and judgment through the alembic of the mind, with no advantages over the first of its race, excepting the assistance of others in the application of influences, to hasten maturity of the reasoning powers, so as to be able, not only to reflect the light of others, but to emanate light of its own, constituting the true philosophy of education.

And though it is claimed there is no rule to demonstrate the existence of intelligence, without material organization, yet in imagination myriads may exist in all conceivable forms and conditions; and it might be considered folly to attempt to prove, and the height of presumption to insist upon others believing, in the truth of imagined conjecture only. Still, what matters it, if those who desire to hide ignorance, clothe the incomprehensible operations of Nature with the attributes of Divine Intelligence, or with the qualities of a demon, when, as her laws are obeyed or contravened, so will the attributes of a Deity, or the qualities of a demon, be exhibited in evidence of the truth of such conjecture.

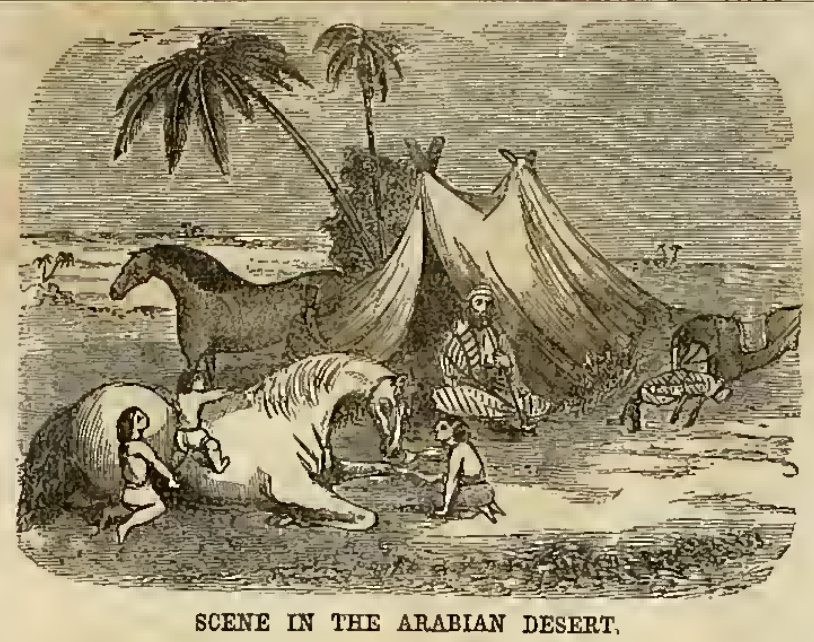
Although it might be difficult to admire that faith which believes true an inferred conjecture based on an unsolved problem, yet such faith would compare with that which believes it possible to convince an intelligent mind of a truth without evidence.

And after all, similar results are pursued in our present system of juvenile education; the abstruse studies are presented to the candidate for knowledge, before reason and judgment are matured, so as to be able to understand what is presented as evidence of truths taught consequently many juveniles pass for prodigies, if able to advance a few score of opinions, on obstruse subjects, and at the same time, unable to give a reason, other than what is found in books, for one of them.

Knowledge is not surely gained, until the pupil is able to give reasons of his own, in language of his own, and still be the true reason.

S. Graves.

Marcellus, Jan. 2nd, 1854.



SCENE IN THE ARABIAN DESERT.

Useful Olio.

The above engraving represents a scene in the deserts of Arabia, where the sons of Ishmael, whose hands are against every man, and every man's hand against them, are reposing in the shadow of their tents. These are pitched upon one of those singular oases scattered here and there over the broad surface of the desert like the islands of the ocean, affording rest, shelter, and fresh water, to the wandering and restless followers of the Prophet.

The fleet and noble coarser, who is the favorite animal and constant companion of the Arab, is appropriately mingled in the scene.—Of all the numerous and valuable varieties of the equine race, the Arabian is the most celebrated in history, in romance, and in song; and next to his favorite wife, the steed that bears him over the sands with the fleetness of the wind, stands nearest in the affections of this wild wanderer of the desert. And the dumb but intelligent brute, is not a whit behind his master in his affections; following him like a dog, obeying his voice and gesture with astonishing sagacity, sleeping with him in the same tent, sporting in harmless gambols with his children, and sharing with them even the last meal.

The camel is the most useful of all animals to the inhabitants of desert countries, for without them existence could not be maintained; but in this, as in an infinite number of instances besides, the thing absolutely necessary is placed in the affections of mankind behind that which ministers to luxury or show; and thus the horse is made the companion of the Arab, while the camel is made his slave.

Sir Walter Scott in the outset of one of his best stories, entitled the "Talisman," has given a thrilling sketch of an encounter between a redoubtable Crusader, Sir Kenneth, of Scotland, and a Saracen, which took place beside a spring called "The Diamond of the desert," that welled out amid a trackless waste of sand. The narrator contrasts in the most vivid manner, the heavy, unwieldy, but resistless power of the Christian knight in his mail of proof, and the light and agile evolutions of the Arab and his steed. The former was like the sword of Richard of the lion heart, that would sever, at a single stroke, an iron stanchion; the latter was like the scimitar of Saladin, that would cut a web of gossamer while floating upon the breeze. The knight proved afterwards to be the Earl of Huntington and heir to the Scottish crown, and the Saracen the renowned Saladin himself; and both lived, according to the romancer's account of the affair, to do yeoman as well as kingly service in the cause of their respective religious faiths. The courser of Saladin may be represented by that in the accompanying cut, and that of Sir Kenneth by one of our best imported Clydesdale steeds.

ABOUT THE CAMEL.

The want of good pastures and fresh streams is very unfavorable to cattle, but the camel makes amends to the Tartars of the Ortous for the absence of the rest. It is the real treasure of the desert. It can remain fifteen days or even a month without eating or drinking; and however miserable the country, it always finds something to satisfy it, especially if the soil is impregnated with salt or nitre: plants that other animals will not touch, brambles, or even dry wood, serve it for food. Yet little as it costs to keep, the camel is more useful than can be imagined out of the countries where Providence has placed it. Its ordinary burden is seven or eight hundred weight, and thus laden it can go forty miles a day. In many Tartar countries they are used to draw the coaches of the kings or princes; but this can only be on flat ground, for their fleshy feet would not permit them to ascend hills and draw a carriage after them.

Notwithstanding this softness of its foot, however, the camel can walk over the roughest roads, stones, sharp thorns, roots of trees, etc., without being hurt. But if obliged to walk too far, the real sole of its foot wears out, and the flesh is laid bare. The Tartars, under such circumstances, make it shoes of sheep-skin; but if after this the journey is still much prolonged, the creature lies down and must be abandoned.

There is nothing the camel dreads so much as a wet and marshy soil. When it places its foot on mud and finds it slip, it begins to stagger like a drunken man, and often falls heavily on its side. Every year, toward the spring, the camel loses its hair, and it all goes to the last fragment before the new comes on. For about twenty days it is as naked as if it had been clean shaved from head to tail; and then it is extremely sensitive to cold and rain. You may see it shiver all over, like a man exposed to cold without clothes. But by degrees the hair grows again: at first it is extremely fine and beautiful, and when it is once more long and thick the camel can brave the severest frost.—It delights then in marching against the north wind, or standing on the top of a hill to be beaten by the tempest and breathe the freezing air. Naturalists have sometimes said that camels cannot live in cold countries; but they could hardly have meant to speak of Tartar camels, which the least heart exhausts, and which certainly could not bear the climate of Arabia.

The fur of an ordinary camel weighs ten pounds; it is sometimes as soft as silk. That which the entire animal has under his neck and along its legs is rough, tufted, and black; but the hair in general is reddish or gray. Tartars do not take any care of it, but suffer it, when it falls off, to be lost. In the place where the camels feed upon you may see great bunches of it, like old rags, blowing about; and sometimes, in the hollows and corners of the hills, large quantities will be drifted by the wind. But it is never picked up, or only a small portion of it, to make a coarse sort of sacks and carpets.

The milk of the camel is excellent both for butter and cheese: the flesh is tough, ill-flavored, and little esteemed by the Tartars. They make use, however, of the hump, which they cut in slices and take with their tea.

It is said that Heliogabalus had camel's flesh served at his banquets, and that he was especially partial to the food. Of this latter dainty, which the emperor had the glory of discovering, we cannot speak; but we can affirm from our own experience, that the flesh of the camel is detestable.—*Huc's Journey through Tartary.*

EBONY WOOD.

Ebony is a wood that is very hard and close grained, susceptible of a very high polish, and its colors are black, red, green, and sometimes variegated.

Black ebony is found in the Indies, St Domingo, Ethiopia, the Island of St. Maurice, and Madagascar, where the natives call it black wood. The green is found also in the Antilles and in the Isle of Tobago.

Authors and travelers give very different accounts of the tree that yields black ebony.—By some of their descriptions it would be like a palm tree, by others, a cytisus. M. Flacourt, who resided many years at Madagascar, as Governor, says that it grows very high and large; its bark is black and its leaves resembling those of our myrtle, of a deep, dusky green color. It yields an agreeable perfume when laid on burning coals. When green, it readily takes fire from the abundance of its fat.

Camfia also bears a little shrub which goes by the name of Ebenus Cretica; it is a slender, elegant shrub, with silky leaves and rose-colored flowers. It is called ebony because its wood is hard and black. It is said to be heavier than water.

The tree that yields the green ebony is very bushy, its leaves are smooth, of a fine green color. Beneath its bark is a white layer about two inches thick; all beneath which, to the very heart, is a dark green, approaching towards a black, though sometimes streaked with yellow veins. It is used for the purpose of coloring, and is said to possess some medicinal qualities.

The black is used for ornamental purposes, such as Mosaic work, toys, canes, handles for tools, knives and some kinds of musical instruments. The Indians make statues of their gods, and sceptres for their princes of this wood. Black ebony is used more than the other colors; the best is a jet black, free of veins. It is now much less used than it was by the ancients, since the discovery of so many ways of giving other hard wood, a black color.

Mahogany.—This is one of the most useful as well as one of the most ornamental woods in the world. It grows in immense forests on the American continent within the tropics, from whence it is exported in the log, to all the civilized countries. It is then cut into thin slabs and used in the manufacture of elegant furniture, which is thus made to assume the appearance of solid mahogany.

EDDYSTONE LIGHT-HOUSE.

Who that has crossed the Atlantic, has failed to see the Eddystone Light-house? It is erected on one of the rocks of that name, which lie in the English Channel, about fourteen miles S. S. W. from Plymouth, and ten miles from the nearest land. These rocks are now much elevated above the sea, and at high water are covered with it so that many gallant and valuable ships, with all on board, formerly perished. In 1696, and in 1706, light-houses were built on one of these rocks, the first of stone, and the second of wood, but both perished; the first being washed away, and the second burnt. So that at the end of 1755, passing ships were exposed to all their former dangers.

In the early part of the following year, Mr. Smeaton, a self-taught civil engineer, was recommended by Lord Macclesfield the President of the Royal Society, and he undertook to erect a new light-house, which should resist alike the winds, the waves, and the flames.—This plan, it was almost universally believed, would fail; but the fact was, that the public did not understand the great principles on which he was about to proceed. Men were set to cut deep into the rock for a foundation, which was at length secured. The whole work was a solid mass, for every stone in the vast circular building was *dove-tailed* to the rest; so that it was impossible any part should move without the whole moving, and the rock also. By the labors of 2,674 hours, which was all the time they could work in more than three years, the whole undertaking was completed. It has stood the most terrific storms which history has recorded, without the slightest injury, for nearly a century, to the vast delight of its friends, and is one of the grand objects of which the English people boast.—*Watchman and Ref.*

TEMPERANCE.

In regard to temperance, I am inclined to think that the inhabitants of southern Italy, and of the wine-growing countries generally, enjoy a reputation somewhat beyond their deserts. It is true that it is very rare to see a man absolutely drunk; but it is not uncommon to see those who have drank more than is good for them. But even where excess is avoided, the constant use of wine in considerable quantities is unfavorable both to health and good morals; to health, from the febrile and inflammatory state of the system to which it leads, and to good morals, from the irritability of temper and quarrelsome spirit which it induces. If the proportion of the cases of stabbing brought to the Roman hospitals which occur in or near wine-shops could be known, I have no question that it would furnish a strong fact wherewith to point the exhortations of a temperance lecturer. There is an added temptation to drink abundantly of wine, from the nature of the usual food of the common people. This, being principally vegetable, does not, especially in cold weather, supply the waste of nervous energy, but leaves, even when the appetite is satisfied, a certain dull and indefinable craving, like being filled but not fed. Wine relieves this sense of flatness and inertness by the momentary glow and fillip it gives to the languid blood; but the relief thus derived is like the heat of a fire of thorn, and there is thus constant inducement to repeat and increase the remedy. If the common people of Rome and its neighborhood could eat more meat and would drink less wine, there is little question that their health and morals would be the better for the change.—*Hillard's Six Months in Italy.*

DICKENS' TRIBUTE TO AMERICA.

Dickens closes his Child's History of England, in the Household Words of December 10, with the following tribute to America:

"It was in the reign of George III, that England lost North America, by persisting in taxing her without her own consent. That immense country, made independent under Washington, and left to itself, became the United States: one of the greatest nations of the earth. In these times in which I write, it is honorably remarkable for protecting its subjects, wherever they may travel, with a dignity and determination which is a model for England. Between you and me, England has rather lost ground in this respect since the days of Oliver Cromwell."

We commend this as a lenitive to the wounded sensibility of those who absurdly took offence, where no offence was intended, at the allusion in the *Newcomes*, by Thackeray, to Washington. If we smart under the lash of one English author, there is another to pat us on the back. If Dickens, in his book of travels, touched us on the raw, there was Chambers, in his petting letter, the other day, to coax and wheedle us. If we quarrel with Thackeray in his novel, here is Dickens, in his history, to make peace with us. If Americans cannot suffer criticism, no one will deny their power of endurance under flattery. We do not doubt, then, that our vanity will absorb all the good that is said of us. As we were quick to square off with Thackeray, so we shall not be slow to embrace Dickens.

Our Country a Hundred Years Hence.—A hundred years hence, and the population of the United States, if it increases as it has in times past, will be about three hundred and seventy-nine millions. That will be equal to one-third of the present population of the whole globe. Where there is one person now there will be 16 then. What a teeming host! And yet there will be room for all. Uncle Sam is rich in lands, and all may have land and employment. But what will be the state of the country then? Will education be far advanced? Will virtue and religion be generally extended? Where will the seat of government be? Washington will be about as far from the centre as Boston would have been from that of the thirteen original States. What will be the state of politics? What will be the honor of the President? But it is useless to ask questions in regard to these matters. Time will bring forth. Our duty is to be good and do good. Thus we may lay the foundation for good in the future.—*Exeter News Letter.*

Sunday Reading.

AN ANGEL IN CLOUDS.

Methought the clouds in Heaven so fair
Were Isles with cliffs filled—
With spires and turrets gleaming there,
Just like the castles in the air
We often build.

These islands, in the realms of space,
Sailed on through seas of blue,
And there I could distinctly trace
The azure wing and angel face
Of one I knew.

She sat upon a radiant throne,
And wore a crown of light;
More glorious than the sun at noon,
A heavenly halo round her shone—
Her robes were white.

She was a pleasant angel here,
Before wings had been given
To bear her to that blissful shore
Beyond the silver cloud so near—
Her native Heaven.

I've seen her at the sick child's bed—
Watch with unsleeping eye,
Until its gentle spirit fled,
On rosy pinions from the dead,
To God on high.

When sunlit clouds are floating by,
I often bow to hear
The sweep of wings from yonder sky,
Where ministering angels fly
From sphere to sphere.

EARLY IMPRESSIONS.

Early impressions are considered the most interesting and important of all those which are received during life. Interesting because they are full of all the buoyant feelings experienced by those who are in the morning of youth, in the spring time of life. The mind at this time begins to expand, and may be compared to the opening bud, spreading its leaves to the enlivening and beautifying influence of the sun.

In early youth, the mind, that living principle within, is continually seeking something to satisfy the craving of its insatiate appetite. It seizes upon that which lies within its grasp.—It acquires habits and indulges feelings which form the whole character, and control the subsequent acts of life, thus causing the most trivial and insignificant things to tell on the destinies of a future existence. The youthful mind unsuspectingly quaffs copious draughts from the pure ocean of pleasure which rolls in sweetness o'er the soul. The rich treasures of thought are just disclosed to our view with bright and joyous images gathered from the storehouse of nature, which will accompany us through the dark vale of human existence, divesting it of many real and fancied ills.

Early impressions are the food which nourishes and supports our intellectual nature, or a corroding poison, that, mingling with the stream which follows us, for refreshment gives only weakness, for support destruction. It is an incontrovertible truth that they can never be entirely erased, however low or exalted the station fortune may allot us. How often in after life, when hope's fairy visions have fled, when ambition's gaudy laurels no longer delight the heart, does memory, that faithful chronicler of the past, revert to those illusory dreams of childhood's sunny hours; and though experience has taught us their falsity, we turn to them as the polar star of the future.

It is in childhood's early day, before the mind has become imbrued by the vicissitudes of life, that superstition exposes its direful form and seeks to enter the portals of the youthful mind. It is easy, then early, to imbue the living fountain with unholy principles, which will poison the pleasing cup of existence. With what rigid scrutiny ought we to select those objects with which we suffer our attention to be engrossed; for in youth we riot in a profusion of blissful anticipations, and revel in the enjoyment of society. May we study with zealous care to improve the golden hours which we now enjoy, and as we drink deep from hope's perennial fount, strive by faithful efforts to experience the reality of her bright visions, that when time has furrowed the cheek with the cares of life, and the eye is dimmed with age, we can look back upon the reminiscences of youth with a pleasure that will shed a richness and a beauty around our pathway, and like Æolian melody call back those kindred spirits that dwelt with us in happier days, and which seem to linger near and pour their persuasive strains upon the ear, until a gentle zephyr wafts them to a brighter clime.

But when we consider these impressions imperishable as the soul, and that when time with all its scenes and changes shall have passed away, the mind, with the impress it receives during the early period of its brief existence here, will yet live on during untold ages, how important then does it appear that they be such as will fit us for a higher, holier state, and enable us while eternity rolls on to be forever ascending in the scale of intellectual and moral excellence.

E. B. F.

North Ridgeway, N. Y. Jan., 1854.

The brevity of human life is recognized in the abstract by all men, and yet they act as if it would endure forever.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

THE SCHOLAR'S SEARCH.

We seek not the pearls of the Ocean—
We search not for gems of the mine—
We delve not for gold of the mine;
But we strive with a purer devotion
For the treasures of Wisdom divine.

Our hearts are not fixed on the feeling,
Our spirits not bound to the earth—
Our souls soar away from the earth—
For Virtue and Truth they are beating
A happier measure than mirth.

We are miners in search of true treasure,
For the riches of Truth do we mine—
For the ore of true knowledge we mine—
Assayers—our work 'tis, and pleasure
The gold from the dross to refine.

Then give us the wisdom of ages,
The virtue and boldness of youth—
The spirit and courage of youth—
And we upon Time's marble pages
Will grave a new record of Truth.—B.

PLUTARCH—HIS WORKS.

Time, in its continuous round of change, of rapine and destruction, has ground to atoms the proudest productions of ancient learning; but still, as if in mockery, has spared a few specimens whereby we are made known the immensity of our loss, and are left to mourn over the annihilation of many a tome of splendid genius. We are therefore compelled to detach from Poetry—which is, at best, but a doubtful and extravagant source of knowledge—and infer from Fiction, such matters as are necessary to substantiate History.

Of all the writers of antiquity, on Morals, Philosophy, and History, we may say, perhaps, Plutarch was the most worthy of being spared. His philosophy is natural, and comes warm from the heart; his incidents and examples are always appropriate and touching: Indeed, the sympathy he everywhere expresses, and the benevolence he endeavors to inculcate, constitute the chief beauties of such of his writings as have been preserved. He united himself to no sect, but selected the beauties and consistencies of all, to adorn his own philosophy, while he rejected their superfluities of form and absurdities of belief. Living at a period when the religion of the Bible was confined within the boundaries of Palestine, he had no polar star to guide him in his endeavors to instruct the world and increase its happiness: Yet, he expressed many of the sentiments of Divinity, as if its noble conceptions were implanted, originally, in his breast.

But yet, notwithstanding the excellency of Plutarch's works, how neglected are they!—The learned and philosophical read, study, and pass encomiums upon them; but the triflers, the devourers of fiction, who lounge upon sofas and weep over imaginary misfortunes, know nothing of their merits, nor of the writer; only as he may be referred to in the fashionable productions of the day. Depraved in taste, it cannot perhaps be expected that they can ever admire his inimitable compositions; and they thus make recompense for their early mis-education. But the rising generation should be protected. The public Libraries, that are springing into existence in every section of the Union, should be the guardians of the young. No novel should disgrace their shelves; but History, Philosophy, and Poetry, should embrace their contents: and Plutarch should be among the first authors placed in the hands of youth, to enable them to form a correct taste, and lay the foundation for a sound understanding.—L.

BEAUTY OF JEWESSES.

It is related that Chateaubriand, on returning from his eastern travels, was asked if he could assign a reason why the women of the Jewish race were so much handsomer than the men, when he gave the following one:—"Jewesses have escaped the curse which alighted upon their fathers, husbands, and sons. Not a Jewess was to be seen among the crowd of priests and rabble who insulted the Son of God, scourged Him, crowned Him with thorns, and subjected Him to infamy and the agony of the cross. The women of Judea believed in the Savior, and assisted and soothed Him under affliction. A woman of Bethany poured on his head precious ointment, which she kept in a vase of alabaster. The sinner anointed his feet with perfumed oil, and wiped them with her hair. Christ, on his part, extended mercy to the Jewesses. He raised from the dead the son of the widow of Nain, and Martha's brother Lazarus. He cured Simon's mother-in-law, and the woman who touched the hem of his garment. To the Samaritan woman he was a spring of living water, and a compassionate judge to the woman in adultery. The daughters of Jerusalem wept over him; the holy women accompanied him to Calvary, bought him balm and spices; and weeping, sought him in the sepulchre. 'Woman, why weepest thou?' His first appearance after the resurrection was to Mary Magdalene. He said to her 'Mary!' At the sound of his voice, Mary Magdalene's eyes were opened, and she answered, 'Master.' The reflection of some beautiful ray must have rested on the brow of the Jewesses."

The world grows wiser, and it is hoped better with each succeeding generation.

THE COUSINS,
OR, MR. WHITEHEAD'S WILL.

[CONCLUDED FROM PAGE 23, THIS NUMBER.]

"La, my dear old soul!" interrupted Ellie, laughing good-humoredly, "Miss Pamela and I think alike in all respects. You don't think I'd disobey her, do you? She told me to come here, and here I am. She told me to take the dogs for company, and they followed me. She told me to put the pistols in my pocket for protection, and here they are. She told me that I mustn't refuse to marry cousin Sam, and I don't mean to. And so, if cousin Sam will take me 'for better or for worse,' here I am—all meekness and obedience! La! Mrs. Scrope, you don't know what a girl I am, and how I've been brought up.' I mean to turn Scrope Hall out of windows when we are married. Did you ever follow the hounds, Sam?—it's such fun!" Sam faintly said "No," retreating further and further, pursued by the young lady, her dogs having quietly stretched themselves on the rug. At length matters reached their climax, for Miss Elspeth Gordon, pulling off her gloves, placed one lily hand on Sam's shoulder, and with the other began patting his fat, white cheeks, saying, in a coaxing tone, "Ducky mustn't be frightened. Ducky will learn to leap a five barred, won't he?—and to ride steeple-chase, won't he, to please Ellie?"

Blushing scarlet, Sam eluded her gentle touch, and rushed from the room, while Mrs. Scrope, bewildered and miserable, persuaded her singular guest to adjourn to the chamber prepared for her reception. She re-issued thence in the same attire, merely having cast aside her slouched hat, and substituted a velvet cap of conical form in its stead, beneath which her hair was not visible, while the green spectacles rested on her nose as before. After the repast was over, (a repast most uncomfortable to Mrs. Scrope and Sam, who scarcely tasted food, or uttered a syllable, the young lady talking incessantly all the time about horses, dogs, fire-arms, her own wonderful feats, and what she would do when she became her own mistress,) Ellie took out a cigar-case and handed it to Sam, inquiring indifferently:

"Do you smoke?"

Too much astonished and embarrassed to reply, the young man looked at his mother who, with grave looks, answered for her son:

"No Miss; Sam doesn't smoke, and allow me to say, it is remarkable to see a lady carrying and offering such things as those!"

"La! ma'am: Aunt Pamela said to me: don't forget your cigar case, Ellie," replied the guest with simplicity; "and so you see I didn't forget it."

"I don't allow any smoking on my premises, Miss, said Mrs. Scrope, authoritatively.

"Well, well, ma'am, don't put yourself in a passion," rejoined Ellie, surretly; "I'll wait till they're mine, and then see if I don't smoke you out! Ha, ha, ha! But perhaps Cousin Sam is a snuff-taker"—handing to the wretched Sam an unique gold box full of "Prince's mixture."

"No, Miss; my son does nothing of the kind," replied Mrs. Scrope, she alone being the speaker; Sam's heart was too full for speech; "and allow me to remark that snuff-taking is another singular habit for a young lady."

"La, ma'am," responded Ellie, smiling imperturbably—"Miss Pamela said to me: 'don't forget your snuff box, Ellie:' and so you see I didn't forget it. I'll teach Sam to snuff famously when he's my husband. Won't we snuff and smoke, Sam? Are you fond of home brewed, Sam? You should see our groom drink it."

"You're a water drinker, I observe, Miss," said Mrs. Scrope, stiffly, by way of saying something.

Elspeth looked very sly, and smacking her pretty lips, replied, "Ah! I ain't thirsty to-day, you should see me sometimes!"

"And this is the young lady of Miss Pamela Gordon's bringing up?" said Mrs. Scrope, when she had retired for the night, tears of vexation ready to start from her eyes: "This is a wife for my poor Sam. She'll marry him per force; I see she will, she's so desperately in love with him already. They say opposites often fancy each other in this way; but if she had a million instead of only forty thousand pounds, she'd never do for Sam. I see her eyes sparkle through those green glasses; she'll smoke me out—O, to be sure!"

Mrs. Scrope, in the habit of thinking aloud, did not remark that her maid Martha loitered in the room, as if desirous of speaking out something which burdened her mind; and unable to keep it any longer, the handmaid broke out with:—Oh, Missis, 'xcuse me, but Tom, Miss Gordon's groom, as come with her, says—at least he hints, which is much the same—that Miss Ellie won't never do for Master Samuel. She's a regular lass of spirit, he says, and he means more than he says. And he says outright, with such a broad grin on his red face, that if Miss Ellie ever marries Master Sam, she'll horsewhip him to a dead certainty, and turn the old one out of doors. Yes ma'am, she calls you 'the old one."

"Alas!" thought Mrs. Scrope, as she laid her head that night on a restless pillow, "what is to be done?" There is near forty thousand pounds at stake. What could Mr. Whitehead mean by making such a will?—and knowing this odious Miss, too!"

For one whole week did Miss Elspeth Gordon turn Scrope Hall completely topsy-turvey; never was such a din and racket heard; the servants grinned, and ran hither and thither, and Mrs. Scrope was nearly out of her mind with fright and vexation. Miss Elspeth also made such desperate love to Sam, that Sam, flattered and bewildered, and inveigled out on a wet day to walk with the Amazon through the woods, and following her steps through brake and brier, fairly stuck in a dismal swamp, got soaked to the skin, and took to his bed at once, putting his nose out of the blankets only to ask "if that Jezebel had gone?"

"No, my dear," said his anxious mother, "your Cousin Elspeth is not gone yet; she wants to see you."

"To see me?" cried Sam. "What! would she follow me even into my sick chamber, the impudent hussy? I'll never see her again, mother; you may tell her so—she'll kill me; tell her to be gone. Oh—oh—what a twinge! I wish she had it, the Jezebel! and she laughed at me too, I'll never forgive that."

"But the forty thousand, Sam," said Mrs. Scrope, sighing deeply; "think of that, Sam."

"I do think of that, mother," said the miserable Sam; "and it almost breaks my heart, it does, to give it up. I wish she'd give me up; I wish with all my heart that she had taken a dislike to me."

"Ah, my darling," said the fond mother, "you cannot wonder that she does not do that. The mortification will be severe enough when she has to return to that precious Miss Pamela with the tidings that you have refused her.—But, after all, she may improve, Sam, my dear, and perhaps it is worth while to try; for though you possess forty thousand pounds of your own, it would be very convenient to have as much more."

"Mother," replied Sam, solemnly, "if you wish to see me in my grave, you'll marry me to this dreadful woman. Tom Hicks, Miss Pamela's groom, a most respectable man, who has lived with Miss Pamela these twenty years, and whose wife is cook there—Tom Hicks told me, that if ever Miss Ellie Gordon was my wife, he'd not give a brass farthing for my life. 'If she marries you, sir, she'll worry you to death in a year; if you marry her, sir, you'll get a'——" But Tom Hicks didn't say what, though I guess he meant a tartar! No, mother, my mind's made up; I'll have nothing to do with her, and you may tell her so at once. She laughs so wildly too, I declare I'm all over skeerie like when I hear it. Let her go! let her go!—and well rid of her at any cost."

"Do you really mean to tell me, ma'am, that Mr. Samuel Scrope, of Scrope Hall, absolutely refuses to marry me?" cried Miss Elspeth Gordon, in a voice of high indignation. "I'll not give him up so easily—no, that I won't, that I won't," and the voice almost rose to a hysterical sob and laugh.

"Calm yourself, pray, miss," replied Mrs. Scrope with severity—she did not care about keeping terms now the chance has gone; "calm yourself, pray. My son's mind is quite made up; and, allow me to say, that the sooner you return to the protection of Miss Pamela Gordon the better, as we particularly desire a quiet house, now my poor son is so ill—an illness, miss, entirely brought on by your extremely improper and indelicate proceedings."

"I'll tell Aunt Paul" whimpered the young lady, taking out her cambric handkerchief.—"I'm badly used by cousin Sam—that I am.—You asked me here to marry me to him; and now I've come, you send me off again, just because cousin Sam don't like my green specs."

"No, miss; you well know that is not the reason why my son rejects the honor of your alliance," responded Mrs. Scrope, bridling up and getting very red in the face; "and if you had ten thousand times forty thousand pounds in your hand to offer him for marrying you, he'd refuse the bribe, miss." Mrs. Scrope spoke very loud. "My son, Samuel Scrope, will never marry, for the sake of lucre only, a smoking, snuffing, horse-whipping, dog-baiting"——

"Go on, ma'am—go on with your peroration," sobbed the young lady, with her handkerchief at her face. "I'm very badly used—that I am; and I cannot face Aunt Pamela, and tell her all this. She'll never believe it, unless cousin Sam writes her a letter all in form, to say he won't marry me. I cannot tell her myself, ma'am—indeed I cannot," and Miss Ellie began to blubber violently.

"Well, I'm sure if you'll go away in peace, miss, my son shall write the letter at once, and communicate, in formal terms, his rejection of your hand," interrupted Mrs. Scrope, only too glad to clear the house on any terms.

"I'll go when you give me the letter—but won't you let me see Sam?" said the green-spectacled damsel, in a wheedling tone, smiling up to Mrs. Scrope, with her comical velvet cap vibrating from some inward emotion. "Give my love to cousin, then; and if I may not see him, tell the dear fellow that I'll be a sister to him in heart, if he refuses me for a wife."

"Indeed, I'll tell him no such thing, Miss," said Mrs. Scrope with asperity, "he'd rather not have you in either character. You're half killed him; and the mischief your two dogs have done is incalculable. You shall have the letter in half an hour; so please be in readiness for departure, Miss, if it quite suits your convenience. Excuse my want of ceremony, but a sick house, Miss, must plead for a mother's want of time; so I bid you a very good morning, and wish you a very pleasant journey, Miss, and pray present my compliments and Sam's compliments to Miss Pamela Gordon." As the incensed lady hurried out of the room, and up stairs to her son's apartments, what a wild, clear laugh rang in her ears! What could it be? It was doubtless the Jezebel in hysterics; and Mrs. Scrope hastened her steps.

Mounted on Vixen, prancing and curvetting down the avenue, and attended by Tom, with Juno and Pero bounding and frisking for joy, Miss Elspeth Gordon, provided with the letter, turned her head and waved an adieu to Scrope Hall; and as the little cavalcade receded in the distance, again the same clear laugh floated past on the morning breeze.

It was not very long after these events, when Mrs. Scrope—who had never ceased to lament the loss of Mr. Whitehead's fortune, even going the great length of upbraiding Sam for having been too premature in rejecting the young lady, was informed by her elder son in person, of his approaching marriage with Miss Elspeth Gordon. Mrs. Scrope was, of course, delighted to hear that the money, after all, was not going out of the family; but concluded her remarks by saying—

"Well Frank, I'm sure I wish you joy of your bargain; forty thousand pounds is not to be sneezed at, as I told Sam. However, you have fine health and spirits, and may be able to manage her; but mind, I shan't be in the least astonished, to hear that your bride has horsewhipped you before the honeymoon is over."

"Never mind, mother," cried Frank, gaily laughing, "if she horsewhips me, I'll flog her soundly, I promise you. I hope you'll come and see us soon, and bring Sam with you. I'll promise that Ellie shall behave herself."

To Mrs. Scrope's dying day she never could comprehend by what means her son Frank Eardley had wrought so wonderful a change in his wife; and even Sam, who always remained a bachelor, was heard to declare, that if he could meet with an exact counterpart of Frank's wife, he too would marry.

"But who could guess," said Sam, "that matrimony would transform a mad woman, in odious green spectacles and a sugar-loaf cap, into a wild, pretty, kind creature, who never laughs at a fellow because he's got a cold or a face-ache?"

Genius is desirable, but application is indispensable to great excellence.

For the Ladies.

"SHE IS THINE."

She is thine—the word is spoken;
Hand in hand and heart to heart!
Though all other ties are broken,
Time these bonds shall never part.

Thou hast taken her in gladness,
From the altar's holy shrine;
O, remember in her sadness,
She is thine and only thine!

In so fair a temple never
Aught of ill can hope to come;
Good will strive, and striving ever,
Make so pure a shrine its home.

Each the other's love possessing,
Say what care should cloud the brow?
She will be to thee a blessing,
And a shield to her be thou.

[Written for Moore's Rural New-Yorker.]

EARLY MARRIAGES.

BY MRS. M. W. H.

"Do nothing without advice, and when thou hast once done, repent not."—Eccl.

No parents who have taken a proper interest in the well-being of their children and society, can have failed to contemplate with concern, the prevalent tendency to too early marriages. When young people marry in the immaturity of youth, form hasty and inconsiderate connections, how can any thing be expected for them but disappointment? They form an alliance which should be terminated by death alone, before the mind has discovered what is really wanting to constitute its highest happiness. This tendency is clearly traceable in many instances, to parents themselves. It does appear to me that our children partake very much of the "spirit of the age," in the rapidity with which they pass from babyhood, to the assumption of responsibilities belonging to men and women. We too often see a mother, as much delighted with the attentions bestowed on her child-daughter, as is the child herself, who is not slow to discover the weak points in her mother's character, and fortunate indeed, if her own good sense prevents her taking advantage of them, to her own injury. In our daily walks we meet mere boys, who ought "to tarry at Jericho till their beards have grown," gallanting the little misses, talking nonsense and feeding them with confectionery. I heard a lady remark not long since, that "moon-n-days, a fine horse and carriage, and a paper of lozenges, form the preliminaries of a courtship."

I am aware that in cities particularly, it is very difficult to restrain children from assuming their own guidance, before the judgment is sufficiently matured to understand the just requirements of social life. Yet they should, as far as parental authority can be properly exercised, be prevented from mingling too freely in each other's society. In the first flush of imagined maturity, what more natural, than that they should fall in love? or in Dr. Johnson's language, "exchange glances, reciprocate civilities, go home and dream of one another, find themselves uneasy when apart, and therefore conclude they shall be happy together." They marry, and when too late, they find each other destitute of those qualities, on which alone a permanent affection can be founded—too late,

"Regret, unchecked by hope, devours his mind,
He feels unhappy, and he grows unkind."

Cowper has furnished a vivid picture of the evils resulting from early marriages, in his fable, "Pairing time anticipated." After relating that the young birds, deceived by a beautiful day, contrary to the advice of more experienced ones, immediately paired and built nests, he describes the disastrous effects of this precipitancy:

"But though the birds were thus in haste,
The leaves came on not quite so fast;
And destiny, that sometimes bears
An aspect stern on men's affairs,
Not altogether smiled on theirs.
The wind,—of late breathed gently forth—
Now shifted east, and east by north;
Bare trees and shrubs but ill, you know,
Could shelter them from rain or snow;
Stepping into their nests, they paddled,
Themselves were chilled, their eggs were addled!
Soon, every father bird and mother
Grew quarrelsome, and pecked each other,
Parted without the least regret,
Except that they had ever met,
And learned in future to be wiser,
Than to neglect a good adviser."

I do not quite like it, that the Poet should have represented that all the evils resulting from this false step, were traceable to the blandishments of a little *female* bird,

"With golden wings and satin poll."

However, we will let that pass, pocket the insult, and appropriate the moral.

I think parents frequently commit an error, in treating the fancies of their children as silly vagaries, unworthy their attention; thus driving them to other and indifferent persons, for that sympathy which is so important to them. How many parents know less of their children's conduct than others, from the very fact, that the children do not confide to them their little plans and secrets,—the parents being in fact, almost the only ones from whom they wish to hide their acts. It is a matter of the first importance to a young girl, to have a sensible mother, who should be the sole recipient of her full confidence. The *daughter* may rest assured, the judicious *mother* will never advise to any course which is not consistent with her duty and well-being—the mother will endeavor with unselfish kindness, to hide her little aberrations, and enter with feeling into all her little plans for enjoyment. Young people often withhold their confidence, from a fear that their parents will sneer at their childishness and folly. Their hopes and disappointments, pleasures and pains, are matters of much moment to them; they are in fact, "the stuff their young lives are made of," and exert a powerful influence on their future.

A young person of your own sex, and nearly of the same age, is rarely found to be a safe depository for love secrets. There are so many trifling interests, for each one to consult on his or her own account, that disinterested friendship is a rare virtue. I would by no means encourage suspicion, but would recommend the advice of Burns to his young friend:

"Ay free, aff han' your story tell,
When wi' a bosom crony;
But still keep something to yoursel
Ye scarcely tell to ony.
Conceal yourself as weel's ye can
Frae critical dissection;
But keek thro' ev'ry other man,
Wi' sharpened sleekit inspection."

It is a very important matter in a family of brothers and sisters, to submit in many cases to the judgment of each other, in regard to associates. Young men, by their position in life, have many opportunities of learning the habits and pursuits of their own sex, that females cannot command. No girl should venture to receive attentions from one whom her brother had seen to frequent any of those places kept purposely for the gratification of perverted appetite, even though the place be so aristocratic that the prices of its viands, cigars, and wines, exclude the poorer class, who indulge the same tastes on cheaper materials. No right minded brother could see his sister exposed to the blandishments of a vicious man, without warning her of her danger. There is something so beautiful in the confiding love of a sister, that my heart always warms toward those who evince it.

On the other hand, a sister can much more easily ascertain the real character, tastes and habits of her own sex, than the lover. In fact, it is rare that a young couple understand each other's characters till after marriage. I think it would be well for parents to mingle more with their children in company. Under proper regulations, it is decidedly advantageous for the sexes to associate. I have known young girls to receive the attentions of gentlemen for months, under the same roof with the parents, without their ever seeing him. This is certainly a culpable indifference on the part of the parents, who should require an introduction of the suitor, and become acquainted with him, that the daughter may have the benefit of their judgment and penetration.

Only a few days since, I was reading in a newspaper, an account of the miserable end of a young female, who persevered in receiving the attentions of a man to whom her father objected, because he believed him to be a dishonest man. She believed the professions of the lover, who promised immediate marriage, and persuaded her to elope with him. Whenever she reminded him of the marriage ceremony, he put her off, till at length he grew tired of her, and his character was seen in all its deformity, even by her, his too yielding dupe.—She clung to him with a woman's love, till he fled, to escape from the offended laws of his country, leaving his poor victim, to a life of degradation, from which her heart revolted.—She committed suicide, rather than return to her heart-broken parents, or pursue the only course left her by the perfidy of her professed lover. This is but one of the many instances in which the most lamentable results have followed a disregard of parental advice.

As a means of preventing boys and girls from becoming too familiar, would it not be well to have their little meetings under the eye of the parents, who should unbend sufficiently to remove constraint? It would relieve many a little coterie from embarrassment, if the parents would join the circle and lead off in some proper amusement, that does not involve the old fashioned kissing plays—the resort in many instances, from lack of more rational and less mischievous amusement. Happy is that parent who retains enough of youthful feeling to send his blood coursing through his veins while enjoying a hearty play with the children, who always enjoy it all the better for having "father and mother" engaged in it. Were this course to prevail more generally, it would, no doubt, lead to more confidential intercourse between parents and children, and consequently, there would be less improper, and too early marriages.

Woman's Sphere.—Woman is by far the fittest judge of her own sphere. Not the individual, but the aggregate of the sex; and what they claim as a whole, may be safely, and ought to be justly awarded to them. There are idiosyncrasies in the female mind as well as in that of man, but those instances are not the true exponents of woman's character.

MOORE'S RURAL NEW-YORKER.

ROCHESTER, JANUARY 21, 1854.

Patience, Kind Friends.

In consequence of the large and continued increase of our subscription list, it has been impossible to issue the RURAL, for two weeks past, as promptly as was anticipated—and our present number will go to press a day later than intended. In order to gain time, the steam press is now running both day and night, and the prospect is that we shall be fully up to time next week and thereafter. Meantime, we must throw ourselves upon the indulgence of our subscribers. Though some may receive the paper a day later than was expected, it will be sure to reach them—and will embrace the most important news up to the time of going to press. Grateful for the generous support accorded to the RURAL, we are doing all in our power to facilitate its rapid printing and mailing, and feel confident that those interested will make proper allowances for a temporary delay which could not be foreseen or avoided.

Franklin Anniversary.

THE Rochester Typographical Union appropriately celebrated the natal anniversary of FRANKLIN, the Patron Saint of the "Artof Arts"—by giving a Banquet at the Hall of Blossom's Hotel, on Tuesday evening last. The craft and other professions were well represented on the occasion, and the entertainment was apparently satisfactory to all participants. Capital responses were made to the regular toasts by Rev. Drs. VAN INGEN, KENDRICK and DEWEY, Prof. RAYMOND, EDWARD WEBSTER, R. D. JONES, JAS. VICK, Jr., H. G. BRENT, C. B. HILL, C. P. DEWEY, and others. Letters were read from Ex-Gov. HUNT, Hon. T. C. PETERS, HENRY O'REILLY, Esq., and other distinguished gentlemen, who were unable to attend. After the conclusion of the intellectual banquet—served by the more solate and mature guests—the representatives of "Young America" continued the festivities—opening *their* hall by twinkling merry feet in unison with excellent music. We shall endeavor to give a synopsis of the proceedings in our next number.

The Weather.

THE weather during the past week has been exceedingly mild for the season. Some of the time it has been wet and muddy, but much of it has been very pleasant. Thus far this winter, the prognostics of the weather wise, have failed most signally. It was said in the fall that a killing winter was about to come upon us; that the instincts of the animal creation had forewarned them to put their houses in a state of extra preparation; that the muskrat had dug his hole a foot or two more in depth; that the otter had fortified his habitation with extraordinary care; that the ground squirrel had been particularly active in the corn field and hickory grove; that the wild geese had taken an early and a rapid flight to a more genial clime. The vegetable kingdom also, had put on an additional covering against Jack Frost; corn husks were of extraordinary thickness, &c., &c.

Admonished by these exponents of winter, the human family also, put themselves in a posture of defence, and then calmly awaited the onset. But thus far they have waited to no purpose.—There has been, it is true, a sort of skirmishing warfare going on between the antagonistic solsticial forces, and for a week or two the frigid party seemed to get the upper hand. Sleighs, and sleds, and skates, were called into active service, the locomotive covered its frosty nose with a snow plow, and the city dandy laid on an extra moustache by the use of bear's grease and Macassar. Sparkling eyes, and tiny feet, peeked out of plentiful surroundings of down and fur, and the poor wretch who could do no better, covered his shivering limbs with rags.—But in a few brief days the battle was over, and ethereal mildness commenced its reign once more.

It may be said however, that there is yet abundant time for cold and frost, and that it will not do to exult too soon; all of which is true.—But it does not detract from the fixed fact, of a mild winter thus far, and it has cut off at least one half of the season allotted for the reign of frost. The sun has long since reached his southern declination, and is now wheeling his majestic car again towards the north. He rises every day higher and higher in our heavens, and ere many months have rolled away, we shall be able again to say,

> "Come, gentle spring! ethereal mildness come!
> And from the bosom of yon dropping cloud
> In gentle showers on our plains descend."

SINCE the above was in type, another turn has taken place in the tide of success, and this (Wednesday) morning it is snowing fast.—Whether or not the triumph of the Boreas forces is to continue, "this deponent saith not."

TO AGENTS AND FRIENDS.—We are publishing a large extra edition in order to furnish the complete volume to new subscribers. Hence it is not too late to form new clubs, or make additions to those already ordered. Come on, good friends, and we will endeavor to honor all drafts, whether you count by tens, twenties or hundreds. Remember *it is not too late* to secure the back numbers, and hence all your neighbors and friends (and especially the borrowers) can have the pleasure of joining your club, forming a new one, or subscribing singly.

Dreadful Shipwreck.

IT becomes our painful lot to record one of the most direful shipwrecks that has ever fallen to the lot of our merchant marine; and one too, that has been attended with an overwhelming and lamentable loss of human life!

The new and beautiful steamer San Francisco, sailed from New York on the 22d of December, with some six hundred persons on board, of whom five hundred were United States troops, and their families. On the evening of the 24th, the wind commenced blowing violently from the North-west, and continued to increase in intensity until the morning of the 25th, when, in consequence of the breaking of the piston rod of the air pump, the engine suddenly stopped. The ship then became nearly unmanageable and labored heavily—laying in the trough of the sea, and every sea striking tremendous blows under the guards, tearing up the planking fore and aft on both sides. At the same time they tore away the railing on the upper deck, hen coops, hay, boxes, barrels, &c., all swept off in a confused mass. The ship now commenced leaking badly and all hands were immediately set to work clearing the deck, manning the pumps, &c. The water still gaining on them, the troops were organized into bailing gangs to keep the steamer from going down with all on board.

At 7 o'clock on the morning of the 25th, the foremast went over the side with all the rigging attached, breaking about six feet above the deck, and splintering to the berth deck. At 9 o'clock the vessel shipped a heavy sea amidships which stripped the larboard paddle box, carried away starboard after ring post, both smoke stacks, all the upper saloon, saving the quarter deck thro' and washing overboard a large number of passengers, including Col. WASHINGTON, Maj. TAYLOR and wife, Capt. FIELD, Lieut. SMITH, two ladies, names unknown, three civilians, also unknown, and about 150 privates; a waiter, the barber, and a young man, the carpenter's brother, were killed. Up to this time the water had gained much. A large part of her quarter deck was stove in, and it was only by the greatest exertions that the ship was kept afloat. A gang of soldiers was set apart to hold blankets around the shafts to prevent the flowing in of water.—The storm continued until the 29th, the vessel being entirely at the mercy of the winds and waves. The bark Kilby, of Boston, having fallen in with the wreck at this time, took off 100 of the passengers, the remainder continuing on board until January 5th, when the survivors were rescued by the British brig Three Bells, of Glasgow, and the ship Antarctic.

Besides those who were washed overboard at the time of the wreck, 11 died on the steamer from sickness and exhaustion. The cholera broke out on board of the Three Bells, in consequence of the crowd of passengers, exposure, and want of suitable provisions and medicines, and a large number of them died.

Taken all together, it is one of the most heart-rending calamities that has ever happened upon the high seas.

The conduct of Capt. Watkins, of the San Francisco, is everywhere extolled. He was the last person to abandon the sinking ship, and with 225 others, is now on the Antarctic bound from Liverpool. The Three Bells brought her passengers back, and the Lucy Thompson relieved the Kilby of most of hers and landed them in New York.

SMUGGLING BY THE EUROPA.—A paragraph in our item column states that the steamer Europa had been seized and two of her crew arrested by the United States authorities for smuggling. It appears from later advices that Dr. WISSTEN, the surgeon of the steamer, was one of the parties, and when arrested, lace of the value of $1,600 was found secreted on his person. The other party was John Beran, the bar-keeper, who had in his possession a large quantity of watches. They were both imprisoned. Information of the intended smuggling was given to the officers by Mr. Cunard, the agent of the line. The Europa was not seized, as had been previously reported.

COMMENDABLE.—The merchants of New York City, have held two meetings in the Exchange, for the purpose of urging upon Congress the propriety of indemnifying the vessels for expenses incurred in rescuing the passengers and crew of the ill-fated steamer San Francisco, and of bestowing on the officers and crews some proper testimonials for their heroic exertions.

Governments of late have been especially liberal in cases like this, and there is nothing which stimulates men to the performance of noble and generous actions so much as the bestowment of well merited praise.

THE GENESEE COLLEGE.—A difficulty has arisen in this institution lately, which has resulted in the withdrawal of the President, Dr. TEFFT, and also of Professor WHITLOCK. Nearly all of the students of the College have left and gone to Amherst College, in Massachusetts. The difficulty has arisen, it is believed, in reference to a difference of opinion as to the restraints and rules necessary in the management of the male and female departments of the institution; and is much to be regretted, for it is one of the best and most successful seminaries in the State.

THE HORTICULTURIST.—Attention is directed to the advertisement of this popular journal—now, as heretofore the leading Horticultural periodical of America. It is ably conducted, and published and illustrated in superior style. We shall be happy to furnish the Horticulturist to any of our agents or subscribers at $1,50 per copy for plain, and $3 for colored edition.

Our Albany Correspondence.

ALBANY, Jan. 16, 1854.

THE first week or two after the appointment of committees, there is generally very little done in the Legislature, more than to give notices, present petitions, and plan the work for the more active part of the session.

The present session has been more than usually active. The Maine law has been introduced into both houses, and will be open for discussion in a few days. It is in substance, the bill acted upon by the last legislature. Notice has been given of a bill to submit the same to the people.

The question of allowing city stocks to be deposited in the Bank department, has been discussed at some length. One of the best speeches of the session was made by Mr. LITTLEJOHN, in favor of the measure. The arguments adduced for such a course are, that the stocks of the United States and of New York are so scarce that it is difficult for banks to perform the business necessary for the growing commercial wants of the State. Said stocks are as good security for the bill-holders as any other, and far more readily and safely converted into money than bonds and mortgages on real estate. On the other hand it is contended that the use of these stocks would have a tendency to draw too many into banking operations, and in times of commercial revulsion, disastrous consequences would follow.

The Senate have had under consideration a bill to perfect the amendments to the Constitution on the canal question. It provides a special election the third Wednesday in February. Of course this day may not be adhered to, but it will be likely to be as soon as that.

The reports of various officers of the State are coming in quite briskly. The business will be in full blast very soon. As most of the members are young and ambitious, a profitable session may be anticipated.

The people of Albany are enjoying a rich treat in a course of scientific lectures from Prof. CASS, of the Albany University. They are free and will extend through several months. The different clergymen embrace the opportunity afforded by the presence of the Legislature and the many other visitors in the city, to preach series of sermons. Some of them are largely attended.

The argument of the celebrated HENDRICKSON case comes off to-morrow before the Court of Appeals, the decision of which will be looked for with much interest.

The January thaw made serious fun here for several days. But little is said just now.

"OWE."

Congressional Proceedings.

THE principal business done in the Senate during the week, was a debate on the Clayton and Bulwer treaty, in which Mr. CASS took strong ground as heretofore against the treaty. Mr. Clayton replied in part, but was taken ill before closing his speech, and was obliged to defer it to a future day. Mr. Dixon gave notice of an amendment to the Nebraska bill, repealing that part of the act which prohibits slavery north of 36 deg. 30 min.

A resolution was offered by Mr. Pearce, of Maryland, for a joint committee to express suitable thanks to the rescuers of the San Francisco passengers, and adopted.

The nomination of Mr. Redfield, as Collector of New York, was received and referred to the Committee on Commerce.

HOUSE.—Mr. Cobb, from Committee on Public Lands, reported back the Homestead bill, with amendments.

Referred to Committee of the Whole on the State of the Union.

Mr. Cutting from Judiciary Committee, reported a bill making the children of American citizens born abroad, citizens of the United States.

Mr. Orr introduced a bill for the relief of the survivors of the army saved from the steamer San Francisco, which was referred to the Com. on Military affairs.

A resolution was offered by Mr. Chandler, like that of Mr. Pearce, in the Senate, for a joint committee to express suitable thanks to the rescuers of the San Francisco passengers, and adopted.

A Noteworthy Item.

THE man who superintends the press work of the RURAL, has been ciphering a little, and gives us the result in the following note. Were we to add the expense of editing, type setting, mailing, &c., &c., the figures would be far more surprising to the uninitiated:

FRIEND MOORE:—Perhaps some of your readers are not aware of the expense of publishing the Rural New-Yorker. If it will set them to thinking on the subject, we will figure a little on *one* item. The paper to print *one* week's issue of the RURAL costs $310. The weight of the paper is 2,790 pounds. If placed one on the other, closely pressed, they would make a pile over 12 feet high. If spread out on a smooth surface, would cover nearly 5½ acres of ground. If cut into strips one inch wide, and fastened together, would reach over 530½ miles. If printed in the old fashioned way, on a hand press, it would take a good smart man 30 days to work each week's edition.

Very respectfully yours, S. E. D.

LETTERS FROM THE PEOPLE.—We are receiving from 125 to 200 letters per day, the most of them well lined with the essential requisite, from all quarters. When we get all the names entered, we propose to publish extracts from many of these epistles—for, aside from money and names, they abound in wit, humor, facts and sentiments worthy more attention than we can now bestow.

News Paragraphs.

☞ Edward Harris, a manufacturer, at Woonsocket, R. I., to encourage his apprentices, five hundred in number, to save their earnings, offers the twenty-five who shall save the largest per cent. of them during the year, a premium of $40 each, and to the twenty-five who shall save the next largest he offers $10 each. He proposes to appropriate in this manner the sum of $750.

☞ Six gold watches, appropriately inscribed, have been procured by the citizens of Buffalo, to be presented to the six gallant men who rescued the sailor Wakeley from the schooner Oneida, in October last, and a purse of $500 made up to be presented to Mr. Wood, whose team was ruined while carrying the life boat and the men to point Albino.

☞ A letter from Oetz, Transylvania, Nov. 23, states that so thick a smoke arises from several forests of that country, which are on fire, that it is impossible to carry on the ordinary agricultural pursuits. In addition, the atmosphere, the letter declares, is so saturated with acrid emanations as to seriously affect the sight and breathing.

☞ Mr. Marsh, of Litchfield, Conn., has on his premises an apple tree which measures *fourteen feet* in circumference, and yielded twenty bushels of good fruit the past season. It had yielded previously to 1835, about 100 bushels a year. It was carried to Litchfield from Hartford by the first settlers of the former town, and has borne delicious fruit for 130 years.

☞ The Queen of Spain and the King of Prussia have addressed letters of congratulation to Santa Anna, in reply to letters from him of April last, in which he informs them of his election to the Presidency. We suppose when he informs them of his elevation to a quasi throne, they will send him another, a longer, and a warmer letter.

☞ The daily food of Hannibal, the elephant at Herr Driesbach's Menagerie, consists of four hundred pounds of hay and three bushels of oats. He washes this enormous quantity of provender down his throat with four barrels of water. Besides his regular meals he thankfully receives candies, cakes and apples from the visitors.

☞ The New York State Court of Appeals has given an important decision in a suit brought by Ex-Attorney General Chatfield, on behalf of the Commonwealth, to test the title of Rensselaerwyck. The Court has unanimously affirmed the title of the Van Rensselaers to be regular and valid.

☞ Not less than £2,972,000 was remitted from Irish emigrants in America to their friends and relatives at home in 1848, '49, '50 and '51. It is estimated that if the remittances have continued at the same rate, upwards of four millions must have been remitted in the last six years.

☞ Rev. J. M. C. Pennington, D. D., of New York city, has been elected President and Professor in the Wenkstuck, Mich., Manual Labor Institute. He is a colored gentleman, and was a fugitive slave at the time of the passage of the fugitive slave law.

☞ Two mammoth steamers are building in Buffalo, to run in connection with the Michigan Central Railroad route on the opening of navigation. They are estimated to cost $500,000 each, and are to be named the "Plymouth" and "Western World."

☞ The Methodist Church in Fairhaven, Conn., was prevented from administering the Sacrament a few Sundays since, from the theft of the wine reserved for the purpose, and a portion of the communion service, by some unscrupulous rascal.

☞ Col. Benton declares that the central part of the Rocky Mountains has territory enough to make a mountain State double the size of all the Swiss cantons, with everything as grand in scenery, and without the drawbacks of its avalanches, glaciers and cold.

☞ The screw steamer Era, from Greenock to Australia, foundered on the 28th of Dec. about 15 miles from Lambay, on the Irish coast. Only 7 of the crew were saved. The captain and wife, and second mate and five seamen were drowned.

☞ Extensive robberies have been detected at the Custom House. Large quantities of Canton silks and shawls, have been abstracted from the bales, and the bales restored to their original appearance. Suspicion rests upon parties connected with the Customs.

☞ In a personal altercation at the University in Columbia, Missouri, between Benjamin Hardy, of Harrodsburg, Ky., and W. W. Thornton, of Shelbyville, Ill., both students, the former was shot by the latter with a revolver, and almost instantly killed.

☞ A telegram says that an important treaty had been concluded with Mexico, which gives the United States 30,000,000 acres of land in the Mesilla Valley, for the sum of $20,000,000; $5,000,000 of which is reserved for paying claims, including the Garay grant.

☞ The Oxford University Commissioners recommend the study of Locke. Thereupon Dr. Pusey pronounces Locke to be "one of the shallowest writers who ever treated of the human mind," and, moreover, "the forerunner of infidelity."

☞ The price asked for Mount Vernon, the mansion house and two hundred acres of the adjacent land, is $200,000, while the intrinsic value of the property, is not estimated higher than $30,000

☞ Lord Aberdeen is said to have declared that, having once witnessed forty thousand dead and wounded men exposed on the battle field, he "shrinks from the responsibility of being a party to any warlike operations."

☞ Two hundred and eighty-three thousand three hundred and thirty-two emigrants arrived at New York during the last twelve months; and $570,322 were received, and $570,775 disbursed for their benefit.

☞ The consumption of water in Philadelphia, during 1853, supplied by the Fairmount Water Works, amounted to 2,000,000,000 of gallons; that supplied by the Schuylkill Works, to 1,400,000,000.

☞ The steamboat Jno. S. Avery, passed the mouth of the Ohio river Jan. 11, having on board 34 tons of silver, which Adams & Co. were transporting eastward.

☞ The steamer Europa has been seized by the officers of the Customs. Two persons, one of them the steward, were detected smuggling lace.

News Brevities.

—— The hills west of San Francisco, have been found to contain prunxyle of tin.

—— Malignant scarlet fever is prevailing to some extent in Buffalo.

—— Another evening paper has been started, so that San Francisco has now thirteen thrills.

—— Archbishop Hughes had arrived at Havana.

—— Parliament met at Quebec, on the 16th inst.

—— The Ladies of Texas are petitioning to the Legislature for the prohibition of the sale of intoxicating drinks.

—— The cars on the Milwaukie and Mississippi Railroad now run regularly to Stoughton, a distance of seventy-three miles.

—— The Western House of Refuge at Rochester, will cost, when enlarged as it must be, not less than $600,000.

—— Two thousand and twelve marriage licenses were issued in Baltimore during the present year.

—— There is a German in Chatham street, N. Y., who gives dinners to all poor Germans, gratis, every day.

—— Two men were killed lately and two severely injured, by the fall of an embankment on the Toronto and Hamilton Railway.

—— The German who was shot in the Bedini riot, at Cincinnati on Christmas, had just inherited a fortune of $20,000.

—— The failure of the Merchants' and Mechanics' Bank of Oswego, was announced January 6th.

—— "Twelve hundred murders" have been committed in San Francisco, during the last four years, and but one conviction has been made.

—— The total number of barrels of Flour transported over the Western railroad from Albany, during this year was, 371,804.

—— The Church of the Holy Cross, in Troy, have just been presented by N. B. Warren, with a peal of six bells.

—— The trial of the policemen in the Bedini affair is progressing at Cincinnati, and the testimony so far is dreadfully against them.

—— The Mayor of New-York, in his Message to the Councils, recommends City railroads as "great public conveniences."

—— Baltimore consumes about 5,000,000 bushels of coal annually; Philadelphia 2,000,000; and Cincinnati 6,000,000.

—— The Legislature of Kentucky have elected the Hon. J. J. Crittenden (Whig) United States Senator.

—— A newspaper has been already commenced in Nebraska, at Old Fort Kearney, called the Nebraska Democrat.

—— General Wool has gone to New York, to replace the men and officers lost on the San Francisco.

—— Senator Clayton, of Maryland, is confined to his bed. He has been seriously, but not dangerously attacked by the influenza.

—— The machinery for the San Francisco Mint, to be in operation on the 1st of February, arrived out on the 10th.

—— There are eighty-three newspapers in Michigan—the aggregate circulation of these is over three millions and a quarter.

—— The Louisville Courier publishes a list of seventeen merchants of that city, who import their goods and wares direct from foreign countries.

—— It is stated in one of the Cleveland papers that orders to Pittsburgh Glass Manufacturers to the amount of $50,000 have been withdrawn, in consequence of the Erie difficulties.

—— The land commission of California, decided eleven cases on the 13th ult., confirming six of 44,000 acres, and rejecting five of 115,160 acres.

—— The second track on the New Haven Railroad will be completed in a few days, when there will be a double line of rail on the whole route from Boston to New York.

—— The steamer Massachusetts has brought not far from seventy-five wrecked seamen to New Bedford, free of charge, within the past two weeks.

—— The "Ericsson" steamer is still under treatment, and probably will remain so for some time to come. The experiments thus far have proved very unsuccessful.

—— The year 1854 began and will end on Sunday; there are five months in the year that contain five Sundays each, and there are fifty-three Sundays in the year.

—— The earnings of the "People's Line" of steamers on the North River, the past year, are said to have been $346,000, and the net profits $214,800.

—— The medical fraternity of San Francisco have formed a society of sixty-five members, to protect the community from those pretenders who kill without a regular diploma.

—— George W. Peabody, of London, has offered a donation of $200 a year while he lives, to be awarded as rewards of merit to the children of the public schools of Danvers, Mass.

—— A Scotch servant girl at Cleveland, Ohio, has received information from her mother in Scotland that she is heiress to a cash fortune of $30,000.

—— In Connecticut, a man named Lucas has been sentenced to the State Prison for six years, for placing obstructions upon the Middletown Railroad track.

—— The Senatorial term for which Mr. Crittenden has recently been elected by the Kentucky legislature, extends 6 years from next March.

—— The Senate's bill to perfect the amendment of the Constitution to complete the canals, names the 3d Wednesday in February for the election.

—— A list of the Presbyterian clergy of Scotland occupies fifty-two pages, while the list of all other denominations occupies a little over five pages.

—— Two Half-Breed Indians, at the mouth of the Coquille, Southern Oregon, are said to have recently dug out one hundred and fifty pounds of genuine gold ore.

—— A party of engineers sailed from Southampton on the 15th, per steamer Orinoco, to survey the Isthmus of Darien, for the purpose of constructing a ship canal.

—— A slight shock of an earthquake was felt in Memphis on the 18th ult., between the hours of six and seven o'clock. It lasted but a few moments.

—— The Cleveland Plaindealer says that the Common Pleas of that county granted 21 divorces at its last sitting.

Foreign Intelligence.

Arrival of the Baltic.

The Collins mail steamship Baltic, arrived at New York, Jan. 12.

She left Liverpool at 9 o'clock on Thursday evening, 29th ult.

The news affecting the Turko-Russian war is highly important. The Divan met on the 18th ult., when, after a long and animated discussion, it was resolved to authorize the ministry to state that the Sublime Porte would willingly send a plenipotentiary to some place in neutral territory for the purpose of treating for peace, and at the same time would be willing to accept the guaranty of the four powers that the principalities should be evacuated immediately upon the conclusion of a peace.

On the contrary, we learn that the Czar, in non-official communications to the courts of Berlin and Vienna, has stated his determination not to agree to any proposition for peace, unless considerable concessions were made to Russia.

The question had become much more complicated by the intrigues of Russia in Sweden, Persia and India, and according to the general tone of the English press, *a general war throughout Europe and Asia is now inevitable.*

The only event of political importance is the decision of Lord Palmerston to retain office.—The reason assigned is that his differences with government on the Reform bill have been adjusted. The Times renews its assertion that the foreign affairs had nothing whatever to do with his tender of resignation.

Letters from Paris distinctly state that Louis Napoleon was very peremptory in his determination to protect Turkey after the affair at Sinope.

PROGRESS OF THE WAR.

The allied fleet it was said had entered the Black Sea, although the public are unaware with what instructions they entered.

This lack of information, which appears so remarkable to Americans, is far from being the result of accident. The governments of Europe keep the telegraph in their hands, and suffer nothing to pass over it but what suits their purpose.

The Turks are preparing for an expedition against Sebastopol.

The overland Indian mail brings confirmation that the Shah of Persia left Teheran with his army—30,000 cavalry, 1,000 cannon and 3,000 camel loads of ammunition to aid Russia. At latest accounts they had passed Tabreez. The Shah had also sent an envoy to Dost Mahomed to point out the advantage of his siding with Persia and the Russians.

Odessa letters of the 8th state positively that the Jagondib, 90 gun Russian ship, was lost at the battle of Sinope. This ship was bravely attacked by a Turkish frigate and both vessels blown up.

Admiral Osman Pacha has himself had a limb amputated, and now lies in a dangerous state.

The Turks estimate their loss at Sinope, in ships, munitions and treasure, at 20 millions of piastres.

The detailed account of the massacre of Sinope, brought by the English frigate Retribution, confirms the previous statements which had been made as to the heroism of the Turks, the unrelenting ferocity of the victors, and the lamentable extent of the disaster which has occurred. Ali Bey, the captain of the frigate Navick, finding a combat with a Russian line-of-battle-ship hopeless, threw a lighted match into his powder magazine, and blew up his own vessel and that of the enemy. The Turkish Admiral, in a small frigate, only yielded to a three-decker of 120 guns, after he had inflicted considerable damage on his opponent, and had himself lost a leg in the action. In no naval engagement recorded in modern times has a hopeless resistance to overwhelming force been maintained with more desperate resolution.

According to a letter of a Constantinople correspondent, out of 4,400 Ottoman sailors, only 1,680—and those mostly wounded—survived the battle.

The details of the past events do not bear out the victories claimed by the Russians.

The European residents of Smyrna, have collected 300,000 francs to send to the Frank volunteers in the Turkish army. The Governor of Smyrna and the French Consul General have given orders to seize all incendiary publications coming from Greece.

On the 11th of December, the anniversary of the birth of Mahomet was celebrated with very great splendor at Constantinople.

It was very generally reported in all the principalities that an armistice during the winter months would be agreed upon. But this would enable Russia to take the field in the spring with not much short of 180,000 men.

It appears that the Moldavo-Wallachian militia, recently incorporated with the Russian forces, cannot be trusted in the field against the Turks. They are therefore to be employed to do garrison duty in the principalities.

Arrival of the Europa.

The Europa arrived at New York, Jan. 16th, with 21 passengers.

Lord W. Stuart is at Constantinople endeavoring to induce the Porte to enroll an European Polish Legion, to entice desertion of Poles from the Russian army.

The ratification of the treaty between Russia and Persia was done at St. Petersburg, December 18th. The Persians were daily expected to attack Bagdad.

Turkey has formally accepted the Persian declaration of war. The Shah of Persia has dismissed all French, English, German and Italian officers from his army.

The British Parliament is appointed to meet for business, Jan. 31st.

There had been a severe storm on the Black Sea, and 80 sail lost.

Capt. Deard, of the steamer Prince, from Liverpool for Dublin, reports having seen a large screw steamer sink in the recent gale in the Channel. Much anxiety is felt to know what steamer is missing.

At Constantinople, the Porte is acting in the most friendly accord with the representatives of the powers.

On the 20th, a company of Wallachin militia seized their newly appointed Russian officers, beat them soundly, and then deserted with five of them to Kalafat.

The Chronicle states that the Turks have raised the siege of Akiska and Alexandrianople.—20,000 Turkish irregulars have been repulsed.—Abder Pasha, Commander-in-Chief, has resigned. Ahmed Pasha replaces him.

On the 15th, the four powers presented a note demanding an armistice.

Halil Pasha's entrance into the Ministry is regarded as favorable to the projected peace.

VIENNA, Friday.—Turkish bulletins acknowledge the evacuation of Russian territory in Asia.

The English Consul at Teheran, mediates between Persia and the Porte.

It was rumored in Paris on the 29th, that Minister Soule had fought the third duel with the Duke of Alba, and was killed. It wants confirmation.

LIVERPOOL BREADSTUFFS.—The arrivals of foreign breadstuffs continue moderate, and millers and dealers have been obliged to purchase freely at an advance of 4d@6d. on the week. Flour fully 1s. pr barrel dearer. Indian corn in better demand at 5s@1s. 6d. on the week.

LIVERPOOL PROVISIONS.—All the provision circulars report nothing doing in beef. No sales of American or French pork. Bacon, new, is selling at about 45s.; no sales of old. Lard lower, 50s. taken to clear out stock; 200 tons now remaining on hand in speculators' hands. Cheese, little offering and prices firm. Apples have been much inquired; some of first quality realized 60s.

Kane's Arctic Expedition.

A LETTER from Dr. Kane, giving the experiences of the Arctic Expedition under his command, up to July 20, has been communicated to the N. Y. Tribune. It is the first letter received since the expedition sailed, and it is written in a hopeful and encouraging spirit. The gallant commander describes a calm of twelve day's duration which came over them, and they lay almost still, Ancient-Mariner-like, like a painted ship upon a painted ocean. This calm began on the 30th of June. Then a stiff breeze set in from the South, hauling shorewards, and sending them on at the rate of eight knots an hour. During the calm, Commander Kane had sent into Sukerloppen and laid in a good supply of reindeer skins, filling at the same time his water casks. At the rate he was going, he expected to make Lielly the night he was writing, and Proven in two days more. The Northwesters he thought must have cleared the ice from Melville Bay, and if the wind hauled a little more to the eastward, the ice would not drive back again. The commander then described his procedures for undertaking a sledge journey, and his plans generally. It was his intention to remain in the brig as long as possible, seeking a harbor on the eastern side of Smith's Sound. The moment the vessel comes to anchor, he will leave Olsen, a trustworthy man in charge, to prepare for winter quarters, drop his whaleboat, with himself, the Esquimaux and seven men, and take advantage of inshore tide-leads to continue his journey to the north.

RAILROAD ACCIDENT.—The *Chicago Tribune* says: On the evening of the 12th inst., about 6 o'clock, a construction train belonging to the Illinois Central Road, came into collision, while backing on the track, about four miles below the city, with the evening train going towards that place. The engineer of the construction train, fearful for his own safety, reversed his own engine and sprang off. The shock threw one of his rear cars off the track and uncoupled it from the remainder of the train, which rushed on toward the depot at a lightning speed, where it buried itself in a freight car of the train made up for the morning. There were fortunately no lives lost, and no one injured.

GOLD AND SILVER IN WAYNE COUNTY.—It is a current report that there is a placer of gold in this county. It appears that it was known to the Indians who inhabited this section previous to the advancement of civilization, and has been handed down from generation to generation. The knowledge of the location is now in the possession of a man resident near us, who obtained his information from an Indian, at Green Bay, Wisconsin. The exact locality was found by marked stones as described by the Indian, which was found to correspond exactly with history. We understand the placer is in the town of Wolcott; and the owner of the secret is only waiting an opportunity to possess himself of the land in which it is situated, or permission to work it, to avail himself of the secret. No need of going to California now; gold at home and plenty of it. We hope our Wolcott friends won't advance the price of their lands so as to be beyond the reach of purchasers, on this account. —*Clyde Times, 13th.*

MAINE LAW.—The Albany correspondent of the New York Daily Times says, "There can be no doubt that the question (of a prohibitory law) will be submitted to the people, and probably at the same time as the amendments to the Constitution. To obviate the Constitutional objections, the question submitted will be: "Shall a law be passed prohibiting the sale of liquor? and if decided in the affirmative, then the law will be drawn and passed by the Legislature."

IMPORTANT RUMOR.—The Springfield, Mass., *Republican* of Saturday says there is a very current rumor in that city, for which good authority is given, that the Supreme Court of the State have come to a decision unfavorable to the constitutionality of the seizing and destroying features of the present anti-liquor law.

PLYMOUTH CHURCH.—Last Tuesday evening week, a sale of pews in this church, (H. Ward Beecher's,) in Brooklyn, was made for one year. One hundred and sixty-three rented for $10,047 25. One hundred and thirty-six are unsold.

Commercial.

BUSINESS AND FINANCE.

THERE has been an unusually quiet week in the financial world. No upward or downward movement has taken place among the *bulls* or *bears* and there is a general dearth of interest around the financial board. No California arrivals since our last, and consequently there has been no additions to the specie list, while at the same time it has continued to move off towards the commercial cities of the old world, at about the usual rates. The Africa took out on the 11th, $900,000, and the Propeller Alps $222,703.—The new steamer Nashville had also $40,000 in specie on her manifest.

The Tribune says the balance due in Sub-Treasury at N. York is now $2,864,793.

The total amount of dry goods entered at the port of New York, thus far in January is $4,178,694, against $5,006,766 in 1853.

The imports of the week other than dry goods, were $1,455,296. The exports of the week, exclusive of specie, are $1,509,807, including nearly $1,100,000 of breadstuffs.

The comparative receipts of the New York Central Railroad for the past five months have been compared with those of last year as follows:—1853, $2,487,740.12; 1852, $1,949,898.69. Increase in five months, $538,841.43. This is equal to an average of $107,000 ₹ month increase.

Stocks are not active and some of them have declined.—N. Y. Central 114½, Erie 78, Michigan Central 99¾, Hudson River 67, Panama 98½, and other stocks in proportion.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, Rochester, Jan. 19th, 1854.

PRICES of farm products have gone up generally, all around the board. The last European advices by the Europa, have pushed Wheat and Flour still higher, and the general impression is, that the end is not yet. All the excellent prices now ruling, ought to bring out the stored grain more freely. Flour is quoted at $7,87@8; Wheat $1,75@1,78. Mill Feed, not much in market—prices are as follows:—Fine Middlings 37½@41c. ₹ bush.; Coarse do 17@18¾c do.; Shorts or Bran 12½@14c do.

Pork is active and higher, quoted at $5,75@5,87. Sheep carcasses also higher, ranging from $4@5 ₹ cwt. Turkeys 8@9c. Hay $8 to $13 per ton.

Other things not quoted at any actual advance, but the market sympathizes with the buoyancy of the more important staples.

Rochester Wholesale Prices.

Hogs are arriving freely; about 2,500 sold at $6,25@6,88, which is a slight improvement; about 1,000 head were taken for packing. Prices of killed hogs are also looking up.

Sheep and Lambs come in slowly, and command $3 to 6,-50 each, according to quality.

Marriages.

In Middleport, by the Rev. J. Timmerman, on 11th inst., Mr. HERRARD of Pembroke, and Miss ALIDA A. VAN BROCKLIN, of Middleport, Niagara Co., N. Y.

THE LOSS OF THE STAFFORDSHIRE.—The Halifax Chronicle gives a few brief details of the ill-fated Staffordshire. Mr. Alden, the chief mate, and the steward had reached Halifax. They were badly frost bitten. In the gale a day previous to the wrecking, the Staffordshire lost foretopmast, foreyard, and sprung bowsprit. Captain Richardson had dislocated his ankle, but was on deck giving orders when the ship struck. In 10 minutes after striking, the ship went down.—When the boats left the ship, the water was even with the upper deck. Capt. Richardson, when urged to save himself, refused to leave the ship, saying that if it was the will of Heaven that she should sink, he would not desert his passengers. One hundred and seventy-five persons went down in the ship.

—— Three persons have died in Hudson—two men and a woman—from eating putrid meat.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ TO CANADIANS.—As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Mr. C. MOORE, is duly authorized to act as Agent for the RURAL NEW-YORKER in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

☞ Persons who have forwarded $15 for a club of ten, can extend the number to TWENTY for $10, but all the subscribers must begin at one date.

☞ IT is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ THE postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

☞ PERSONS entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ ALL business letters, communications, &c., should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

AS heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary Journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

IN order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Agr'l Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies ($15,) an extra copy of the RURAL and three volumes (past or present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

ALL competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compile for Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

THE HORTICULTURIST,

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in this line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to

JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854.

POLAND OATS—AGAIN.

For seed, a good supply of the celebrated Poland oats, at $1 per bushel, delivered at my residence, or $1,25 if sent by railroad. Each bushel to weigh at least 40 pounds.

THE YOUTH'S CASKET,

An Illustrated Magazine for the Young. Monthly; Fifty Cents a Year, invariably in advance. E. F. BEADLE, *Publisher, Buffalo, N. Y.*

THE Third Volume of the *Youth's Casket* commences with January, 1854. The publication has now become well established in the public confidence and estimation, and it is our intention to spare no pains to make it worthy of increased patronage and support. The Casket is devoted to the best interests of the young, combining instruction and amusement, in a style suited to the capacities of those for whom it is designed. Useful knowledge is made attractive by being presented in a pleasant garb, and moral lessons are enforced, not in hard, didactic sentences, but in the form of tales and stories, toward which the youthful mind is instinctively drawn. And the Pictorial Illustrations, which are in profusion in every number afford great aid in interesting and fixing the attention of the young reader, and in impressing what is read, upon the memory.

The Casket is printed on good paper, from clear type; and is published in monthly numbers of twenty-four pages each, making altogether, at the close of the year, a handsome volume of nearly 300 large magazine pages.

The January number, which commences the volume for 1854, is now ready for mailing; it contains a splendid tinted engraving, entitled, "*Going to School;*" which will form a beautiful frontispiece to the volume.

Terms to Clubs.—Invariably in advance.—Seven copies, one year, $5; Fifteen copies, one year, $10; Twenty-four copies, one year, $20.

AGENTS WANTED.—Respectable and responsible persons wanted, to canvass for subscribers for the Casket, in every town in the United States and Canadas. To whom a liberal percentage will be paid. Specimen numbers supplied gratis. Address, post-paid,

FARM FOR SALE.

THE subscriber offers for sale his farm containing fifty-five acres of good land, within one-fourth of a mile of the village of Nunda, in the county of Livingston, State of N. York. Said farm is located on the State road, north of said village; on said farm there is a good two story house and three good barns. Said farm is well adapted to the growing of wheat and all kinds of spring crops: said buildings are all in good repair, and said farm is in a high state of cultivation. There is on said farm a young orchard consisting of a variety of fruit. There is also seventeen acres of wheat on the ground—said farm is well watered by creeks and wells. Also will be sold, twenty-three acres of wood and timber land, one and one-fourth miles off,—said timber consists of valuable pine timber and white oak.—There is on said lot, a good assortment of wood—said farm will be sold separate or with the timber lot.

Terms of payment, one-third of the purchase money on giving possession, the balance may by secured by bond and mortgage, on the premises, to suit the purchaser.

JOHN SEAVER.

Nunda, Jan. 16th, 1854. 211-3t

VALUABLE FARM FOR SALE, IN BATAVIA, GENESEE CO., N. Y.

SITUATED 2½ miles north of the village, on Bank street, containing 120 acres,—a good new dwelling house, a commodious barn and other necessary out-buildings; two orchards with grafted fruit, and some 20 acres of wood land.—The farm is under a good state of cultivation, naturally adapted to the growth of wheat. There are 40 acres of as good looking wheat as can be found in Genesee Co., which may go with the farm. Also, 30 acres well seeded to clover, preparatory for wheat next season, and 12 acres or more, plowed, and in good condition for spring crops.

One-third or one-half paid down, and the balance may run to suit the purchaser. For further particulars, reference is made to Hon. E. C. Dibble, Batavia village; Rev. Allen Steele, near the premises, and the subscriber.

MIDNIGHT.

BY E. MARCIA ALLEN.

The silvery moon is looking down
On tree, and dome, and spire to-night,
Shedding o'er earth a glorious crown—
A holy radiance of light,
And snowy fields, and ice-bound stream,
Are smiling 'neath its kindly beam.

All hushed and still, the din of toil—
The busy throng—the hurrying feet—
Naught, save the lonely watchman's tread,
Is heard along the silent street:
Save where beneath some shadowed pile,
Dark vice and crime may lurk the while.

All wrapped in sleep, save they who watch
With throbbing hearts the couch of pain;
Or where the student manly robs
The hours of sleep, Fame's wreath to gain;
Or some fond gazer ton with me,
May weave wild dreams of Poesy.

O, it has power—wild, wondrous power,
This moon-lit world, so calm and clear—
Sleeping in beauty—is there aught
But Peace and Joy that slumbers here?
So much of holiness is given,
'Tis less of earth, and more of Heaven.

Sleep, mortal, sleep! to-morrow comes
Fraught with its weight of toil and care;
And then again, the stream of life
Will course along the thoroughfare.
I too must toil, when morning beams,
And then forget my moonlight dreams.

Rochester, N. Y., Jan. 9, 1854.

Rural Sketch Book.

THE COUSINS:

OR, MR. WHITEHEAD'S WILL.

When the wealthy, middle-aged bachelor, Samuel Scrope, espoused the penniless widow Eardley, who had one child of her first marriage living, a boy of three years old, folks, as usual, expressed various opinions on the subject, while of course the happy couple, knowing nothing and caring less of what was said about them, in process of time shared the common fate, and, when gossiping had exhausted itself, were allowed to glide down the stream of life unheeded. Mrs. Scrope presented her second husband likewise with a son, the nurse declaring that the child and his father were as like as two peas. This, perhaps, was not flattering to the baby, though the declaration might be based on truth—Mr. Scrope being a fat, white, flabby looking personage, with half closed eyes, and a clean-shaven face, whereon stray hair was never permitted to rest, presenting, in short, the semblance of a huge overgrown "flabby dabby babby."

The likeness between father and son continued to increase as the latter grew up, and long after Mrs. Scrope was left a widow for the second time, continued to be pointed out by those who had known the deceased. And this likeness was not confined to outward appearance; for in disposition and character young Samuel greatly resembled his father—in excessive timidity approaching to nervousness; in shy and embarrassed manner; in all sorts of old-womanish propensities—such as putting his feet into hot water, and taking basins of scalding gruel to cure colds, which, somehow, he was always catching; in fidgety neatness, and detestation of fire-arms and all offensive or defensive weapons—in these particulars he was indeed, as the neighbors remarked, his father's own son. From his mother he inherited a love of money, of parsimonious saving and hoarding; a tolerable share of suspiciousness, and a large amount of prudence, a cold and unimpassioned temperament, calculating even his indulgences, and a rather obtuse brain, were singularly combined, and what he wanted in sense, he made up in deliberation and wariness. Such was Samuel Scrope the younger, the heir to his father's large fortune, the idol of his doting mother, and the pampered, spoiled boy of the household. She never could part with him for the purpose of education; he was too delicate for any school—it would kill Sam to be buffeted and rudely treated! So Sam had a tutor at home, whose situation was a real sinecure, so far as teaching went—the young gentleman having it much his own way when and how his lessons were to be acquired and repeated.

Mrs. Scrope, like many weak mothers, cared not much for her son's acquirements, except those which barely sufficed as a passport thro' society in general. What did it matter, she said, for Samuel to toil and moil over books, when he had a large fortune ready made to enjoy? It was all right and proper that her eldest born, Francis Eardley, should strive to win prizes and be a great scholar, because he had only his own exertions to depend upon; besides, Frank was high spirited and boisterous, had fine health and energies, and was altogether of a different nature from Sam. Of a different nature, indeed!—brave, generous, self-denying, affectionate, and warm-hearted Francis, as little resembled his younger brother in disposition as in person, for that was pre-eminently graceful and agreeable. Sam's cowardice and sluggish intellect presented such a contrast to the bold, daring and splendid abilities of Frank, that even Mrs. Scrope could not fail to see it, despite her partiality for the former, though why that partiality existed, it was hard to fathom, unless it arose from Sam's more closely resembling herself.

Frank was sent to a public school, and was a favorite with every one, making friends wherever he went; but at home, the home where his younger brother reigned paramount, there grave faces always met him, there he was chided and rebuked by his mother, and avoided by the fat, pampered Sam, who looked askance on the fine youth, whose noble and manly bearing roused feelings of envy and dislike. What right had Frank to laugh and joke, and ride and sing and conduct himself in so off-hand a way, when he never had a farthing in his pocket?—for Mrs. Scrope kept poor Frank very low in pocket money, though she had a moderate life jointure; and Sam, whose hands were always in his pockets turning over his gold, which he seldom changed, skulked about, with nothing to do and nothing to say, and feeling quite ill at ease before his gay, handsome brother.

Among the visitors at Scrope Hall, was a Mr. Whitehead, an elderly bachelor of grave and taciturn demeanor, reputed to be enormously wealthy, and of privileged eccentricity. A miser in the literal sense of the term, sly, observant and prying noiselessly into the concerns of everybody and everything, Mr. Whitehead visited about, from one house to another, living in clover at them all. It was rumored that he was not quite sound in his mind, and that an early love disappointment had turned his brain; however, those who now contemplated his dirty flaxen wig, and tall, lank form, arrayed uniformly in threadbare black, found it difficult to realize the idea of a romantic passage in such a life and in such a being.—Mammon was the god of his worship now, at all events. Mr. Whitehead had been a crony of the deceased Mr. Scrope, and it was apparent that he transferred to the younger Samuel much of the approval and liking he had bestowed on the elder. At Scrope Hall, Mr. Whitehead was always a welcome and favored guest; his ways were in unison with their ways; and Samuel was so great a favorite with the sour-visaged old man, that Mrs. Scrope indulged pleasant dreams of an accession to her darling's fortune. As to Frank, he had become Mr. Whitehead's abomination, for Frank would neither bend, nor fawn, nor flatter.

There was another dwelling to which Mr. Whitehead had access, and whose inmates were of a very different character from those of Scrope Hall, and yet, strange to say, these two domicils were the old bachelor's favorite resting places, and he resorted from one to the other, with infinite satisfaction. Many miles of hill and dale, rivers and woodland divided the hostile houses, and Miss Pamela Gordon had not seen Mrs. Scrope face to face since the widowhood of the latter; but unspoken animosity existed between the ladies; and Mrs. Scrope called Miss Pamela "a masculine spinster!"—while Miss Pamela denominated Mrs. Scrope "a shrew!" Mr. Whitehead heard what each said of the other, laughed in his sleeve, and enjoyed the good things at both houses. Perhaps, unconfessed by himself, the childless and lonely man found attraction at Miss Pamela's pleasant home, which he vainly sought for elsewhere; for Miss Pamela had a young niece residing with her, whose laughing dark eyes brought memories to the old man's heart he vainly essayed to dispel; and Elspeth Gordon became to Mr. Whitehead a sort of loadstone, whose attraction it was not possible to resist. Yet who played such pranks with the cross old miser as little Ellie? Who cajoled him out of a silver crown so easily, for the purpose of charity? Who said and did such impudent and yet such tender and charming things as Ellie Gordon, the orphan niece of the strong minded Miss Pamela.

Miss Pamela was the half sister of Elspeth's father, who had married the only sister of Mr. Scrope, to that gentleman's lasting and inexorable displeasure. Captain Gordon died soon after his ill-fated marriage, leaving his broken-hearted wife and infant daughter ill provided for. Mrs. Gordon, at length, in deep distress, appealed to her brother's widow for assistance, but Mrs. Scrope turned a deaf ear to her request; she had Samuel to take care of, and Francis to educate and provide for. The dying woman then turned towards her sister-in-law, Miss Pamela, as a last resource, for help in her extremity. Miss Pamela was considered a person not to be imposed upon, and by no means soft-hearted. She lived on a handsome life annuity, a fact she took care to render public, "as it was better folks should all know," she said, "that she had nothing to bequeath in her will, and lived up to her income." Miss Pamela and her half brother had never been very good friends; they had squabbled and differed on every possible and impossible topic; moreover, Miss Pamela had strongly set her face against his alliance with Mary Scrope, and she was in the secret of Mr. Whitehead's romantic devotion to that lady, who, however, preferred the insinuating captain.

Notwithstanding these bygone reminiscences when poor Mrs. Gordon meekly entreated a small sum to extricate her from pressing difficulty, the good spinster, burying all the past in oblivion, set herself earnestly to the task of comforting and supporting the widow and the fatherless; and at length received Ellie as her own child, into her own home, when Mrs. Gordon sank to rest in the grave. Mr. Whitehead, in conversation with Miss Pamela, had recently begun to hint very strongly about the valuable qualities of Mr. Samuel, and the good-for-nothing character of his half brother—a proceeding which always set Miss Pamela in a blaze of indignation, while her appeals to Ellie brought a corresponding color into that young lady's cheeks.

"I wonder what that old miser has taken in his head now?" thought Miss Pamela, as on one occasion of the kind she watched his retreating figure; "he looks wonderfully bent and withered of late; he cannot last much longer. I hope he'll leave a legacy to poor Ellie, for her mother's sake. Ah, he was very fond of Mary Scrope. Who ever would believe such a being as he appears now, could ever have played the fool, and raved when she married poor Ned! Ellie is very like her mother, full of life and animation. Bless her, she's a good, dear girl; I don't know what I should do without her. She's a clever-spirited puss, too, and after my own heart."

Some months subsequent to this period, Mrs. Scrope and her youngest son sat sipping their breakfast coffee, and munching hot rolls, Sam's head being swaddled in flannel for the rheumatism, when the former, after a pause, pursued the tenor of their conversation, by saying in a half-hesitating tone: "After all, Sam, my dear, it's as nice a letter as one could expect from Miss Pamela Gordon; she has always been considered a most extraordinary person, famous for doing out-of-the-way things, and not sticking at trifles. I confess I don't quite understand the calm, sweet tenor of her polite epistle; and I feel almost as if I stood on the brink of some powder magazine, with a lighted candle in my hand. But that must be all my extreme nervousness; because you see, Sam, there is nothing to occasion misgiving, and all is fair and above ground. We have asked your cousin Elspeth here, as in duty bound—she is coming as a matter of course; and, as a matter of course, you will receive her. Let me see"—mounting with her fingers—"Elspeth Gordon is just twenty—a year younger than you, Sam, my dear, and some five months; and Mary Scrope that was, has been dead about twenty years. Mary was a handsome, spirited girl."

"Old Whitehead must have been very fond of her to make such a will," broke in Sam, with his mouth full and his face very red. "I'm sure, mother, I'd much rather remain single than be married—that I would; I know a wife will only bother me, and I shall be taking these eternal colds dancing after her—girls are so tiresome."

"How do you know girls are tiresome, Sam?" asked his mother, sharply.

"Why, mother," responded Sam, looking rather sheepish, "I've heard you say so scores of times."

"Well, well, my dear, never mind," responded Mrs. Scrope, soothingly. "I dare to say Elspeth Gordon is a discreet maiden, though Mr. Whitehead spoke of her as being a gay, laughing lass; and, to do her justice, Miss Pamela is a clever woman, and has brought up the young miss well, no doubt, and trained her to obedience and respect of her elders. I'll be bound she'll come here all blushes and tremors at her own rare good luck;" and Mrs. Scrope paused, as a kind of jealous pang shot through her maternal heart. Sam remained silent, his white flabby face and half-closed eyes affording no index as to the nature of his ruminations.

Unaccustomed to the society of strangers, it may be supposed that Mrs. Scrope and Sam felt a little nervous at the expected visit of a well-bred young lady, placed in such extremely delicate and peculiar circumstances towards themselves, as Elspeth Gordon was. Mr. Whitehead had departed to another world, after a few days' illness, soon after his visit to Miss Pamela Gordon; bequeathing the whole of his large fortune, without any deduction whatever, to Sam'l Scrope, of Scrope Hall, on condition of the said Sam'l Scrope marrying Elspeth Gordon, daughter of the late Captain Gordon, and Mary, his wife; the said marriage to take place within twelve months after the testator's decease. In the event of the said Samuel Scrope refusing to ratify the said condition, and rejecting the lady, he forfeited the fortune, which then became Elspeth Gordon's. But if the lady rejected the gentleman, why, then, of course, vice versa. Moreover, Mr. Whitehead had provided for every contingency. If the couple by mutual consent, refused to fulfill the stipulated conditions, the many scores of thousands went to enrich various charities, almost unheard of by the most philanthropic.

As to Elspeth Gordon refusing Sam, that was a thing Mr. Whitehead never dreamed of; a penniless girl like the daughter of his lost Mary to cast fortune away—why, two fortunes—was unheard of in the annals of romantic folly. So he secured her, as he considered, an excellent husband and a luxurious home. Then the idea of Samuel Scrope, prudent and money-loving as he was known to be, refusing a pretty girl and a still prettier douceur, for any whim sort of insanity, was far too wild and improbable a conjecture to gain footing in Mr. Whitehead's calculations. Sam, unimpassioned and cold as he was, would hardly reject a fine, lively, good-tempered young creature, marrying whom he would insure to himself the possession of nearly £40,000.

Elspeth Gordon had received an invitation to Scrope Hall, for the purpose of being introduced to her cousin; and Miss Pamela, to Mrs. Scrope's astonishment, had herself written to accept it in Ellie's name, at the same time wishing good speed to the wooing.

The eventful day arrived; Sam had thrown aside his flannel wraps, and arrayed in a bright new coat, with well oiled hair, was surveyed by his admiring mother with looks of unmitigated admiration.

"O mother," he said, "I am all in a fluster; I don't know what to say to her."

"I dare to say she is in more of a fluster than you, Sam, my dear; so let that comfort you. She won't meet your eyes, depend upon it; girls are always shy on such trying occasions as these."

So endeavoring to rally her son's spirits, and to support his drooping courage, Mrs. Scrope remarked that she every moment expected to hear the sound of carriage wheels approaching, as it was rather beyond the hour fixed for the arrival of their guest. The crack of the riding whip was heard in the hall, the door of the apartment was flung open, and a lady attired in a riding costume, rapidly entered, exclaiming, "Down, Juno! down, Pete!" as two huge dogs leaped about her, creating confusion and dismay in all the beholders, for if Mrs. Scrope and Sam hated one thing more than another, it was a dog.

With dismay and surprise painted on her countenance, Mrs. Scrope, turning to the domestics, said, in a hasty tone: "Turn them out! turn out these troublesome creatures immediately!" But Miss Elspeth Gordon—for it was she—peremptorily exclaimed: "I should strongly advise nobody to meddle with my dogs; they are savage and will bite strangers unless left alone, and never obey any one except me and Mom." Shrinking from contact with the surly animals, and in the utmost consternation, Mrs. Scrope surveyed her young visitor. A tall, finely formed, though slender figure, was set off by a tightly fitting habit; while a pair of green spectacles, of antiquated make, aided by a slouching hat, concealed the upper portion of the stranger's face. The mouth, however, displayed a set of dazzling white teeth, although the voice proceeding from that mouth uttered wonderful things for a timid young lady, but with a remarkably soft and musical modulation. Turning suddenly round towards Sam, who had retreated to the further end of the room, the owner of the green specs, regarding him fixedly for a few moments, advanced with extended hand, saying: "We won't wait for a formal introduction, Cousin Samuel, will we? Come, don't be shy; shake hands and be friends. Now Juno, now Pete—here, let me introduce you to your new master."

But poor Sam was desperately afraid of large dogs; and he looked so scared and miserable, that the gay lady indulged in an immoderate fit of laughter, which she vainly endeavored to control. Recovering herself with difficulty, she said with much suavity and gentleness:—"You'll get used to them in time, Cousin Sam; I cannot live without them!"

"And how did you come, my dear?" said Mrs. Scrope, willing to get away from the subject. "Sam and I were listening for the sound of carriage wheels on the avenue, but we heard none."

"Carriage wheels, indeed!" cried Ellie Gordon contemptuously, and flourishing her whip; "as if I come to see my intended in so stupid a fashion. Not I, indeed. I rode over on Vixen, my beautiful mare, with Tom at my heels, and Juno and Pete for company." With uplifted hands and eyes, Mrs. Scrope repeated the words:—"Rode over on Vixen! Why, it is a good eighty mile from hence to Miss Pamela's, and you rode over on horseback!"

"To be sure! what of that? Forty miles a day; and slept last night at the Ellistons'. Bob and James Elliston rode part of the way with me to-day, but I didn't want them, even thro' Hanging Wood; for look here, ma'am, I never travel without these; you and I will have a practice, Sam;" and, so saying, the young lady drew forth from a concealed pocket, a pair of small, elegantly finished pistols, pointing one in Sam's face. He recoiled, saying, in a scarcely audible voice:—"I hope, Miss, they're not loaded?"

"Why, Sam, what would be the use of pistols if they were not loaded?" replied she, smiling, and adding, in an under tone, "except to frighten fools with."

"I think, my dear," said Mrs. Scrope, coming between the pair, and gently turning aside the hand which graced the offensive weapon, "that you had better lay them aside now, with your traveling dress; there are no robbers or ruffians here to molest you."

"Thank you, ma'am—thank you," quickly replied Ellie, "I prefer wearing my habit; and if you've no objection, I'll return these pretty dears to my pocket," replacing the pistols; "it's all use you know—all use."

Mrs. Scrope, roused to something like self-possession, now replied with dignity, "It is unusual for a young lady to carry fire-arms, and to wear a riding dress in a drawing-room. Has Miss Pamela Gordon countenanced such proceedings——"

[CONCLUDED ON PAGE 25, THIS NUMBER.]

Wit and Humor.

WONDERFUL BIRD.

The subjoined incident is sent to us by a Southern correspondent, as related by a Virginia negro. If it is true, the parrot was certainly a remarkable bird:

"You see," said he, "dis parrot belonged to a baker in Richmond. Now, each bakers, lowed to make a certain number of loaves every day, and no more, 'cordin' to how many customers he got; 'cause if dey bake too much, dey will be servin' out stale bread to de customers—Well, dis baker had baked more'n his share one day, and hid de rest ob 'em under de counter. De parrot was hangin' in his cage, and see it all. Bime-by, in comes de inspector, and finds de bread all right, and is goin' out again satisfied, when de parrot cocks his eye at him, and sings out, *Dere's more bread under de counter!* So de inspector grabs it, 'cordin' to law, and carries it off. Well, den de baker goes to de parrot, werry mad, and takes him by de head and fotches him a twitch or two, and flings him into de butter for dead, 'tongside of a pig just dead of de measles. Bime-by, he parrot begins to crawl about, his feathers a stickin' out, and his head lopped on one side, and den he stoops and looks at de pig, wery pitiful, and says he, '*did you say any ting about de bread?*'"

Willie's father is a clergyman, and "temperate in all things;" so Willie had never seen a man chewing the "vile weed" until he was about three years old, when Mr. ——, holding his little son by his dimpled hand, stood in the street for a moment, to speak to an acquaintance. Willie was all eyes, as he could not comprehend the conversation: and, seeing the heavily bearded individual occasionally put a pinch of "fine-cut" into his mouth, was considerably puzzled and astonished. At last he could stand it no longer. "Pa," said he, anxiously, "does that man *chew hair* so as to make it grow out over his face?"—*Knickerbocker.*

Goon.—The following, which is clipped from an exchange, only goes to prove that—"some things can be done as well as others:"

> When lovely woman veils her bosom
> With muslin fashionably thin,
> What man with eyes, could e'er refuse 'em,
> Cautiously, from peering in?
> And when his ardent gaze returning,
> The muslin heaves to deep drawn sighs,
> Would not his fingers' ends be burning
> To press—*his hat down o'er his eyes?*

"Will you take the life of Pierce or Scott this morning, madam?" said a newsboy to our good aunt Betsy. "No, my lad," she replied, "they may live to the end of their days for all me—I've nothin agin' 'em."

The man who attempted to look into the future, had the door slammed in his face.

"Wool is the thing, after all," as the man with an oak leg said when the dog bit it.

Youth's Corner.

"Attempt the end, and never stand in doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS NO. 6.

DEDICATED TO CALIFORNIANS.

☞ Answer in two weeks.

We will forward the Rural three months, free of charge, to *each* of the first *four* persons (residing out of the city) who send correct answers to the above Rebus previous to the publication of the solution.

[Written for the Rural New-Yorker.]

POETICAL ENIGMA.

I am composed of 15 letters.
My 3, 9, 6, 8 is something that grows.
My 1, 2, 4, 4 is similar to grass.
My 1, 12, 11, 15 is the name of a lass.
My 13, 8, 12, 3 is a kind of fruit.
My 14, 9, 11, 6, 8 is the name of a brute.
My 14, 9, 8 is the name of a tool.
My whole is a book much used in school.

Casilio, N. Y., 1854. M. C.

Answer to Illustrated Rebus No. 4.—*A man liquidating an account passed a counterfeit bill.*

Answer to Philosophical Enigma.—*Fogs are produced by watery vapor coming in contact with air colder than itself.*

UNIVERSITY OF ALBANY.

Department of Chemistry.—E. S. Carr, M. D., Professor of Chemistry and its applications to Agriculture and the Useful Arts.

F. E. Dabis, Instructor in Analytical Chemistry.

This Department of the University, having been permanently established, a spacious Laboratory will be opened for the reception of Students, on Tuesday, the 10th day of January inst. There will be a Course of Instruction in Practical and Analytical Chemistry, and a Course of Lectures by Prof. Carr, on the applications of Chemistry to Agriculture and the Manufacturing Arts, continuing during a term of three months. The Laboratory will be open from 9 A. M. to 4 P. M.

The Lectures will be delivered in the evening, and will be free of charge.

For Laboratory Instruction, $20 per term, or $10 per month, for a shorter period. Students will be charged with breakage and the Chemicals they consume. Students will also have access to the State Agricultural and Geological collections.

Analysis of Soils, Ores, Mineral Waters, &c., made on reasonable terms.

Address Prof. E. S. Carr, at Albany, or either of the following gentlemen:—Luther Tucker, office Albany Cultivator; Hon. B. P. Johnson, State Agricultural Rooms; Mr. J. H. Armsby, 569 Broadway. 207-3t.

PERUVIAN GUANO.

We are receiving our supply of Peruvian Guano, per ships Blanchard, Senator, and Gray Feather, from the Chincha Islands, and are now prepared to make contracts for the spring supply. As the demand is large, we would advise all who may be in want of this valuable manure to make early application. Price, $43 per ton of 2,000 lbs.—Be particular to observe that every bag is branded—

No. 1.
WARRANTED PERUVIAN
GUANO.
IMPORTED INTO THE UNITED STATES BY
F. BARREDA BROTHERS,
FOR THE PERUVIAN GOVERNMENT.

LONGETT & GRIFFING,
State Agricultural Warehouse, 25 Cliff st., N. Y.
January 2, 1854. [200-2t]

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

RURAL NEW-YORKER.

MOORE'S — EXCELSIOR — AGRICULTURE, HORTICULTURE, MECHANIC ARTS, LITERATURE, SCIENCE, ARTS, &c.

VOLUME V. NO. 4 { ROCHESTER, N. Y.—SATURDAY, JANUARY 28, 1854. { WHOLE NO. 212.

Moore's Rural New-Yorker:
A QUARTO WEEKLY
Agricultural, Literary, and Family Newspaper.
CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, in the Practical Departments;
EDWARD WEBSTER, in the Literary and News Dep'ts.
Corresponding Editors:
J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE.

Rural New-Yorker.

Progress and Improvement.

IMPROVEMENT OF PERMANENT MEADOWS.

THE high price of hay invites our attention to the oft asked question, how can our permanent meadows be improved? The most common fault of our permanent grass lands is, *they are too wet.* Most farmers appear to think that grass land cannot have too much water; and which, in reality, is partially true, they cannot well have too much, *provided* the soil is well underdrained. The idea of underdraining meadows will be new to many readers, but we are convinced, in fact we *know* from observation, that underdraining pays quite as well on meadow land as on any other. There are thousands of acres of permanent meadow, that would yield double the amount of hay, from simply underdraining them; while the quality of the hay would be improved to a still greater degree. The next means of improving them, is by manuring. The best manner of doing this is a disputed point. We have seen meadows very much benefited by an application of ordinary stiff soil, composted with lime, but still more, when composted with horse manure and allowed to ferment till all trace of the manure was lost before application. Good barn-yard manure, thoroughly decomposed by slow fermentation, and applied late in the fall, and spread over the meadow, is, in our opinion, the best and cheapest means of increasing the grass crop.

The Rev. W. CLIFT, of Stonington, Ct., has recently made experiments on a five year old meadow, in which 80 lbs. superphosphate of lime gave an increase of 1,040 lbs. of hay per acre; while 20 one-horse loads of unfermented manure, applied in March, gave an increase of 960 lbs; certainly more than we should have expected from such an application, and yet, it was attended with a *loss* of $7,20 per acre, while with the superphosphate there was a *gain* of $5,20. Eight bushels of hen manure, mixed with eight barrels of plaster, and applied in April, during rain, gave an increase of 1,520 lbs. of hay per acre, and a gain of $3,60.—80 lbs. of guano, mixed with 12 bushels of charcoal cinders, gave an increase of 80 lbs., and a *loss* of $1,60; while 100 lbs. of guano, mixed with charcoal as the other, gave an increase of 800 lbs. per acre, and a *gain* of $1,-50. From these experiments it is concluded, that the "superphosphate is among the cheapest and best of manures." We have seen half a ton of superphosphate sown on five acres of old meadow, produce not the least benefit; while half a ton of good Peruvian guano, sown on five adjoining acres, was very beneficial, greatly increasing both the quantity and quality of the herbage.

Mr. Clift's experiments are open to the same objection as those of Mr. EASTMAN on Indian corn. They were on too small a plot of land. The estimates of the acreage yield of hay, were made from two square rods, weighed in the green state, and the amount of *hay* which they would yield, *calculated* from that yielded by one parcel. Under such a system of experiments, we are not surprised that on one plot 80 lbs. of guano should give an increase of 80 lbs. of hay, and 100 lbs. no increase of 800 lbs.; or, that 80 lbs. of superphosphate should give an increase of over half a ton of hay. We have a great desire to know how to enrich our meadows in the cheapest way, but such experiments as Mr. CLIFT's, however frequently and carefully they may be made, can never instruct us.

We have seen meadows in Cheshire, England, where 100 bushels of bones were applied per acre, much benefited for five years after the application; but how far this was owing to the phosphate of lime, or to the nitrogen of the bones, we cannot tell. The fact that superphosphate of lime is not attended with great and immediate benefit when applied to these meadows, would lead us to suppose that the nitrogen of the bones, of which they contain ten times as much as barn-yard manure, was the most valuable. We have had considerable experience in the use of all the various artificial fertilizers, and believe that next to *well decomposed* barn-yard dung, good Peruvian guano will be found the cheapest and best manure for enriching our permanent meadows or grazing lands. When hay is worth $20 per ton, we have no doubt that an application of 200 lbs of Peruvian guano per acre would be very profitable, and even at $15 per ton, we think it would pay, though the profit would not be large. Any of our readers who have used guano or superphosphate of lime on grass lands, would do us and the public a favor by giving us the results. We have not now space to notice the various means of improving meadows by irrigation, dragging, &c., &c., but should be glad of the experience of our correspondents.

CHURNING IN WINTER.

WHERE is the farmer's wife that has not been troubled more or less with churning in winter? We recollect having to help churn for two days, and, after all, we had to throw the milk away, for the butter would not come. Cows fed on straw cannot be expected to have much butter in their milk; the poor things need the whole of it to burn in their lungs to supply animal heat. We opine that this is one of the reasons why butter will not come.

It is well known that butter is held in emulsion, in the form of oily globules, encased in a film of caseine, (curd,) and that agitation bursts these films, when the oil or butter being specifically lighter than the milk, rises to the surface and concretes. This effect is *always accompanied by the formation of lactic acid from the sugar of milk.* But below a temperature of 50° this formation of lactic acid does not take place, and consequently the butter will not come.

To make butter come, then, we would advise *better feed for the cows.* In addition to the straw or hay, give some shorts, a few mangel-wurtzel or beets, and, what is best of all, a little oil-cake. Then your milk will contain butter, and to get it out will not be difficult.—Place the milk where it will not freeze, and the cream in a temperature of about 60°, and keep it till it gets sour, which will not be long, if the temperature is uniform. Avoid heating it in the day and freezing it at night; such a course will turn the cream *bitter* instead of sour. In churning, the temperature should be (in winter) as high as 60° when the cream is placed in the churn, and about 70° when the butter comes. A good "thermometer churn" is of great advantage in winter as well as summer, not because it has a thermometer, but because of the admirable means it affords of placing warm water outside the churn. We are surprised that they are not more generally used.

SAVE THE OLD BONES.

THE value of bones in almost any form, as a manure for field or garden, should induce farmers to save them for this purpose. In the winter, especially, large quantities might be gathered, to be broken in spring and mixed with compost, or applied directly to the soil. For Pear trees—for grass lands, for most kinds of garden vegetables—nothing better can be found. Then save the old bones, and though you fail in making "improved superphosphate" you will not fail in benefiting your land and increasing its productiveness by the application.

MANUFACTURE OF GUANO FROM FISH.

A PATENT has been taken out in Great Britain for the manufacture of guano from fish.—The fish either fresh or dried is treated with a small quantity of sulphuric acid, by which it is reduced to a pulpy state. In this state it is dried either by direct application of heat or by mixing with it some absorbent substance. Analysis shows this (it is said) to be equal to the best Peruvian guano. It is stated that the supply of fish, especially of unsalenble fish, is prodigious; and that if $10 per ton were offered for them, the fishermen would bring in enormous quantities. At present one-half to two-thirds of the fish is thrown overboard. Sprats are frequently sold along the coast at less than $5 per ton, and waste fish at from $4 to $7.

We very much doubt the feasibility of converting fish into a cheap, dry, portable manure, that shall successfully compete with guano.—But of one thing there can be no doubt: that the farmers on the Atlantic slope, where guano is principally used in this country, would act wisely by encouraging fishermen to save all the unsalenble fish and bring them to shore, where they would form a most valuable manure. Instead of treating them with sulphuric acid, they might be incorporated with soil or even plowed under or applied in the hill to corn, in their green state, as is already done to some extent. If it will pay to convert them into an artificial guano, it will certainly pay to use them in their natural state; for the process of manufacture adds nothing to their manurial value.

It is a question with us whether *a small quantity* of sulphuric acid will thus dissolve fish. It will arrest decomposition, of course, but that it will dissolve them is, at least, new to us.

A WORD FOR THE POOR ANIMALS.

THE practice of feeding and leaving stock in the open fields, without shelter, or any protection from the winds and storms of winter, to say the least, is a cruel one. Those who have noticed them in such exposed situations, shivering and giving every indication of suffering, need no argument to convince them of the truth of this assertion. If, however, any are disposed to question it, let them take a turn out, some wintry day, (if they are so fortunate as not to find the evidence at home) to the fields of some less fortunate neighbor, who continues this practice, where they may see the truth fully demonstrated. If more evidence is desired, please number the animals, and note their condition. And again, by the middle of April, do the same thing, and let the difference in condition and number testify. Though provided with sufficient food, stock cannot thrive under such treatment. And that animals should become poor, or even diseased and die, is not surprising. It is true, strong animals may endure it, but what becomes of the young and the weak? It is needless to say, that a good animal cannot be reared under such a practice.

Besides, it is not profitable. Some estimate the quantity of food required when thus exposed, at double what is required when properly sheltered. I am not prepared to say, that this is too high an estimate. But, suppose comfortable shelter saves one quarter of the feed, which would otherwise be consumed. Farmers who keep but a moderate stock would, from this saving, soon be able to build all the stables and sheds required. They could then greatly increase the stock on their farms, without an increase of expense for feed. And besides the profit from increased and improved stock, there is a gain in the greater value of the manure, when sheltered from the rains. Farmers all, provide good shelter for your stock; instead of mud or snow, give your animals a clean bed of straw. It is more humane, and *more profitable.* Keep all the stock you can provide feed for, and thus furnish manure for your exhausted lands.

Y. Z.

Peoria, N. Y., 1854.

THE *Maine Farmer* speaks of three premium corn crops in Maine, of 102½, 96 and 78 bushels per acre. Pretty good, that, for a way down east below sunrise.

FALL PLOWING VS. WIRE-WORM.

EDS. RURAL:—In a late RURAL, is an article from the *Country Gentleman*, in reference to fall and winter plowing. As a result of plowing a piece of sod for corn in December, the writer says:—"Although the worms were numerous in the soil, thousands were seen perished in the cold. Their winter retreat was broken up, and I lost but few hills of corn by them." I have elsewhere seen accounts of similar alleged results of fall plowing; indeed, it is the *prevailing notion* that such plowing is destructive to the wire-worm, *but is it so?* I have had a good deal of experience with this little pest, to the decided disadvantage of my pocket, and it does not accord with that of the writer quoted. I once turned a few acres of sod late in the fall, which had been thirty years in pasture and meadow, and never plowed, and which contained more wire-worms than I hope ever to see in a field of equal size. The work was finished late in November, one bitter cold day, when the ground was rapidly freezing, and the worms which were brought to the surface by the plow, stiffened in a moment, apparently dead. I verily thought a good work was being done, until a day or two after, in crossing the field, I was induced to pick up a few from the frozen surface, to see whether they were really dead, or only "playing possum." The result was, that ten minutes in a warm room, restored them to life and activity. After the first thaw, I again took a look at the furrows, but no worms were to be found. Deep in the ground they had all secured themselves safely against the next storm, as they will invariably do in a few moments when the mercury is above 32°. There were enough of them the following season to have destroyed not a "few hills" only, but *every* hill, and the field been planted; and not till it had been twice in buckwheat, would it have been safe to venture in with a hoe.

Whether buckwheat will kill them or not, I can not say. Certain it is, that the worm will not destroy a crop of it. Continuous plowing year after year, will eradicate them. The third crop will not generally be injured much. Bare fallow, from early spring to the time of seeding in the fall, the injurious to the soil perhaps, will do something. A part of my last year's fallow was broken up just as the frost was out, and soon mule dead; the balance, late in the season, and poorly done. On the last plowing, the wheat is injured rustly more than on the first. The worm is certainly migratory, as, where ditches are cut through turf and left to lie fallow some time during the summer, and between them fallowed, the strip adjoining the ditch, afterwards plowed, will be much more infested by them. Indeed, I have had the wheat on such narrow strip entirely destroyed, while that adjoining was only partially injured.

WM. B. PRATT.

Prattsburgh, N. Y., Jan. 13, 1854.

PLENTY OF WATER.

THAT there is plenty of water for all the purposes for which it is needed upon a farm, is evident when we consider the amount falling from the clouds in the course of a year. A writer in the Albany *Cultivator*, goes into a calculation showing that on every surface of ten feet square, seventy-two barrels of water fall annually. The roof of a thirty by forty feet barn, yields in the same time, eight hundred and sixty-four barrels,—more than *two barrels a day*, for every day in the year.—From three to five times this extent of roof is found on every farm, and with eave-troughs, conductors and cisterns to secure the supply, no one need lack for plenty of water at all times throughout the year.

With cistern-room for one-sixth of the amount, a great want would be satisfied—that of water during the Autumn drought, when streams and wells are low. How much more convenient, too, a supply of pure rain-water, always available, than this depending on wells, or distant ponds,—or chance showers, which seldom come in a very dry time. Let us have cisterns—good cisterns—and then make free use of water, never fearing that the clouds will fail us, or that rain and snow will cease to bless and gladden the earth.—R.

SHOULD CATTLE BE FED THREE TIMES A DAY.

A CORRESPONDENT of the *Ohio Farmer* thinks that sheep and cattle should not be fed three times a day. He says a cow when turned into good grass, will eat with avidity for an hour or two, and then seek repose, when, after an hour or so, the ruminating process is commenced, and continued for three or four hours more. The food is in this way thoroughly masticated and mixed with saliva before it enters the second stomach to be acted on by the gastric juice and digested. The digestive process will occupy four or five hours. We have, therefore, "allowing two and a half hours for eating, one hour rest, four hours for rumination and four or five for digestion, eleven or twelve hours between the times when an animal would naturally need feeding." He thinks from this that "feeding animals three times a day is not only unnecessary, but positively injurious." If the animal is fed at 6 A. M., and again at noon, the ruminating process is not completed, and if fed at 5 P. M., it will not give the animal sufficient time to masticate the food, even by keeping its grinders in constant motion, so that at the best there must be forced on the digestive organs a portion of the food improperly masticated, causing an extra amount of labor for these organs, and at the risk of engendering disease.

His practice has conformed to this theory, and he thinks his stock at least as good as his neighbors', who feed three times a day. He asks those who think differently, to give a reason for their belief, and also to try a lot fed twice a day, against a lot fed three times.

We have always considered it advisable to feed animals three times a day, and have observed animals so fed, on an occasion when the noon's feed has been omitted, manifest all the symptoms of real hunger, eating substances which, under ordinary circumstances, they would not touch. But perhaps we are wrong, at all events *let us have the experiment.*

A STRANGE PHENOMENON.

MR. MOORE:—Last spring, I had a small bed of about 45 feet square, unoccupied in my garden, which the old man, who worked the garden, planted in corn, in checks at about 3 feet, which gave about 18 rows each way. The corn planted was a small white flint, the seed of which I brought from Northern New York, in 1843, but which had much enlarged by 10 years' cultivation in our Southern climate. The corn came up and grew well, the ground being rich and well broken. On the 4th day of July, the corn then being about three and a half feet high, and just beginning to tassel, I discovered that three rows of the corn assumed the appearance of having been scalded, and in a few days dried up and died. The balance grew finely and yielded a very abundant crop. I carefully examined it, but could find no cause for its decline. The roots had not been injured by worms, nor had there been anything put on the corn. There was not another hill in the square similarly affected. I had a field of corn on two sides of the garden, and immediately adjoining this square, in which was no similar blight.

I called the attention of many to it, but found none who had ever seen anything like it. Can you or any one else account for it?

The day before I discovered it, and for several successive preceding days, we had very severe thunder storms, with much lightning and hard thunder, but with little or no rain. Could it have been the effect of electricity?

ELI PELLEGAR.

Christiansburg, Va., January 14th, 1854.

J. M. COXSON, Chelsea, Mich., has three last spring chickens, that are *without feathers* but well covered with a stiff down, which at a little distance has the appearance of coarse hair.—The wings and tails have quills, which appear as if they had been stripped of the feather.—They are healthy fowls and part of a brood of pure Shanghais.

IN the Journal of the N. Y. State Ag. Society, it is stated that JOSEPH MCGRAW, JR., Tompkins Co., has a Short-horn cow which yielded 60½ qts. of milk and 2¾ lbs. of butter per day for 30 days in succession.

FARMING IN NORTH CAROLINA.

The following extracts from a private letter, from E. M. Carpenter of Rochester, N. Y., now staying in Sunbury, N. C., may be interesting to our readers:

"The modus operandi of farming here, is not essentially different from that with us. The mule or ox and cart is used altogether, instead of the team and double wagon. If mules, for toughness, capability of endurance, easy keeping, &c., are so much better than horses for farming purposes, as is affirmed here, I wonder why they are not used with us? Perhaps pride has something to do with it. Oats, rice, cotton, &c., are raised here in some extent and sweet potatoes in abundance. In some counties considerable wheat is raised. It is not a grazing country, and the cattle are very inferior. The farmers turn their attention mostly to raising corn and hogs. Many raise from two to five thousand bushels of corn a year, and fat from 75 to 250 hogs. Corn is planted as with us, except that there is invariably only one stalk left in the hill. A sort of pea is sown with the corn, and used also for fattening hogs. The custom is to kill the hogs when a year old, such pork bringing a higher price than older pork—the reverse of northern markets. At our late fair there were exhibited some splendid fat hogs. One, 11 months old, weighed when dressed 390 lbs.; three others of the same age weighed respectively 363, 374, and 367 lbs. The Rural ought to find its way there to disseminate the practical truths and practical knowledge of agricultural science in its present advanced state, which its well filled columns are fully able to do."

CULTURE OF POTATOES.

Eds. Rural:—I select a piece of dry, sandy, or loamy soil, and plow late in autumn deep enough to throw up some of the sub-soil, and effectually expose to the frost everything that can favor the preservation of the insect tribes, and, unless a grass sward, plow again in the spring, early enough to let it freeze. Sow from 3 to 5 bushels of good ashes and harrow well. Then select seed no larger than a hen's egg, but *that which is fully matured*—such as grew near the root of the plant, and matured early. Put one potatoe in a hill *without cutting*—hills from three to four feet apart. Put on the seed in the hill before covering, a large spoonful of a mixture of 1 part plaster, in 2 of slacked lime, and 4 of leached ashes. Plant as early as the ground is in good order, and the seed safe from freezing in the hill. Stir the earth with the cultivator often enough to kill weeds, and keep the earth suitably moist. From the time the tuber is as large as a musket ball, *sow ashes broadcast when the dew is on*, once a week till the growth of the tuber ceases.

Unless the weather is unusually warm, they are as safe in the hill as anywhere, until in danger of frost. On sandy or loose land they should be pitted; on clay or heavy loam buried on the surface. In either case care should be taken to prevent water from settling among or near them. I have rarely found it necessary to take any further precaution to prevent potatoes grown in this way from rotting, especially when gathered dry. Sometimes, however, when the rot was bad around the country, I have sifted slacked lime on the potatoes in the pit. In this way I have never failed since 1845, of having the best quality of potatoes. Harlow Butler.

Chesterfield, Fulton Co., Ohio.

LADY CHATHAM VS. ARABIAN "TARTAR."

Friend Moore:—In the last number of the Rural you present your vast company of readers with a picture of the Arabian horse "Tartar," accompanied by a brief letter press.—Your remarks are true to the text, i. e., the engraving; but I claim that I have a mare that will beat that *picture* all to pieces. She has all the points which you commend, fully equal to those of "Tartar," viz: head, neck, quarters, legs, &c., while she has in equal perfection, those points which you decide to be defective in him, in which decision any judge of a horse will fully agree with you. In ease and grace of action, in speed, in symmetry of form, and pureness of blood, I claim she cannot be beat in the Empire State. She has the Duroc and Hamiltonian blood as fully, I think, as any horse in the Union.

You concede the banner to our county for the greatest number of subscribers to your paper, and I claim the banner for the best mare in the State.

I will give $1,000 for a match to her.

C. R. Wilkins.

Newark, Wayne Co., N. Y., Jan. 18, '54.

Dr. Lee thinks that "as potash is very soluble in water, old ocean has gotten considerably more than either its fish or its plants need."—Potash is usually locked up in combinations which are very insoluble; and we suspect that the ocean has no more potash than the Creator designed, and, consequently, no more than is wanted for some useful purpose.

CENTRE OF GRAVITY.

In the Transactions of the New York State Agricultural Society for 1850, there is a prize essay on agricultural dynamics by L. J. Thomas, which should be read by every farmer. The following extracts on the centre of gravity, will prove interesting and instructive.

The *centre of gravity* is that point in every hard substance or body, on every side of which the different parts exactly balance each other. If the body be a globe or round ball, the centre of gravity will be exactly at the centre of the globe; if it be a rod of equal size, it will be at the middle of the rod. If a stone or any other substance rest on a point directly under the centre of gravity, it will remain balanced on this point; but if the point be not under the centre of gravity, the stone will fall towards the heaviest side.

Every farmer who erects a wall or building; every teamster who drives a heavy load, or even he who only carries a heavy weight upon his shoulder, may learn something useful by understanding the laws of gravity.

If any body, of whatever shape, be suspended by a hook or loop at its top, it will necessarily hang so that the centre of gravity shall be directly under the hook. In this way, this point in any substance, no matter how irregular its shape may be, is ascertained. Suppose, for instance, we have the irregular plate or board shown in the annexed figure, (fig. 1,) first hang it by the hook *a*, and the centre of gravity will be somewhere in the dotted line *a b*. Then hang it by the hook *c*, and it will be somewhere in the line *c d*. Now the point *e*, where they cross each other, is the only point in both, consequently this is the centre sought. If the mass or body, instead of being flat like a board, be shapeless like a stone or lump of chalk, holes bored from different suspending points directly downwards, will all cross each other exactly at the centre of gravity.

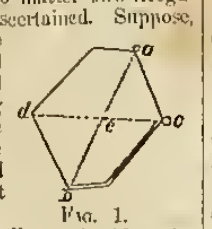

Fig. 1.

An imaginary line from the centre of gravity perpendicularly downwards to where the body rests, is called the *line of direction*.

Now, in any solid body whatever, whether it be a wall, a stack of grain, or a loaded wagon, the line of direction must fall within the base or part resting upon the ground, or it will immediately be thrown over by its own weight. A heavily and evenly loaded wagon on a level road will be perfectly safe, because the line of direction falls equally between the wheels, as

Fig. 2.

Fig. 3.

shown in fig. 2, by the dotted line, *c* being the centre. But if it pass a steep side hill road, throwing the line of direction outside the wheels, as in fig. 3, it must be instantly overturned. If, however, instead of the high load represented in the figure, it be some very heavy material, as brick or sand, so as not to be higher than the dark part of the figure, the centre of gravity will be much lower down, or at *b*, and thus the line falling within the wheels, the load will be safe from danger, unless the upper wheel pass over a stone, or the lower wheel sink into a rut. The centre of gravity of a large load may be nearly ascertained by measuring with a rod; and it may sometimes happen that by measuring the sideling slope of a road, all of which may be done in a few minutes, a teamster may save himself from a comfortless upsetting and perhaps heavy loss. Again, a load may be temporarily placed so much towards one side, while passing a sideling road, as to throw the line of direction considerably more up hill than usual, and save the load which may be adjusted again as soon as the dangerous point is passed. This principle also shows the reason why it is safer to place only light bundles of merchandise on the top of a stage coach, while all heavier articles are down near the wheels. When it becomes necessary to build very large loads of hay, straw, wool or other light substances, the "reach," or the long connecting bar of the wagon, must be made longer, so as to increase the length of the load. For, by doubling the length, two tons may be piled upon the wagon with as much security from oversetting as one ton on a short wagon.

Where, however, a high load cannot be avoided, great care must be taken to have it evenly placed. If, for instance, the load of hay represented by fig. 4, be skilfully built, the line

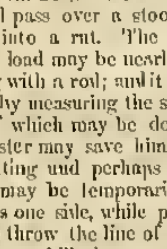

Fig. 4.

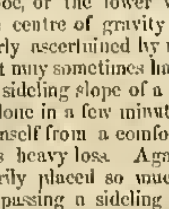

Fig. 5.

of direction will fall equally distant within each wheel. But a slight misplacement, as in fig. 5, will so alter this line as to render it dangerous to drive, except on a very even road.

It is familiar to every one, that a body resting upon a broad base is more difficult to overset than when the base is narrow. For instance, the square block, fig. 6, and pyramid, fig. 7, are less easily thrown over, than the tall and narrow block of equal weight, fig. 8. Because, in turning the square block over its lower edge, the centre of gravity must be lifted up considerably, in the curve shown by the dotted line; but with the tall, narrow block, this curve being almost on a level, very little lifting is required.

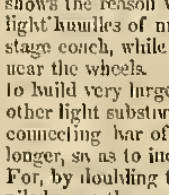

Fig. 6

Fig. 7 Fig. 8.

Wheel-carriages owe their comparative ease of draught to the fact that the centre of gravity in the load is moved forward, by the rolling of the wheels, on a level, or parallel with the surface of the road. Each wheel supports its part of the load at the hub. Hence, on a level road, the line of direction falls precisely where the wheels rest on the ground; but if the road ascend or descend, it falls elsewhere; hence the reason that it will run by its own weight down a slope. Whenever a stone or other obstruction occurs in a road, it becomes requisite to raise the centre of gravity by the force of the team so as to throw the wheel over it, as shown

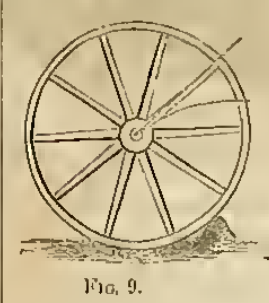

Fig. 9.

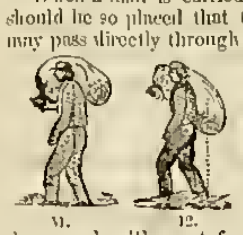
Fig. 10.

by fig. 9. One of the reasons thus becomes very plain why a large wheel will run more easily on a rough road than a smaller one, the larger one mounting any stone or obstruction without lifting the load so much out of a level as shown by the dotted lines in the above figures, (figs. 9 and 10.) Another reason is, the large wheel does not sink into the smaller cavities in the road.

When a load is carried on the shoulder, it should be so placed that the line of direction may pass directly through the shoulder or back down to the feet, fig. 11. An inexperienced person will sometimes place a bag of grain as shown in fig. 12. The line falling outside his feet, he is compelled to draw downwards with great force on the other end of the bag. A man who carries a heavy pole on his shoulder should see that the center is directly over his shoulder, otherwise he will be compelled to bear down upon the lighter end, and thus add in an equal degree to the weight upon his shoulder.



11. 12.

STOCK RAISING IN IOWA.

A correspondent of the *Country Gentleman* writing from Jackson Co., Iowa, says:

As an agricultural county it is unsurpassed by any in the state, and probably unequalled for timber. The Maynoketn River bottoms are the finest meadows I ever saw, and thousand of acres can be obtained at the Government price. Large herds of cattle are now kept on them; yet, looking from the bluffs, the spots from which hay has been cut to keep them, seems no larger than a garden on a farm. Cutting and stacking this hay can be done for one dollar a ton, when the scythe is used; with a mower much cheaper. This Prairie hay has one peculiar property, curing heaves in horses. This has been ascribed to the country; but a farmer near here who uses for his horses timothy hay alone, has the only horse with the heaves known about here. The fragrance of it when cured, is delightful, almost rivaling the sweet scented geraniums. The present prices of cattle here are very high, viz: Cows from $20 to $35—working oxen $70 to $100—Calves $5 to $7—coming two years, old, $12 to $20—Geldings from $70 to $150—Good brood mares, from $100 up. Provisions and grain are at present—Wheat, spring, 50 a 60—winter, 60 a 75—Oats 20 to 25—Corn, shelled, 28 cts; in the ear 25 cts.—Potatoes 20 cts.—Butter 20 to 25—Beef, 4½ a 5½—Pork 4 a 4½—Cheese 12 a 15. Very little Butter and Cheese is made here for the number of cows kept, calves being allowed to suck all summer, to induce the cows to come home of themselves; and the case with which an animal is raised, and the high price when grown, effectually prevents any being used for veal.

BLIND LEADERS OF THE BLIND.

I am one of that class who do not allow that *chemistry* has done anything to forward the interests of agriculture, but deny it in toto.—I am no *chemist*, but here is the receipt for making ammonia ad libitum. Let a large dung pit or liquid manure tank be constructed and placed so as to drain the out-houses—the dung-heap, the suds and other slops from the house—every liquid about the premises but rain or clear water. When you want, and previous to using, the liquid thus preserved mix with it in the tank, sulphuric acid. One quart to the one hundred gallons, will cause the ammonia to evolve—a greater quantity of acid to a less quantity of liquor will quicken the result—now, sir, you have it in your power to produce ammonia at your pleasure.

The above is from a correspondent of the *New England Cultivator*, who the editor says, "writes like one accustomed to do his own thinking, instead of blindly following the advice and directions gratuitously offered in many agricultural works." It is strange that our friend having such little faith in chemistry, should undertake to *teach* chemistry, but it is *not* strange that he should make a grave mistake. So far from sulphuric acid causing ammonia to *evolve*, it has just a contrary effect. It will fix any ammonia existing in the liquid and if enough be added, check all further formation of ammonia. The practical advice is very good, and cannot be too frequently urged on the attention of agriculturists.

It is said that a few drops of kreosote, on brown paper, put in the holes of rats, will drive them away.

SUBSTITUTES FOR HAY.

Hay, of some kind or other, is by common consent, considered the most natural food for cattle, horses and sheep during the winter. Many persons think it would be almost impossible to winter horses without it. Hence in the neighborhood of large cities, where many horses are kept, hay usually sells for more than it is relatively worth. That is to say, the same amount of nutritious matter could be obtained at a much less cost in other substances. We know that horses can do without hay. One winter after our hay crop had entirely failed, we kept seven horses for three months, on cut oats in the straw, a little barley meal and bran, and as many oats as they would eat. The horses kept in admirable condition, and we found it much cheaper than wintering with hay.

The relative nutritious properties of food is a matter of great importance, and has occupied the attention of nearly all the eminent scientific men who have written on rural economy during the last century. It is seldom that any two of them agree, where they have not manifestly copied each other's figures. Thus Block, Pictet and Paust, each give 200 as the equivalent of oat straw, (meadow hay being 100) while Meyer and Wrede give 150, and Schwertz 400. The writers pretend to base their opinions on practical observation, yet the discrepancies are so great that we cannot rely on the figures. Equally untrustworthy are the *deductions* of science based on the per centage of dry matter and nitrogen, which the several foods contain, for they are in conflict with the results of practical experiments. Under such circumstances, therefore, we can be said to know but little on the relative nutritious value of the several substances used as food for animals. Had we, in conjunction with the per centage of dry matter and nitrogen, the per centage of *available* carbonaceous substances, such as starch, sugar, oil, &c., we think a table of equivalents might be prepared that would indicate, pretty nearly, the relative nutritive value of the foods so analyzed. But for these we must learn to labor and to *wait*.

"Have you then nothing to propose as a substitute for hay? Is this column occupied to tell us that you know nothing on this subject? The fact might have been stated in fewer words."—Don't lose your temper, my dear reader. It is sometimes necessary to ascertain how much we really know, and how much is mere speculation. We have told you how much we know, and will now offer you a few speculations for your consideration:

Good hay is now worth, in this city,			$11,00	per ton
Corn at 70 cents per bushel of 60 lbs.			21,33	do
Oats at 44 " "	32	"	27,50	do
Oil cake			33,00	do
Shorts at 11 cents per bushel of 15 lbs.			14,66	do
Coarse middlings, 11c. "	21	"	16,19	do
Fine do 22c. "	28	"	20,71	do
Extra do 42c. "	37	"	22,79	do

Indian corn undoubtedly contains more available carbonaceous matter than any other food.—We have no hesitation in saying moreover, that more can be obtained for a given price in corn than in any other of the above foods. As straw is of little value on a farm it cannot but be economical to feed horses and cattle with corn meal, and cut straw, instead of giving them hay. A horse weighing 1,000 lbs. will eat about 33 lbs. of hay per day. Now what we want, is to get the same nutritious matter and the same *bulk* in a cheaper form. We believe 30 lbs. of cut straw and 8 lbs. of corn meal, will answer the purpose better than any thing else. If the horses are worked much during winter, a few pounds of oil cake, peas, or oats, might be substituted for an equal weight of corn meal, inasmuch as they are much more nitrogenous, and would be more likely to supply the extra wear and tear of muscles, caused by hard work; and, what is of more importance than is usually accorded to it, the manure would be greatly improved by substituting the nitrogenous oil cake, peas or oats, for the carbonaceous corn.

SHELTER YOUR SHEEP.

A Mr. Childers selected two lots of Leicester yearling wethers, of 20 in each; one was placed under shelter in a yard, the other folded in the field. They all received the same food, viz: 12 lbs. cut turnips, as many as they could eat, half a pound of linseed cake, half a pint of barley, a little hay, and salt per day, for each sheep. At first they each ate about 19 lbs. of turnips a day, but after three weeks, those in the shed eat 2 lbs. apiece less, and in the 9th week, 3 lbs. apiece less again, and of the linseed cake there was a falling off also, of nearly one-third of the amount given, viz.: 13, 3 lbs. a day from the lot. Those in the field consumed the same quantity from first to last. The respective weights of the two lots were as follows:

	In the shed.			In the field.	
	stones.	lbs.		sts.	lbs.
Jan. 1st,	183	3	.....	184	4
April 1st,	239	9	.....	220	12
Gain	56	6		36	8

The gain of the shed fed sheep over the field fed, was 19 stones, 12 lbs., consequently the sheep in the shed, though they consumed nearly one-fifth less food, made above one-third more progress.

In another experiment of three lots; one entirely covered in, one under a shed in the yard, and one entirely exposed, all of them having a pint of oats a day apiece; the first consumed on an average between Nov. 18 of one year, and March 9th of the following, 8 lbs. of cut turnips and other roots per day, and increased in live weight 23½ lbs. per sheep; the second consumed 11 lbs. of the same food, and increased in weight 25 lbs.; the third consumed 17 lbs., of cut turnips per day, each, and increased 23 lbs. live weight in that time. The several lots, it thus appears, did not differ so much in their growth as in the case reported by Mr. Childers, but there was a much greater difference in the quantity of food eaten by them. These experiments would lend to an assumption that twice as many sheep can be kept upon the food, under perfect shelter, as when entirely exposed.

Inquiries and Answers.

CLOVER AND TIMOTHY, &C.

Eds. Rural:—I take the liberty, as one of your subscribers, to make a few inquiries. And first I will say that in this part of Chemung county, I, with most of my neighbors, have been seriously troubled in raising clover and timothy, the two grasses mostly grown here, and to which the soil is considered best adapted, on account of the clover dying out, or winter killed, after the first or at most the second winter, and the timothy being killed by the severe drouths of summer. This uncertainty of hay and pasture has compelled many who formerly kept considerable stock to reduce their numbers, and if no remedy is found must materially injure this branch of agriculture in this section. Now I shall not ask you for a remedy against drouths, or the dying out or winter killing of clover, as I presume you have none, but wish to inquire if there are no substitutes for these grasses. Sainfoin, it is said, is extensively cultivated in France and some other countries, but I am not aware that it has ever been much tested in this country. Lucerne has also been talked of, but I know not of its having been much tested. These grasses, it is said, send their long roots deep in the earth, which would enable them to resist the drouth, and cold of winter, and if adapted to this climate might answer the purpose, or supply the deficiency of timothy and clover. If you can give me any information, or put me in the way of obtaining any reliable information on these topics, and where the seeds of sainfoin and lucerne can be procured, I shall be much obliged.

G. B. Ludlam.

Red clover is a biennial plant, and consequently dies out before the third year. The clover often found in old pastures, is either self-sown red clover, or some other variety.—Timothy is a native of this country, and we know of no other grass that is so good as this for our latitude. Underdraining and deep plowing will prevent winter killing, and greatly lessen the bad effects of drouth. From what experience we have had with sain-foin, we think it much inferior to timothy, and of little value except on rich calcareous soils. Lucerne is a valuable crop for soiling purposes in the neighborhood of large cities. It delights in a rich, deep, well tilled soil. It should be sown in rows, at least 15 inches apart. It must be frequently hoed. The first year it produces little, but afterwards, if the soil is *very rich*, it can be cut several times in the season. We believe that in common farming, it requires too much labor to make it profitable. We think the native grasses of the country will prove more valuable than any we can import from Europe; and it is exceedingly desirable that the subject be fully investigated. At present we are deplorably ignorant in regard to the requirements and relative value of the different grasses, and shall be glad to receive any information from our experienced correspondents.

Analysis of Soils.—Will you inform the readers of the Rural where there is a *good* Chemist, who will analyze soils? What the price of an analysis, (if there is any regular price,) and how much soil is required; and what is the best way for digging it, &c.?—N. J. Hall, *Steuben, N. Y.*

We will answer the last question first.—We never took but one sample of a soil for analysis, and therefore cannot speak with much authority on the subject. We took a wheelbarrow and cut a trench about eight inches deep, some fifty rods in length, wheeling the soil into a heap. The heap was turned over several times so as to insure its homogeneousness, and then about 20 pounds was taken to the laboratory. It is rather expensive, but we know of no better plan that will insure a fair sample. A good analysis of a soil—say duplicate nitrogen determinations, which should agree within one-tenth of one per. cent. and accurate determination of phosphoric acid, potash—not potash and soda, *combined*, but the exact amount of potash alone,—alkaline silicates, &c., &c., is well worth fifty dollars. But you can get the amount of silica, lime, alumina, potash and soda, organic matter and water, determined with some degree of accuracy for five dollars. There are quite a number of chemists, who analyze soils, &c., among whom we may mention Prof. Porter, of Yale College, New Haven, Ct., Dr. Salisbury, of Albany, New York. We are not personally acquainted with Dr. Emmerin, of New York, but we believe he is a most excellent chemist. You do not ask our opinion of the value of soil analyses or we might endeavor to persuade you to make experiments with the money which an analysis would cost.

Broom Corn.—Will you, or some of your correspondents, please answer the following questions? Is Broom Corn a paying crop? What soil is it best grown upon? What is the best fertilizer for it? Is it a sure crop usually? How much is the usual yield per acre? What is the process of cultivation; time of planting, hoeing and harvesting? How many brooms can be made from 100 lbs. of corn prepared, &c. &c.—J. C. Knapp, *Dec.* 15, 1853.

Will some of our experienced broom corn cultivators answer the above inquiries?—Eds.

Orchard and Garden.

PRINCIPLES OF PRUNING.

Experience alone can enable the Horticulturist to understand the art and mystery of Pruning. "No definite rules can be laid down for guidance in many of its details," says one of the initiated; and, indeed, an examination of various authorities convinces us, that gardeners as well as doctors "disagree." All quite, however, in considering it a subject of great importance—one demanding constant and careful attention in order to the production of good trees and fine fruit. It has of late attracted much inquiry and research, and the general principles of Pruning bid fair to become in some degree established by the general agreement of results arrived at.

A recent writer on this subject,* gives a theory of "the conditions upon which a tree exists, and the modifying influences to which it is subjected" by pruning, &c., which seems very just and reasonable. He says the first effort of a seed in germination is to send down roots, and this "is immediately followed by corresponding upward elongation, forming the stem and leaves. The seed contains within itself all the elements required for this process; but as soon as leaves are developed, the plant changes its source of nourishment, and is now dependent upon the soil and air for support.—The elementary substances absorbed by the roots undergoes decomposition in the leaves, and the new matter thus prepared, passes down the stem and roots, extending their formation. The roots have no inherent power of extension, but are dependent on the elaboratory functions of the leaves, and their increase will be in an exact ratio to the amount of foliage retained."

A beautiful system of reciprocal action has been established between the roots and branches—every check upon the latter exerts a decided influence upon the future condition of the tree. Their correlative action is such, "that by diminishing the extent of foliage a corresponding check is given to the roots. Their power of action being circumscribed, there is less absorption of watery matter into the systems of the plant, and the wood is in consequence solidified and well matured, which is indispensable to a fruiting condition. This effect is produced by pruning when the plant is in full foliation and vigorous growth. If deferred until the leaves perform their allotted functions, a contrary effect is produced. By reducing the branches after the fall of the leaf, the balance of power is destroyed, and the roots have the preponderance: new shoots are then produced with increased size and vigor.—Hence, it is a well known axiom with successful cultivators, that summer pruning weakens, while winter pruning strengthens a plant. The whole art of pruning is comprehended in the proper application of these principles."

If these principles are correct, it will readily be admitted that the operation of pruning will be more correctly performed when they are taken into consideration, than it can be by following any definite rules without experience.—If the tree be young, a healthy, vigorous and extended system of roots is generally the most important consideration. Foliage must be encouraged and preserved during the summer, to be removed before the earliest commencement of the growth of another season. When healthy, strong roots are secured by winter pruning, then summer pruning to check the production of wood, and secure the greater elaboration of the sap and thus promote fruitage, may be practised with favorable results.

The season for winter pruning, or that in the intermission of growth, has been decided by competent authority, to be that when the severe frosts of winter are over, and immediately before the swelling of the buds. If performed in autumn, or early in winter, in this climate, the ends of the cut shoots dry up, shrivel and die: losing the buds that are intended to make leading shoots, and having dead points that require much labor to prune off afterward; or if large branches are cut, leaving a broad, fresh surface—the wood and bark dry up and require a long time to heal.

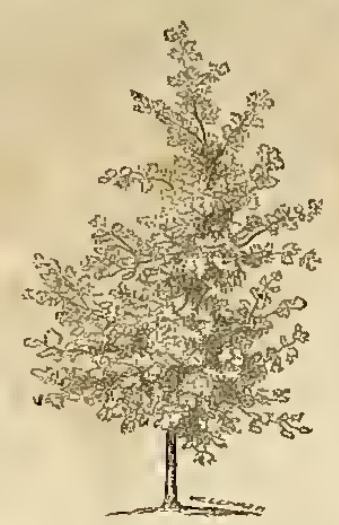
We shall refer to this subject again—giving the best light we can gather on the art and mystery of Pruning—though, as remarked at first, we do not expect to instruct Experience.

R.

*Mr. Wm. Saunders, of Baltimore, in the Horticulturist.

NEW SHADE TREE.—THE SWEET GUM.

The *Horticulturist* for Jan. has an article from Mr. Meehan, of Philadelphia, recommending the Sweet Gum, *Liquidamber styraciflua*, as a new and valuable shade tree—one *entirely free from insects*. It is eulogized as having a claim to picturesque and simple beauty which no other can eclipse, besides combining many traits of interest only found separately in other trees. Mr. M. after speaking of the proper places to find the Sweet Gum in its native beauty and perfection, describes its characteristics as follows:



The Sweet Gum, (*Liquidamber styraciflua.*)

"It is a very rapid grower, and will attain a height of eighty feet, and a circumference of seven feet, under favorable circumstances, and has a widely spreading, roundish, conical head. The branches have a rigid, though much divaricating mode of growth, and are covered with that corky-barked appearance, so much sought after and admired in some varieties of elms, maples and nettle trees. The leaves and fruit resemble the buttonwood in all except size and hue, and there is, indeed, a sort of distant relationship between the two families. The leaves are not one-third the size of the buttonwood, deeply lobed, star-like, and produced in abundance, (see annexed figure.) The upper surface shines as if varnished; and as the foliage moves with the slightest summer breezes, gives the tree a playful and pleasing character in its succession of light and shade. This is heightened at the approach of fall by its brilliant colors. It has no compeer in this character. The leaves change to every describable shade of orange, yellow and red."

The *Horticulturist* endorses this tree, remarking that it is one "that arrests the attention of even common observers at all seasons,—in summer, its starry, shining, tremulous foliage,—in autumn, its gorgeous hues—and in winter, its peculiarly furrowed bark." It is not entirely new, having been somewhat in vogue some fifteen years ago. A great recommendation is its freedom from insects—which it owes to a resinous principle abundant in it. Neither Mr. Meehan, or Mr. Barry have ever seen any insects upon it, though Loudon says, that several species of moths feed upon its leaves. This was probably observed in its more southern localities.

The *Liquidamber* is easily propagated.—The seed can best be gathered before the first severe frost; and may be sown then or early in the spring "in a loose, loamy soil, somewhat shaded." Plants will appear in a few weeks in the spring, (sometimes not until the second spring,) and grow a foot or more the first season.

These are its merits—now, what are its defects? It is not adapted to all soils—it grows in perfection only in a cool, deep, rich loam.—In poor, dry soils, it is of slow growth, and short duration, and will not do well in the confined air of a densely built city. It is not sufficiently hardy for high northern latitudes, and here, probably, would fare hardly in the most exposed situations. We hope it will be tried more thoroughly, and if it succeeds, that it will be extensively introduced. We have many native trees that would adorn our barns and walks, and refresh our spirits and our patriotism,—and those as beautiful as any country can boast. Let us search them out, and honor them as they deserve, instead of ransacking the "ends of the earth" for those of far less value and appropriateness.—R.

WONDERS OF KEW GARDENS.*

That Queen of Plants, the *Victoria regia*, was first introduced into the civilized world at Kew, though it first flowered at Chatsworth.—It swims in state in a moderate sized apartment, kept stifling hot—feeling the closer for the roof being so low—but most plants thrive the better for the glass being brought near them. It is truly a vegetable wonder, putting forth alternately a blossom and a leaf, the latter not the less curious of the two, and looking, as it begins to emerge, very like a hedgehog swimming on its back. The leaf attains here its curious rim, and also perfects the honey-combed air chambers in the under surface, by which its buoyancy is increased, enabling it, with management—that is, by equalizing the pressure—

*Continued from page 15, this volume.

to support as much as one hundred and fifty pounds weight. The plant is dormant in winter, unless it is to be forced; and the forcing *that* will make it a nice task for the gardener to avoid toiling it.

The *Pontederia crassipes*, is another floating contrivance seen in a corner of the same tank, the foot-stalks of whose leaves are swollen into bladders. In the Palm-stove one can form some idea of a tropical forest; a tiger might start out from among the tree-ferns, a boa-constrictor be climbing the trunk of the cocoa-nut palm, and humming birds dart amidst the leaves of the bananas. Every plant has its own interesting history—the reviewer glances at a few of the most remarkable.

The *Hibiscus—rosa Sinensis*, is a tall shrub with crimson holly-hock-like flowers—its blossoms are used in China to *black shoes with!*

The *Xylophilla falcata*, that is, the scythe-shaped wooden-leaf, from the Bahamas, is an exaggerated instance of what might be called vegetable malformation, which yet works well in the long run. It has *phylloid* bunches, or green branches flattened and resembling leaves, even more deceptive than those of the New Holland Acacias, being inserted horizontally in the usual position of leaves on the stem, instead of vertically. The flowers, and occasionally, though rarely, true leaves, appear in what would be the serratures in a true leaf, but what in the metamorphosed branch must be considered as *cirillæ*. Things useful as well as passing strange grow in the Palm-stove at Kew: The *Chocolate-nut Tree, Theobroma Cacoa*—"food for the gods"—puts forth flowers from the thickest part of its woody trunk, to be succeeded by nuts in the same situation, instead of on the twiggy branches. And the *Mango Tree, Mangifera Indica*, with its fruit pendulous at the end of a long stalk, plays the most tempting bob-cherry; for though bad varieties are no better than low and turpentine, first rate numbers leave a delicious taste in the mouth, which is remembered for years and years, like the cream-tarts by which the widow of Noureddin Ali recognized the neighborhood of her cruelly mystified Bedreddeen. Each fruit here is secured in a little bag-net, to prevent accidents, and to make hereafter a dainty dish to set before a Queen.

Among the creepers, is the *Aristolochia gigas*, with flowers shaped like a helmet, and so huge that the children in South America, according to Humboldt, wear them as hats.

That deadly plant, the *Jatropha urens*, was formerly found at Kew, but it has either been killed off like a mad dog, or starved to death in isolation like a leper. Its possession nearly cost one valuable life, some twenty-five years ago. The present curator was reaching over the Jatropha, when its fine bristly stings touched his wrist. The first sensation was a numbness and swelling of the lips; the action of the poison was on the heart, circulation was stopped, and he fell unconscious—the last thing he remembered being cries of "Run for the Doctor." Either the doctor was skilful, or the dose of poison injected was not quite, though nearly, enough; but afterwards the man in whose house it was, got it shoved up in a corner and would not come within arm's length of it. He watered the diabolical plant with a pot having an indefinitely long spout; and who could blame him, if he watered it not at all, or if it disappeared very unaccountably?—R.

Domestic Economy.

Plum Pudding without Eggs.—Pour over twelve crackers, after they are broken, one quart of milk: let it stand over night; strain it through a colander. The next morning, add a quarter of a pound of suet, a pound of raisins, half a pound of currants, a little salt, and a teacupful of molasses. Boil it three or four hours. To be eaten with a rich sauce.

To Insure Health for Children.—Give them plenty of milk; plenty of flannel; plenty of air; and let them have plenty of sleep; and they will seldom, if ever, ail anything. That is, milk is their best diet; they must be warmly clothed; must be much out of doors; and must be always allowed to sleep on till they awaken of their own accord.

To give Butter a fine flavor.—To a peck of fine salt, add one ounce of crude sal ammoniac, and two ounces of salt-petre, both finely powdered, mix them well with the fine salt; work your butter until the buttermilk be entirely extracted. Then put it into woollen firkins, salting it with the same mixed salt, until it is palatable.

Mustard Poultice.—Into a gill of boiling water stir one tablespoonful of Indian meal, spread the paste thus made upon a cloth, and spread over the paste one teaspoonful of mustard as it is prepared for the table, instead of mustard flour.

To Clarify Honey.—Melt the best kind with water over a water bath, add the white of an egg, and boil it to throw up the scum; when the scum is removed, the water must be evaporated, and the honey brought to its former consistence.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending January 10, 1854.

David Clark, of Philadelphia, Pa., for improvement in oil cups for steam engines.

Lucian A. Brown and Jeremiah W. Brown, of Hartford, Ct., for improved press for veneering.

Leonard Campbell, of Columbus, Miss., for improvement in cotton gins.

Dan't. S. Darling, of Brooklyn, N. Y., for improvement in preventing dust from entering railroad cars.

D. M. Cummings, of North Enfield, Me., for improvement in machinery for mortising frames of window blinds.

Charles W. Fillmore, of Corat, Itl., for improvement in clamps for building steel plates white being hardened and tempered.

F. C. Goffin, of New York, for improvement in attaching cross-bar fastenings to vault and safe doors.

Benj. D. Gutlett, of Aberdeen, Miss., for improvement in cotton gins.

H. Halvorson, of Hartford, Ct., for improvement in machines for pegging boots and shoes.

Jas. J. Johnston, of Alleghany city, Pa., for improvement in heaters for smoothing irons.

John Johnston, of Alleghany city, Pa., for improvement in self-heating smoothing irons.

Ebenezer A. Lester, of Boston, Mass. for improvement in machines for squeezing and compressing metallic bodies.

Harry H. Matteson, of Buffalo, N. Y., for improvement in flexible couplage.

Wm. G. Merrell, of Auburn, N. Y., for machine for cutting ellipses.

Henry E. Pierce, of Charlemont, Mass., for machine for matting the ends of blocks, in making matches.

David Pierce, of Woodstock, Vt., for improved gold separator.

J. P. Spofford, of Brackett's Bridge, N. Y., for improvement in saw-gummers.

Caleb C. Walworth, of Boston, Mass., for improved float-valve for discharging condensed water.

S. D. Wilson, of Reading, Pa., for improvement in valves and valve-seats of steam engines.

Asa H. Barth, of Indianapolis, Ind., for improvement in bedsteads.

Harvey Brewer, of East Boston, Mass., for improvement in torch lamps.

Jno. Kutzie, of Rochester, N. Y., for improvement in filters.

J. W. McGaffey, of Philadelphia, Pa., for improved mortising chisel.

H. B. Smith, of Lowell, Mass., for improvement in mortising machines.

Jas. Swain, of Philadelphia, Pa., for magnetic toy, called the magnetic cupid.

Thos. L. Jones, of Poughkeepsie, N. Y., assignor (through Horace Dresser,) to Jas. G. Jones, of New York, for improvement in feathering paddle wheels.

RE-ISSUES.

T. W. Allen, and C. W. Noyes, of Greenbush, N. Y., for improvement in stuffing boxes. Patented Nov. 6, 1849.

Junius & Alfred Judson, of Rochester, N. Y., assignors to Junius Judson, of same place, for improved valves for governors. Patented Nov. 5, 1850.

For the week ending January 17, 1854

Perry G. Bates, of Waterbury, Ct., for spiral or worm-joint hinge.

F. Darison, of Liberty, Va., for improvement in salira pumps.

Jno. Jas. Greenough, of New York, for improvement in machines for pegging boots and shoes.

D. T. Hitchcock, of Warren, Mass., for improvement in diaphragm pumps.

E. C. Hyatt and Christopher Meyer, of Milltown, N. J., for improvement in the manufacture of boot and shoe soles, of gutta percha or India rubber.

Abraham McInturff, of Liberty, Va., for improvement in machines for mincing meat.

Lorishon G. Merrell, of New Bedford, Pa., for improvement in frill machines.

Thos. J. Shinn, of New York, for improvement in apparatus for indicating the action of the feed-pump to steam boilers.

C. W. Stimpson, of Cleveland, Ohio, for improved photographic plate-rises.

Ira Warren, of Boston, Mass., for improvement in tonsil instruments.

Gen. W. Griswold, of Carbondale, Pa., for improvement in amputating apparatus.

Chas. T. P. Wale, of New York, assignor to D. C. Morehead, of same place, for improvement in clasps.

Lewis B. White, of Moscow, N. Y., for improvement in trusses.

PREMIUMS AT THE CRYSTAL PALACE.

We have received a pamphlet of 98 pages, containing the official awards of premiums at the New York Crystal Palace. As it is impossible to give the whole, we select the most important, or highest awards in the principal classes—giving the names, &c., of those to whom Silver Medals were awarded. We may hereafter give further extracts from the reports of the juries:

Batchelut, J. M., Gail Mills, Miss., U. S., for Cotton of staple and best working quality.

Beslovich, Von Lang Oele, Silesia, for the finest specimen of Wool in German department.

Graux, M. Maurhamis, France, for superior specimen of combing Wool.

Hoffman, Anthony, Pine Plains, N. Y., U. S., for the finest specimen of Wool in U. S. department.

Lardered de Count, Tuscany, for Muracic acid.

Pope, John, the Oaks, Tennessee, U. S., for Cotton of staple and best working quality.

American Linen Thread Company, Meehanicsville, N. Y., for superior excellence in fabrication, bleaching and coloring thread.

Edwards, A. D. & Co., Dundee, Scotland, Flax and Tow Thread.

Atkins, Jearum, Chicago, Illinois, for an exceedingly ingenious self-raking Reaper, exhibited by J. S. Wright, of Chicago, Illinois. The silver medal is awarded for the new mechanical principle as here exhibited in its adaptation to the Automaton Rakes.

Ruggles, Nourse, Mason & Co., Boston and Worcester, Massachusetts, for the scientific principles which have been practically perfected by their artist, Samuel A. Knox, and adapted to the series of sod and stubble Plows exhibited by them.

Salmon, George B., Elgin, Illinois, for his patent Grain and Grass Seed Separator.

Borden Gail, Jr., Galveston, Texas, for Meat Biscuit.

Longworth, N., Cincinnati, Ohio, for sparkling Isabella Wine, very superior quality, made from the Isabella Grape, and destined to be of great commercial value to our country.

Hecker & Brothers, New York, for Flour of Extraordinary fine quality, and of superior manufacture.

Welch, J. S., Shenandoah Mills, Clark Co., Va., (L. Roberts & Co., agents, N. Y.,) a very superior quality of Family and Market Flour, specially adapted for general use.

Moussard, Alexis, Paris, France, for a very beautiful and elaborately finished carriage for Ball dress, exhibiting much skill and taste in all its appointments.

Colt, Samuel, Hartford, Conn., for various kinds of Revolving Fire Arms. The wide-spread reputation and extended use of these arms, entitle the inventor, in the opinion of the jury, to the highest distinction which they can award. The arms presented at the exhibition are of superior workmanship and finish.

Delano, U. S. Naval Constructor, for a model of a War Steamer. This model is highly approved as combining all the elements necessary for a vessel of that class, viz: buoyancy, stability, speed, with ample room for stores, crew, &c.

Lawton, Captain, for a temporary Rudder, of much approved construction.

Steers, George, for model of Yacht "America." This model is superior to all the others presented.

Charriere, Jr., Paris, France, for a case of highly finished and ingenious Surgical Instruments.

House, —, exhibited by J. D. Richards, N. York, U. S., for House's Telegraph.

Leer, Antina, Paris, France, for Surgical Instruments, original and highly finished.

Morse, Prof. S. F. B. exhibited by W. M. Swain, U. S., for House's Telegraph.

Palmer, Frank B., Philadelphia, U. S., for best Artificial Leg.

Spencer, Chas. A., U. S., for Microscope and Improved Object Glass.

Whipple, John A., Boston, Mass., U. S., for Crystallotype, a new art.

Trott, Stanley G., New London, Conn., U. S., for Abbott's Horometer.

Newport Silk Factory, Kentucky, for perfection and general excellence in the manufacture of Silk of native production, from the cocoon.

French Government Manufactory of Gobelins and Beauvais Tapestry of Paris, for originality and great beauty of their specimens.

Rogers, W. H., London, Great Britain, for superb specimens of carving in wood.

Smith, A. J., West Farms, N. Y., U. S., for novelty of invention, elegance of design and color, truthfulness of material, &c., in imitation tapestry carpets.

Smith, Dr. William, Philadelphia, U. S., for the application to useful purposes of the refuse slags of the Iron Reducing Furnace.

Shirt Sewers' Union, as a mark of special honor and expression of warm sympathy in their struggles for success.

Van Skrilin, F., 359 Broadway, New York City, for the invention of various Busts exhibited in Artificial Flowers, by which materials, the leaves and petals resemble those of the natural flowers they represent.

Cornelius, Baker & Co., Philadelphia, for the great variety and best display of Gas Chandeliers, &c.

Hay & Newell, 359 Broadway, New York, for the originality, safety and durability of the Paraoleptic Bank Lock.

Japy, Brothers & Lalance, Maire, France, for the superior quality and beauty of finish of their enamelled and tinned Wrought Iron Ware, and new and peculiar process of manufacturing.

Moseley, J. & Sons, West Troy, New York, for a Peal of Bells, also Factory and Steamboat Bells.

New England Screw Company, Providence, Rhode Island, for improvement in manufacturing Gimlet and Pattern Screws, superiority of finish, and excellence of workmanship.

Sherwood & Fitzgerald, Gold street, New York, for unqualified excellence of the "Invulnerable Reservoir Safe" as proof against fire, with more than ordinary token of special approbation.

Simmons, Pemberton & Sons, Birmingham, England, A. Fidler, Platt street, New York, agent, for the best display and great variety of brass Cabinet goods, comprising Curtain Bands, Hinges, Bell Pulls, Door Springs, &c.

The Collins Company, Hartford, Connecticut, for general excellence and superiority of finish in the manufacture of Axes, Adzes, Cleavers, and other heavy edge tools.

The Steele and Johnson Manufacturing Company, Waterbury, Connecticut, for the great variety and best display of Metal Buttons.

The Society of La Vieille Montagne, Rue Richet, Paris for the various Fancy Groups and articles in Zinc, Zinc Statuettes, &c.

Goodyear, Charles, New Haven, Connecticut, for specimens of India Rubber Fabrics.

The North American Gutta Percha Company, 80 Cedar street, New York, for Gutta Percha Goods manufactured under Rider's Patent.

Brooklyn Flint Glass Company, Brooklyn, N. Y., for their discovery in compounding materials for making Glass, by which a superior brilliancy of color is produced, and for their beautiful display of rich cut Flint Glass.

Brooklyn Flint Glass Company, Brooklyn, New York, for their discovery in making Pressed Glass, Dioptric Lenses, and Signal Lamp Glasses for Railways, Ships and Steamers.

Cartlidge, Charles & Co., Green Point, New York, originality in the manufacture of Porcelain Door Knobs and Door Plates.

Herbert, Minton & Co., Stoke-upon-Trent, Staffordshire, England, for Patent Encaustic Tiles, an original and beautiful article.

Baker, Godwin & Co., New York city, for Fancy Job Printing, and Press Work with honorable mention.

Dunn, Delwin F., Brooklyn, N. Y., for best specimens of Off-hand Commercial and Ornamental Penmanship and Pen-drawing, with special approbation for unequalled skill in his art.

Bagley, A. G. & Co., New York city, for best Gold Pens and Pencil Cases.

De La Rue, Thomas & Co., London, for excellent Paper, and commendation for variety and excellence in all parts of the manufacture.

Mathews, Wm., New York city, for excellence in Bookbinding, with special approbation.

Curtis, Jas. D., New York, for the manufacture of Iron and Steel of excellent quality from "Franklinite."

Ziervogel, W., Director of the German Pennsylvania Coal Co., Treskow, Pa., for collection of ores, half metal, powder, pure metal, &c., illustrating a process for separating silver from copper.

Water Gas.—The water gas discovery would appear to be genuine, though I fear it will be an illusion, like that of Mr. Paine, in America. The inventor has proved his ability in Paris, to extract a thousand cubic quarts of hydrogen from twelve quarts of water. The hydrogen needs purifying, but the cost is little or nothing. The machine by which the operation is effected is an electro-magnetic battery. Sea water is preferable to fresh water. A gas company in this city is in treaty with the inventor for the privilege of lighting the capital; and a southern company of capitalists has made overtures for the application of the invention upon the Mediterranean as fuel upon ten screw steamers. There is no doubt about the facts as I have given them; but whether the inventor, the speculators and the capitalists are not the victims of a delusion, is another matter.—*London Cor. Com. Adv.*

Former for Boot Leather.—John Chillcott and Robert Snell, of Brooklyn, N. Y., have invented an instrument which they denominate a former, which is intended to be used as a stick, or mould or block, on which to fold a piece of leather of suitable size to form the whole upper of a boot in such a manner as to avoid the usual process of crimping. It constitutes a variable mould or block which can be adjusted and varied in its size and proportions, so that the whole of the uppers of various sizes may be formed by simply lapping the leather around it, and securing the necessary parts together. It somewhat resembles some of the implements used for crimping, but while they stretch the leather, this simply presses into shape. The inventors have applied for a patent.—*Scientific American.*

A steamship nearly one-eighth of a mile long is building at Liverpool. She is to have side wheels and a propeller.

Franklin Anniversary.

PRINTERS' FESTIVAL.

BIRTH-DAY OF BENJAMIN FRANKLIN.

The 147th anniversary of the Birth-Day of Benjamin Franklin was appropriately celebrated at the Blossom House, in this city, on Tuesday evening, Jan. 17, under the auspices of the Rochester Typographical Union. The first edition of the Celebration—the Banquet or Supper—which commenced about 8 o'clock, was participated in by several hundred ladies and gentlemen. After a feast of good things for the refreshment of the inner man, the occasion was enlivened by sentiments, speeches, &c., until a late hour—to the general satisfaction of the large and respectable auditory.

Regretting that we are unable to give the entire proceedings, we condense the following synopsis from the reports already published:

The head of one of the tables was occupied by D. D. T. Moore, Esq., President, assisted by Messrs. A. Strong, W. S. Falls, J. E. Morey, H. C. White, J. Curtis, R. W. Hill, and A. Bennet, Vice Presidents. When the guests had taken their seats, the President of the Union, Mr. Moore, pronounced the words of welcome:

Ladies and Gentlemen—

In behalf of the Rochester Typographical Union, I extend to you a cordial welcome to this Banquet in commemoration of Franklin—the Patron Saint of our Profession. Our desire is that it may prove of far more value and importance than a mere refreshment of the physical man—that it may cement the bonds of friendship and brotherhood, and enlarge and strengthen the mind—thus truly becoming a "feast of reason and a flow of soul." That our Festival will result thus auspiciously, no one can doubt who properly estimates the grace and goodness, wit and talent, logic and eloquence, of those who have honored us with their presence on this occasion.

As a people and nation, Americans devote too little time to recreation and amusement; our holidays are too "few and far between." In our race for the "almighty dollar," and personal aggrandizement—in which, by the way, we are proverbially "up to time," and more than a trifle in advance of "all the rest of mankind"—we are prone to neglect or forget the requirements of both our physical and mental constitutions. Editors, publishers and printers, more, perhaps, than any other class, appreciate the necessity and benefit of relaxation—for their labors, mental and physical, are nearly constant and almost Herculean. Hence our Union, representing the craft generally of this city, have thought it eminently proper to revive the custom of commemorating, in an appropriate manner, the natal anniversary of the Printer, Philosopher and Statesman who contributed so largely to the establishment and prosperity of this Republic, and its Republic of Letters.

That we are *entitled* to the privilege of greeting each other and our friends on such an occasion, we think none properly informed will gainsay. Though one of the junior cities, and ranking as the fifth or sixth in population, Rochester circulates many thousand more periodicals than any other town in the State—New York alone excepted. This assertion, which may surprise many present, is based upon statistics recently obtained from reliable sources. The aggregate circulation of our Rochester journals,—daily, weekly and monthly—is estimated (on the best authority, and we think entirely within bounds) at 99,300,—making about 6,000,000 single copies annually! and embracing a greater amount of power and influence upon the prosperity of mankind, than all the engines of the various Railroads represented at the celebration this evening in the "City of the Straits." The circulation of our papers is over thirty thousand *greater* than those of Albany—and about 60,000 more than those of Buffalo—though Rochester has far less population than either!

Whether this great superiority in the circulation, influence and we trust usefulness of our journals is attributable to the fact that Rochester is located in a rich country, inhabited by an intelligent and appreciative people, or to the superior talent and tact of the craft, we leave others to determine. In our opinion the credit should be divided. Certain it is that the profession embraces many tried and worthy members. For instance, the political press—which is pretty certain to aid in saving the nation every four years, and the commonwealth twice as often—is always *Strong* and generally *Man*-ly—embracing a conservative *Warner*, and a veteran *Major*, skilled in the use of a weapon mightier than the sword. Though ifs and ands are sometimes serviceable, a "genuine" *Butts* is oftener in requisition, and a balmy *Rea*, joined with *Dewey* fields, aids in prosecuting the peaceful campaign—while all broken vessels are repaired by an excellent *Cooper*, who, unlike his illustrious namesake, eschews fictions and contributes items of fact. Our Religious journals are also progressing, thanks to the efforts of an ascending *Hill* and a reclining *Marsh*. The Rural press has abundant *Lee*-way, and is so *Harris*-ing the enemies of "Progress and Improvement"—at the same time securely *Barry*-cading its own outposts—that an easy *Pick*-tory is anticipated. On this point it would be superfluous, if not egotistical, to add a syllable *More*.

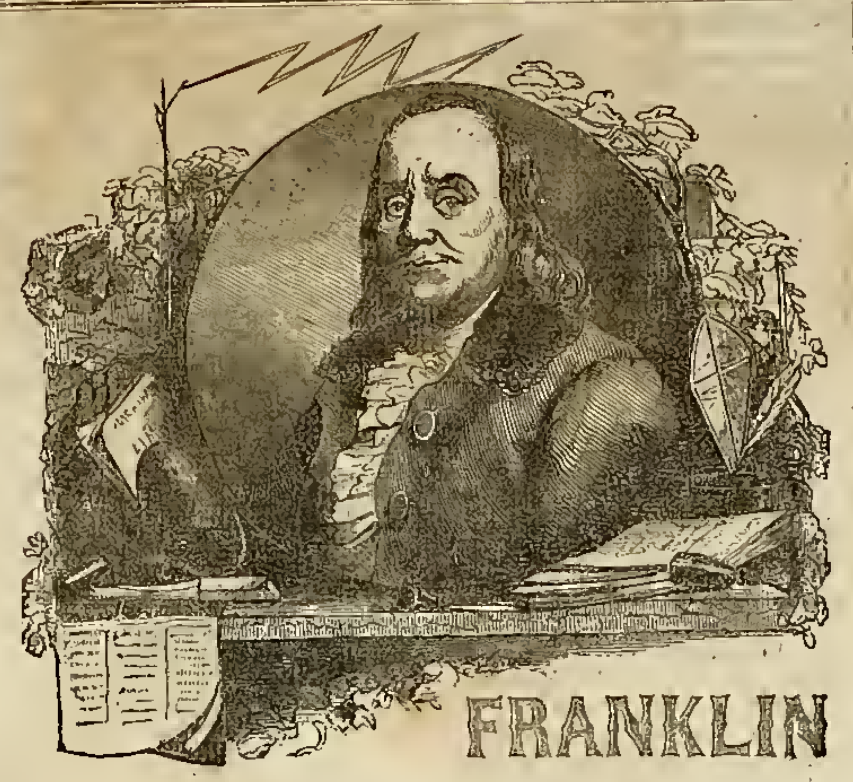
Good Friends—pardon our prolix and perhaps egotistical digression. Members of our profession so rarely "speak in public on the stage," that we may perhaps be allowed to talk somewhat of ourselves. Though speech-making is not our forte, yet if Demosthenes was correct in his definition of what constituted oratory—action, action, action—we ought to be the most eloquent class in the world. We again tender an earnest welcome to strangers and citizen friends—with a fervent aspiration that "you and I, and all of us" may not only enjoy the present, but that He who controls all may vouchsafe us the privilege of meeting on many similar occasions. To the ladies who have favored us with their presence—thus endorsing our Banquet beyond the fear of protest, and stamping, we fondly trust, indelible impressions upon many hearts—one of the exclusive *rights* of woman—we bow, however awkwardly, in grateful acknowledgment.

The Rev. Dr. Dewey said Grace, when ample justice was done to the feast.

After the Supper was properly dispatched the President announced the First Regular Toast:

1. *Benjamin Franklin*—Working at his printing press in Philadelphia, he was the Mechanic of Truth, the Craftsman of Liberty.

Rev. Dr. Van Ingen appropriately responded to this sentiment. He would not detail the life of Franklin. The toast mentions him as laboring for the press. He might speak of him, and his character, and his achievements. We ought not to meet to make distinctions between classes, to magnify one at the expense of another. All noblemen who desire to be anything are *workers*. Men work in all departments. Here are representatives of every pursuit and calling. We are here as workers, to do homage to the memory of a worker, whose name would be immortal, even if we did not honor him. Truth must be worked out. The mind is in its soundest state in working out truth. We are called to work in every position. When Franklin recognized that he had no capital but his brains and his sinews, he recognized the truth about himself. Every apostle of truth must be a worker and a mechanic of truth, as the toast styles Franklin. Franklin was earnest, because he had great simplicity of character and a love of truth, from which nothing could seduce him. He was always Benjamin Franklin—the same everywhere. Nothing could add to his glory, to his chaste beauty, to his calm, self-understood beauty. The motives that governed him and the principles which swayed his life, made him what he was. His ruling principle was to do his day's work well. He loved to conquer obstacles. The maxim that illustrated his life was the homely one of "Mind your own business." He would not let the work of the day master him. He would finish it before his head touched his pillow. His was the maxim of order and vigorous efficiency. Such a man would attain the highest elevation of which man is capable. He would stand before kings.



FRANKLIN
"The thunders of a mighty age,
May drown the voices of the past,
But thou, the Printer and the Sage,
Shall speak thy wisdom to the last."

2. *The Memory of Gutenberg*—The lead that formed even one of his letters, expended upon human mind, has been more potent in Telleri g the destiny of mankind, than all the lead expended upon human bodies, from the time of Marlborough, the great Duke, down to the period of our day. His alphabet is the Material Gospel of the World.

Prof. Kendrick responded. He commenced with a string of witticisms, of which he kept up a running fire from beginning to end of his speech, putting the assemblage in a vastly good humor. He related how Franklin proposed to a young lady, who very properly referred him to her mother. The old lady refused Franklin, because he was only a printer, and there were already two printing offices in America, and she did not see how they could be supported. This suggested the story of the Scotch clergyman who told his daughter it was a solemn thing to get married—she replied that it was still more solemn not to get married. Dr. Kendrick then referred to the history of Gutenburg, who was born about the year 1400, and printed his first book in 1440. He referred to the ignorance and superstition of the age, which persecuted the printer, and alleged he was in league with the devil. He then paid a beautiful compliment to the craft, for the obligation under which Greek literature is to the art of printing. Socrates congratulated a friend because he owned a full copy of Homer—now Homer can be bought for a half dollar, and printed on fair type that may be read by any eyes. The civilization of the world was overwhelmed by the fall of Rome, and the subsequent darkness of the middle ages. Gutteburg came to the rescue and saved letters, placing them high upon an Ararat of safety. Printing saved the remains of classical antiquity and made them imperishable.

3. *The Press of America*—No matter how in some cases, it is said to lie, Truth, as in a well, lies at the bottom.

Mr. Edward Webster, of the Rural New-Yorker, responded as follows:

Mr. President, and Ladies and Gentlemen:—Gentlemen of the Press; and I might add also, *Ladies* of the press. For if the wives and daughters, the sisters and sweethearts of pressmen, compositors, and editors, are not entitled to that name, then indeed there is no life or potency in the cause of woman's rights!

It may be asked by some, why an older and an abler man is not called upon as the respondent of a toast like this. And it may be asked by others why a Pressman or a Compositor—one who wields the lever in the press-room or the rule and stick in the composing office, instead of one who wields the pen and scissors in the sanctum, is not called out for a reply. As the boy said to an outsider who was witnessing some impressive mortuary ceremonies, and was weeping over them as if his heart would break; "What are you crying for? 'taint none of your funeral!"

But, sir, the cause of the Pressman and the Compositor, is the cause of the Editor; and the cause of both, in the exercise of their legitimate functions, is the cause of civilization—the cause of humanity—the cause of God! Every man except a tyrant, who speaks of, and for the press, is in his own proper place, and is pleading his own cause!

The speaker then congratulated the assemblage upon meeting on the auspicious occasion, and drew a parallel between Prometheus and Franklin, drawing fire from heaven; stating that the latter took the first step in that brilliant train of discoveries, which have since yoked the lightnings as willing and working slaves to the car of progressive humanity.

The speaker then contrasted the difference between multiplying books by means of the steam press, and writing them out with a pen. It would take one man a day to copy in a fair readable hand, on an average, one page of the *New York Tribune*, which would be eight days' works on a single sheet; and yet one of Hoe's eight cylinder presses would print off on both sides 10,000 sheets in *an hour;* which is equivalent to the labor for a day, with the pen, of 80,000 men.—Other facts equally surprising were stated.

The speaker then exhibited a book which he held in his hand, printed 200 years ago, and contrasted it with the printing of the present day, and then closed with a justly merited tribute of praise to the craft.

4. *Education*—Without it, all the sentiments we have uttered would be but as the wind, idly blowing over the famed Dead Sea, where no barques bear commerce into busy ports, or waft, from shore to shore the blessings of progressive mind.

R. D. Jones, Esq., Superintendent of Schools, made an eloquent response, remarking on the dependence of educators upon the Printing Press.

5. *Authors and Printers*—The men of *letters* and the men of *types*—the natural co-operators and the complements of each other. He whom we commemorate is a wonderful instance of the facility with which the two unite.

Prof. Raymond responded. He thought if the ball of yarn was rolled up at length, as it had been, that it was a grave question what should become of the ball that is to follow. He then alluded to the "errors of the Press," making a number of facetious hits.

6. *Science*—Before printing the possession of the few—since printing the heritage of the many; then the sword of the priest—now the shield of the people.

Rev. Dr. Dewey spoke of the distinguishing traits of Franklin's character, particularly with reference to the application of his mind to science. Some have wondered that he should have held so high a place in literature and science, and they have said that it was by the general consent and concession of his cotemporaries.—But this is wrong. Franklin was really eminent, as a natural philosopher before all of his day.—In political economy, and in literary and moral writings he held no ordinary place. He became a great man though he started as a Journeyman Printer, because he had a really great mind.—Till he became a typo, his education was imperfect. Then he grew to be a writer, for there are few better places than the printing office for a man to learn, unless he is a mere machine.—Franklin cultivated his moral character, and the private virtues. He was governed by strict rules.

7. *Mind*—The mother of Gutenberg's sublime necessity. It is eternal, and made beneficently omnipresent by the German discovery.

J. H. Brent, Esq., responded, but he would not speak at length. He was in favor of putting back the clock, and putting forward the main business of the evening.

8. *Washington*—A man and a principle. A hero and an idea. Used in the revolution as its Champion, and since its close, adopted as its revelation.

Drank in silence.

9. *Our Agricultural and Horticultural Press*—The pride of our city. It causes the desert place to rejoice, and the wilderness to blossom as the rose.

Mr. Jas. Vick, of the Horticulturist, said:—Travel from Maine to Georgia, from the Atlantic coast to the shores of the Pacific, and in almost every village and hamlet, at every country post-office, you will find the Agricultural and Horticultural Journals of our goodly city. No city of our Union, with perhaps one exception, sends out as many Agricultural and Horticultural Journals, as Rochester. We are of late becoming more celebrated for our Rural Literature, than for our Genesee wheat and Rochester flour. Intimately connected with this interest, are our Agricultural Warehouses, Seed Stores, and our celebrated Nurseries. Rochester is becoming the garden of the country, and the nursery of the continent.

A few years since and we had but one Agricultural Journal, struggling for a feeble existence, but by well-directed skill and unbounded energy, this interest has been advanced to its present high position. And to no one are we more indebted for this result than to our honored President.

And what a flood of light and truth are these Journals shedding over the land. Their fruits are every where to be seen. The appearance of farms and houses, barns and stables, gardens and orchards, in almost every neighborhood, speaks their praise in language not to be misunderstood by the most careless observer. The slovenly, ill-managed, unproductive farm of other years, has been succeeded by one that is both a source of pride and profit to its possessor. The barns and dwellings whose loose boards were shaken like reeds by the wind, have given place to others that afford safety to the crops and comfort to the inmates. The "yard," so unsightly to behold,—the receptacle of refuse and rubbish, has in many cases been transformed into the flower-garden, or lawn, delighting the beholder with beauty and fragrance, and denoting the improved taste and increased happiness of the owners. The Agricultural and Horticultural Journals are doing much to improve the unstable and roving disposition of our people. A well kept garden and orchard, next to wife and children, gives home its charm. To him who loves his garden, or orchard, or farm, every plant,—every tree—is a friend with whom he communes. He has watched over its infancy—supported it in its weakness—given food in time of need, and water when it was parched with thirst. He has curbed its disposition to ramble, and under his guidance it has grown up with a fine form and good habits. In return, it has poured into his lap its offering of gratitude. It has delighted him with its beauty and fragrance; and, as this was not enough, it is daily inviting him to partake of its fruits. A man who thus erects Nature's temple around his home, and worships her there, will not be apt to relinquish those pleasures for a "new home," in a strange land, or the gold of California; and should stern duty ever compel him to desert the much loved spot, it will be dear to his memory. He will often say in spirit—

"An exile from home, splendor dazzles in vain,
And I sigh for my lovely thatched cottage again."

One word to the ladies, and I sit down—devote a portion of your time to gardening. It will not only afford pleasure, but health. It will furnish the luxuries—the poetry of life, and the health essential to their enjoyment. Work among your flowers and plants every day during the season; it is the best cosmetic in the world—it will drive away that sallow, bilious look. It will give you a color more beautiful, more lasting than rose or carmine. It will send the glow of health to the cheek, and joy to the heart.

10. *The Brotherhood of Authors and Printers*—Like the union of the years and the months, they join the past with the present, and throw upon the eras of time the mingled benefits of flowers and fruits—of rational mirth and philosophic usefulness.

Mr. Barry, who was called for to respond to this sentiment, was absent.

11. *The Constitution of the United States*—Printed on paper, it is more durable than the statutes of Greece or Rome; for graven as they were on local granite, the tyrant's battle axe could splinter them at a blow, or time could moulder them into their original dust.

Maj. Humphrey was called, but declined speaking, owing to the lateness of the hour.

12. *The Democracy of Right*—The Despot's plea for tyranny, the People's plea of power. The *E Pluribus Unum*.

Mr. C. B. Hill responded in a neat speech, closing thus:

Sons of Franklin—ye who toil as once did he,
To speed the truth, with earnest might,
"All things good and true," still let your motto be
Your sacred watch-word—God and Right.

13. *Woman*—How shall we sing her praise? 'Tis sung at home, where children nestle near her shielding heart; 'tis sung in Senates, when genius sits in the memory of a mother's teaching; 'tis sung when man panoplies himself for life's hard battle in the guarding genius of her love. Her sphere is Earth and Heaven.

C. P. Dewey responded. He alluded to the example set by the Union in gathering the ladies to this banquet of the craft. Woman was admitted and the wine cup discarded. The example set by the Union is appropriate to the birth-day of Franklin. He owed much of his after fame to the fair Miss Reed, who watched him from her father's doorway as he trudged along the streets of Philadelphia. This no doubt is ominous, and some here may perhaps date their happiness to the experience of this evening. The present is a new era for Woman. Her place is home. She is shrined on the domestic altar. But there is a chance for Woman to find a new sphere of activity. She may become a printer. Let way be made for her at the *case* and she will beat man with his own *stick*. She shall be prominent in Typographical banquets, to which gentlemen will be admitted. She will mollify the bitterness of editorial strife and mitigate the acerbity of writers for the press. The toast mentions Woman as Mother and Wife. We all have mothers, but not all wives. Still there is encouragement and hope for bachelors—the girls are not all married. Indeed, the last census showed that there are 17,000 more marriageable females than males in this State. If this malproportion is allowed to exist, there will be a perpetual Leap Year decreed, and then the bachelors will be crowded with tempting offers.

The following letters among others were read:

D. D. T. Moore, Esq.,

President Printers' Banquet:

Circumstances having transpired to forbid my being present at the Festival this evening, and taking part in the exercises, I cannot refrain from sending you my heartfelt desire that it may be "a feast of reason and a flow of soul," and operate as a bond of union to those whose business it is to be engaged in the "art of all arts."

In 1816, I commenced the art, trade and mystery of Printing in the village of Rochester, and from that time till 1833, followed the business,—certainly through a period when as little could be gleaned out of it, as any poor man could desire; for readers and advertisers too were "few and far between." Though long retired practically from the business, I have ever felt a warm interest in the much augmented and respected body who still pursue it in this city, and beg through you to acknowledge the honor intended to be conferred upon me, with the assurance that I regard myself as one of your body, and tho' not present in person, shall be in spirit and feelings. Your ob't, serv't.,

Edwin Scrantom.

Permit me to offer the following:

The Printer at the Old Ramage Press in 1816, and the Printer by Lightning in 1851.—The difference is as great as the heavens are high above the earth; and the *results* more than the difference.

Lockport, Jan. 14, 1851.

Gentlemen:—I regret that the state of my health will not permit me to attend the Printers' Banquet in honor of Franklin's Birth Day, in accordance with your kind invitation. It would afford me sincere pleasure to interchange sentiments with you on so interesting an occasion, and to unite with you in celebrating the virtues of the immortal Patriot and Sage. Among the great characters which History presents for our consideration, there are none, perhaps, which can be contemplated with more unqualified satisfaction than that of Benjamin Franklin. To the youth of our country, his career from boyhood to old age, furnishes a noble example for study and imitation. His name is justly regarded as a perpetual testimony in favor of industry, perseverance, self-culture, self-reliance, and a manly devotion to principle. If the patriotism of mankind endeared him to his own country, his conquests in the domains of science attracted the attention of the civilized world; and the concurring voice of many nations has placed his name high on the roll of philosophers and benefactors.

That the Printers, as a profession, should cherish the fame and memory of Franklin with peculiar interest and pride, is alike natural and appropriate. May we not indulge in the hope that the craft will ever continue to emulate his example, and in the exercise of their art make it equally conducive to the interest of liberty and virtue? I remain, with great regard,

Yours truly,
Washington Hunt.

To D. D. T. Moore, and others, Committee.

Several other interesting letters were received, which we should be glad to publish, but want of room in our columns prevents it. We therefore give the *sentiments* contained in them:

By Henry O'Reilly.—*Franklin the Editor*—Whose integrity in vindicating the Rights of the Public Press, formed a worthy prelude to his patriotic assertion of American Independence.

By Hon. T. C. Peters.—*The Editors and Printers*—The head of the one and the hand of the other, rule the destinies of our country.

By A. Holly.—*Printers*—May they *press* despotism out of the world, *chase* aristocracy to the verge of annihilation, *dash* royalty to the ground, *lock-up* oppression and wrong, *embrace* independence and truth, multiply *impressions* of virtue, and in every way honor the calling that has been consecrated by the illustrious Franklin.

By J. Clement:—*The American Press*—May it continue, to the end of time, as free as our mountain streams, and its influence be as fragrant as our prairies.

By Rev. John E. Rosie, of Buffalo:—*The Printers of Rochester*—May *impressions*, always beautiful and saving, be made upon their hearts.

By H. A. Dudley.—*A Printer's Union for Western New York*—Let it be *set up* at once and *locked up* in the *chase* of mutual regard.

Volenter Toasts.

Of the many we have only room for the following:

By A. Strong:—*The President and Faculty of the University of Rochester*—Noble *types* of intellectual greatness and moral worth. We greet them as the friends of progress, and co-workers with the *press*. May they rear up many "bright particular *stars*," who shall go forth with radiating light to bless our country and the world.

By Rev. R. W. Hill:—*The Press of our City*—Its influence upon the political, agricultural and religious interests of Western New York is incalculable—May it ever be satisfied with the education of the head and the heart, while others take care of the hands and the feet.

By Wm. S. Falls:—*Woman*—The most beautiful *specimen* of Nature's handiwork. A *type* of the Garden of Eden. Unsullied, her *impressions* are enduring as eternity.

By A. Bennett:—*The Telegraph*—Franklin's thought was to connect Heaven and Earth by a flash,—Morse unites by a spark the uttermost parts of the world.

By Wm. H. Beach:—*The Mechanic Arts and Sciences*—A noble gift from God to man. The Mechanic—God's nobleman.

By R. D. Jones:—*Public Schools*—The power press of freedom, whereon is to be worked the future edition of American citizens and statesmen. May each impression be dedicated to "Liberty, Equality, Fraternity."

By J. M. Winslow:—*Benjamin Franklin, the Patriot, Printer, Philosopher and Statesman*—Eminently distinguished while living for his many private and public virtues, and equally remarkable for habits of industry, economy, and self-reliance, he has left us right examples, which it will become not only printers, but all others to imitate.

By J. P. Foos:—*The Newspaper*—The storehouse of the mind; the garner of facts and fancies; giving immortality to thoughts ready to perish.

By C. P. Dewey:—*To Bachelors*—Keep your "cases" well distributed, and you will never be "out of sorts."

By E. C. Williams, Ship-chandler and Sail-maker:—*To the Rochester Printers, a reasonable* would touch his *tarpaulin*. They are a *gallant crew*. The *mess* they have provided, is fitting for an *Admiral*. May their *voyage* upon the *ocean* of life be prosperous and happy.

By W. Hughes:—*The Type-Setting Machine*—When perfected, it will be driven by perpetual motion and lighted with Paine's gas.

By B. Frank. Enos:—*Our Lady Guests*—The *types* of purity, *set up* in *forms, justified* and *corrected;* whose every impression makes a perfect *proof sheet*, which *furnishes copy* for the million.

By a Lady Guest:—May the craft of Rochester publish many *Mo(o)re* editions of this Festival, and keep us, as on this occasion, until *Dewey* morn.

By a "Sub?"—*The Fugitive Editors*—They fled to Canada by the Underground Railway, but they are not beyond the reach of the "bill" for this Banquet.

The following from the office of the Rural New-Yorker:

By D. D. T. Moore:—*Western New York*—The best edition of "Progress and Improvement" that has been "worked off" during the last century.

The Plow and the Press—The twin levers of physical and mental prosperity and wealth.—Without them, we are powerless—with them, in proper hands, both wealthy and wise.

By Joseph Harris:—*Printers' Ladies*—Although we have not, like our sister city, Albany, lady-printers at work upon a *Country Gentleman*, yet we have printers' ladies for beauty and elegance unsurpassed. May they increase till there is not a bachelor printer in the city.

By Edward Webster:—*The Printer, the Editor and the Critic*—the Executive, the Legislative and the Judicial departments of Civilization—Mental darkness vanishes before them, as the shades of night are scattered at the coming of the god of day.

By J. H. Bixby.—*The Good Compositor*—He seeks a *clean proof* of this life's pages, for no *errata* can be added in the next.

By H. C. White:—*The Sword and the Pen*—The one, a weapon always potent in the cause of humanity; the other, too often the scourge of the people. The one writes with ink, the other with blood; may the fountain of the former never flow again, and that of the latter never dry up.

By A. H. Sibley:—*Mailing Clerks*—The power between the Press and the People, too often thwarted by Uncle Samuel's miscarriages.

By Wm. B. Lewis:—*The present Organized Militia of the State of New York*—The bulwarks of the State, and the right arm of its Government.

By R. A. Nichols.—*The Printers of Rochester*—May the *period* of their existence be distant, their pockets well lined with *quoin*, and when forced to "shuffle off the mortal coil," may it be done with *cases clean*, and *forms* well *revised* and *corrected*.

Our Printers' Devil—Though a small * now, he may by *press*-ing onward ‖ those of the first magnitude—becoming, perhaps, a Franklin.

The festivities of the occasion were concluded by the representatives of "Young America," who practiced the Terpsichorean art. Those who participated report that the short hours passed rapidly—being chased away by twinkling feet, while all went "merry as a marriage bell." And thus ended the second edition.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

WE MISS THEE AT HOME.

A REPLY TO POPULAR AIR, "DO THEY MISS ME AT HOME?"

BY J. W. HANKEN.

Yes, we miss thee at home, O! we miss thee,
Thy image is still in our hearts;
And we linger with fond recollection,
While the warm tear of sympathy starts.
We are thinking how sweet was that moment,
When you stood at the head of our band,
How dear were the words that were spoken,
And how warm was the clasp of the hand.

But now when the shadows of evening
Are stealing on valley and hill,
And the soft tones of melody, falling,
Like dew on our spirits distill;
There's a note in that rapturous measure,
That bears all its sadness to me,
For it tells me of vanished pleasure,
And mournfully whispers of thee.

This moment we fearfully miss thee,
While round the old family hearth,
With fondest remembrance we gather,
And join in the fireside mirth;
But if there's a seat that is vacant,
It covers our spirits with gloom,—
This wearisome moment, we miss thee,
We miss thee, we miss thee at home.

O! where dost thou wearily wander,
For many a long weary day?
Nay, why from the friends that now love thee,
So long, thro' the world, dost thou stray?
Nay, our bosoms can never forget thee,
Where'er thou mayst thoughtlessly roam,
And O, will thou ever remember,
We miss thee, we miss thee at home.

Kendall Mills, N. Y., 1851.

[For the Rural New-Yorker.]

ECCENTRICITY.

There are some strange people in the world—yes, a great many—something like twenty-four millions in the United States alone I think; though I am not certain whether even that estimate covers the entire whimsical population of all colors or not; by the way, do you happen to be acquainted with an individual who does not appear to you possessed of *some* eccentricities? Of course, you have none—you are conscious of moving in the exact sphere Nature assigned you—but others seem to have a comet-like tendency; a disposition to play vagrant—to wander beyond limits. You are sometimes fortunate enough to meet a person who seems to you remarkably sensible—free from those odd conceits, fantastic notions, extravagances of opinion or disposition which, in some degree, distinguish all your former acquaintances, and to which you have such an aversion that you are thereby repelled from all close intimacy with the subjects of them; but bye and bye you detect in this new friend certain mental angularities—sharp points of character, which experience teaches you are very likely to wound whatever comes in too sudden or violent contact with them. Perhaps it is only a slight determination to egotism, unoffending enough, but that your own—*not egotism, but self-respect*—whispers you not to admit his rather too complacent assumption of superiority; or, may be, it is a mere outward fancy of his that first strikes you as peculiar, a preference for some particular color or fashion in dress, to, the constant exclusion of all other hues and modes, and if the perception of this strange regard to trifles comes upon you in an ungenial mood, and especially with the aggravating circumstance of dislike on your part, to the favorite style, it annoys you; you really think he might be less capricious; you do not deny that you have a pretty decided choice in such things yourself; but then with you it is matter of taste, while with him it must be purely whimsical.

What is, then, this eccentricity? One never hears it used as a term of serious reproach; it is never employed in reference to such marked unamiabilities as selfishness, ingratitude or the like, though the manner in which it is sometimes applied indicates that those exhibitions of singularity made by the individual characterized as fanciful or eccentric, are regarded rather as freaks of a cynical waywardness than as honest, hearty utterances of a truthful nature. And yet it is not difficult to discriminate here between what is natural and what is assumed. Those studied variances from ordinary usage which make up all there is distinctive in the characters of certain artificial people, rarely pass themselves off as expressions of genuine, common sense, radical dissent from the ideas involved in such usage, but are most commonly, as most truly, known for counterfeits or affectations. True diversity, in effort as in manner, is explained by the fact that the opinions of an individual never fully coincide either with the aggregate sense of the community in which he lives, or with the views of any other individual. The elements of character are never mixed in precisely the same proportions for two; and in whatever respects one differs from all others, those circumstances constitute his peculiarities—his eccentricities; they are the points seized on by historians to give piquancy to biographic narrative. The unlikeness is in thousands of cases so slight, or so lessened by a weak fear of standing alone, as to be overlooked; and the epithet which, in truth, if applicable to any, is so to all, is reserved for cases of more extreme non-conformity, for those souls of superior veracity, who cannot lead second-hand lives, but must give a faithful report of what has been revealed to themselves personally. The man who rejects such forms and observances as to him have not only no significance, but are positively false, as utterances of his individual perception of the spiritual meanings of things, receives as he willingly hears a mime conveying, though often blindly, the fact of such casting off. Eccentricity, then, rightly considered, is but the "limbs and outward flourishes" of an individuality too strong to be repressed, too self-respecting to be moulded into a soft compliance by the smoothing plane of conventionalism; and in its highest, serenest condition affording the example, worthy of imitation by less literal natures, of a cheerful accordance to others of all the freedom it demands for itself. A.

South Livonia, Dec., 1853.

A CHAPTER ON THE BEARD.

The manner of trimming the beard and hair, is a matter of mere taste and fashion.—There is nothing intrinsically distasteful in suffering the beard and moustache to grow in untrimmed luxuriance; nor is there anything shocking to natural propriety in allowing the hair even, to flow in uncurtailed profusion.—But, on the other hand, it requires long familiarity with the opposite custom in either of these cases, to render the masculine countenance at all prepossessing to the eye. The naked head of the painted savage, robbed of its natural covering except the scalp lock, the single pig-tail of the Chinese head, or even the shaven crown, saving the narrow ring of hair around the base of the brain, which is characteristic of the Roman Catholic Friar, are anything but ornamental.

Neither the Jew nor the Turk is stigmatized as a dandy because he wears a beard; the moustache of a Tartar does not brand him as a fop, and why should it indicate such a character among civilized men? The God-fearing Puritans who landed upon Plymouth rock, and their immediate successors, sported moustaches and imperials which would put to shame the most contemptible puppy of Broadway. The portrait of Governor Winthrop, one of the earliest and best Governors of Massachusetts, looks down from the walls of the State House in Boston in all the luxuriance of an unshaven face; and one of his immediate successors, whose picture is beside the former, is adorned with an imperial, the like of which has never been seen in this city.

The reason why an idea of dandyism is connected with a profusion of beard, is undoubtedly because it is the custom of grave and intelligent men to shave the face, or at least to dress down the beard to a moderate and well-trimmed whisker. It is the delight of fools and fops to appear the antipods of men of sense; and if it were the criterion of reverend and grave men to retain a natural flow of beard, the dandy would undoubtedly appear immediately with a clean shaven face. He would invade the natural sphere of woman, by imitating as closely as possible her smooth and beardless cheek, instead of leaving such an ignoble contest to gentlemen and scholars.

The time has been when a clergyman with a whisker would stand in peril of arraignment before an ecclesiastical tribunal; but now it is neither undignified nor unclerical to wear a whisker of very respectable dimensions; and the tendency in the community is at present undoubtedly in the right direction, viz—to allow nature a little more latitude and longitude for action in a capillary way. It is shocking to good taste to make an instantaneous and great change in dress or anything else, which habits and association have made familiar; and as a consequence, a revolution even in wearing beards is necessarily slow. Every one will now acknowledge that three-quarters of masculine humanity looks better with whiskers.

"Oh! uncle," said a young lady to a friend of ours, who shaved off his whiskers last spring, "let them grow again. I cannot bear to look at you now, you are so *lantern-jawed*." It was a remark more true than complimentary, but had the desired effect. If a man was not designed to wear a beard, why was one given to him at all? If it was intended like a weed in the field, as an incentive to labor only, why will not long and painful cutting and cropping and winter as well as summer fallowing, effect its eradication? The throat and nostrils, the natural gateways to the lungs and stomach, require protection; and that living protection furnished by nature is far preferable to the death shroud of a crawling worm. The testimony of the medical faculty and the political economist, as well as common sense, stand up in the defence of home production.

Prentice has been to the spirit rappings.—His first question was whether he would be any better looking in the next world than in this—which, much to his gratification, was answered in the affirmative.

Happiness is not in a cottage nor a palace, nor in riches, nor in poverty, nor in learning, nor in ignorance, nor in passive life; but in doing right from right motives.

SPECULATIONS.

Making money by speculation, without regard to the established laws of trade, is a matter that can be compared to nothing so well, as to the dealing in lottery tickets, or some other species of gambling where no sagacity is required. There may be one chance in a thousand, or one in ten thousand, for success, but the odds stand too fearfully against one to encourage the practice. There are apparent speculations which are based upon the closest calculations of demand and supply. Let a merchant ascertain just how much of any given article there is in the market, and also just how large the demand will be, and he may safely purchase the whole with the certainty of realizing a profit. If one of the earliest adventurers to California could have foreseen the population of San Francisco, and thereupon purchased the whole tract of land upon which the city now stands, his profits would have been beyond calculation. Such as these must be considered truly legitimate operations. But the folly of rushing blindly into risks which may be managed by skillful operators, is too absurd for anything more than a passing allusion. Such was the tulip mania in Holland.—While this rage, men were known to give their whole possessions, amounting to thousands of florins, for a single favorite bulbe.—The Mississippi was another, in which reckless gamblers succeeded in fascinating a whole nation. The South Sea bubble is not forgotten. The hundreds of companies incorporated for all sorts of imaginable purposes have all been described in full, but the ruin and misery by the final explosions have been terrific beyond description. Yet men will seldom learn wisdom from their own experience. The same reckless scenes are enacted every year. The land speculations in the State of Maine nearly beggared the State. Men left their ware-houses, counting rooms, and stores, and rushed off to townships, village-lots and mill privileges.—So crowded were the mushroom cities, that barns, sheds, and the privileges to lean against the gate posts, were in requisition for lodging places. This affair did not end in a mere bubble, it ended in the ruin of more than nine-tenths of all who caught the contagion. For many years after, the question was invariably asked by the prudent Boston merchants of applicants for credit, "Have you had anything to do with the eastern land speculations?"

Some fifteen years ago, more or less, there was an effort made to build a city at the junction of the Ohio and Mississippi rivers, which was to be called Cairo. Streets were graded, license and store lots were laid out for miles up the banks of both rivers. Elegant colored maps were exhibited in the eastern cities, most minutely particular in design. There was to be a bank here, a custom house there, a church in another place, and fine brick and stone dwellings in every direction. A hundred steamers were lying at the wharves "painted like life," and merchandise was piled about in perfect looseness of confusion. Drays were industriously engaged in removing the merchandise back into populated streets. Men, women and children were thronging the squares and side-walks. Indeed, from the picturesque description, one would suppose that both Cincinnati and New Orleans were to be removed and combined to make Cairo. Such was what Cairo was to be, according to the representations of the speculators. No wonder that many shrewd men who have never seen the location were taken in by the purchase of shares and lots. On the map and on the plan, a more desirable location for a city could not be found. However, after all the rage for speculation, the city of Cairo remains to be built. A dilapidated old wharf boat, a long portico with a shanty behind it, called the United States Hotel, a lean pig, and a donkey—these make up what Cairo now really is. The location of Cairo is everything that could be desired for a city; but unfortunately, there is one disadvantage not mentioned; the water overflows the place for fifteen miles back, every spring freshet. Large operations were really commenced one dry season, but the first freshet carried all the buildings down stream, except the aforementioned portico wharf boat.—*Hunt's Magazine.*

A GLORIOUS TRIO.

The *Home Journal* gives this little bit of gossip:

Oliver Wendell Holmes and John G. Saxe came near meeting the other day. No sooner had Holmes vanished from Broadway, than Saxe appeared in it. What if they *had* met? Would they have neutralized or stimulated one another? Apart, they are the funniest of men, and wittiest of poets; together, we fear, they would prove *too* much for any spectator to survive to tell the tale. We had Saxe to ourselves the other day, and he said more good things than we can recount; but he said nothing better than this, which is recorded in the Boston Post:—Saxe, in a recent lecture, speaking of the artistic imperfections of our female poets, notwithstanding all their wealth of fancy and sentiment, says, "It seems impossible for Pegasus to trot handsomely under a *side-saddle*." Saxe has gone home to Burlington again.—We may as well finish the Comic Three, and say something of Prentice. Well, Prentice has been exulting over the twenty-third birthday of the Louisville Journal. How many men, besides Prentice, can use such language on such an occasion, as the following? "The thought of the twenty-three years we have passed here is so pleasant to us, that *we should love to live them over again.* If permitted to do this, we would ardently pray Heaven for the privilege of correcting many errors which time and reflection have pointed out to our mind; but if that blessed privilege were not vouchsafed to us, we should thank God for the privilege of once more living those years just as we have lived them. Our youth has passed and our manhood's prime is passing, but *we are as happy now as when we first entered Louisville in 1830, with high hopes and buoyant spirits.*" Prentice should tell the world his secret.

A PEEP INTO THE HAREM.

Mrs. Mackenzie gives us an insight into the state of things in a Mohamedan's "family," in the following extract from her Eastern journal:—"From my frequent visits to Hasan Khan's family, where I can go when it is cool, I see, as you may suppose, a good deal of 'Life in the Harem,' and would undertake to refute authoritatively, as I always felt inclined to do on *prima facie* grounds, the fine theories of Mr. Urquhart regarding the superior happiness of Mohammedan women. What *can* a man know of the matter? Did he go about visiting in the form of an old woman?—Had he friends and acquaintances in half a dozen Zenanas? Would any Musalmani woman speak freely to a Feringhi, even if he did obtain speech with her? or are the Turks to be taken as competent and impartial witnesses as to the relative happiness of their wives? It is presumption for him ever to talk of a Musalmani's feelings: I will flap him out of the field with the end of a purdah. I do not think their secluded life makes them objects of pity. They are hardly more devoid of excitement than I am myself; they see their female friends and their dearest male relations, and the tie between brother and sister seems to be very strongly felt by them; but it is not in human nature to be content with being only the fourth part of a man's wife. They are far from viewing the matter as we do, and I should suppose Hasan Khan's Zenana a favorable specimen, as both Leila Bibi and Bibi Ji seem very good-tempered, and very friendly to one another. Still, as no man can love two or more equally, and as no woman can bear that another should share her husband's affections, I plainly see there are heart-burnings innumerable, even in this family. Leila Bibi is the favorite; she is a very pretty, merry, clever little creature, who laughs and talks with Hasan Khan much as an English wife would do. He is evidently very fond of her, but he takes not the smallest notice of poor Bibi Ji, who says nothing, but has an expression sometimes in her face which pains me to see. Luckily for her, she does not seem at all a sensible person; she is a good, warm hearted creature who is very much obliged for any little kindness, but not very bright. But then she has a little girl, and Leila Bibi, who has been married four years, has none. It is the old story of Hannah and Peninnah over again: the one is so anxious for children, and the other indirectly boasts of hers, by always talking of children, and pitying people who have none. Given a very slight knowledge of human nature, and we may penetrate the closely veiled walls of seraglios, and economically save our curiosity the expense of a journey to the East. Selfishness and tyranny, disguise them as polished Orientals or crude Welsh Mormons may, will have the same result."

THE CITY OF LAWRENCE.

The young city of Lawrence is a prodigy. Twenty-six miles on the Boston and Maine Railroad—a road of immense business, by the way, and of admirable arrangements—brings you to Merrimac. Here is the monster dam, forming a young Niagara; and here is the mushroom city. Such factories! The new one, the Pacific, just receiving its looms, is full 800 feet long; the rooms are of this length. I paced 200 steps in marching through these industrial halls. Is not this a room "with a witness?"—And the neatness and perfection of all the adjacent buildings, dye houses, &c., are very remarkable. The canal, or raceway, extends on the north side of the river, a mile below the dam, and is about 100 feet wide. It leaves a space between itself and the river of 400 feet, and this is the area for the mills.

A similar canal will, at some time, be made on the south side. The power is estimated to equal eighty good mill privileges. The dam cost $250,000, and the canal, with its appurtenances, about $200,000. The Bay State Mills and the Atlantic Mills are immense establishments. The Lawrence Machine Shop employs 750 hands. The population of Lawrence is somewhat more than 13,000. It is not a crowded place, but spreads out finely, and all the municipal regulations have been well studied. It is likely to be a very healthy place.—Everything is on a liberal scale, and promises comfort as well as occupation.—*Correspondence N. Y. Mirror.*

A TOUCHING MEMENTO.

Mr. Prentice, of the *Louisville Journal*, thus touchingly alludes to the death of his associate, Mr. Shreve:

"We, the surviving editor of the *Journal*, feel that the prime of life is scarcely yet gone; yet, as we look back upon our long career in this city, we seem to behold, near and far, only the graves of the prized and lost. All the numerous journeymen and apprentices, that were in our employ when we first commenced publishing our paper, are dead; our first partner, our second partner, and our third partner are dead; our first assistant and our last assistant are also dead. When these memories come over us, we feel like one alone at midnight, in the midst of a church-yard, with the winds sighing mournfully around him through the broken tombs, and the voices of the ghosts of departed joys sounding dolefully in his ears.—Our prayer to God is that such memories may have a chastening and purifying and elevating influence upon us, and fit us to discharge, better than we have ever yet done, our duties to earth and to heaven."

Love is the key of the human heart. Once get it in, and you may soon open the door.—Love will use gold, silver, kind words and winning deeds, and thus get access to the heart that was locked against truth and against God.

A gentleman praising the generosity of his friend, observed:—"He spends his money like water." Then of course he liquidates his debts," rejoined a wag.

For the Ladies.

[Written for Moore's Rural New-Yorker.]

THE DYING WIFE.

Come still nearer to my pillow,
Place thine hand upon my brow;
Cold the damps of death are creeping
O'er its marble surface now.
O, that touch so soft and dear!
Would that I might linger here!

Dear one, I had hushed my yearnings,
Still on earth to dwell with thee;
But their accents fall me never,
Troubling o'er life's ebbing sea;
Death alone can break the spell,
Death will force a last farewell.

Fold me closer to thy bosom,
Shield me from the death-king's power;
O, I cannot, must not leave thee!
Dark the shadows o'er me lower;
'Tis not that I fear the tomb,
But thou can'st not share its gloom.

All is hushed; my weary spirit
Wails that last and solemn call;
Husband, dearest, on thy bosom,
Sweetly to my sleep I'll fall.
Then in Heaven forever rest,
Gently on my Savior's breast.

Do not weep! thy tears are falling,—
Drops of fire upon my head;
Do not sigh for her thou lovest,
God has called her to depart;
Thou will meet me in yon Heaven,
He will join what death has riven.

Yet another wish is rising,
Wildly from my parting soul;
I have rested on thy bosom,
I have felt its life-tide roll.
Sacred be that home to me,
As mine own would be to thee.

Do not let another pillow
On that breast a cherished head;
'Tis my place and will be ever,
Even when I am cold and dead.
Casting off this robe of life,
Does not make me less thy wife.

Raise me in thine arms still higher;
Press those lips unto mine own,
Leave them there till death shall call me
To my Maker's mighty throne;
Earth is falling from my sight,
Dear one, 'tis my last good night.

Jessy.

AN ENCOURAGING SALUTATION.

Wish you a Happy New Year, Mr. Moore. We hope you had a good visit with "Uncle John and the cousins"—and hope you left all your cares and labors behind, had a Merry Christmas, pleasant holidays, good cheer, warm fires, (for it was very cold last week,) and arrived safely home with a budget of knick-knacks for the "editorials," found all well and a *long* list of new subscribers on your desk for the Rural.

How we missed that same Rural last week. We do indeed feel as though we could hardly "keep house" without it, for verily it hath a "pleasant countenance." It has ever "a word fitly spoken," for the farmer, mechanic and teacher, and also for the house-wife, which is like "apples of gold in pictures of silver."

Many a pleasant hour have we spent with it, and much information have we gathered from it, which we hope has made us wiser and better. However, we were willing to forego the pleasure of it for a season, that you might seek that recreation for mind and body which you must very much have needed, and which all editors of *good papers* should have occasionally.

We shall hail your Rural again this week with renewed pleasure, and shall, no doubt, to the "Ladies' Department," (to which we always turn first, and in which we always find something *good*,) receive a *new year present* in something timely and interesting. For, while our "lords" are receiving a full share of benefit from your pages in the way of inventions, experiments, patents, manuring, draining, pruning, planting, reaping, building, and all that sort of thing, we are by no means forgotten; and, thanks to you, sir, we have stored many good hints, gathered from the Rural, with our stock of useful information,—and more than one nice dish have we placed upon the table, which has been playfully dubbed "*Rural New-Yorker.*"

And now, we wish for you and your Rural, long life; and may your children's children enjoy all of the pleasures and benefits arising from the ennobling pursuits of Agriculture and Horticulture, in which your Rural has been so great a stimulus to improvement. Again, sir, Happy New Year, from a

Farmer's Wife.

Farmer, Seneca Co., N. Y., Jan. 3, 1853.

Flowers.—Flowers in all ages have been made the representatives of innocence and purity. We decorate the bride, and strew her path with flowers; we present the undefiled blossoms as a similitude of her beauty and untainted mind, trusting that her destiny through life will be like theirs, graceful and pleasing to all. We scatter them over the coffin, the bier, and the earth, when we consign our mortal blossoms to the dust, as emblems of transient joy, fading pleasures, withered hopes; yet rest in sure and certain trust that each in due season will be renewed again.

A Hint.—If the girls would spend as much time with encyclopedias as they do with milliners, they would soon find their heads as attractive as their hats.

MOORE'S RURAL NEW-YORKER

ROCHESTER, JANUARY 28, 1854.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the Rural are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

☞ For a variety of particulars relative to terms, &c., see Publisher's Notices on next page — which answer most of the questions propounded by agents and other friends. We shall soon publish a list of books (with prices) from which those who are, or may become, entitled to Premiums, can make selections.

A Few Words to Advertisers.

In answer to inquiries and complaints, we are constrained to again define our position on the subject of advertising—and will do so as briefly as possible. In the first place, we never intended to make the Rural an advertising sheet, only so far as it was actually necessary. From the first we have refused to publish, at any price, any and every thing pertaining to patent medicines, and other quackery—including deceptive advertisements of all classes. In this matter we have acted consistently,—being governed, we trust, by a principle which neither fire, water nor money can emulcate—having often been tendered pecuniary rewards which would have proved of great temporary advantage, for even the Rural has not always been profitable.

But what we more particularly wish to say now, is this—We desire to publish such advertisements, and such only, as are *brief* and appropriate to the objects and character of the Rural. Preference is given advertisements particularly interesting to Farmers, Horticulturists, Teachers, Country Merchants, &c.—such as the cards of dealers in Agricultural Implements and Machinery,—Nurserymen and Seedsmen,—Booksellers, and Publishers of standard, school and other valuable works,—Inventors, Manufacturers and wholesale dealers in the most useful branches of business. We want no lengthy notices—none exceeding 25 or 30 lines—and should prefer to give an advertisement more than four insertions. We publish this paper for the benefit of subscribers as well as ourselves,—and therefore wish every advertisement to interest the reader, as well as *pay* the advertiser for his investment.

A word in regard to our terms, and we have done. Many seem very obtuse on this point—don't see why we should charge more than "other papers," and so on. Now, the simple reason why we ask more than ordinary papers, is because the publication of a card in this paper is *worth* far more than the difference demanded. The circulation of the Rural is at least *twenty times greater* than the average of country papers, and more than four times larger than that of the Agricultural journals. Those interested can compare prices, and figure accordingly. There are other advantages, obvious to the intelligent reader, which we need not mention in this connection—especially as we have no occasion to solicit advertising. In conclusion, those who wish to advertise in the Rural New-Yorker must make their notices *brief* and *appropriate*, and accompany them with the money according to our rates, to secure insertion.

Use of Rain Water to Prevent Cholera.—Prof. John Lea, of Cincinnati, writes to the New York Commercial, stating as a verified fact which will stand the test of the strictest investigation and eventually obtain universal credence, that rain-water, used for drinking, instead of the hard mineral water of wells, acts as a prophylactic (or preventative) in cases of cholera. He says:—"The calcareo-magnesian properties of the water unite with the miasma of cholera. A diarrhœa ensues, more water is taken, and death soon closes the scene. It appears that comparatively few cholera cases occur on ships coming from Bremen. This will be found to proceed from the pure quality of water furnished at that port." He says further, that "no city exclusively supplied with rain water, as Charleston, or with soft pure water, as Mobile, or district, as West Tennessee, suffers from epidemic cholera; and in the same category may be ranked all the small islands of the West Indies, where none other than rain water can be obtained. A very small portion of the New England States suffer by cholera; primary formations prevail generally, and the water is rarely imbued with calcareous elements." This statement is worthy of no little attention.

Transactions of the N. Y. State Ag. Society.—We are indebted to B. P. Johnson, Esq., for a volume of Transactions of the State Agricultural Society for 1852. It is somewhat smaller in size than usual, and contains fewer portraits of animals, &c., yet on the whole, though not what we could wish, it is an improvement on its predecessors. The Agricultural Survey of the county of Essex, by W. C. Watson, is a valuable article. Breeding Animals, by Sanford Howard, we have read with much pleasure. The reports from the various County Societies are, as usual, replete with interest. We will notice at greater length in a future number.

Disastrous Conflagration.

One of the most destructive and disasterous conflagrations that ever visited our city, occurred on the morning of the 21st instant. The fire was discovered about 3 o'clock in the brick block corner of Maine and North St. Paul street, and soon swept with devastating rapidity through the fine range of brick buildings known as the Blossom block, as far as the Crystal Palace block. Here, through the indefatigable exertions of the firemen, aided by a dead wall which separated the blocks, and a fire-proof roof upon the latter building, the conflagration was finally arrested; which, destructive as it now is, would if it had progressed farther, have devoted long ranges of other buildings, including churches and private dwellings, to utter destruction.

The wind was at the time of the alarm blowing a perfect gale, and as the sound of the fire bell struck upon the drowsy ears of our citizens, it told too truly that the devouring element was reveling in all its resistless fury. How the fire originated is a mystery, and the exact locality is undetermined. Watchman Vance was passing along St. Paul St. about three o'clock in the morning, and detected the presence of the fire by the smell. At this time the shoe store of Bradstreet & Graves, as also the drug store of Lynde & Osborne, and the eating saloon beneath the two stores were on fire, which seems to indicate that it must have originated in the place last named. In the 4th story of this range of building was a large dancing hall, and when the fire ascended to that portion of the building, it swept before the wind with the resistless force of an avalanch. Blinded by the smoke and scorched by the roaring flames, the brave firemen were borne back, and it was Providential that some of their number did not perish in the buildings. Large flakes of fire were carried by the force of the wind to the extreme eastern limits of the city, and all the buildings in that direction had to be watched to prevent them from taking fire. The entire loss cannot fall short of $150,000.

This disastrous conflagration is an especial warning to our citizens. Crowded as many of our best blocks are with stores, offices, and shops, the carelessness of a single individual may result in the utter ruin of many others, who cannot control his actions, but who must suffer for his criminal neglects. Let all men who have at stake either their own property or the property of others, guard it especially against fire! At this inclement season, when many and frequently intense fires are necessary to render shops and offices comfortable, a double amount of caution is called for at the hands of all.

How little did we imagine while preparing for the outside of this paper an account of the Printers' Festival, that it would be our lot to chronicle upon the inside of the self-same sheet an announcement of the destruction by fire of the noble hall in which that festival was held.

Congressional Proceedings.

In Senate, Mr. Douglass gave notice that he would move to take up the Nebraska bill on Monday.

Mr. Walker reported a bill for relinquishing to Wisconsin the lands reserved for Salt Springs. Passed.

Nothing of importance was done in the House.

Jan. 18.—In the Senate a number of confirmations for Collectors, Pension Agents, Receivers, &c., were made.

Mr. Redfield's nomination has been up, but was objected to by Mr. Benjamin, on the account of the absence of Mr. Leward. Laid over.

House.—The House this morning adopted the resolution to appoint a select committee to consider a report on Mr. Ewing's Amendment of the Constitution, altering the mode of voting for President and Vice President.

Jan. 19.—In the Senate a resolution of inquiry was adopted as to the propriety of extending the law regulating the pension of widows of Revolutionary soldiers to the widows of the soldiers of 1812.

Mr. Gwin offered a resolution of inquiry as to the disposal of the naval forces of the United States at the time the Sonora expedition left California, on which a warm debate sprang up.

In the House the Committee on Military Affairs were instructed to inquire into the expediency of constructing a military road from Great Salt Lake to California.

The house adjourned over until Monday.

Jan. 23.—Senate.—Mr. Douglas asked leave to make a report from the Committee on territories. He said the attention of the committee had been directed to the fact that the south boundary of Nebraska as reported in the bill, would divide the Cherokee country. To avoid this, the committee had determined to recommend 39 as the south boundary.

Amendments had been prepared by the committee in the shape of a new Bill. The one bill will provide territorial governments for both Nebraska and Kanzas. The committee desire that this new bill be printed—the motion to print was agreed to.

House.—On motion of Bernhisel, the Com. on Territories was requested to inquire into the expediency of extending the provisions of the Oregon Land Law over Utah.

On motion of Mr. Benton, the Com. on agriculture were instructed to inquire into the expediency of establishing an Agricultural Bureau to be connected with the Department of the Interior, and that they report by Bill or otherwise.

The Pennsylvania Senate has passed unanimously, the bill to repeal the charter of the Franklin Canal Company. It is on the charter of this company that the railroad is built from Erie westward, to the Ohio State line. If this charter is repealed there is an end to the south shore railroad connection.

Our Albany Correspondence.

Albany, Jan. 23, 1854.

A very good week's work has been accomplished by the Legislature. The Canal Bill referred to in my last, passed the Senate unanimously, and in the House with only one dissenting vote. It provides for a special election on the third Wednesday of February, and details the manner of notices and for the canvass of votes. The State Canvassers are to meet within 15 days of the election, which will make quick work for them. As the vote of the people will in all probability be entirely on the affirmative side of the question, further remarks are unnecessary. The ballots are to be of the following form:

"For the proposed Amendment in relation to the Canals."

"Against the proposed Amendment in relation to the Canals."

The two houses go through with their regular order of business daily, that is to receive petitions, introduce bills, reports, resolutions, &c., &c., which is doing very well for this early day of the session. The opposition to the Maine Law, headed in the Assembly by Mr. Darby, of Jefferson County, are busily engaged in preparing a minority report in which they hope to present a milder plan of accomplishing the desired end. That report will probably be handed in this week, when the discussion will fairly commence.

The Senate have been considering the proposition to increase the salary of the Canal Auditor, and to provide for his election by the people. He is now appointed by the Commissioners of the Canal Fund, and is simply their clerk. But as the duties have become very arduous and responsible, it is proposed to elevate it into a full department, and make the salary $2,500.—The importance of raising his salary seems to be generally conceded, but many desire to keep his election from the people, while the progressive elements in both parties desire to bring the popular franchise to bear in this case as in that of the other officers. The debates on this item have been conducted with some spirit, but those who put their trust in the people will probably succeed. Should this measure prevail, it will be the second department organized from clerkships in the Comptroller's department. The other is the Superintendent of the Bank department, which is now a separate office under the appointing power of the Governor and Senate.

This may show the world how easy it is to accomplish an object where money is to be made by it. The Banks have their separate bureau, and so will the Canals, for the moneyed men ask it. But see how it is with the School System. The business of this department is performed by a single deputy under the Secretary of State, and he is often obliged to wait a week to get even the Secretary's signature to letters and official documents. He has the supervision of over 11,000 school districts, and the distribution of more than $1,000,000 annually. Yet no separate department has been secured, because it is only the *teachers* and those interested in schools who desire the change. Every Secretary of State for some years past has urged this change upon the Legislature, and the present Governor has joined in the recommendation. Teachers, through their Conventions and periodicals, have prayed for it, but to no purpose.—There is hope, however, that some progress will be made this winter. If the people would agitate the matter, and send in their petitions, the object would be immediately secured.

The Mt. Vernon resolutions have been further discussed, and the Wooly-heads have had a slight tussle with the Silver Greys on the amendment to prevent the estate from being cultivated by slaves, in case the U. S. should purchase it. The House has also been discussing the same proposition.

Resolutions have been introduced proposing testimonials from the Legislature to the gallant Captains of those ships engaged in the rescue of the passengers and crew of the *San Francisco*. They propose to give the commanders of those three vessels a silver speaking trumpet. The noble acts of these men have struck a vein of gratitude in the American people, and these testimonials will be but a feeble expression of the sentiments of New Yorkers.

The greatest excitement, prevailed during the session of the Canal Board for the purpose of making the Canal appointments. The city was filled for several days with hungry applicants. But it is now all over. Some went home rejoicing and some cursing—as usual. From what I can learn, the appointees are worthy men.

The semi-annual examination of the State Normal School will commence soon. The Hon. S. S. Randall, addresses the Literary Societies on Saturday. Of these and others in future.

"Owe".

To Editors.—Our warmest thanks are due and tendered to the hundreds of our friends of the press who have recently commended the Rural New-Yorker, in the most positive and complimentary terms, to the attention and support of their readers. Such a reception as they have given our new volume is indeed gratifying, and sincerely appreciated. We shall endeavor to reciprocate such kindness, whenever opportunities are presented.

— As an instance of the generosity of the press in this direction, the *New York Observer*—whose ability, influence and circulation place it at the head of the Religious and Family Newspapers of the day—*voluntarily* publishes our Prospectus, and thus remarks editorially:

Moore's Rural New-Yorker commences a new year with a new and beautiful dress, and, as ever, rich in its address. It is full of variety, original and select. No paper on our list of exchanges comes so near our ideas of perfection, for a secular family paper, as the Rural. It has always maintained a high moral standard. No profane trifling or sneers at religion, are allowed a place on its pages.

News Paragraphs.

☞ The New Haven Register says that in pulling down a very old house in North Haven, belonging to Harvey Stiles, coins were found in the crannies, one of which, a little larger than a silver dollar, is of a mixture of metals, but looks like iron—having a lion (rampant) for a device, and bearing date 1647. A small gold coin, supposed to be of the reign of George First, and several old coppers, are among those found.

☞ The jail in Geneseo caught fire on Tuesday evening of last week. The fire was so located that all attempts to get at it were baffled, and it spread considerably before it was checked. Finally it was extinguished, with a loss of not more than $300 or $100. The prisoners were shackled and preparations made for their removal.

☞ The Fitchburg Sentinel says that during the snow storm of Monday, Dec. 26, a flock of robins, some 50 in number, made their appearance, and passed the day in the south part of the town. A much larger flock was observed on the same day in the vicinity of Princeton.

☞ The number of students in attendance upon the lecture at the four Medical Colleges in Philadelphia, is between 1,400 and 1,500, viz: 620 at the Jefferson, about 500 at the University, and about 200 at the other two colleges—the Pennsylvania and the Philadelphia.

☞ The mercantile navy of the United States is at present greater than that of the United Kingdom of Great Britain, and the tonnage of the single city of New York is within a trifle of being equal to that of London and Liverpool put together.

☞ The weather at St. Louis, Jan. 22d, was very cold and the river so frozen that teams crossed it with safety. About 200 boats were at Cairo, waiting for the river to open. A large number of emigrants were also there in a destitute condition.

☞ The subscriptions in New York, Jan. 21, for the San Francisco testimonials amounted to nearly $13,000. In Boston also five thousand dollars have been already subscribed for the noble fellows who rescued the San Francisco's passengers.

☞ The passenger depot of the Michigan Central R. R. at Detroit, took fire at 12 o'clock on the night of Jan. 23. All the offices in the building were burnt, but the flames were prevented from spreading to the freight depot.—Loss about $5,000.

☞ The preliminary survey for the ship canal route, was commenced on the 10th inst. The route, as contemplated, will commence on the Niagara river at the foot of White's Island, and continue to the Eighteen Mile Creek, near Lockport.

☞ Omar Pacha, the Turkish commander of the fleet destroyed by the Russians at Sinope, was found lying on the deck of his frigate with his leg broken, and his head terribly wounded. He is now a prisoner in the arsenal at Sebastapol.

☞ Gov. Ligon was inaugurated at Annapolis, Jan. 11. In his Inaugural Address, which is short, he takes ground in favor of the Public School system, and in other reforms of the new Constitution.

☞ A Proposition has been started in New York, to alter the mode now adopted by physicians in making their charges. It is that they abandon the credit system entirely, and require payment for each visit at the time it is made.

☞ Two hundred and thirty-six and a half miles of Croton pipes underlie the dirty pavements of New York, carrying through all the crowded streets and reeking gutters a ceaseless tide of pure, health-giving water.

☞ The District Court of the United States has granted an injunction to restrain the construction of a bridge across the Mississippi at Rock Island. This injunction will, in all probability, be rendered perpetual.

☞ Gov. Ujhazy, from his Western home, has recently declared his readiness and that of his son, to place themselves at the disposition of Kossuth, at any time when their services may be required.

☞ Gov. Clifford, of Massachusetts, was a poor boy. The daughter of a millionaire rejected his suit when a young man, and lived to see him Governor at the age of 42. He is one of the most accomplished men of these times.

☞ The whole number of accidents of all kinds, to steamboats, during the year, was only 31. There were only 819 killed and 150 wounded—an amount much smaller than in preceding years.

☞ The awards of the juries at the Crystal Palace are announced. The whole number of silver medals awarded is 115; of bronze, 1,186. The number of exhibitors who received honorable mention is 1,210.

☞ The bill to repeal the Rhode Island Liquor Law and substitute a license, with no liquor to be drunk on the premises, was laid on the table in the Senate Jan. 20th by a test vote of 17 to 9.

☞ A clergyman in Cleveland, in his sermon, recently remarked that property was as well protected in Honolulu as in the cities of Buffalo and Cleveland, and much better than at home points between the two cities!

☞ The timber seized since July 1st on the Wisconsin and Chippewa rivers, as having been feloniously cut on government land, amounts to sixty millions of feet, and is valued at from $250,000 to $300,000.

☞ Considerable excitement attended the departure of the Baltic, owing to the rumor that Bedini, the Pope's Nuncio, was going out in her. Several thousand were on the dock, but nothing was heard of the Nuncio.

☞ It is reported that the brig Mary Jane, bound from Dublin for New York, with passengers, has gone ashore near Halifax, and that out of 150 souls on board only six were saved.

☞ The Roman Catholic Bishop of Montreal has issued a pastoral condemning table moving as a practice, if not absolutely sinful, at least dangerous and liable to lead to abuse.

☞ The fashionable boots now worn by Parisian ladies are made of morocco, with kid tops, high heels, thick soles, and buttoning up at the side like gentlemen's.

☞ The New York Times says that one of the Mutual Marine Offices, discouraged by the recent disasters by fire and shipwreck, is about to wind up its affairs.

☞ A train of forty-two cars came down from Columbus, over the Columbus and Xenia and Little Miami railways on the 5th inst., having on them 2,761 hogs.

News Brevities.

—The Great Western Railroad will be completed in about a week and open for travel.

—Thursday, April 13, has been appointed Fast Day in New Hampshire.

—There are 1,406 physicians in Massachusetts, which is 1 to every 707 of the inhabitants.

—The population of the Russian Empire is said to be 65,199,598.

—A ship canal from Cayuga lake to Lake Ontario is talked of.

—The cholera is raging frightfully at St. Thomas, West Indies.

—There are five persons now confined in the Erie county jail charged with murder.

—A Professor of Chinese has been added to the University of Oxford, England.

—The Millerites are about to start a paper at Lowell, Mass., called the "*World's Crisis*."

—Capt. Watkins, the heroic Commander of the San Francisco, is a native of Maryland.

—Gen. Armstrong of the Washington Union, is reported to be very ill.

—There are thirteen papers published in Constantinople, six in Smyrna, and one in Alexandria.

—M. Alexander Bodisco, the Russian Minister, died at his residence in Georgetown, D. C., Jan. 23.

—Women are still wanted in Victoria, Australia, as an excess of 55,000 men appears in the population.

—The steamer Geo. Law for Aspinwall, and Star of the West for San Juan, sailed from New York on the 21st.

—Nathaniel Blake, Whig Senator from Aroostook, reached Augusta, Me., by traveling ten miles on snow shoes.

—A baby scarce two months old was received in Louisville the other day by Adams & Co.'s Express.

—It is said that a pendulum, to vibrate once an hour, must be 85 miles longer than the diameter of the earth.

—There are three States which have no debt, viz: Vermont, Delaware and Florida—Pennsylvania has the largest debt—$11,512,875.

—"Kuchfoony" is the name of a new county just formed in Georgia by the legislature of the State.

—A Down-east editor asks his subscribers to pay up that he may play a similar joke upon his creditors.

—The Californians pronounce the gold "halves" and "quarters" which they have recently made, "inconveniently small."

—A regular passenger train commenced running Monday between Niagara Falls and Detroit, over the Great Western Railroad.

—A Monument to Franklin is to be erected in Boston. The mechanics of that city have taken the preliminary steps, for that purpose.

—The amount of duties collected at the Port of Hamilton, C. W., during the year ending January 5th, 1854, was £120,000.

—The small pox is prevailing to a considerable extent in various places in Massachusetts.

—There were two thousand participants in the Railroad Banquet at Detroit, on Tuesday evening of last week.

—The Utica papers say the Central R. R. Company intend erecting in that city an elegant station house 1200 feet long.

—A man and woman have been arrested in Davenport, Ill., for passing counterfeit $10 bills on the Rochester Bank.

—It is estimated that 1,500,000,000 eggs are consumed annually by the population of Great Britain—or about 75 to each person.

—There has been a revival of religion in the Kentucky State Prison, and Rev. T. D. Black baptized seven prisoners one Sunday.

—A rural cemetery has been provided for at San Francisco, and 225 acres of land purchased for that purpose.

—The Governor of Louisiana is reported to be strongly in favor of the annexation of Cuba, and urges it in his Message.

—Immense icebergs have been fallen in with, in the Atlantic, lat. 44-45 N., 48.30 W. One of them towered above the water full 100 feet.

—The city of New Bedford is to be lighted with oil instead of gas as heretofore, as a matter of economy.

—The New York Central Railroad Company have declared a dividend of five per cent., payable on the 1st of February.

—On the 20th of January, a dry goods store in Albany, was robbed of silks and velvets to the value of $5,000 or $6,000.

—A petrified man is attracting the attention of the curious in Baltimore. It is the body of a man found buried six feet in guano, on the Island of Ichabue.

—The remains of the brave Count Pulaski, who fought so gallantly in behalf of American liberty, have been discovered at Savannah, Georgia, after a long search.

—One of the bridges built by the Nicaraugan Transit Company on the road leading from Lake Nicaragua to San Juan del Sud is made entirely of mahogany.

—It is said a fund of $100,000 has been raised at Washington, by the assignees of three patent rights, to induce Congress to extend them for seven years longer.

—Gov. Hunt has given the Genesee College, situated at Lima, $100 to be applied to the Library Fund. The Governor is one of the Trustees of that Institution.

—The collection of letters written by Charles the First during his imprisonment at Carisbrooke Castle, to Sir William Hopkins, have been sold for fifty-one guineas.

—A suit is now on trial against the city of Philadelphia, to recover the value of property destroyed by fire in consequence of the city neglecting to secure the fire-plugs from freezing.

—A private letter to a gentleman in Portland, Me., states that during the late terrible storm a mail-carrier between Ellsworth and Machias was devoured by wolves.

—Two Scottish ladies travelling in Austria were recently arrested by the police, and narrowly escaped imprisonment, for having in their possession a copy of Punch.

—The mob at Erie, Jan. 21, hung in effigy J. H. Walker, one of the directors of the Erie and North East road. The effigy was labeled "The Father of the Gauge Law."

—A despatch to the Buffalo papers, from Pittsburg, states that Kilpatrick, and other leaders of the Erie Rioters, have been discharged from custody, probably upon bail.

Foreign Intelligence.

Arrival of the Niagara.

HALIFAX, Jan. 23.—The Royal Mail Steamship Niagara, Capt. Leitch, from Liverpool, Jan. 7th, arrived at this port this A. M., and reports unusually heavy weather during her passage, which has been prolonged to sixteen days. She will be at Boston on Wednesday noon.

Great Britain, Belgium and France have been visited with the heaviest snow storm experienced for several years.

The Collins Steamship Atlantic, from New York, Saturday, Dec. 24th, arrived at Liverpool at 2 P. M., Jan. 5th.

The screw steamship Andes, from New York Dec. 17th, arrived at Liverpool on Sunday, the 1st inst.

The intelligencer from Constantinople and St. Petersburgh, continues to be as contradictory as ever, but the latest rumors are of a character to learn, in the estimation of the public, scarcely any hope that the Czar will accept the proposition of the Western Powers, and this view of the matter is very universally entertained at Constantinople. As a natural consequence of the greatly increased probabilities of a general European war, the English stocks and breadstuff markets have been greatly excited, and Consols closed, on Friday, at a decline of $\frac{7}{8}$ per cent. on the week.

LATER.

The Czar is indisposed to accept the new note of the great powers, but will hear the propositions of Turkey for a settlement of the difficulty. He holds the issue to be one wholly belonging to Turkey and Russia. The Sultan has accepted the note of the allied powers. His council were not harmonious on the subject, and a public outbreak at Constantinople was seriously threatened, but matters were subsequently quiet. The Sultan continues to insist that the Principalities shall be evacuated by Russia as a *sine qua non* to new negotiations.

The London Observer says agents are on the way to the United States to purchase ships and arms, privately, for Russia.

Up to Dec. 25, the allied fleets had not entered the Black Sea, owing to tempestuous weather. The instructions to the fleets are, that in the event of meeting Russian ships of war, they will in the names of their respective governments, request the Russian officer in command to return with his ship or ships to Sebastopol, where he will find further instructions from his government. On refusal to comply force will be used.

Russian statements assert the entry of the fleets would be the signal for simultaneous outbreaks in India, Algeria, Greece, and a Greek insurrection throughout the Turkish Empire.—All being already organized by agents of the Czar.

The French Government has addressed a circular to all its European reporters, in regard to the threatened wars.

The Times correspondent reports that when required 70,000 Frenchmen will be ready for the camp.

A report from the War Department states that the number of men available for arms in France in the event of a general war is 1,250,000 for land service.

The Patria and Bulletin gives a report that the Czar had given orders for immediate preparations for crossing the Danube; if this be true it indicates that the Czar had rejected the proposition of the Four Powers.

In England the utmost indignation has been aroused against Prince Albert, who is openly accused of betraying the secrets of the Ministry to the Czar of Russia.

MARKETS.

The breadstuff market through Great Britain has been more excited than at any previous time since the great famine in Ireland, and prices had largely advanced.

The advance on flour, for the week, is quoted by some respectable mercantile houses at 3s per bbl., and none quote the actual advance at less than 2s.

Wheat has also advanced almost beyond precedent, ranging from 10d. to 14d. per bushel of 70 lbs.

The market for Indian corn is less excited than the flour market, but prices have been advanced since the sailing of the Europa, from 18d. to 20d. per quarter of 480 lbs.

The cotton market continues firm at previous quotations, with transactions to the extent of about 10,000 bales for the week.

The provision market continues quiet without any material change in prices.

A BUTTERED TOAST.—In making up our outside pages, the sentiment given by the foreman of the RURAL office at the Franklin Anniversary, was omitted. As it embraces an admonition to those who complain of errors of the press—including some of our good friends—we publish for the edification of all interested:

By SAMUEL M. RAYMOND.—*The Author and the Compositor*—If the former be not critically exact in his compositions, he casts the blame for printed errors upon the latter. His hieroglyphics in English, which none but himself can decipher, and "quail-tracks" in *foreign languages*, which would scarcely be recognized by the best linguist, subject the compositor to unrequited mental toil, exhaust his patience, and rob him of time which is to him almost invaluable. Let the *copy always be faultless*, and the printed page will approximate to the author's idea of perfection.

RAILROADS.—The Railroad Journal for January, 1854, states that the aggregate length of Railroads in New England is 3,297½ miles.—New York roads 44, aggregate length 2,473 miles; Pennsylvania roads 50, aggregate length 1,316 miles; Ohio roads 30, aggregate length 1,757 miles; Indiana 18 roads, aggregate length 1,208 miles; Michigan roads 6, aggregate length 631 miles; Illinois roads 14, aggregate length 759 miles; Wisconsin 1 road, 80 miles in length; Virginia roads 21, aggregate length 1,077½ miles. In the United States there are 17,776 miles of Railroad in operation. The number of miles completed January 1, 1853, was 13,266; January 1, 1852, 10,843.

RAILROAD DEBT.—The shareholders of the Buffalo and New York City Railroad met at Warsaw a few days since. The cost and condition of the road are as follows:—Capital stock paid in $700,000; first mortgage bonds $100,000; first mortgage from Attica to Buffalo $500,000; income bonds $160,000; floating debt about $1,200,000; total, 92 miles $3,260,000. A debt of $2,560,000 on less than a hundred miles of road is running the credit system for building railroads into the ground.

California News.

Arrival of the Northern Light.

NEW YORK, Jan. 24th.—The steamship Northern Light from San Juan arrived here this morning with California dates to the 31st of December, 313 passengers and $850,000 on freight brought down the Pacific by the Bin, Jonathan.

The steamer Sierra Nevada with the New York passengers of Dec. 5th arrived at San Francisco Dec. 31st.

The steamer Oregon left San Francisco on the 31st ult. for Panama with 100 passengers and $100,000 in gold and the mails.

SUMMARY OF CALIFORNIA NEWS.

In Klamath Valley there is pretty strong feeling for the formation of a new state, to reach from the Trinqua to Cape Mendocino.

There is some excitement prevailing on the subject of land speculation practised under the school land warrants, issued by the State, and memorials will be addressed to Congress on the subject.

The farmers are sowing a great deal of wheat, especially in the southern part of the State, which now begins to prosper as a farming country.

A singular mortality is raging among birds and beasts.

The surveying party sent out by the Railroad Convention, who examined the Sierra Nevada, at the head of the Stanislaus, have reported that there is a practicable pass there. All the Pacific R. R. Surveying parties have arrived. The engineers speak highly of the Southern route, and general opinion in the State was in its favor.

Lieut. Parker has started overland, by the Gila, for Washington.

The exports of gold for the year, as manifested in the Custom House, were *sixty-seven millions, eight hundred and seventy three thousand, five hundred and five dollars.*

THE MINES.—The weather has been delightful during the fortnight, except one or two days of rain. The miners are very much disappointed, there being for them enough water to fill the canals, or to permit washing in small gulches.—The dry weather, however, has driven the miners to work in the banks, which in some places have been found to be very productive.

LOWER CALIFORNIA.—We have dates to La Saile to the 16th. The accounts received are very contradictory. All agree, however, in saying that the filibusters were besieged in the Adobe House, by about 100 Mexicans and Indians, from the 5th to the night of the 14th, when there being a cold rain falling, a party of the filibusters, attacked the chilled and drowsy besiegers, who fled, leaving arms, horses, a brass field piece, and all their camp equipage.—The filibusters deny having robbed and pillaged the natives.

It is expected that companies to reinforce the Filibusters are in the course of formation at several points in the interior. Reports in circulation that another vessel is being fitted out, but it is doubtful, since public opinion and the press are disposed to consider the expedition and its objects as criminal, not by the letter of the law only, but likewise by the spirit.

THE MARQUIS OF TURGOT HAS BEEN rewarded by Louis Napoleon with a higher rank in the Legion of Honor, for his chivalrous conduct in the Soule affair. There is no reason for giving credit in the rumor that Mr. Soule had fought another duel with the Duke of Alba, ending in his own death.

Commercial.

BUSINESS AND FINANCE.

According to the foreign intelligence brought by the Niagara which arrived at Halifax on Monday, the prospects of a general European war, are much more imminent; and British Government securities declined in consequence in the market, one per cent. on the eve of the steamer's departure. The tendency of these events may be, the turning of attention to American securities, as the governmental most likely to maintain both its credit and its neutrality.

Bullion, of an amount scarcely worth mentioning in comparison with the usual terminate business in transatlantic exchanges, has left our shores during the past week.—The Canada, from Boston on the 18th, took out but $131,600 in specie, and the Baltic, from New York on Saturday, had but $4,000 on her manifest. The feverish excitement and high prices of breadstuffs, and the prospective foreign demand for them, will have a tendency to check the flow of specie abroad. No arrivals of gold from California since our last. There has now intervened a period of some weeks since the golden stream ceased to flow across the Isthmus. We may look for it to commence again ere long.

It appears from a statement made in the Legislature by Mr. CONKLIN, a member from New York, that the debts of that city stand as follows:

Amount of City Permanent Debt	$13,960,858
Fund Debt	950,000
Total City Debt	$14,910,858
RESOURCES.	
Stocks held by Commissioner's of Sinking Fund,	4,637,148
Balance against the city	$10,273,708

The New York Central Railroad Company have finally declared their dividend from the earnings of the past nine months. It is 5 per cent. and payable on the first of February. The following is a brief statement of the business of this gigantic corporation. Gross receipts for the nine months:

From passengers	$2,410,435 26
For freight	1,512,427 85
Total receipts	$3,921,863 11
Disbursements, including specl expenditures,	2,042,328 25
	$1,859,643 86
Deduct nine months interest, at 6 per cent., on debt certificates ($3,885,210) and on debts of the old companies assumed under the consolidation agreement ($1,861,823.) in all say $5,747,033	$453,016 49
Proportion of sinking fund for 9 months to pay debt certificates at the rate of 1¾ per cent., per annum	83,298 84
	566,915 33
Total receipts for nine months, after payments as above	$1,313,619 52

The dividend amounts in the aggregate to $1,100,000, thus having a surplus undivided of about $200,000 besides the sum specified above as set apart for the sinking fund.

Great attention has of late been paid to the subject of copper mining in the Lake Superior region. Some of the companies are reaping *copper-harvests*, which are speedily converted into gold; and on the success of these, many speculative companies have sprung into existence, some of which as an investment are, to say the least of them, problematical. There is no doubt however, that the Lake Superior region is one of the richest in mineral treasures upon the continent, not even excepting California.

P. S.—Since the above was written and in type, the telegraph announces the arrival of the San Juan steamer Northern Light, having on board $550,000 in gold, and also, that a steamer is Isthmus bound from San Francisco, with $400,000 more.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, }
Rochester, Jan. 25th, 1854. }

THERE has been another enormous rise in breadstuffs, in consequence of the news recently brought over by the Niagara. Flour rose at a single jump, in our market, a dollar a barrel, and Wheat twenty-five cents a bushel; so that the farmer may now be quoted at $9, and the latter at $2 with no sales of any amount at that. The readers of the RURAL will recollect our market reports and remarks thereon have pointed to such a result. Taking the greatest pains to make our reports reliable, and using all available means in our power to make our statements conform to facts, it is always gratifying to observe them sustained by results; farmers may depend upon no pains being spared to give true quotations.

Mess Pork is quoted a dollar per barrel higher, and pork in the hog is also going at better prices, selling to-day at $5,75@6.

Rochester Wholesale Prices.

Cows range from $12 to $36 each.

Hogs are selling at $6@6,50 ₱ 100 lbs.

Sheep and Lambs—Sales of 1,100 at $2@3 each, as to quality.

CANAL ELECTION.—The Amendment to our State Constitution authorizing the Speedy Completion of our Unfinished Canals has been perfected so far as the Legislature can do it, and now only requires the People's Ratification; for which purpose a Special Election will be held throughout the State on *the third Wednesday* (15th) of next month. Let the people be ready and sanction the amendment!

PROCLAMATION.—President Pierce has issued his proclamation against the expedition now being fitted out in California and elsewhere in the United States, with a view to the invasion of Mexico, and calls upon all good citizens to discountenance, and by all lawful means to prevent, such unlawful and criminal enterprises.

☞ Cassius M. Clay, recently drove home from the Cincinnati cattle market a cow and a calf for which he paid $2,300.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ TO CANADIANS.—As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 26 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 in 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—and no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ In remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ M. C. MOORE, is duly authorized to act as Agent for the RURAL NEW-YORKER in the counties of Chautauqua and Cattaraugus, N. Y., and Warren, Pa.

☞ Persons who have forwarded $15 for a club of ten, can extend the number to TWENTY for $10, but all the subscribers must begin at one date.

☞ It is not necessary that all members of a club receive their papers at our post office. We send to as many offices as necessary to accommodate the subscribers.

☞ The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

☞ PERSONS inlisted to such premiums, will please refer to the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ ALL business letters, communications, &c., should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary Journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) in the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence to support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Agr'l Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of THE WOOL GROWER AND STOCK REGISTER—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies ($15,) an extra copy of the RURAL and three volumes (present) of the WOOL GROWER—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for SIX copies ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1845 or '49 as preferred.

ALL compilers for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, or a year $5. Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for Premiums, or who desire to extend the circulation of the NEW-YORKER. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

JOHN PHIN, Consulting Engineer, Draughtsman, Patent Agent, &c.—Rooms 16 Buffalo st., Rochester, N. Y.

☞ For details of business, and information on Patents, see circular sent free on application. 212-26t

---

SHORT-HORN BULLS AND SUFFOLK PIGS

FOR SALE.—I have three One-Year old Bulls for sale, got by my imported Bull *Vane Tempest*—colors, Roan and Red. Also, a few pair Suffolk Pigs, bred from my imported stock.

J. M. SHERWOOD.

Auburn, N. Y., Jan. 20, 1854. 212-3t

THE HORTICULTURIST,

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly Illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, JR., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January, January 1, 1854.

Advertisements.

ROVEY'S MAGAZINE OF HORTICULTURE.

NEW VOLUME FOR 1854.—The January Number commenced the Twentieth Volume of this old and established Magazine. It is entirely devoted to the diffusion of information in every department of Horticulture. Its contents embrace:—The Science of Cultivation; Descriptions of new Fruits; Pomological Gossip; Notices of New Trees, Shrubs, &c.; Notices of New Flowers and Plants; Notes on Gardens and Nurseries; Improved Modes of Culture; Construction of Hot-houses; Landscape Gardening; Reviews of Works on Gardening; Chemical Notices; Foreign Notices; Domestic Notices; Replies to Questions; Reports of Horticultural Societies; Massachusetts Horticultural Society.

And to facilitate cultivators in their labors, a *Monthly Calendar of Horticultural Operations*, given in detail, and adapted to the wants of amateur cultivators, reminding them of the nature of operations which are necessary to be performed in the Fruit Garden, Flower Garden, Ornamental Grounds, Greenhouses, Grapery and Kitchen Garden through the varying seasons of the year.

In the past nineteen volumes, more than *five hundred drawings* of the newest and finest Fruits have appeared, many of them in no other work, and upwards of fifteen hundred other engravings, illustrating the great variety of subjects treated upon.

The Magazine is published in monthly numbers, of 48 pages each, besides advertisements, printed on fine paper, and handsome type, and illustrated with numerous engravings.

TERMS, $2 a year in advance. Address

212-1t ROVEY & CO., 7 Merchants' Row, Boston.

FARM AND HORTICULTURAL RESIDENCE,

FOR SALE.—DAVID THOMAS, near Aurora, Cayuga Co., N. Y., wishing to retire on account of feeble health from the care of his farm, offers it with all its improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of fertile land, has a spacious and comfortable dwelling, with a laborer's cottage, and various outbuildings, together with extensive orchard and fruit garden, and a large ornamental and kitchen garden—the whole forming a completely furnished, comfortable, pleasant and refined farm residence; and if applied for soon will be sold at the low price of $7,500. For further particulars, apply personally to DAVID THOMAS, on the premises, or to J. J. THOMAS, Macedon, Wayne Co., N. Y. 212-5t.

RAIN WATER FILTERS.

I CONTINUE to furnish Filters as usual, much improved in the inside fixtures, for which I have obtained "Letters Patent." They are now complete and can be sent in any section of country in safety—no family living in those sections of country ought to dispense with them are—as wherever is taken into the circulation, has much to do with health, as a preventive of disease. They have been fully tested by hundreds of our first class citizens, within the last ten years. I make four sizes at $3, $6, $8 and $10 each,—they will last from two to four years without repacking, which can easily be done by any one with proper instructions. Orders for Filters, or Rights of Territory will be attended to at once. JOHN KEDZIE.

Rochester, January, 1854. 212-tf

POLAND OATS—AGAIN.

For sale, a good supply of the celebrated Poland oats, at $1 per bushel, delivered at my residence, or $1,25 if sent by railroad. Each bushel to weigh at least 40 pounds.

41 J. A. CLARK, Marion, Wayne Co., N. Y.

DISSOLUTION OF LIMITED CO-PARTNERSHIP.

NOTICE is hereby given, that the limited Co-partnership now existing between the subscribers, under the firm of DERBY & MILLER, Auburn, and DERBY, ORTON & MULLIGAN, Buffalo, will be dissolved and renewed on and after the first day of February, 1854. And after that date NELSON C. MILLER, of Auburn, and EUGENE MULLIGAN, of Buffalo, each, and they alone, are authorized to sign the names of the Firm in the liquidation of the Co-partnership Business. JAMES C. DERBY,

ELLIOT H. STORKE, NELSON C. MILLER,
EDWARD MENSON, WILLIAM ORTON,
CHARLES F. TUFFIN, EUGENE MULLIGAN,
Special Partners. *General Partners.*

Dated at Auburn and Buffalo, Dec. 1, 1853.

Business Announcement.

J. C. DERBY will establish himself at No. 8 Park Place, New York, as Publisher upon his own account, and will keep on sale the Publications of Messrs. Phillips, Sampson & Co., of Boston, and Miller, Orton & Mulligan, of Auburn and Buffalo.

The other members of the firm, being purchasers of the *entire list of Publications, Plates, Copyrights, Stock, &c.*, will form a Limited Co-partnership, of which due legal notice will be given, and continue the Business as Publishers and General Booksellers, with increased facilities, under the firm of MILLER, ORTON & MULLIGAN,

Dec. 31, 1853. (212-1t) at Auburn and Buffalo.

FARM FOR SALE,

CONTAINING 30 acres, 5 of which are wood land, and 25 under good cultivation. Good house, barn and outbuildings—plenty of good fruit and good water,—one of the most pleasant situations in the county. Situated in Barre, Orleans Co., N. Y., five miles south-west of Albion, and two south of the Railroad. Price, $2,200—one-half or more of which can remain unpaid for a term of years. Possession given when desired. For other particulars inquire of the subscriber on the premises, or by mail, directed to Albion, N. Y. H. D. BENJAMIN.

January 18, 1854. 212-1t*

VALUABLE FARM FOR SALE, IN BATAVIA, GENESEE CO., N. Y.

SITUATED 2½ miles north of the village, on Bank street, containing 126 acres,—a good new dwelling house, a commodious barn and other necessary out-buildings; two orchards with grafted fruit, and some 20 acres of wood land.—The farm is under a good state of cultivation, naturally adapted to the growth of wheat. There are 40 acres of as good looking wheat as can be found in Genesee Co., which may go with the farm. Also, 30 acres well seeded to clover, preparatory for wheat next season, and 12 acres or more plowed, and in good condition for spring crops.

One-third or one-half paid down, and the balance may run to suit the purchaser. For further particulars, reference is made to Hon. E. C. Dibble, Batavia village, Rev. Allen Steele, near the premises, and the subscriber.

271-3t D. C. HUNTINGTON,
Jan. 14, 1854. Lima, Livingston Co., N. Y.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y. 211tf.

SCRIBNER'S READY RECKONER,

For *Ship Builders, Boat Builders, Lumber Merchants, Foresters* and *Mechanics.* Being a correct measurement of Scantling, Boards, Plank, Cubical Contents of Square and Round Timber, Saw Logs, Wood, etc., comprised in a number of Tables; to which are added Tables of Wages by the month, Board or Rent, by the Week or Day, and Railroad Distances. Also Interest Tables, at seven per cent.

By J. M. SCRIBNER,

Author of "Engineer's and Mechanic's Companion," Engineer's Pocket Table Book, etc., etc.

Scarcely is it possible to add to the recommendations of the above book, more than to give its title page. Every one who is engaged in buying, selling, measuring or inspecting Lumber of any kind, will at once appreciate a work of this kind. No pains or expense has been spared in revising and enlarging this edition, to make it in every respect convenient and accurate.

The Log Table was computed by drawing diagrams for each and every log, from 12 to 44 inches in diameter, and the width of each board taken, after taking off the wane edge. The sum total of each board contained for the amount each log will give, and if there can be any dependence placed upon such strictly mathematical accuracy, no one will hesitate for a moment to admit the results here given, as the method adopted by the author can result in nothing else than strict honesty and mathematical accuracy, to the parties interested.

The best evidences of the usefulness and popularity of this book is the rapid and extensive sale of nearly one hundred thousand, since its publication. We do not hesitate to say that no book of its size and price contains more useful or correct tables.

In all new and lumber countries the book will be found very convenient, as it comprises much that is useful for the farmer, mechanic, and business man.

Orders solicited, and a liberal discount made to wholesale purchasers.

Price, 25 cts. at retail, 5 copies for one dollar, sent postage paid, on receipt of the amount.

Address GEO. W. FISHER, Publisher.
Rochester, N. Y., 1854. [209-4teow]

GENUINE COCHIN CHINA FOWLS.

I HAVE for sale, by the pair, young Cochin China fowls, warranted genuine, and desirable for their symmetry, great size and beauty of plumage. They are of the purest, largest and best importations in the United States. The genuine Cochin Chinas have no superiors. Circulars, with a large illustrative engraving, sent to applicants. Eggs being on the New York Central Railroad, fowls can be forwarded by Express, daily, to all parts of the country. Address, post paid, RODNEY L. ADAMS, Lyons, N. Y.

[209-4teow-2m]

Poetical.

THE SLAVE'S DREAM.

BY H. W. LONGFELLOW.

Beside the ungathered rice he lay,
His sickle in his hand;
His breast was bare, his matted hair
Was buried in the sand;
Again, in the mid and shadow of sleep,
He saw his native land.

Wide through the landscape of his dreams,
The lordly Niger flowed;
Beneath the palm trees on the plain,
Once more a king he strode;
And heard the tinkling caravans
Descend the mountain road.

He saw once more his dark-eyed queen
Among her children stand;
They clasped his neck, they kissed his cheeks,
They held him by the hand—
A tear burst from the sleeper's lids,
And fell upon the sand.

And then at a furious speed he rode
Along the Niger's bank;
His bridle-reins were golden chains,
And, with a martial clank,
At each leap he could feel his scabbard of steel
Smiting his stallion's flank.

Before him, like a blood-red flag,
The bright flamingoes flew;
From morn till night he followed their flight,
O'er plains where the tamarind grew,
Till he saw the roof of the Caffre huts,
And the ocean rose to view.

At night he heard the lion roar,
And the hyena scream;
And the river horse, as he crushed the reeds,
Beside some hidden stream;
And it passed, like a glorious roll of drums,
Through the triumph of his dream.

The forests with their myriad tongues,
Shouted of liberty;
And the blast of the desert cried aloud,
With a voice so wild and free,
Till he started in his sleep and smiled
At their tempestuous glee.

He did not feel the driver's whip,
Nor the burning heat of day;
Death had illumined the Land of Sleep,
And his lifeless body lay,
A worn-out fetter, that the soul
Had broken and thrown away.

Rural Sketch Book.

CAN'T AFFORD IT.

"Can't afford it! Too many mouths to feed—too many backs to cover. It's a luxury I should like very much to indulge in—no man fonder of reading than I am—but I can't afford it, sir."

"It's only three dollars a year. Less than sixpence a week."

"I know. But three dollars a year will buy a half barrel of flour and give my family bread for a month. It's no use to talk, my friend.—I know exactly my own ability, and know that I can't afford to take the magazine."

And thus Mr. Rivers closed the matter with the persevering canvasser, who was industriously trying to add to the circulation of a highly popular magazine.

"I think you might have taken it, papa," said Mary Rivers, greatly disappointed, "I never see a magazine or a newspaper, unless I borrow from June Tompkins, and I know that her father grumbles at her whenever he catches her lending them."

"I might do a great many things, child, if I was made of money, which I am very sorry to say is not the case," returned Mr. Rivers. "If I could afford it, I would take all the newspapers and magazines in the country; but I can't, and so that ends the matter."

And thus ending it, Mr. Rivers turned away from his disappointed daughter, and left the house.

Mary Rivers was extremely fond of reading, and had time and again begged her father to take some of the magazines or papers, but his uniform answer was, "I can't afford it;" so she was forced to borrow from Jane Tompkins, whose father subscribed for half a dozen, and thought the money well laid out. To have to borrow she thought bad enough, but the worst of the matter was, that no sooner did she bring a newspaper into the house than it was seized by one hungry member after another, always including her father, and its contents devoured before she could get a chance to read half a dozen lines. The newspaper or magazine, as the case might be, never passed through the entire family without being considerably worse for wear. The papers were soiled, rumpled, the folds torn through, and the magazine sent home often sadly disfigured. All this to Mary was very mortifying, and often prevented her from asking to borrow the new numbers of a magazine, though to use her own words she was "dying to see them."

It was a warm day in July, and Mr. Rivers, who had about six months before joined the temperance society, felt very dry as he walked along the street. Before joining the society he would have quenched a similar state of thirst with an iced punch, or a mint julep. Now he merely stepped into a druggist's and called for a glass of mineral water, and paid his 6p, thinking, if he thought at all about the expense, that it was the merest trifle in the world.

An hour afterwards he indulged in a couple of oranges, at four cents apiece, which tempted him as he passed a fruit stall.

"Rivers," said a neighbor, stepping into his store after dinner, "It's terrible hot, and as there is nothing doing, I have made up my mind to take a little excursion on the river in the steamboat that leaves at four o'clock this afternoon. Come, go along, won't you?—We can get home by tea time."

"I don't care if I do," replied Rivers; "I want a little recreation, badly."

A thought of the expense, or whether he could afford it, never crossed his mind.

At four he was on board the steamboat, after he had spent a shilling for cigars, which were shared with his friend.

"Come, let us have a glass of lemonade," he said, shortly after they were on board the boat; and the two men went to the bar and each drank a glass of cool lemonade, for which Rivers settled. Shortly after the fare was called for. It was only twenty-five cents.

"Cheap enough," said Rivers.

"Yes, cheap as dirt. No wonder the boat is crowded."

Twelve and a half cents more were spent by Rivers for an ice cream, before he returned from the excursion. He could afford all this very well.

On arriving at the city between seven and eight o'clock in the evening, as he had been enjoying himself so well, he ought to take something home to his family that was nice.—While wondering what it could be, he passed a fruit shop, in the window of which there was a display of oranges.

"I'll take a dozen oranges home, that will do," said he.

And so he went in and took a dozen of the oranges, for which he paid thirty-seven and a half cents; and bought besides, a fip's worth of tobacco.

The extra spending of Mr. Rivers, who could not afford to take a magazine, was for that day just one dollar and twenty cents, or at the rate of three hundred and sixty dollars a year! Yet Mr. Rivers thought himself an economical man, and took merit to himself for saving on newspapers and magazines.

On the next day, Mr. Rivers felt that he needed a little exercise—he was so closely confined in his store—and as it was dull, he could as easily be spared as not. So he hired a horse and sulky for a dollar and a half, and took a pleasant ride to himself. Previously to his riding out he spent a shilling for mineral water; during the ride he paid to gate-keepers, stable boys where he had stopped for lemonades, and for what he drank and smoked, just thirty cents. Ten cents in cakes for the children, laid out to satisfy the rather unpleasant sensation he felt at the idea of having indulged himself in a ride while his family remained at home, completed this day's extra expense of a man who could not afford to take a periodical; the whole amount was just two dollars.

On the day succeeding this, fifty cents were spent in little self indulgences, on the next twenty-five cents, and on the day after nearly a dollar. And so it went on day after day, and week after week, while Mary continued to borrow from Jane Tompkins her magazines, papers and books.

One day, shortly after the new magazines for the month had been announced, Mary called as usual upon her friend Jane. On her table lay "Godey's" and several other magazines.

"How much I do envy you," she said "what would I not give if my father would take the magazines for me as your father does for you; but he always says he cannot afford it."

Then Mary turned over magazine after magazine, examining and admiring the beautiful engravings. When she was going away she said, "Are you done with the Lady's Book, yet?"

Jane looked slightly confused as she replied—

"I have read it, Mary, but papa isn't done with it."

"No matter—either Graham or Putnam will do."

"I am sorry, Mary, but I cannot let you have either of them," said Jane, while the color rose in her face; "the fact is, Mary, to tell you the plain truth, papa has objected for a good while to my lending my magazines and newspapers, and now positively forbids my doing so. But you can come and see me and read them here. I shall be glad to have you. But I need not say that—you know I will. I wish papa was not so particular; but he is a little curious about such things."

Mary felt hurt, not with Jane, but with the fact. She went home feeling very badly.

"Your friend Miss Rivers, did not get her usual supply of reading," said Mr. Tompkins to his daughter, shortly after Mary had left the house.

"No, and I was sorry for her," replied Jane. "She seemed mortified and hurt when I told her that I could not lend them; I am sure, papa, it would not have hurt us at all, and it would have been such a gratification to her."

"Let her father subscribe for them, as I do; he is just as able."

"But he thinks he can't afford it, and now"—

"Thinks he can't afford it, indeed!" said Mr. Tompkins. "A man who pays two or three hundred dollars a year for self indulgences of one kind or another, talking about not being able to afford newspapers and magazines for his family! Why, it costs him more for tobacco and cigars, than it does me for periodicals."

"Still, papa, it is hard for Mary to be deprived of them. It isn't her fault. She says she often begs him to take them for her, but his only reply is that he can't afford it."

"If she were the only one concerned, Jane, she might have them with pleasure, but she is not. It is plain from the condition in which the magazines have come home, that they have gone through the hands of the whole family. That Mr. Rivers indulges in reading at my expense, I am very well satisfied, for I have seen my periodicals at his store more than once."

"Yes, that's the worst of it."

"Besides, Jane, I am not perfectly clear in my own mind that it is honest towards the publishers to encourage anything of this kind. They go to great expense and labor in getting up their works, and certainly give the worth of their money to each subscriber. If every subscriber lends to his neighbors, who are perfectly able to subscribe themselves, and who would do so if they could not borrow, the publishers cannot be sustained, or will receive at least, but an inadequate return. For my own part, there is scarcely anything that I had not rather do than borrow a newspaper or periodical. I have never been guilty of that meanness yet, and if I keep my present mind, never will."

Mary Rivers, as has been seen, went home feeling very badly. The more she thought about what had occurred, the more she felt mortified and really ashamed of herself for having trespassed upon Jane Tompkins for her periodicals and newspapers to such an extent as to cause her father to interfere. For this fact in the case she was not slow to infer.

"Mary," said Mr. Rivers, as he sat that evening, listless for something to read or do, "ain't some of the magazines out for this month?—Hav'nt you got a Gazette, Post or a Courier, from your friend, Miss Tompkins?"

"No, papa," replied Mary.

"I thought you went there, to-day."

"So I did, but Jane says her father has forbidden her to lend the papers and magazines any more."

"He has!" ejaculated Mr. Rivers, with surprise and something of indignation. "Why was that?"

"I don't know, but Jane said she couldn't let me have them any more."

"It's very selfish," said Mr. Rivers, "very selfish! What harm could your reading the magazine do him, I wonder! But that's just like some people! They cannot bear to see others enjoy themselves, and will prevent it if in their power."

Mr. Rivers felt rather uncomfortable about this refusal on the part of Mr. Tompkins. It seemed to him to be aimed at his family. He also felt uncomfortable at the thought of losing his regular weekly and monthly enjoyment of reading the newspapers, "free gratis, for nothing." In fact, this standing of Mr. Tompkins upon his reserved rights had an unhappy effect upon the whole Rivers' family, from the father down to little Tommy, who read the anecdotes, and a story now and then, with as high a relish as any of the rest.

Things remained in this position for two or three weeks, when Mr. Rivers became so hungry for the mental aliment withheld by Mr. Tompkins, that he strained a point, even tho' he felt that he couldn't afford it, and subscribed for a magazine. He brought home a couple of numbers with him, and tossing them into Mary's lap said:—"There's reading for you, Mary, and no thanks to Mr. Tompkins!"

Mary's eyes and face brightened as she caught up the Magazines.

"Have you subscribed for it, papa?" she asked eagerly.

"Yes, dear, you can read your own magazines now."

"Oh! I am so glad," exclaimed Mary, tears starting into her eyes.

Even though he couldn't afford it, Mr. Rivers felt happy to think that he had made Mary so happy. On the next day he thought frequently of the delightful face of his daughter when he told her that he had subscribed for the magazine. Before night he determined to give her another agreeable surprise ere the week was out. It was Thursday. On the next evening when he came home, Mary sprung towards him and holding up a newspaper, said, while her whole countenance beamed with pleasure—"a man left the Gazette here to-day. Did you subscribe for it, papa? Yes, I know you did; your face tells me so!"

"You seem highly delighted about it," Mr. Rivers said, with an impressible smile.

"And so I am, I wanted to see the Gazette badly."

Nor was Mary alone in her expression of pleasure. The younger sisters and brothers were in raptures at the idea of having a Gazette to read that was all their own; and even Mrs. Rivers, who was not of a very literary turn, remarked, on the occasion, that a newspaper was "an excellent thing among children," and that on her part, she always liked to read a little in them now and then, especially in that part containing receipts and other domestic matters. Not for a long time had Mr. Rivers done anything that gave such universal satisfaction at home. Even though he couldn't afford it, he was very far from repenting this act of extra liberality.

Many weeks did not pass before another magazine and another newspaper came to the house, and before six months Mr. Rivers was as liberal a patron of periodicals as Mr. Tompkins, and this although he couldn't afford it.

A year or two have passed, but notwithstanding the heavy additional expense of $20 per annum for magazines and newspapers, the mercantile community have not yet been startled by the announcement of the failure of Mr. Rivers, and we hope never will—at least so long as he takes the magazines and newspapers and pays for them punctually.

We would suggest to the readers of the Rural, the propriety of calling the attention of their borrowing friends to the preceding capital story. It might be advantageous to all parties.—Eds.

THE MAN THAT SLEEPS IN CHURCH.

BY REV. A. L. STONE.

A minister of the "Kirk," in good old Scotland, once discovered his wife fallen asleep in the midst of his homily on the Sabbath.—So, pausing in the steady, and, possibly, somewhat monotonous flow of his oratory, he broke forth with this personal address, sharp and clear, but very deliberate:—

"Susan!"

Susan opened her eyes and ears in a twinkling, as did all other dreamers in the house, whether asleep or awake.

"Susan, I dinna marry ye for your wealth, sin' ye hae'd none! And I dinna marry ye for your beauty, that the hail congregation can see! And if ye hae no grace, I have made but a sair bargain!"

Susan's slumbers were effectually broken up for that day.

One feels sometimes inclined to send sharp words or psalm books, or some other persuasive missiles at the head of a church sleeper, but is deterred by various considerations.

We used to think when we began to preach, that we would defy anybody to go to sleep quietly under our pulpit addresses, and make now and then some very doughty resolves "to keep folks awake, if we had to thunder and lighten for it." But we have long since given that up. People may become accustomed to thunder and lightning, as the Israelites did, lapsing into idolatry at the base of Sinai, when it rocked under the foot of God.

There are different kinds of sleepers in "the great congregation." There is one man who settles himself deliberately to the business, "like a day's work,"—putting himself, with malice aforethought, into posture, his head on its wonted support, his shoulders gently inclined to the right or the left, and "the promises" under his elbow. This is a hardened case, given over, joined to his idol, past cure.

There is another man with whom we always have a deep sympathy. He lends amid his secular business a very active life—a life of incessant locomotion. He can't sit down anywhere without feeling the reaction. He comes into church with a desire to render wakeful worship—to give his most earnest attention to the preached truth. But when the sermon is fairly under way, and labors a little at the foundations of its argument, his drowsiness comes upon him like a strong man armed. He struggles against it with his best manhood. He rubs his eyes. He "blows" his nose. He straightens up desperately. But his enemy is too strong for him. We cannot but be interested in his heroic, though fruitless efforts. We are half moved to call out, "My dear fellow, it is of no use, you may as well give up to it for a little—you have our full and free permission to nap it for eight minutes."

Well, that is about all he wants. He rouses again at the expiration of that time, looking so refreshed that we are really glad for him; and through the remainder of the discourse, nobody listens better.

And here and there we recognize one overcome with the soft potency, whom it is rare to see so subdued. And we charitably understand that he lay awake with the toothache the night before, or watched by the couch of a restless child, or sat by the pillow of a sick friend. He has our consent to be dull, for a space, in his comfortable pew.

It is undeniably true that whatever the type of sleeping, the preacher winces a little under its rebuke. Is he somewhat dull himself? Has he failed to set forth the truth, whose ideal so moved him when he began to write, to the clear discernment and the quickened sensibilities of his hearers? By any personal default, has he robbed his message of its interest and power? Must that occasion go for nothing, or worse, to any for whom he has thought and toiled? Are they getting tired of his voice and his methods? Is he responsible for that lost opportunity?

These queries will make him a little heavy-spirited, perhaps; perhaps, too, they ought to affect him so.

A clergyman whom we know, once stopped in his discourse, as he found his audience sinking from his grasp into too silent a hush, and frankly said aloud, "My dear hearers, I am afraid I do not interest you to-day." And another resorted to another expedient. About midway of his manuscript he closed it suddenly, and gave out a couple of stanzas to be sung by the choir, and then resumed and concluded before a wide-awake audience.

It is difficult to know how to contend against this intruder in the sanctuary. Something may be done by care as to the temperature of the house. Something by a skilful adjustment of the light and shade of the audience chamber. Something by variety of tones in elocution. Something by a caution as to the length of the discourse, by directness of address, by a happy use of illustrations in what are likely to be the heaviest parts of the discourse, by a soul-felt earnestness in every part, by the solemn presence of the Spirit, fervently invoked.

Something, too, the people might do. By care as to the exhausting labors of the day previous—the hour of retiring on Saturday night—the quality and quantity of the Sabbath dinner; by cherishing a sense of common courtesy and good breeding; by a diligently sought spiritual frame of mind; by an awe-breathing consciousness of that Presence into which they have adventured; by a remembrance of the dread day of final account.

There is no infallible specific against dullness, for preacher or people, but a heart earnest and intent upon the business that has gathered them in the sacred convocation, and so garrisoned by the presence and power of the Holy Ghost against whatever influence is hostile to the highest spiritual improvement of the place and the hour.—*Congregationalist.*

Wit and Humor.

At the breaking of the ground for the commencement of the Lynchburg and Tennessee Railroad at Lynchburg, a clergyman present commenced slowly and solemnly to read a manuscript prayer. At the conclusion, an old negro man, who had been resting with one foot on his spade, and his arms on the handle, looking intently in the chaplain's face, straightening himself up, remarked very audibly, "Well, I reckon dat's de fust time de Lord has ever been written to on de subject of railroads!"

A man in Wisconsin, who recently inserted a long advertisement in the papers, offering his farm for sale, closed it in the following sublimely ridiculous style:—"The surrounding country is the most beautiful the God of nature ever made. The scenery is celestial—divine—also, two wagons to sell, and a yoke of steers."

A little fellow, weeping most piteously, was suddenly interrupted by some amusing occurrence. He hushed his cries for a moment: there was a struggle between smiles and tears; the train of thought was broken.

"Ma," said he, resuming his snuffle and wishing to have his cry out, "Ma—ugh! ugh! ugh! *what was I crying about just now?*"

Ariadne:—"When we are told," says Mr. Doron, in the current number of the *Gentleman's Magazine*, "that Ariadne, abandoned by Theseus, was consoled by Bacchus, nothing more, I think, is meant, than that the lady dried her tears and took to drinking."

Youth's Corner.

"(Attempt) the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

HIEROGLYPHIC REBUS.

Our Printer's Devil has caught the Rebus fever, and offers his situation in our office, to any one of the craft who will decipher the following:

HAM$OVACLSOVXECJNV:☞SOVUKR Bill, D.

☞ Answer in two weeks.

ACROSTICAL ENIGMA.

I am composed of 12 letters.
My 1, 2, 6, 5, 2, are found in the ocean.
My 2, 5, 11, 6, is a wild animal.
My 3, 11, 7, 1, 5, 3, is a weapon.
My 4, 10, 1, 6, is the name of the shrub from which indigo is made.
My 5, 3, 2, 9, signifies long ago.
My 6, 4, 1, 3, is a place of rest.
My 7, 5, 11, 10 is a song of praise or triumph.
My 9, 5, 8, 2, is a wild animal.
My 8, 5, 12, 7, 6, 5, is a building.
My 10, 11, 1, 6, is a very useful article.
My 11, 7, 5, is a mischievous animal.
My 12, 11, 10, 1, 7, 6, 5, is a band of soldiers.

My whole is the name of a Revolutionary Officer.

☞ Answer next week.

Answer to Illustrated Rebus No. 5.—*Moore's paper still ahead. Thirty thousand subscribers for 1854.*

The first four correct answers to above were received from S. Sickles, P. P. Strong, E. S. Stanley, and E. McClure—whose names are entered on our books for the Rural three months.

Answer to Poetical Enigma in No. 3.—*Morse's Geography.*

THE YOUTH'S CASKET,

An Illustrated Magazine for the Young. Monthly; Fifty Cents a Year, invariably in advance. E. F. Beadle, *Publisher, Buffalo, N. Y.*

The Third Volume of the *Youth's Casket* commences with January, 1854. The publication has now become well established in the public confidence and estimation, and it is our intention to spare no pains to make it worthy of increased patronage and support. The Casket is devoted to the best interests of the young, combining instruction and amusement, in a style suited to the capacities of those for whom it is designed. Useful knowledge is made attractive by being presented in a pleasant garb, and moral lessons are enforced, not in hard, didactic sentences, but in the form of tales and stories, toward which the youthful mind is instinctively drawn. And the Pictorial Illustrations, which are in profusion in every number, afford great aid in interesting and fixing the attention of the young reader, and in impressing what is read, upon the memory.

The Casket is printed on good paper, from clear type; and is published in monthly numbers of twenty-four pages each, making altogether, at the close of the year, a handsome volume of nearly 300 large magazine pages.

The January number, which commences the volume for 1854, is now ready for mailing; it contains a splendid tinted engraving, entitled, "*Going to School,*" which will form a beautiful frontispiece to the volume.

Terms to Clubs—Invariably in advance.—Seven copies, one year, $5; Fifteen copies, one year, $10; Twenty-four copies, one year, $15.

Agents Wanted.—Respectable and responsible persons wanted, to canvass for subscribers for the Casket, in every town in the United States and Canadas. To whom a liberal percentage will be paid. Specimen numbers supplied gratis. Address, post-paid,

210-3t. E. F. BEADLE, Buffalo, N. Y.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 3 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

Moore's Rural New-Yorker:
A QUARTO WEEKLY
Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, In the Practical Departments:
EDWARD WEBSTER, In the Literary and News Dep'ts.

Corresponding Editors:
J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

Progress and Improvement.

LIME AS A FERTILIZER.

It has been said that "lime is the basis of all good husbandry." Ten years ago, looking at the effect of lime and marl in the improvement of British agriculture, there was much force in the assertion. Modern agricultural practice, the introduction of guano and superphosphate of lime, together with the teachings of inductive science, however, have thrown much doubt on its truth. Certain it is, that in England, at least, the use of lime as a manure is on the wane. It is found that the same beneficial effect can be produced at a much less cost, and, like its sister system, the summer fallowing, it has been, in most instances, superceded. We must not, however, rush to the other extreme and discard the use of lime altogether. There are many soils which are very much and permanently benefited by an application of lime, but we have no rule whereby we can arbitrarily decide which they are. Analysis will not materially assist us. As a general rule, peaty, mucky, or low swampy lands are most benefited, but they require a very large amount to render the application decidedly and permanently beneficial. On such soils, three hundred bushels per acre is ultimately the most profitable quantity to use; and indeed, on all soils where liming is decidedly beneficial, a large quantity should be applied at once.—Oyster shell lime from the fineness of its particles has a quicker effect than ordinary limestone lime, and need not be used in such large quantities. It is plain that liming is an expensive means of enriching the soil, and that it should only be resorted to where other means will not bring about the same result.

Science did not teach the art of liming. It was the result of observation and experience; perhaps originally, like the use of plaster, of accident. And it is somewhat remarkable that science has not yet thrown much satisfactory light on the rationale of the process. There are many theories, all of which have some appearance of correctness, but which are unfortunately contradictory. We shall not stop to examine them all. There is probably some truth in most of them. The three most prominent reasons assigned are, first, lime is a constituent of all agricultural plants, and therefore lime is beneficial. Second, lime by a well known chemical process, renders the insoluble potash of the soil available to plants, and as plants contain a large quantity of potash, it is to be presumed that by liming, which is equivalent to applying potash, we greatly increase the crop. Third, lime greatly accelerates the decomposition of organic matter, changing it into suitable food for plants.

To the first reason we say, that if lime was beneficial, merely from supplying an actual constituent of the plant, one hundredth part of the quantity which experience shows to be best, would be amply sufficient; and a few hundred pounds of plaster, from its greater solubility, would be much better than several tons of lime. Lime, however, is very beneficial in many cases where plaster has no good effect. For these two reasons, we think the benefit of liming is not because it supplies lime to the plant. The second reason assigned is most ingenious, and to some extent undoubtedly true. But we have never seen any good effect follow the direct application of potash to wheat, barley, turnips, &c., while, if the theory is right, it should have given great crops. We come to the conclusion, therefore, that the increase of crops derived from liming, is owing, in a great degree and in most cases, to the increased amount of organic matter, especially of ammonia, which, by accelerating decomposition in the soil, lime renders available to the plants.—There are some objections to this view, but on the whole, it is the only one which we can, at present, reconcile with demonstrated facts respecting the value of ammonia to wheat and other cereal crops.

The old English practice of liming, then, is one of *exhaustion*. It increases the crops, not because it supplies, like barn-yard manure, Peruvian guano, sulphate ammonia, &c., the elements which the plants most need, but because it renders what already exists in the soil available. If these elements were not in the soil, lime, in most cases, would do no good. And it is found that, when land has been once limed, the second application is much less beneficial than the first. Under such circumstances it is not to be wondered at, that, guided by experience and the teachings of true science, the quantity of lime used as manure in England, is less and less every year, while every effort is made to increase, by keeping more stock and purchasing American oil-cake and other cattle foods, the barn-yard manure; and if more than this is required, by buying guano, sulphate of ammonia, &c., which of themselves supply those elements of which the soil is most deficient. We do not anticipate, therefore, that lime, except in rare cases and for special objects, will ever be extensively used as a manure in this country.

BUTTER-MAKING IN WINTER.

We find in the *Maine Farmer* of the 15th ult., a valuable but lengthy article from "Dairyman" on the general subject of Butter-making—especially of setting milk and churning cream in freezing weather. We condense the most important suggestions thereof, for the benefit of our readers.

Setting the Milk.—Experience has taught "our dairymen," that milk must be set either in a warm place, or a cold one where it will freeze, to have the cream rise quickly and freely. If the pans are set in a cool place in the winter, the milk will grow bitter before the cream rises. Put it when it freezes partially or even wholly, and the cream comes up as perfectly as in summer.

To get the cream off of solid ice, let the pan stand a while in a warm room, and it will come off cleaner and easier.

Churning.—Temperature of the Cream.—It is said that the cream should be at a temperature of 55° when in the churn, and this is doubtless correct. How to get it there, and how to know when it is about right, without a thermometer, is explained by the writer before us. The cream is "ice-cream" perhaps, and the manner of thawing it is of some importance. Stand it in the corner by the fire over night, or the cream pot may be set in a vessel of warm water, or the cream may be put in a tin pan, and then placed in a larger pan of warm water, until "the cream feels just the least bit warm to the end of the finger, or *not quite milk* warm" when it is ready for churning.

It should be remembered it is one thing to *thaw* frozen cream, and quite another to melt it. When cream is heated too hot, there is a yellow scum on the top of the cream pot, which is just the same as melted butter. Melted butter can never be butter again, nor can melted cream be either cream or butter—or anything but melted butter, by any process of churning. "Dairyman" explains this as follows:

"Butter exists in milk in very minute particles, diffused throughout the whole mass, and by setting in a summer temperature, or in a frosty room, these particles rise to the surface and form a coating called cream. The butter particles are really little bags or sacks of butter, or butter oil. The little minute bag is a thin film of curd,—just the same thing as cheese curd,—and this bag is full of butter. Now, if you heat the cream of these million of little butter bags too hot, they will parch open, just like parched corn, and the yellow oil will run out, making in one case a scum of melted butter. The only difference is that the cream is not salted, and the butter is. So while *thawing* the cream, you must not set it where it will *melt*, and when you put the pot into *warm* water, you must not have *hot* water. Have the water so that you can hold your hand in it, and do not think of driving business, or you will have a mess of melted cream to float over the butter-milk pot."

When the milk is "just barely milk warm," the churn should be scalded and the cream put in, and then commence churning. The butter will come in ten minutes, or perhaps in five, but butter that comes in five minutes is not as good as that churned double the time. If the milk is too warm, the butter will be white—if a little warmer, it will not come at all—if too cool, it will froth up and not come.

This matter of *frothing* is not well understood by most butter-makers. We copy, therefore, "Dairyman's" explanation:

"If you put the cream into the churn as warm as dishwater, it will not come: in this case let the churn stand open till the cream cools down so as to be the least bit warm to your finger—then the butter will certainly come shortly. But if the cream is cool and not warm at all, then it will not come. *When may you know that it is certainly too cool?* Namely, just when it *froths up a great ways in the churn.* You may churn a week and it will only not come, all the more. So stop at once, turn it out into the cream pot and warm it again, and be more careful; for, if it is *just a little warm*, it certainly will come. Notice. It will almost always froth up three or four inches, but after churning five or ten minutes, the froth looks creamy, and does not rise any higher, then no matter: it will come soon. But if a light, white froth fills the churn, and if, by thrusting your finger down through into the cream, you find the cream cool and even cold, then turn it out—it is of no use to churn. But if there are several inches of froth, and still the cream is really *warm*, then churn away. If the cream is too warm it will not froth at all—not a bubble; and if, on taking off the cover, it steams up well, you had better let the cover be off and cool down till it is just barely warm, then churn. But if it is so very warm as not to froth, and steams so that you can hardly see down to the cream, it never will come so—it must cool down some."

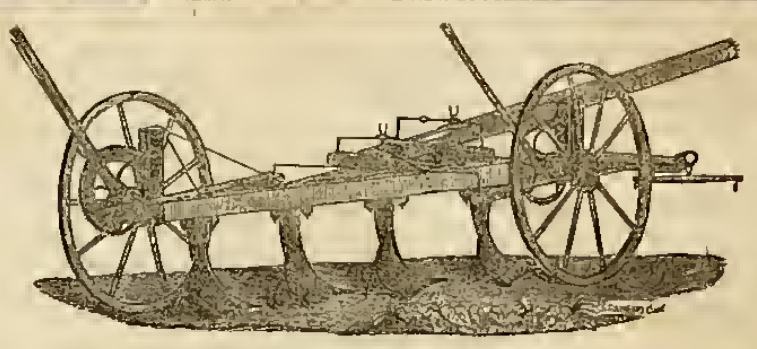
The object of scalding the churn just before putting in the cream, is to warm it—in summer, cold water should be used to cool it. Another thing—the churn must not be too full; there must be room for the dash to break the cream, or the butter cannot be made.

Churns and Churn-dashers.—"Dairyman" likes the common dasher churn better than any other, and a great many butter-makers agree with him. If the cream is right, the butter will come as soon with one churn as another, and the simplest is the best.

It is a fault of most churn-dashers, that the prongs or wings are wider than necessary or useful. With dash prongs an inch and a half wide, the work of churning is much lighter than with them three inches wide, and the butter will come quite as soon.

Working the Butter.—If butter comes white and soft, it is not much matter; the churn should stand open until it cools off, and it should then be taken out, or it may be taken out to cool in the tray for a few minutes, and then be worked and salted. If cooled too long—so as to crumble—put a little milk-warm water to it. In working over the butter a second time, set the butter first in a warm room for three or four hours until it softens.—R.

Plaster for Peas.—A correspondent of the *Country Gentleman*, has used plaster for 15 years on all grain crops, potatoes, &c., and thinks he derived no benefit from it, except on peas and grass. He applied plaster to one ridge of peas and left one without. The one with plaster exhibited a dark green, thrifty appearance, and yielded one bushel and eighteen quarts, while the one, the same size, not plastered, was pale and unthrifty, and yielded two quarts less than a bushel.



PATENT IMPROVED GANG PLOW.

Our engraving represents an improved Gang Plow, patented by Killam & Valleau, of Scottsville, in this county.

The pole has a horizontal motion, with which the wheels are so connected that the machine may be easily turned, the wheel on the outside of the circle adjusting perpendicularly to the beam—the other at the same time forming a pivot on which the plows may turn. The wheels can be raised so as to give the plows any required depth, or lowered so that they can be driven anywhere on the farm. It is said that the wheels keep the plow steady, without holding, in the roughest ground. The draught comes wholly on the beam, consequently there is little strain on the pole, so that it never galls the necks of the team, and thus is obviated one of the strongest objections to the use of gang-plows or cultivators. The pole can be arranged for either two or three horses abreast, as circumstances require.

We have seen this implement, and believe it will prove far more efficient than the ordinary gang plows, and, in many cases, much preferable to the common cultivators. The practice of preparing land for wheat by one good plowing, and then cultivating, harrowing, &c., till the soil is in good tilth for sowing, is found to be much better and cheaper than the old fashioned summer fallow. This gang plow will not of course "break up," but it will enable the farmer, on any but the stiffest clays, to dispense with all except the one plowing—thus saving much labor in the busiest season of the year. Six acres is a common day's work, with three horses and this gang plow.

Joseph Williams & Co., West Henrietta, Monroe Co., N. Y., are making these plows, and they have already sold quite a number in Livingston, Monroe, and other of the best wheat growing Counties in the State, where they are said to give entire satisfaction.

UNSEASONED FUEL.

A few calculations relative to the comparative value of green and seasoned wood for fuel, may serve to remind those interested of the importance of attention to the subject. Every body knows that green wood is poor stuff for kindling a fire, though some contend that it will keep it up as well as seasoned, if applied constantly, not suffering the heat to go down. That is, if you have a good fire to season it in, you can burn green wood as well as dry. But to the calculations:

A green stick of wood weighing 100 lbs., when seasoned weighs but 66 lbs., or such is about the average of wood commonly used for fuel. In the seasoned stick you have all the wood—all that will support combustion—you have only got rid of 34 lbs. of water. Now, water will not burn, and if present in fuel, it has to be converted into steam, at the expense of that fuel, and it will take five times as much heat to make steam of water, as it will simply to bring it to the boiling point. Here is seen at once, the poor economy of burning green wood.

We have shown that about one-third of the weight of green wood is water—now, how many barrels of water are there in a cord?—There are 128 cubic feet in a cord, which allowing two-fifths for vacant space between the sticks, leaves 77 solid feet of wood,—one-third of which is water—equal to over six barrels of water in every cord of green wood. The heat, required to evaporate this water, would bring thirty barrels to the boiling point. And this is not the only expense. If the wood was cut, properly piled and seasoned in the woods, the cost of drawing would be nearly one-third less. Any way you can look at it—the economy of burning green wood is more than questionable.

Every farmer should look at, and determine to keep a stock of wood on hand, sufficient to last one year, at least. And he may take another look at the difference between wood seasoned just enough, and under cover, and that which has lain out doors until all the sap-wood has become rotten, and one-half its value been lost by exposure to the weather.—R.

ANOTHER GOOD WHEAT CROP.

Eds. Rural:—In the first number of the Rural, present volume, I noticed a statement under the head of "a good crop," which I deem worthy of notice; it going so far to show the reward of labor and well directed husbandry, as well as to prove the necessity of improvement in the great business of agriculture.

Mr. Jackman therein states that he raised on nine and three-fourths acres, four hundred and eight bushels of wheat, (about 42 bushels per acre,) and sold it for $1,50 per bushel; all with "a slight manuring, &c." Now I propose to show what I have done the last year, and leave others to decide as it regards "good land," &c.

I had a piece of land containing 13 acres, six acres of which had been planted to corn three years in succession, previous to sowing it to wheat, without any manuring. I plowed it in the fore part of the summer, cultivated it two or three times to kill thistles, and then plowed it once more preparatory to sowing it to wheat. The remaining 7 acres, I sowed after taking off a crop of broom corn; it being the fourth crop of the same kind in succession without even "a slight manuring"—harvested the broom corn about the fifth of Sept. (1852) —cut the stalks, placed them in the furrow and covered them about seven inches deep. I then sowed about 26 bushels of white Soule wheat on the whole piece, dragging in the seed both ways, and afterwards rolled it with a heavy roller. Threshed the crop about the last of August, (1853,) drew it to the mill, and had five hundred and eighty-three bushels and a half good clean wheat, besides three or four bushels of cleanings; averaging a trifle over forty-five bushels per acre; sold it for $1,50 per bushel. If my friend Jackman can beat this, then I will try again and manure it.

H. B. Smith.

Avon, Jan. 21, 1854.

TO LOVERS OF PUMPKIN PIE.

The subscriber has two quarts of seeds of the sweet potato squash for distribution among the readers of the Rural. I will send ten seeds in an envelope to any one writing for them.—If they enclose a stamp, it will be used to *prepay* the letter. My compensation will be ample in the pleasure of passing round "a good article. Last fall they were grown in a potato field without extra attention, and weighed from 10 to 50 lbs. We have kept them in a cellar with potatoes, and they are now as sound as when picked, and, if possible, of better quality; we have pumpkin pies from them in perfection.

J. W. Batoos.

West Macedon, Wayne Co., N. Y.

Barns should always be on the same side of the road as the house, and back of it if possible. When the barn is near the highway, and on the opposite side from the house, the road is frequently filled with implements, &c., and it offers greater temptation to thieves to loaf around and steal than a well enclosed barn within sight of or contiguous to the house.

Communications.

NEW YORK STATE POULTRY SOCIETY.

BRAHMAS—THEIR ORIGIN.

The New York State Poultry Society is soon to assemble at Albany for the purpose of a general exhibition of fine poultry. Comparisons will then be made of the best samples of all the important breeds of fowls cultivated in the State, and premiums will then and there be awarded for the best specimens. The influence for good of this meeting, on the interests of such portions of the farmers' stock as will come under their notice and examination, may be extensive and great. While progress has been inscribed on every other interest of the farmer for years past, the poultry interest, great beyond any estimate that had been formed of it, has been wholly overlooked and neglected, until within a very brief period. The foreign fowls of recent introduction, have thus far been a decided improvement on our native stock. They have been better layers, possessing larger size, and are more quiet and domestic in their habits. Among the varieties thus introduced, are probably to be found all the excellences that can exist in the nature of the case. The design and effect of such exhibition therefore, is to disseminate the knowledge of this fact, and to excite a general ambition to realize and participate in, the benefits of such improvement. It comes not within the province of the judges, to decide the comparative value of the different breeds or varieties; but to designate the best of each variety. To decide the comparative value of the different breeds, must still be left to the experience and judgment of individual breeders, and control their conduct in relation to them.

The variety which will be the most prominent at the exhibition, and which will enlist the strongest feeling, and induce the highest excitement, will doubtless be the BRAHMA POOTRA. They are generally, if not uniformly, larger than any other variety. In beauty of form, and productiveness as layers, they are considered equal if not superior to any of the Oriental breeds, and equal to any in desirable habits. On account of their extra size, and the paucity of their numbers, those that are considered genuine and pure have ruled high as to price. There has been, however, some disagreement among knowing ones, as to what were the genuine Brahmas. What are claimed as such, are described as an "India fowl, white, with black tails, and a slight shading of black in the neck feathers." (I find no such word as neck "huckles" in Webster, or any lexicographer to whom I have access.) Their history is also cloudy and obscure. No such vague pedigree as is claimed for them by the celebrated breeders, Mr. COUNISH and Mr. HATCH, of Conn., would be tolerated for a moment, or weigh a feather with the Arab, when applied to his blood horse. And that Dr. BENNETT, who gave them their name, and claims that they came from the valley of the Brahma Pootra, ever imported one from the Bay of Bengal, I have yet to learn. Their brief history is this: "That three pairs (two dark and one light) were brought to New York by some unknown sailor, in one of the India ships."—Being noticed by a Hartford gentleman, "the light pair was purchased, taken to Connecticut, and the stock with white bodies, and black tails, and penciled neck feathers, proceeding from this pair, are the genuine Brahmas." I do not, however, object to the pedigree, although I think very lightly of it. I only insist, that the learned judges who are to officiate at the exhibition, shall know what is, and what is not a genuine Brahma. And I protest totally against the exclusiveness that would reject as not pure, all that have not proceeded from this Hartford pair.

Now, I have before me a letter from a New York merchant—at present, and for many years past, engaged in the India trade—whose agent resides in the consular cities of China, principally in Shanghai, and who has received fowls from thence at different times. It is in answer to inquiries in regard to his Oriental fowls, and bears date Feb., 1853. He says:—"I received, about four or five years since, by the ship 'Montauk,' from Shanghai, five pairs of fowls. They were of different colors; black, red, yellow, pheasant colored, and white with black tails. Some had feathered legs, and some clean limbs. I have cultivated them with great care. Their progeny has been an improvement on the original flock. I have sold hundreds of them to the north and to the south. To my certain knowledge, *some of the best fowls ever offered at the Boston exhibitions, were from my flock.* The whites with black tails have always been my favorites.—They are known in this market as Chittegongs." In a subsequent verbal communication, he says that the captain of the ship "Montauk" selected them himself in the city of Shanghai, and brought them to him at New York.

Now it is by no means a far-fetched conjecture, that a Yankee sailor, seeing the purchase of his captain for a friend in New York, should think it might be a good "venture" for himself also, to purchase two or three pairs, and that he should succeed in obtaining three pairs of similar character; and that to this source, the Hartford stock should be indebted for its origin.

That the white Chittegong with black tail feathers, is the real Brahma, is evident from the fact, that when offered as Chittegongs at the Boston exhibition, they were pronounced by the judges to be misnamed, and were decided by them to be genuine Brahmas, and were received as such.

That the gray Shanghai is also the same, can admit of no question. They are alike in every feature, except that the gray Shanghai has, generally, a larger admixture of black feathers over the body. But I have seen from the Hartford stock, acknowledged as pure Brahmas, birds as handsomely shaded all over the body with black feathers, as the darkest gray Shanghais. Now if nothing is to be considered as Brahmas at the great exhibition of the State Society, except the progeny of the Hartford pair, bought of the unknown sailor, the value and influence upon the community, of any such decision, can be easily imagined.

It is important to the character and usefulness of the State Society, in regard to their decisions, that entire confidence should be reposed by the community in their integrity, knowledge and judgment. A superior breed of fowls, originating in the hill country, of the Chittegong district, or the adjacent Brahma Pootra valley, would no more be confined to those localities than would the wind. They must necessarily be scattered eastward through the contiguous Chinese territory. And it is no more to transfer them from their native valley to Canton and Shanghai, than from the northern to the southern portions of the United States. And no more, than to bring the Shanghais from the mountains of the north to the city of Shanghai. The conclusion, I consider irresistible, that Dr. BENNET, in his haste and ardor, has attached the name and reputation of the Brahma fowl, to but a small portion of those that are equally and justly entitled to this honor. HONG KONG.

Monroe County, N. Y., Jan., 1854.

COST OF RAISING CORN—AGAIN.

MR. EDITOR:—In the RURAL of the 21st, is an article over the signature of "E. S. H.," on the cost of raising Indian corn, in which the writer takes some exceptions to a statement made by myself, a few weeks since, upon the same subject. This article calls for a notice from me. He says, "he was surprised at reading a statement relating to a crop of Indian corn, raised by C. K. W., at the very low cost of 9½ cents per bushel of ears." In answer to his question concerning the amount of manure applied, I would inform him, that it should have read 200 loads, instead of 20, as in the RURAL: perhaps this was my mistake. He asks, "Did the manure cost anything, and if so, how much? And how much was the hauling worth? What is the use of land worth in Le Roy? What is it worth to market the crop?" He then says:—"If you will answer the above and add the cost to the crop, it may increase the cost per bushel."

Now, I would inform E. S. H., that the manure was all made on the farm, with no expense out except a slight one for plaster. Does he wish me to charge for the manure? If so, I must be informed as to the value of it, for I must confess my ignorance of it. I know there is a very general opinion among farmers, that a load of manure is a load of manure, no matter of what it is composed. But I do not so understand it. I believe it is very generally admitted, that the chief value of manure consists in the amount of ammonia it contains, and this will depend altogether upon the substances of which it is composed. That made from stock fed on highly nitrogenous substances, such as clover-hay, peas, or oil-cake, will be found to contain a far greater amount of ammonia than that made from stock fed on straw.* Manure from the pig-sty, made from hogs fatted on corn and other grain, will be much more valuable than that commonly made in the barn-yard. Besides, manure applied to a soil for the benefit of any crop, is valuable, so far as the crop is concerned, only, as it furnishes to the soil that which was before wanting for the growth of that particular crop.—Now if I am right in my position, (and I have some very good authority,) I think it would trouble my friend somewhat to prize my 200 loads of manure, consisting as it did, of various qualities. If he would undertake to do this, he must give the amount of ammonia contained in the 200 loads, and tell us what it is worth; and also, the amount and value of the other fertilizers contained in it. There is still another difficulty, quite as formidable, in charging a crop for the manure applied. If any charge is made, the amount only should be reckoned, which was actually consumed by the crop. Certainly not that which remains in the soil for the benefit of succeeding crops.—Now perhaps my friend can tell me just how much my crop of corn consumed of the 200 loads of manure applied; if so, I really should be interested to know. "How much was the hauling worth?" This question has already been sufficiently answered.

In preparing a field for any crop, the first thing to be considered, should be,—Is the field in a suitable condition for such a crop as is proposed to grow upon it? Does it need draining?—are there stones that ought to be removed, or is manure needful? If so, make the necessary preparation, and the general condition of the field will be sufficiently improved to pay all expenses. At a suitable time, commence to plow, and charge the crop for all after expenses. "What is the use of land worth in Le Roy?" In keeping accounts with crops for my own benefit, this certainly ought to be considered, and so it is—but in a statement for the public, I see no necessity, or even propriety in doing so, inasmuch as the value of land varies so much in different localities. I can see no danger of misleading any one, where each item of expense is separately and plainly stated. If any one is omitted, varying according to locality or circumstances, it can very easily be supplied by any one.

Lastly—"What is it worth to market the crop?" Nothing, at the price I credited. My corn and all other coarse grains, find a ready market on the farm; for the consumption of stock, I consider it worth the money. I have posted myself tolerably well upon this point, for a few years past, and am satisfied that it pays better to feed the coarse grain out on the farm, than to sell it. I seldom sell any, I consider it a ruinous business for a farmer to sell off all he raises. A worn-out soil, empty pockets, and a long face, will be the certain consequences of such a practice. By my statement E. S. H. will see that the stalks and pumpkins nearly pay all expense of the entire crop. He is "surprised" that corn can be grown for the low cost of 9½ cents per bushel of ears, and says, "he has raised a first rate crop the past season, that cost him more than double that sum." Now I am not personally acquainted with E. S. H., but from certain documentary accounts in my possession, I suppose him to be a very successful farmer; and as such, I would pay all due respects, at least my age demands that I should. But I would very respectfully suggest, that I think there must be something wrong in your management of corn. I have raised a few crops, but never one that cost me what you say yours did—I could not afford it. "It's a little too many oats for a shilling."—You misunderstand me in supposing that I follow corn with wheat the same season. I would not recommend that practice ordinarily.

I am very much obliged to Mr. E. S. H. for replying to my article. Perhaps I will "toe the mark" better in future. Discussions upon subjects connected with our calling may be of great benefit, if conducted in a friendly manner.

Le Roy, Jan., 1854. C. K. W.

*See the series of articles, on Barn-Yard Manure, in last volume of the RURAL.

LETTER FROM ENGLAND.

The following extracts from a private letter from JOHN POWELL, Shaubury, England, one of our English subscribers, will be read with interest:—"I have been in regular receipt of your papers, and have derived from their perusal much pleasure and instruction. Separated, as we are, by the vast Atlantic, and though boasting, perhaps, of our superior agriculture, I cannot but think that the RURAL and WOOL GROWER may be read with profit and to the enlightenment of thousands of our fashionable, dashing gentlemen farmers. I believe the agricultural community of this country would be immensely benefited, did it possess a cheap and plentiful rural literature—something after the style of your American papers—instead of the expensive and scanty form which now exists in this land. Indeed, I expect there is not one farmer in fifty who has any knowledge of the principles of agriculture, except what he finds in the political papers, unless he should chance to have the *Farmers' Almanac*, for which few will pay a shilling, when they can get old Moore's for two pence. Do not understand me as speaking disparagingly of English farmers; but I must say there is little 'Progress and Improvement' amongst them. Scientific agriculture is at a great discount, and likely so to be, unless other means than those hitherto employed be put into requisition. The wet autumn of 1852, and the indifferent harvest of 1853, have taught our farmers a lesson they will not soon forget. They have displayed more energy this last fall than usual, and I should judge a larger extent of land has been sown to wheat.

A word about American Reapers. HUSSEY'S machine, as manufactured by CROSSKILL, is most in use. Great were the expectations of its value previous to the harvest of 1852. The demand for them was tremendous; the makers could not supply half their orders. The whole agricultural population was astir. It is true there was much prejudice against its introduction; the laborers generally did not like it, and the machine was often, through neglect, broken or rendered inefficient. On the whole, *the machine is a complete failure*, and they may now be bought by the dozens for a trifle. Notwithstanding all this, I am of opinion that the machine will yet be used with advantage in this country. It was too much to expect that a new machine, against which much prejudice existed, could at once be brought to perfection, and so modified as to suit the conditions of our agriculture.

I perceive from the RURAL that the American ladies know how to make good apple puddings; but unfortunately, eggs sell for one penny each, (two cents,) and my wife thinks it is cheaper to sell them than to use them to make American apple dumplings."

Agricultural Miscellany.

PREPARE FOR THE NEXT CROP.

The present and prospective high and flattering prices of wheat and other grains, should induce farmers to make proper preparation to sow and plant largely the ensuing spring.—Those who do so can scarcely fail of a large remuneration—for breadstuffs must continue to rule high, at least until after another harvest.—Aside from the war or foreign demand, there are other reasons (which, though no prophet, we assigned in the RURAL of Aug. 6, 1853,) why breadstuffs must command highly remunerative prices for some time to come. Without stopping to discuss the causes now, our advice to all farmers, throughout the country, is to prepare to sow and plant as largely as their means and circumstances will allow. Those favorably situated, should sow spring wheat, for the crop will prove a profitable investment. Other spring crops—such as Indian corn, oats, barley, beans, peas, potatoes, &c.—will also pay largely, and farmers can well afford the expense of proper manuring and *good* cultivation.

—Here is a semi-official hint which we add to our brief suggestion. In a recent letter, Mr. SANDFORD, the American Consul at London, says:—"Finally, our farmers should sow plenty of spring wheat, and plant any quantity of Indian corn. The Baltic and Black seas will certainly be closed for at least a twelvemonth. England and Western and Southern continental Europe will have to look to the United States alone for a supply of breadstuffs, hither to obtained from those seas."

The Second Annual Meeting of the United States Agricultural Society, will be held at Washington, D. C., on Wednesday, Feb. 22d, 1854. It is hoped there will be a full attendance of delegates from all the agricultural Societies in the country, as business of importance will be transacted, and officers elected for the ensuing year.

VERMONT STATE AG. SOCIETY.—The following is the list of officers elected for the ensuing year, at the second annual meeting of this Society:

President—FREDERICK HOLBROOK. Vice Presidents—E. HAMMOND, E. B. CHASE, J. W. CULBURN, H. B. STACY. Corresponding Secretary—J. A. BROWNITH, Middlebury. Recording Secretary—WM. WESTON, Burlington. Auditor—E. P. WALTON, Montpelier.

WINTERING STOCK.

Much of the profits of rearing cattle depends upon the manner of keeping them through the winter. If they are suffered to lose flesh during the cold season, and turned out to pasture "spring-poor," it takes a long time to regain what they have lost. With the best quality of early cut, and well made English hay, with regular and judicious feeding, and comfortable quarters, a stock of cattle, from the oldest to the youngest, may be made to thrive all winter, to gain size and flesh; and with a small allowance of meal, potatoes, turnips, or other roots, they would do still better.

Our horses, cattle and sheep, were originally constituted to subsist the year round on green and succulent food.

By domestication, they have been gradually introduced from a warm, to the cold climate of the north, where, as with us, they generally have to be fed on dry forage for six months, or more, every year. This, in some degree, is placing them in an unnatural condition, and it seems to us, it is a strong argument in favor of a more extensive root culture among us, for feeding purposes.

Most farmers have more or less coarse fodder, such as poor hay, corn fodder, straw, &c. And many commence feeding their cattle exclusively on these the first part of the winter, or till it is used up, and seem to think it is a "good riddance of bad rubbish." Cattle and sheep, doubtless, like a change of food as well as man, and when kept in good condition, they seem to relish a foddering of meadow hay, corn-fodder, or straw occasionally; but if fed entirely on such fodder the first half of the winter, they lose flesh, and will be apt to come out in the spring in poor condition, in spite of English hay.

Corn-fodder is as nutritious as common stock hay, when fed in connection with it, but to compel cattle to live on such fare for weeks together, is, as some one has said, "absolutely cruel, as it makes their teeth sore when fed for a length of time." A better way is, to give cattle one foddering a day of corn butts, and that at the last feeding at night, and if they have a pretty stout allowance given them, they will eat it nearly clean before morning—at least, what they reject, will hardly pay for passing through the straw-cutter. Cattle, to do well, must have drink as well as food; and a free use of curd and brush add to their good looks.—*Granite Farmer.*

Inquiries and Answers.

SWEET POTATOES.

NOTICING in the RURAL NEW YORKER, your inquiry, on behalf of a correspondent, for information relative to the mode of growing sweet potatoes, and having been engaged for several years in their cultivation, I send you the following directions which are at your service.

Prepare a hot-bed early in the spring, say the 1st of April, in which put your seed, bedded in rich earth of as warm a nature as can be procured. The potatoes may be laid close to each other, covering the whole surface, and should be covered to the depth of one or two inches. When the sprouts are from 4 to 6 inches long, and as soon as frosts are over, they should be transplanted. To do this, first prepare your ground, (a dry sandy loam is best,) by manuring it well with compost thoroughly decomposed, after which make your hills, which should be about 3 feet apart, by cross furrowing with a plow until you have raised them as high as possible; after which, dress them up with a hoe. When you commence transplanting, which should be done when the ground is very moist, (immediately after or during a rain is the time,) break off the sprouts close to the potatoes, so as to get all the root, and plant them down in the hill, pressing the earth firmly around them. Dress them often, keeping the soil mellow and free from weeds. Should the grub molest them (which they are likely to do,) place small boxes or stone tubes over them until the plant is large enough to resist its attacks. Cultivate as long as possible with the plow and hoe, without disturbing the vines.

To preserve the seed during the winter is the most difficult matter. The mode is to pack them in dry sand, cut straw, chaff or pine leaves, not allowing the potatoes to touch each other, place them in a dry situation, and keep them at a uniform temperature, as near the freezing point as may be without freezing.—Examine them occasionally to see if they are rotting—if so, they should be taken out and repacked, carefully rejecting those which are decaying. S. T. W.

Chatham, Col. Co., N. Y., Jan., 1854.

GRASS SEED, STRAW CUTTER, &c.—I would like an answer to the following questions from you or your correspondents:—What is the best kind of grass for a pasture, for an orchard, and for a mowing-field—soil a stiff clay with a hard subsoil? Where can the seed be had, and at what price? Is it good, clean seed? as I wish to use no other than the best. What is the price, &c. &c.? Where can the best straw cutter be got, whose patent, and what price?—AN INQUIRER.

There are few better straw cutters than the "raw-hide," if used with care. They can be had at almost any seed store, at prices ranging from $12 to $20, according to size. Will some of our correspondents give their views on the seed question?

SEVERAL QUESTIONS.—How many solid feet of hay in the mow will make a ton? How many pounds of hay does a cow require per day to keep her in a good condition through the winter? The way for a farmer to preserve eggs through the summer? How many pounds of carrot fed to cattle will equal one pound of hay?

DANIEL GROFFEL.

Warsaw, N. Y.

WILL our readers give their views on the above important questions.—ED.

CHURNING BUTTER IN WINTER.—Col. William Swett, of South Paris, who carries on the dairy business quite extensively, and whose better half has had great experience in the manufacture of both butter and cheese, writes us that he finds the following an excellent mode of rendering butter to come in winter.

"Place a box of Liverpool salt where the cows can go and eat whenever they please.—Then, when the milk is brought into the house, strain it into a tin pail, set it into a boiler of hot water on the stove, until the milk is scalding hot. When we manage in this way, we have no more trouble in fetching the butter, or working out the butter-milk, than we do in September."—*Maine Farmer.*

AGRICULTURAL IMPROVEMENTS.—Since the days of Sir John Sinclair—the esteemed friend and correspondent of Washington, and one of the great men of the earth—no science has received more general attention than that of agriculture. This at least is particularly true with respect to the past twenty years, agricultural experience of our own country. When we look back over that space of years, and contemplate the many improvements in farming which have been made, we have great reason to congratulate our farmers for the spirit, intelligence, and good sense which they have exhibited.

CLOVERING.—Never spare the seed when you sow clover. Four quarts are not enough in the acre; put on not less than six, and be not frightened if you scatter a peck! The great superiority of thickly sown clover fields over others for feed and manure, is too manifest to need demonstration.

MR. JOHN JOHNSON, near Geneva, writes to the Geneva Courier that he has got a Shanghai hen, which for the last three months has laid two eggs a day, from two to four days in a week, and the rest of the days one egg a day.

Orchard and Garden.

SEASONABLE HINTS.

Salt for Plum Trees.—The application of salt around plum trees, has been found very beneficial by Dr. Shurtleff, a correspondent of the *N. E. Farmer*. He says:—"For many years I have salted my plum trees and had large crops of fruit, but last winter I omitted to salt the trees, excepting three, and the consequence was, I had no plums excepting on the trees that I salted." He thinks the only sure way to get a crop of plums, is to put about four quarts of salt to each tree, in a circle one foot from the trunk, any time in January or February, without regard to snow being on the ground.

"Quinces love Salt."—It should not be forgotten at this season, that "Quinces love Salt." Two quarts is the proper quantity to apply to each tree, and all who wish for large, fair quinces, should attend to it. It will not do away with the necessity for other manures, but it will do what other manures will not without it—it will insure productiveness—Such, at least, has heretofore been its uniform effect.

Pruning Grape Vines.—A present of fine grapes from a valued friend, reminds us that we omitted to state, that the earlier in winter vine-pruning is attended to, the less the liability of their bleeding in spring from the cut surfaces. We should also have remarked that young vines should be pruned but sparingly, until the roots are well established. The growth of the root is in proportion to that of the leaves, and to promote the one we should encourage the other. Give the vine a dry, rich, and low soil, when you set it out, and let it grow all the leaves it will for the first two years, and then you may begin to prune and train it.

Names of Scions.—Be careful to preserve the true names of scions when you cut them, and the same care should be exercised until they come into bearing.—D.

HORTICULTURAL GLEANINGS.

Is the Fruit Market Overstocked?—Not by a long shot, we should say, after reading Mr. N. P. Morrison's statement in the *N. E. Farmer*. For one barrel and twenty-eight apples, of the Hubbardston variety, he received $10,08. These apples were sold by the retailer at *four to six cents* each. For twenty-six bushels of apples he received $60. For one hundred and thirty-six barrels, he received $408. His fruit crop from eight acres of land brought him, this barren year, *eight hundred and fifty dollars*, $750 of which was for apples. Good fruit still brings good prices.

Upland Cranberries.—Cranberry vines, producing fruit of the best quality, sometimes grow without culture on upland in New England. Dr. Shortleff, of Chester, says that while crossing a field where corn and rye grew five years ago, he found cranberries growing quite thick; more than a quarter of an acre was covered with the vines, and they were quite full of fruit in many places, of the best kinds. It was on high, sandy land—the fruit was perfectly sound and uninjured by frost, and much better than on very low meadows.

"The Dudley Apple."—This is a Wisconsin seedling, and received the first prize at the State Fair of 1852. It is described in the *Prairie Farmer* as follows:

The fruit is one of great beauty, being a bright red running in stripes, and sometimes scattered in flakes over the surface, with a greenish yellow intervening. The skin is of little more than average thickness. The size, large medium. The stem is short and thick—the calyx short in a shallow basin. Flesh creamy in color, crisp, spicy, and a brisk tart, showing decided relationship to good English fruits, whose flavor is sharper than ours. The apple is worthy of further attention; for tho' not of the highest flavor, it may prove an excellent domestic fruit.

It is a handsome apple, and we should be glad to know more of it.—B.

Genesee Valley Horticultural Society.—The Annual Meeting of this Society will be held at the Court House, in Rochester, on Saturday, Feb. 4, at 2 o'clock P. M. There will be an exhibition of Winter Fruit. Exhibitors should leave their fruit at the Court House, before 12 o'clock, in order that it may be properly entered and arranged.

Transactions of the North Western Fruit Growers' Association.—This is a neat pamphlet of 78 pages, for which we are indebted to M. L. Dunlap. It contains an admirable address delivered before the association by J. A. Wilder, and discussions on horticultural and pomological subjects. We will give extracts from the proceedings as opportunity presents.

We are indebted to some kind friend for several of the "ad interim Reports of the Philadelphia Horticultural Society." They contain much interesting information on fruit.

HAMPTON'S CLUSTER PEAR.

The above outline is taken from a very excellent seedling Pear, raised by Wm. C. Hampton, of Hardin Co., Ohio, from seed sent by his father, residing in New Jersey.

Form, quite variable, mostly oblong turbinate. Stalk one inch long, sometimes slightly sunk. Color, brownish red, with yellowish brown russet and greenish yellow. Flesh very tender, sweet, juicy and melting, of fine flavor, equal, if not superior to the best variety grown. Season, middle of August. Tree, hardy and profusely productive; the fruit growing in clusters of from three to six.

The tree is now about 12 years old, and has fruited four years, bearing every year; growth of the tree rather slow, leaves on very long footstalks, of the size of those in the outline, the fruit the size of the outline without extra cultivation.

GOOD THOUGHTS FROM A LETTER.

The following extracts from a letter, not long since received, in acknowledgment of seeds sent, contain such sound sense, with practical hints, that it is hardly well they should remain hid in a corner; and though they were penned without any idea of their being printed, I am sure the writer will have no objection, when they may do a great many so much good through the Rural. T. E. H.

Speaking of the use of a cold frame he adds—"From observation, I am led to prefer the simple frame, placed upon good garden soil, to the hot-bed. Plants so raised, excel, for me, those matured in the more delicate climate of artificial heat. I am not a gardener. Reduced to ill health in a professional employment, I took refuge on a farm, in rather a secluded neighborhood, and seeking amusement to mix in with employment, I have habitually read the agricultural and horticultural periodicals for a number of years, and now, through the influence of Buel, Downing, and others, on the brink of fifty years, my horticultural egg is just cracking the shell, and whether a Shanghai or a Bantam is to appear remains to be seen. Be this as it may, I am delighted with the efforts making to discover the laws that govern vegetable growth.

"The cold vinery is a beautiful idea,—a contrivance by which man can seize upon a portion of the rough and freezing elements, rasp off their asperities, and so tame their dispositions as to render them subservient to the wants and pleasures of humanity, thus snatching time from vernal chills and autumnal frosts, to enable Black Hamburghs, Muscats, &c., to compass their maturity. I have no vinery yet, but everybody should have one. Since the birth of Crystal Palaces, it is hinted that glass roofing would be cheaper than shingles, with glass at $1,75 per fifty feet. If so, could not this be made to answer the double purpose of roof for out-building and a vinery in the upper story? I am thinking I shall roof a wood house with glass and so turn the upper part into a light, warm place for some purpose or other.

Again, the well constructed under drain that, while it runs away with the superabundant flood, should by its condensing powers, furnish the parching plants with moisture by wringing dews from the rarified air, as it steals through them, adds another gem to the diadem of modern science. Then the feeding of both plants and animals the elements that compose them, is another discovery that sparkles in the constellation of modern developments. And the beauty of the theory sparkles in the practical application. A neighbor excels in raising turkeys. He feeds them while young a little boiled egg daily, and scarcely loses one. He feeds, you perceive, bones, fibrine and feathers in every mess. A young colt fed wheat bran, increases rapidly in frame, because the provender contains a large proportion of bone material.

The fascinations, however, of the million of scientific communications want close watching. The most hideous blunders, colored with success, often assume the honor of a new discovery, and the horn of plenty is sometimes emptied in the farmer's barn in spite of his officious opposition. Intelligence must winnow the mass and blow out the chaff from the great amount of agricultural news. Experiments, deformed with failure, may be profitable as light-houses, to point out the parts of the coast we approach. But errors resulting favorably, are deceptive lights that lead the thoughtless into quagmires.

I have a farm of Northern exposure, partly level, partly side-hill. I design making it a fruit farm. The peach and pear do well thus far, therefore I run upon them. My peach buds have not been killed in the last ten years, and in that time, trees, within a half mile from me, four inches in diameter, have been frozen to death. Grape vines I never cover in winter and never have had them killed. So I procured a pair of self-marking thermometers and have found the cold during a still night to vary five degrees with a difference of elevation of about 25 feet. My trees told a like tale winter before last. Hence I select the most elevated and exposed places for the more tender fruits, and find they are more certain, and that they mature later, which suits our market best. These currents and counter-currents of air are very interesting, and I mean to look more fully into the subject, for I deem it an important one.

SUCCESSFUL MODE OF GRAFTING THE PEACH.

To successfully graft the peach tree, has been universally considered next to an impossibility; but in consequence of the ease and success of budding, this concession has seemed of but little practical importance. Yet every one, of the least experience in this matter, knows that many trees, where budding had been neglected or unsuccessfully performed, might be saved and rendered valuable if grafting could be performed with success.

I am aware that Dr. Page, of Washington, published and copyrighted about a year ago, a method of grafting the peach, for which he claimed success, equal to that attending ordinary grafting. His plan consisted in checking the growth of the tree simultaneously with grafting, by transplanting or root pruning.

The plan given below is more simple, and from limited experience I should think more successful.

It consists in grafting early, as for other stone fruits, in the manner of the common cleft.

The side seams are to be waxed in the usual manner, the cleft *filled*, and the end of the stub covered with *warm* or melted composition.—The whole is then to be wound with composition cloth, to prevent curling of the bark.

That this plan will succeed, is a demonstrated fact, but in how great a proportion of cases, experience is too limited to determine. Suffice it to say, that right scions set in different branches of the same tree, all lived and grew with astonishing rapidity. Will others give this plan a trial and report the result. D. C. Gibbs, M. D., *Perry, Ohio.—Country Gent.*

Cultivating Orchards.—Mr. H. B. Childs, of Grand Rapids, informs us that he has a young thrifty orchard, a part of which is in clover; and a part he plowed and planted to corn, and plowed as close to the trees as he could without injuring them on that part planted to corn. On the clover part he spaded under the trees as far around as the branches extended. Now the result of this experiment is that the trees in that part of the orchard plowed and planted, made a much more rapid growth than the part in clover; the difference is plainly discernible to the passer-by. From this experiment he has concluded that a young orchard should not be seeded down, and our opinion corroborates his, judging from our own experience in such operations.—*Mich. Far.*

The Hon. James Mathews, Coshocton, Ohio, states in the Horticulturist, that among the pears he considers the best, and what he has fruited this year, were the Madeleine, Beurre Giffard, Ott, Doyenne de Ete, Bartlett, Urbaniste, Heathcote, Seckel, and Louise Bonne de Jersey.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending January 24, 1854.

Calvin Adams, of Pittsburgh, Pa., for improved copying press.

Rounce & Albert F. Andrews, of Avon, Conn., for improvement in wood saws.

Lucien B. Batcheller, of Arlington, Vt., for improvement in railroad rail brakes.

Chas. P. Bailey, of Zanesville, Ohio, for improvement in dumping cars.

Enoch Batt, of Manchester, Conn., for improvement in fancy check horns.

Silas Constant, of Brooklyn, N. Y., for improvement in resin oil lamps.

Wm. Cunningham, of Holliday's Cove, Va., for improvement in washing machines.

J. H. Dennis, of Boston, Mass., for improvement in bee-hives.

Spencer D. Driggs, of Detroit, Mich., for improved attachment to piano fortes.

Chas. R. Harvey, of New York, for improvement in air-heating furnaces.

Dennis G. Littlefield, of Lowell, Mass., for improvement in stoves.

Gen. Nelson, of Boston, Mass., for improvement in ventilating railroad cars.

Thos. Prosser, of New York, for improvement in the manufacture of hollow slabs and flanged metallic plates.

Harvey Trumbull, of Central College, Ohio, for improvement in the feed apparatus of straw cutters.

Peter, Wellington S. & Jerome J. Rench, of Port Royal, Pa., for improvement in mills for grinding sumac.

Jas. H. Jennings and Thos. Brierly, of Clayville, N. Y., for improvement in machinery for fulling cloth.

Jos. Minks, of Boston, Mass., for improvement in piston valves and steam-passages in cylindrical steam boilers.

Jas. Robinson, of West Hebron, N. Y., for improvement in threshers and cleaners of grain.

Alex. Hall, of Lloydsville, Ohio, for improvement in piano-fortes.

Daniel Haight, Jr., of Clinton, N. Y., for improvement in attaching shafts to wagons.

Wm. Orerend, of Cincinnati, Ohio, for machine for wetting paper.

Aaron Palmer, of Brockport, N. Y. and Stephen G. Williams, of Janesville, Wis., for improvement in grain harvesters.

Jacob Reese, of Shaton, Pa., for improvement in rolling axles and shafts.

Chas. R. Soule, of Fairfield, Vt., for improvement in threshers and separators of grain.

Moses C. Stiles and Tristram S. Lewis, of Hollis, Maine, for improved machine for soaking window blinds.

Carl E. Wetner, of Newcastle, Ill., for improvement in distilling apparatus.

Jacob E. Bunn and Stephen S. Bartlett, of Woonsocket, R. I., for improved mortising machine.

RE-ISSUES.

Jno. A. Taplin, of Fishkill, N. Y., for improvement in portable horse powers. Patented Dec. 30, 1851. Re-issued Jan. 24, 1854.

The force or Cohesion.—The force with which the particles of matter cohere, is entirely dependent upon heat, the existing cohesive force decreasing proportionate to the increase of temperature. The arrangement of the particles, likewise, exerts its influence over the force of cohesion. Wood is known to be more cleavable lengthwise than across the fibres, and cast-steel is more brittle than wrought steel. The force of cohesion of various substances is pretty accurately known. 120 lbs. are required to tear asunder an iron wire 1-25 of an inch in diameter, while the same thickness of bar-iron requires 90 lbs., steel, 60 to 80 lbs., cast-iron 28 lbs., brass, 60 to 120 lbs., copper 42 lbs., lead 2½ lbs. and glass 5 lbs.

Elasticity.—If an ivory ball be placed on a marble slab, coated with lamp-black, it will only receive a small black speck on the point on which it rests on the slab. But if the ball be allowed to fall from a height upon the slab, it will receive a round black spot, increasing in size proportionately to the height from which the ball falls, proving that the ball is *flattened* at the moment it touches the slab, but that, being elastic, it immediately regains its spherical form.

Ductility of Metals.—The silk-worm spins filaments, 100 of which must be placed side by side to occupy the space of a millimeter (about 1-25 of an inch.) But metals have been drawn out into wires of such fineness, that one hundred and forty of them put together have only the thickness of one silk filament, and three hundred and fifty thousand of them placed together occupy the space of only one inch.

A New Clock.—Among the late inventions announced is a curious one by Mr. Robert M. Kerrison, of Philadelphia. It is a clock, different from any heretofore made, in being without the slightest noise or any alteration in its motion, and, from this latter fact, promises to be of the greatest use in the science of astronomy. In this clock Mr. Kerrison has succeeded in overcoming a difficulty which has been made the study of scientific mechanics for nearly two centuries, being attempted by Huygens as early as 1668.

New Locomotive.—The Stuttgart journals give the following details of the locomotive which has just been constructed at Esslington (Wurtemberg,) for the Mont Semmering railway in Austria:—"This locomotive, which is called the Kappeln, has ten wheels; its boiler is twice as large as that of the ordinary engines; the tender is not separate, but forms an integral part of the engine. It is in the form of a horse shoe, and advances on each side of the boiler.

APPARATUS FOR CONDENSING SMOKE.

A patent was issued on the 29th of November last, to J. Bloom, of Woburn, Mass, for an improved mode of condensing smoke and gases, rendering them innoxious. The nature of this invention consists in passing the smoke and other products of combustion through water, it being conducted in pipes to the bottom of a suitable reservoir made air tight and nearly filled with water, which is kept constantly exhausted by air pumps. The smoke passes through a pipe leading nearly to the bottom of the water in the cistern, and as the air above the water is exhausted, the smoke will evidently pass through the water, and thus becomes purified from its soot and cinders. It is evident that the draught from the furnace will be increased by the exhausting force of the air pump, and the ordinary draught cannot act in opposition to the action of the pump, so that no great amount of force will be required to produce the desired effect. Travelers on railroads would be very grateful if some such plan were adopted. We recommend this to the consideration of all concerned, and hope that some one will give it the attention it deserves.—*Scientific American.*

EGYPTIAN HOUSES.

The ancient Egyptians built their houses usually of crude brick. The ordinary way was a single story and a basement—with a terrace on the roof, open or carved, surrounded by a balustrade or battlement. In hot climates, two great objects in the arrangement of houses are, to admit air and exclude heat. To attain the latter, the Egyptians made their windows small and their apartments lofty; and for ventilation it is probable they had a contrivance in the roof similar to that which is now used in Egypt. Houses which stood attached and enclosed within a wall of their own, had an ornamented garden around them, and were still more capacious, comprehending a variety of apartments, and had frequently the appendage of a barn-yard. The walls of the principal rooms were carved with stucco and with paintings.

M. Paurait has invented a tubular life-raft. It was tried on the Serpentine, London. It is composed of vulcanized India-rubber tubes, inclosed in canvas cases and nettings, so arranged and lashed to cross-bars as to form, when extended, an excellent contrivance, not only for floating on the water, but being roved like a boat, and capable of being conveyed with safety through a surf or heavy sea.

Door Stop.—O. A. & A. H. Harland, of Princeton, Ill., have invented a new method of applying weather strips to doors, which consists in the peculiar mode of hanging the strip and arranging the saddle, whereby when the door is closed, the strip is caused to drop and lap over the outside of the saddle, and is held up thereby while the door remains open.

Domestic Economy.

How to treat your Boots or Shoes when Partially Burned.—On one of the coldest days of the present month, I pulled off my boots and set them close to a stove which was very hot. The room was filled with a smell as of something burning. Turning around, I saw my boots smoking at a great rate. I seized them and immediately besmeared them with soft soap, much of which, owing to their highly heated condition, quickly disappeared in the leather. When the boots became cold, the leather was soft and pliable; and now, after several days of subsequent wear, they exhibit no marks of having been burned.—S. G. W., *Rochester, Jan.*, 1854.

For Cough and Pain in the Breast.—Equal parts hoarhound tops, Elecampane root, and Young William roots and tops. Boil until the strength is extracted, adding boiling water as it decreases, then strain and put in sufficient sugar to make it very sweet; boil down to a thick syrup. For a light cough, the addition of a teaspoonful of tincture of lobelia to each pint, when cold, enhances its value. It is tonic, diaphoretic, diuretic, expectorant and emmenagogue.—*Ohio Cultivator.*

Preserving Grapes.—I first procure a quantity of dry saw-dust, then a tight, clean, dry barrel. I pull the grapes in bunches when dry—put in the barrel a layer of saw-dust, then a layer of grapes, and so on until the barrel is full. I place the barrel in a dry place, covered with an old carpet. The result of this mode is, that I now have fruit as perfect as when they left the vine.—*Ger. Tel.*

Kentucky Corn Cake.—Take a quart of corn meal, put in it a spoonful of salt, and water enough to make a stiff dough. Knead it into a cake. Then rake open the ashes on the hottest part of the hearth; put in the cake and cover it with hot ashes, and then with coals.—It will take two hours to bake it; when done, wash off the ashes with a wet cloth.

Making Vinegar.—A correspondent of the *Dollar Newspaper* says:—"The cheapest mode of making vinegar is, to mix five quarts of warm rain-water with two quarts of Orleans molasses, and four quarts of yeast. In a few weeks you will have the best vinegar you ever tasted.

For Hemorrhoids or Piles.—White or black oak bark, and alum, make a tea, wash the parts frequently. Never known to fail—often gives immediate relief, and when persevered in, has cured where other means have failed.

THE AMERICAN STEAM-SHIP "SAVANNAH."—THE FIRST OCEAN STEAMER.

OCEAN STEAM NAVIGATION.

One of the most gigantic fields of enterprise in modern times, is that of Ocean Steam Navigation. So gigantic indeed, that, when viewed in all its length and breadth, and accompanied by statistical tables of the numbers, magnitude and cost of these leviathans pursuing their trackless courses over every sea in defiance of the winds and waves, making ports three thousand miles away from the point of starting, and arriving in all except the most extraordinary circumstances within a day of the appointed time, the subject is absolutely astounding.

And yet this whole interest, involving at the present moment hundreds of millions of dollars, and affording employment to thousands of men, has grown up entirely within about thirty years! Indeed the problem of navigation by steam, whether on rivers or on the sea, whether plying along shore within reach of fuel every few hours, or pushing off into the broad ocean, thousands of miles from land, has been solved but about forty years.

The first river steamer was launched by Fulton, on the Hudson, in 1811, and made what at that time was considered the astounding progress of seven miles an hour, under the most favorable circumstances. Not, however, until steam propulsion had been successfully applied to river and coasting navigation for some years, was the same agent brought into requisition for transatlantic voyages. The want of economy in the application of steam, the imperfection of machinery, and above all the necessity of material for fuel, which would combine at the same time, a great amount of caloric with a small comparative bulk of storage, strongly indicated the impossibility of ocean steam navigation. Even after the first voyage had been made, partly by steam, the undertaking was considered entirely futile, and pecuniarily, if not physically impossible. But at length, after much experimenting and improvement in machinery, after a vast increase in the size and tonnage of ships, and above all, after the discovery and use of bituminous coal in the generation of the motive power, the cause of steam navigation triumphed; and such a triumph it has been that in any other age than this, the iron bound demon which works the ponderous wheels would be exalted into a god.

At the head of this article may be seen an engraving of the American steam-ship Savannah, the first of her class that ever made a trans-atlantic voyage; she was the pioneer of the ocean steam-ship enterprise, and stands a monument of praise to the far-reaching and prophetic eye of "Young America." Rude in her model and appurtenances, and limited in her dimensions compared with the floating islands of 1854, she excited an extraordinary degree of interest, at the time of her first voyage, both in America and Europe. She was a ship-rigged vessel of 380 tons burthen, and only used steam as auxiliary to her sailing powers. Coal not then being used, it was impossible to carry fuel for the whole time consumed in an ocean voyage, and consequently it was so arranged as to be able to unship her wheels and use her sails.

The Savannah steamed for Liverpool from the port of Savannah, Georgia, on the 28th day of June, 1819, and crossed the ocean in eighteen days, steaming, however, during the whole time but seven days. After she had left port and was on the broad ocean, with a fair breeze, the wheels were hoisted upon deck, and the ship proceeded on her voyage under canvass. As she neared the British coast the wheels were again adjusted, the sails clewed up and the engine set in motion. When about entering St. George's Channel, off the city of Cork, she was descried by the commander of the British fleet, then lying at that city. Seeing a huge mass of smoke ascending from the vessel, enveloping her rigging and overshadowing the sky, he naturally inferred that a vessel was on fire, and in distress, and with commendable promptitude, despatched two cutters to her relief. After passing near to her a few times, taking a full survey, and firing a few guns across her stern, the steamer was boarded. Finally, being perfectly satisfied that all was right, the cutter bore away. The news of her approach being telegraphed to Liverpool, as she drew near the city with her sails furled, and the American colors flying, the pier-heads were thronged by many thousands of persons who greeted her with the most enthusiastic cheers.

Before she came to anchor, the deck was so crowded that it was with difficulty the men could move from one part to another in the performance of their duty. She was afterwards visited by many persons of distinction, and then departed for Elsinore, on her way to St. Petersburgh. She next touched at Copenhagen, where she remained two weeks.—From Copenhagen she went to Croustadt and St. Petersburg. Not being able to get over the bar at the latter places, she lay opposite the city six miles distant.

Here, as at other places, she was an object of much wonderment. She, however, was not sold as had been expected, but sailed for home, putting into Errington on the coast of Norway, on the passage. From the latter place she was twenty-two days in reaching Savannah.—On account of the high price of fuel, she carried no steam on the return passage, and the wheels were taken off.

The model of the Savannah, although a miniature ship compared with one of our late constructed steam vessels, is by no means a bad one; but the propelling power is extremely rude. The wheels, destitute as they are of paddle boxes, indicate a want of finish and a slowness of motion, that naval constructors of the present day would laugh to scorn; but what assurance have they, that their own proud and ware-compelling steamers will not be pointed at half a century hence as the rude construction of a naval steam marine, if not in its infancy, at least in its early and half developed manhood?

Two or three weeks hence, we will give in the Rural, an engraving of one of our modern-built and gigantic steamers, as a contrast to the above illustration.

Wind and steam are the great propelling powers of every kind of vessel.

Educational.

MATHEMATICAL STUDIES.

One of the best branches of study for mental discipline pursued in our schools, is that of mathematics. The close train of thinking—the steady and unyielding pursuit, link by link of the mental chain—the necessity of holding on until the consummation of the argument, all contribute admirably to give the pupil the all-important power of control over his thoughts.

The tendency of the uneducated mind is to fly off from any subject upon which it is bent. The recollections of the readers of this article, will bear us witness, that in their early years, before laborious mental discipline had given them power of control over their train of thought, the main difficulty to the accomplishment of any intellectual task was this *tangential* tendency of the mental powers. A boy sits down seriously to commit to memory a lesson in Geography; and presently and unconsciously an image of the glorious skating frolic of the last evening maps itself out upon his brain. He undertakes to conjugate the regular verb love; and as he mentally ejaculates "I love, thou lovest,"—the imaginary visage of a bright-eyed girl who has captivated his boyish fancy, peeps into the windows of his soul. He undertakes to write a composition, and imperceptibly his truant pen glides into caricaturing horses and dogs. All things, and everything in fact, except the task essayed, crowd upon the active, wayward and undisciplined brain.

Mathematical studies are admirably adapted to correct this tendency of the mind to wander away from the subject under consideration—to teach it to grasp a chain of thought, and having grasped to hold on to it until the end.—With wonderful precision it leads one along and induces him to retain a firm hold, for the consciousness is ever present, that with a moment's diversion, or a single instant's indirection, all is lost; and the process must be commenced anew. The very unwillingness to labor is a spur to the intent, for when the chain of reasoning is once traced through, the task is done.

Nothing is more gratifying to an examining committee, or an intelligent spectator, than to see a class of bright little boys and girls go through the long and difficult problems of Colburn's Mental Arithmetic. That arithmetic is one of the most valuable books in the whole range of school studies, and is more beneficial in the mental training of the young than a dozen ferules, half a dozen rawhides, and a row of cross schoolmasters reaching from our sanctum to the most distant reader of the Rural New-Yorker.

Beautiful Thoughts.—The same God who moulded the sun and kindled the stars, watches the flight of the insect. He who balances the clouds and hung the earth upon nothing, notices the fall of the sparrow. He who gave Saturn his two rings, and placed the moon like a ball of silver in the broad arch of heaven, gives the rose leaf its delicate tint, and made the distant sun to nourish the violet. And the same Being notices equally the praises of the cherubim and the prayers of the little child.

MICHIGAN SCHOOL FUNDS.

The primary school fund arises from the sale of lands granted by the United States to the State, comprising the sixteenth section in every township. The land is held by government at four dollars per acre, but if section sixteen of any township should be so situated as to command more than that price, the primary school fund receives a greater increase. The new city of Lansing, the capital of the State, is located upon section sixteen, and the consequence is a large addition to the fund in question. Two years since it amounted to $11,000, and I am told that, during the last year, more than double the amount of public lands have been entered at the land offices, than during any previous year since Michigan became a State. The sources of revenue for the support of primary schools, in addition to the interest on this constantly accumulating fund, are, 1st. A tax of one mill on each dollar's valuation of the taxable property of the township; and 2d. A tax not exceeding one dollar upon the taxable property of the district, for each scholar between the ages of four and eighteen years; said tax to be voted by the district, and collected and returned the same as other township taxes. If these three sources do not prove sufficient to support the schools, the law makes it obligatory upon the officers to resort to the rate-bill. In order to entitle any district to its share of the public money, it must be shown by the report of the proper officers, that a school has been taught at least three months therein, during the previous year, by a legally qualified teacher. By a clause in the constitution, it is provided that the legislature shall within five years, establish a system of primary schools, whereby a school shall be kept without charge for tuition, at least three months in each year, in every school district in the State. The whole number of districts now organized is about 3,400, and the number of children residing therein, between four and eighteen years of age, is 143,200, while the number actually attending school is 115,200.—*N. Y. Teacher.*

A Remnant of the Dark Ages among the Ohio Schools.—The Ohio State Democrat publishes a reply of H. H. Barney, the State Commissioner of Common Schools, to a question proposed to him by a number of citizens of Brown county, whether on New Year's evening, scholars were legally authorized to bar the doors of their school houses, and resist the demand of the directors and teacher to open the same, unless a treat of two dollars should be granted them by the teacher? It seems that this mode of procedure on the part of the scholars has been practised from time immemorial; and on the last New Year's day, when the teacher of a school in Brown county refused to pay the sum, the boys were upheld in their demand by many of their parents and some of the magistrates of the county, and the teacher was at last obliged to comply. Mr. Barney decided that the boys in such cases were trespassers, and liable to the same amount of damages as they would be at the suit of a private citizen, whose dwelling they should close against him with a view to extort money.

Without a Parallel.—The amount invested in school houses in Boston, is $1,500,000. The yearly appropriations for education are $1,200,000, while the amount raised for all other city expenses is only $870,000. The amount expended for instruction in the common schools of Massachusetts last year, was $4,50 for each child between five and fifteen years of age in the State. This is unquestionably the best commentary ever afforded upon Boston influence; and is eminently worthy of imitation elsewhere.

Sunday Reading.

THE PILGRIM FATHERS.

BY JOHN PIERPONT.

The Pilgrim Fathers—where are they?
The waves that brought them o'er
Still roll in the bay, and throw their spray,
As they break along the shore:
Still roll in the bay, as they rolled that day
When the Mayflower moor'd below,
When the sea around was black with storms,
And white the shore with snow.

The mists, that wrapped the Pilgrim's sleep,
Still brood upon the tide,
And his rocks yet keep their watch by the deep,
To stay its waves of pride.
But the snow-white sail, that he gave to the gale
When the heavens look'd dark, is gone;
As an angel's wing, through an opening cloud,
Is seen and then withdrawn.

The Pilgrim exile—sainted name!
The hill, whose ivy brow
Rejoiced, when he came, in the morning's flame,
In the morning's flame burns now,
And the moon's pale light, as it lay that night
On the hill-side and sea,
Still lies where he laid his houseless head;
But the Pilgrim—where is he?

The Pilgrim Fathers are at rest;
When summer's throned on high,
And the world's warm breast is in verdure dress'd,
Go, stand on the hill where they lie.
The earliest ray of the golden day
On that hallow'd spot is cast;
And the evening sun, as he leaves the world,
Looks kindly on that spot last.

The Pilgrim *spirit* has not fled;
It walks in noon's broad light;
And it watches the bed of the glorious dead,
And shall guard this ice-bound shore,
Till the waves of the bay, where the Mayflower lay,
Shall foam and freeze no more.

RELIGION IN ITALY.

The advocates of change in Italy embrace several classes. There are the infidel politicians, led by Bianchi Giorini, and socialists, who are also pantheists, with Antonio Franchi as their oracle. The Gioberists are found chiefly in Piedmont, and aim at full religious liberty. They have two able and influential newspapers. Finally, there are the evangelical Protestants, of whom a letter from Italy in the Independent gives the following account, which is full of encouragement and invites vigorous co-operation with the revived and active Waldenses:

"First of all, those who may claim that name should be mentioned the Waldensians; whose *Table* or Synod are displaying much zeal, and obtaining much success in the work of evangelizing Piedmont. Their mission at Turin is truly a splendid one, and the converts are counted by *hundreds*. The same thing can be said of their mission at Genoa, and they are just now taking possession of a new field, (Nice,) which bids fair to give an abundant harvest.—Two weekly newspapers are the organs of evangelical religion in Piedmont and Savoy, the *Buonn Novella*, at Turin, and the *Glaneur Savoyard*, at Chambery. The *Cerghini*, at *Favale*, form already an interesting little church; in several other little places, which it might not be prudent to mention for the present, are little groups of men who prepare themselves, in secret, to come out one of these days, confessing openly the name of the Lord.—Florence, Pisa, Milan, and even Rome, have also their secret little meetings of Christians; and though most of what is done must be done in secret, it is no exaggeration to say, that, besides the Waldensians, there are in Italy several thousands of people who may rightly be reckoned Evangelical Protestants, and many thousands more who would ask for Protestant teaching, if once religious liberty was established. Bibles and tracts abound in Italy, in spite of the custom-houses, and of priestly efforts to oppose their diffusion. Indeed, Florence itself enjoys—though not knowing it—the possession within its bounds, of an evangelical and active press. From what I see and know, Italy—so far as it is open—is a most interesting field of missionary labor; and there is every reason to believe that if she was once rid of the political despotism which crushes her, we should witness a very earnest and considerable movement of her people towards evangelical religion."

DON'T MURMUR, CHRISTIAN!

Chrysostom propounds this question: "Was Job miserable when he had lost all that God had given him?" and gives this answer:—"No; he had still that God who gave him all." And is not Christ thy treasure? is not Heaven thine inheritance? and wilt thou murmur? Hast thou not much in hand, and more in hope?—Hast thou not much in possession, but more in reversion? and wilt thou murmur? Hath not God given thee a changed heart, a renewed nature, and a sanctified soul? and wilt thou murmur? Hath not God given thee Himself to satisfy thee, His Son to save thee, His Spirit to lead thee, His grace to adorn thee, His covenant to assure thee, His mercy to pardon thee? and wilt thou murmur? Hath he not made thee a friend, a brother, a son, a bride, an heir? and wilt thou murmur? Hath not God often turned thy water into wine, thy brass into silver, thy silver into gold? and wilt thou murmur?—When thou wast dead, did not he quicken thee? and when thou wast lost, did not He seek thee? and when thou wast wounded, did not He heal thee? and when thou wert falling, did not He support thee? and when thou wert down, did not He raise thee? and when thou wert staggering, did not He establish thee? and when thou wert erring, did not He reduce thee? and when thou wert tempted, did not he succor thee? and when thou wert in danger, did not He deliver thee? and wilt thou murmur?—What! thou that art so highly advanced, and exalted above many thousands in the world.—Murmuring is a black garment, and it becomes none so ill as saints.—*Brooks.*

He that is wise is wise for himself, but he that scorneth he alone shall bear it.

Miscellaneous.

SONG OF THE ENGINE-DRIVER.

TO BE READ AT SPEED.

I COMMAND the stoker
Of an engine rare;
Lots of other folks also
Trusted to my care.
From the startling hour,
I, and I alone,
Wield a despot's power
From my fiery throne.

Pile the fuel higher—
Never mind the smoke;
Keep a blazing fire—
He don't pay for coke.
Faster still, and faster,
At a racing speed;
Oh, 'tis grand to master
Such a glorious steed!

Flying, glaring, tearing,
To our destination;
Rushing, crushing, pushing,
Roaring through the station;
Dashing, crashing, smashing
Rattling up the line;
Quick as lightning flashing
Down the steep incline.

Hi! a signal tossing
Wildly to and fro!
"Danger!—at the crossing;
Danger!—down below."
Warnings shower o'er us,
As if we should mind;
Luggage-train before us,
With *express* behind!

See, 'tis there! be ready—
Give the brake a kick;
Shut the steam off—steady;
Jump, my lad—be quick—
Off the train, this minute!
For I rather doubt
That, for those within it,
'Tis a blue look-out.

* * * * *

What a shriek! good Heaven,
How the timbers part!
Doubled up, and riven,
High in air they dart.
Shattered fragments flying
Everywhere around;
Hundreds lying, dying,
Bleeding on the ground!

MORAL.

Oh, ye wise Directors
Of our iron roads!
Oh, ye sage Inspectors
Of their legal codes!
Would this frequent kind of
Scene occur again,
If ye trained the mind of
Him who minds the train?

(Written for Moore's Rural New-Yorker.)

GOLDEN MOMENTS.

Look here, sir—*you* with your mouth wide open, your hands in your pockets,—what may you be *thinking* about? Why are you *not at work?* Do you not know these are *golden* moments—that *life* is fast flying on?—that *eternity* is approaching, and that moment just squandered brings *you* one moment nearer the eternal world?

Are you a successful farmer? if so, I marvel! successful, and throw away Heaven's noblest gift—Time! These are *golden* moments, sir. There is no *resting* here. If you are not advancing, you are retrograding. If that revolving wheel in your cranium is not turning off pure, noble, and bright thoughts by its centrifugal force,—if these material things around you are not breeding thoughts,—if these sparkling icicles, these snow crystals, the smoke from yonder cottage, the jingle of merry bells, the loud shouts and merry laughter of school children—if none of these things rouse you from this stupid nonchalance,—if this moving world—this steam-wheel age, with its bursting boilers, and the sound of the war trumpet,—if none of these things move you to ACT, then nothing but an infinite power *can do it.*

You, there, with your elbows on your knees, and head in your hands,—why, my dear sir, *wake up* from that "*blue*" sleep. What if the winter *is* a hard one,—if you *have* got a large stock, if all kinds of "fodder" are scarce, do you expect *that* position and your own foolish murmurings will make it more plenty? *Come*, sir, take the last RURAL, and look over the market, get a good, sound, sober idea into your head—*read, think*, and then go AHEAD!

You, Mr. Mechanic, don't take the last week's earnings and go to the dwelling of the *Fire-demon*, and spend it, and then complain of the "high price" of provisions. You have not only squandered your *money* there, but your *time*,—these "golden moments,"—and impaired your health. O, may *you*, too, learn wisdom!

And you, young student, there,—now *don't "give up."* Why, sir, "Where there's a *will*, there's *a way*." Life is before you; don't squander it, but improve each moment. These are golden moments. Why not value, and improve them? This is a great world, you live in, and broad are the fields of usefulness. You are just entering these fields! Take with you the best tools, and *use* them—a disciplined mind, strong and large heart, fixed purpose and moral character. Let your aim be to do good—leave the world better for having lived in it. If you would succeed, improve your time, let not one moment waste, for gold cannot recall it. If obstacles arise, work the harder—don't stop, but press on! CHARLIE CHESTNUT.

[To all which we subscribe,—particularly desiring the writer to occupy some of his future golden moments in addressing RURAL-ists.—ED.

OLD GEMS RESET.—NO. I.

MR. MOORE:—I well remember when one of the English Reviewers sneeringly asked, "Who reads an American book?"—but "the funeral has gone by" on that subject some years ago; in fact, it may now be more pertinently asked, "Who reads an English book," or rather an *old book*, of any kind? Who now reads MILTON, ADDISON, YOUNG, JOHNSON, STERNE, or COWPER, or even Sir WALTER SCOTT, or BYRON?—only a few years since, the admiration and adoration of the reading world. All have nearly descended to the tomb of the capulets.

Since the introduction of the steam press and paper mill, whereby inert substances supply the agencies of intellect, human sinews and vitality, a perfect avalanche of namby-pamby trash overwhelms the sedate, laborious, and strong-thinking minds of the olden time, and silly novels, with unmeaning pictures and paper covers, usurp the place of genius, science and good sense.

I am, Mr. Editor, *old fogy* enough still, to read and be edified by many of those old sterling works, which stand on our library shelves, unopened, unused, and unread—prim as old maids inviting for beaux.

In looking through *Darwin's Botanic Garden*, written during the latter part of the last century, I could but admire his gorgeous and often prophetic visions of nature and art—his swelling and fanciful descriptions of many of the wonders of creation, now as familiar to us as household words, and written too, when but little was known of Chemistry, Geology, or the Philosophy of Nature.

In the very infancy of steam, he says:

"Nymphs! you erewhile on simmering cauldrons played,
And called delighted SAVARY* to your aid—
Bade round the youth explosive steam aspire
In gathering clouds, and whinged the wave with fire—
Under the cold streams the quick expansion slop,
And sunk the immense of vapor to a drop;
Pressed by the murderous air the piston falls,
Resistless sliding through its iron walls,
Quick moves the balanced beam of giant birth,
Wields his huge limbs and nodding, shakes the earth.

The giant power from earth's remotest caves
Lifts with strong arm her dark, reluctant waves,
Each caverned rock and hidden ore explores,
Drags her dark coals and digs her shining ores.

* * * * * * *

There the vast mill-stone, with inebriate whirl
On trembling floors his forceful fingers twirl,
Whose flinty teeth the golden harvest grind,
Feast without blood to nourish human kind.

Soon shall thy arm, *unconquered steam*, afar
Drag the slow barge, or *drive the rapid car*,
Or on wide waving wings expanded bear
The flying chariot through the fields of air,
Fair crews triumphant leaving from above,
Shall wave their fluttering kerchiefs as they move,
Or warrior bands alarm the gaping crowd,
And armies shrink beneath the shadowy cloud."

How prophetic! when it is taken into consideration that it was written before steamboats or railroads were ever dreamed of, except in the hallucinations of the poet. Flying remains yet an unsolved problem.

If this article is acceptable, and amuses your readers, I will contribute others of the same cast. B. MANLY.

January, 1854.

*SAVARY was the first to use steam in cylinders for the purpose of raising water, about 1690.

LOVE OF COUNTRY.

A STRONG attachment, an earnest and passionate love of country, is an inborn element of human nature. It warms the heart and thrills the soul of the rude and uncultivated, as well as the more refined. Though bleak and barren the paternal land may be—though its hills be covered with perpetual snow, and the wild flowers in rich profusion deck not the vales—there is a tie, aye, a chain of golden links, which binds each to his native land.—There is a beauty in its bleakness and barrenness, far more delightful than sunnier and richer climes. And those mountain streams ice-bound, and snow-capped summits appear more grateful than the rarest landscape gemmed with nature's choicest gifts, and touched with the softest pencilings. This favorite principle, heaven-born as it is, inspires the soul with exalted sentiments, and urges on to noble endeavors.

These scenes which are presented during the hours of early infancy, make an impression on the mind that cannot easily be erased. All things in nature, animate and inanimate, by frequent association become, as it were, part of our own being. We learn to love each spot and cherish it in remembrance. And in after years, when the elasticity of youth has departed, when the bloom and hue of childhood have fled, and the silvery locks of age mantle the brow, the memory, quick and warm, glides back through the long period of the past, and delightfully lingers amid the haunts of other days. Thus is formed a deep and abiding passion for our native land.

The friend, the patriot, the lover of his country, watches over its interests with anxious solicitude. For its good he lives and acts alone. Nothing affords him so much pleasure as to see it smiling in prosperity. But when the hour of adversity holds unlimited sway, and terror and desolation are visible, he offers himself a willing sacrifice on the altar of his country, and hopes by his life-blood to seal its freedom. A. J. E.

[Translated from the German for the Rural.]

LESSONS OF NATURE.

AMONG the pupils of HILLEL, the wise teacher of the sons of Israel, there was a youth who was disgusted with every kind of labor, and gave himself up to idleness and indolence.—But HILLEL, who was greatly concerned for this youth, after exhorting him day by day, and seeing that his efforts to rouse him to activity, were all in vain, conducted him to the valley of Hinnom, near Jerusalem. In that valley there was a stagnant water, full of vermin, and covered with slimy and noxious weeds. When they had reached this place, HILLEL said, "Let us take rest here from our journey." But the youth was astonished, and said, "How, master, by this filthy swamp? Do you not perceive, what poisonous exhalations rise from it?"

"You are right, my son," said his teacher, "this swamp is like the soul of the idler. Who would dwell thereby?" Then HILLEL led his pupil to an uncultivated field, where grew thorns and thistles, which checked the grain and wholesome herbs. Then HILLEL leaned on his staff and said, "Behold, this field is of a soil sufficiently rich to produce whatever may conduce to our comfort and joy. But it has been forsaken and neglected, so that, now, it produces only thorns and thistles and poisonous plants, among which, is the habitation of venomous serpents. In the first place, you saw the *soul*—now recognize the *life* of the idler." Upon this the youth was affected with shame and regret, and said:—"Master, why do you lead me into such a desert and dreary region? It is the image of my soul and life, severely afflicting me." But HILLEL answering, said,—"Seeing that you would not believe in my words, I thought that perhaps the voice of nature might impress her instruction on your mind." Scarcely had he concluded, when the youth pressed his teacher's hand, and said: "Your efforts are not without success, for I feel a new life running through my veins."

And so it was. He worked with the activity of a zealous youth. Then HILLEL walked with him into a fertile plain, to the banks of a clear and transparent stream, beautifully meandering between fruitful trees and flowery meadows. "Behold here," said the gray-haired sire to the joyful youth, "the image of a new and active life. Nature, that has warned you, will also reward you. Her charm and beauty can rejoice him only, who, in her life, sees his own. T.

"LOOK ON THE BRIGHT SIDE."

THERE is in earth enough of beauty to warm, cheer and enliven the heart, were it but looked upon with an eye to see, a mind to feel it.

Look on the bright side, keep looking on the bright side. Surround yourself with forms and hues of beauty—"a thing of beauty is a joy for ever." Thus, if you would be joyous—and who would not?—cultivate a taste for the beautiful; and what so beautiful—ever renewing their youth and beauty—as the things with which God has surrounded us?

Then let that majestic elm still wave its branches in lofty freedom. Suppose it would make so many feet of boards, let it stand, as you would be happy in a shady, bountiful home. Leave that little patch for wife and children to scatter flower-seeds in the spring time. Suppose you could raise so many potatoes upon it; leave it if you would meet joyous, smiling faces.

Indeed, surround, in country and city, your homes with the beautiful, that your eye, resting upon it, may be insensibly but surely attracted to that perfect beauty of soul which, if you make it yours, shall one day bear you where none will say, "look on the bright side," since every side will be bright with purity—bright with love, for "God is love."

VIRTUE ITS OWN REWARD.

EVERY man, under God, has his destiny in his own hands. If he will be virtuous, he may be. If he is virtuous, he cannot but be happy. Like the suffering Redeemer, he may and will be "a man of sorrow and acquainted with grief;" but his consolation shall flow like a river, and his righteousness and happiness shall roll like the waves of a peaceful sea; following one after another, until they bear him to the bright and beautiful land beyond the tomb. Reader! art thou poor? art thou tried by thine infirmities? art thou persecuted by enemies? Still "Hope on, hope ever," be the motto of thy life. Still be virtuous, and your triumph shall be certain. I do not know a single young man who started with me in life, guided by a virtuous intent, who has failed of success. Many of that class are scattered to and fro in the earth. Fierce blasts and pelting storms beat upon many of them to this day, but every one of them now living who has been virtuous, has won for himself a good degree in his sphere; and many shall rise up and bless the hour when these young men were born.

A LITTLE FABLE.—The sword of the warrior was taken down to brighten; it had not been long out of use. The rust was rubbed off, but there were spots that would not—they were of blood. It was on the table near the pen of the secretary. The pen took advantage of the first breath of air to move a little further off. "Thou art right," said the sword, "I am a bad neighbor." "I fear thee not," replied the pen, "I am more powerful than thou art, but I love not thy society." "I exterminate," said the sword. "And I perpetuate," answered the pen. "Where are thy victories, if I record them not? Even where thou, thyself, shalt one day be—in the Lake of Oblivion."

LOSING HIS SOUL.

A MAN well clad, and apparently "well to do," passing along East Broadway yesterday, dropped a pocket-book as plethoric and well to do as himself. A manikin of a fellow, with red cheeks, bright eyes, and toes that could be counted every one, through the worn and tattered shoes, spied the fallen treasure, picked it up, and bounded on with might and main after the unconscious loser.

"Here, sir! Here's yo-ur pocket-book!"—panted the little fellow. The man stopped quietly, took the book, opened it, rapidly ran over the bills—5s—10s—20s.

There was a little silver—dimes, shillings, quarters, and among them a poor, dingy-looking penny, just one, sole representative of the whole Lake Superior regions.

It was all right—every bill, atom of silver, even to the dear little penny, was there.

The man seemed to be musing. What would he do, thought the boy; what would he do, thought we. Perhaps he would give him a dollar—certainly a quarter—at least a shilling. May be he would take him into a neighboring shoe store and buy him a substantial pair of little boots. That would be better still. At least he would purchase a pair of warm, woolen mittens—nice red and white mittens—for the little man who looked up so earnestly and honestly into his face. Slowly he fingered the change in the pocket-book.—He takes out a coin deliberately, and with a generous smile, placed in the opened palm of the lad a *whole cent*.

The recipient of this unexpected gift gave a second look at the coin, to make sure it was no optical delusion, and another at the man, to make sure it *was* a man—of which, by the way, he had some small doubt—and dropping the penny into the capacious pocket of his benefactor's overcoat, archly said, "Don't rob yourself, sir," and darted away over the frozen ground, convinced, no doubt, that he had seen a man for once, who carried his soul in his pocket-book.—*N. Y. Tribune.*

WHAT HOPE DID.

IT stole on its pinions of snow to the bed of disease; and the sufferer's frown became a smile—the emblem of peace and endurance.

I went to the house of mourning—and from the lips of sorrow there came sweet and cheerful songs.

It laid its hand upon the arm of the poor man which was stretched forth at the command of holy impulse, and saved him from disgrace and ruin.

It dwelt like a living thing in the bosom of the mother, whose son tarried long after the promised time of his coming; and has saved her from desolation, and "cure that killeth!"

It hovered about the head of the youth who had become the ishmael of society, and led him on to the work that even his enemies praised.

It snatched a maiden from the jaws of death, and went with an old man to heaven.

No hope? my good brother. Have it; beckon it to your side. Wrestle with it that it may not depart. It may repay your pains. Life is hard enough at best—but hope shall lead you over its mountains and sustain you amid billows. Part with all besides—but keep your Hope.

BEAUTIFUL ALLEGORY.

THE following beautiful allegory is translated from the German:

Sophronius, a wise teacher, would not suffer even his grown-up sons and daughters to associate with those whose conduct was not pure and upright.

"Dear father," said the gentle Eulalia to him one day, when he forbade her, in company with her brother, to visit the gentle Lucindu; "dear father, you must think us very childish if you imagine that we should be exposed to danger by it."

The father took in silence a dead coal from the hearth, and reached it to his daughter.

"It will not burn you, my child, take it."

Eulalia did so, and behold her beautiful white hand was soiled and blackened, and as it chanced, her white dress also.

"We cannot be too careful in handling coals," said Eulalia, in vexation.

"Yes, truly," said her father "you see, my child, that coals, even if they do not burn, blacken; so it is with the company of the vicious."

FASHIONABLE EXTRAVAGANCE.—One of the New York newspapers, speaking of the extravagance that prevails in the world of fashion in New York, says:

Already our ladies, who make any pretension to the title of fashionable, have commenced a war of rivalry with the European aristocracy, and if they do not surpass them in the style of dress, they are certainly their rivals in extravagance. In one year, a lady of fashion, living on Fifth Avenue, will spend seven or eight thousand dollars upon dress; and we are assured upon the most reliable authority, that a walking or promenade dress, such as is seen occasionally in Broadway, costs from fifteen hundred to one thousand dollars.

A GOOD WAY OF HEARING FROM HOME.—A young man in California, whose friends had not remembered him as he thought they ought, adopted the following expedients:—He sat down and wrote some half dozen letters to different persons at home, inquiring the price of land and stock—what he could buy a handsome farm of 200 or 300 acres for, &c.; intimating that he had large sums to invest, and was very rich generally. By return mail he received no less than seven letters, all anxiously inquiring after his health, when he was coming, &c., and has received three or four every mail since, including some very warm ones from an old and very cold sweet-heart.

WHY should people who wish to lead peaceable lives, never go to evening parties?—Because hops produce great bitterness.

For the Ladies.

MY LAMBS.

BY MRS. MARY A. DENISON.

I LOVED them so!
That when the "elder shepherd" of the fold
Came covered with the storm, and pale and cold,
And begged for one of my sweet lambs to hold—
I bade him go.

He claimed the pet;
A little fondling thing that to my breast
Clung always, either in quiet or unrest;
I thought of all my lambs I loved him best,
And yet—and yet—

I bid him down,
In those while, shrouded arms with bitter tears;
For some voice told me that in after years
He should know naught of passion, grief, or fears,
As I had known.

And yet again
That elder shepherd came—my heart grew faint;
He claimed another lamb with sadder plaint;
Another! she who, gentle as a saint,
Never gave me pain.

Aghast I turned away;
There sat she, lovely as an angel's dream;
Her golden locks with sunlight all agleam,
Her holy eyes with heaven in their beam;
I knelt in pray—

"Is it Thy will?
My Father, say—must this pet lamb be given?
Oh! Thou hast many such, dear Lord, in heaven,—
And a soft voice said—"nobly hast thou striven,
But peace—be still."

Oh! how I wept!
And clasped her to my bosom, with a wild
And yearning love—my lamb—my pleasant child!
Her, too, I gave—the little angel smiled—
And slept.

"Go, go!" I cried;
For once again that shepherd laid his hand
Upon the noblest of our household band;
Like a pale specter—there he took his stand
Close to his side.

And yet how wondrous sweet
The look with which he heard my passionate cry!
"Touch not my lamb—for him, oh! let me die!"
"A little while," he said, with smile and sigh,
"Again to meet."

Hopeless I fell—
And when I rose—the light had burned—so low,
So faint—*I could not see my darling go;*
He had not bidden me farewell—but oh!
I *felt* farewell.

More deeply far,
Than if my arms had compassed that slight frame—
Though could I but have heard him call my name,
"Dear mother"—but to heaven 'twill be the same—
There burns my star.

He will not take
Another lamb, I thought—for only three
Of the dear fold are spared to comfort me;
And yet my haunting dreams! could I foresee,
My heart would break.

Oh! with what thrill
I heard him enter;—but I did not know
(For it was dark) that he had robbed me so;
The idol of my soul—*he* could not go!
Oh! heart, be still!

Came morning; can I tell
How this poor frame its sorrowful tenant kept?
For waking tears were mine—I sleeping wept;
And days, months, years that weary vigil kept,
Alas—"Farewell"—

How often is it said;
I sit and think, and wonder, too, sometime
How it will seem—when in that happier clime
It never will ring out like funeral chime
Over the dead.

No tears! no tears!
Will there a day come that I shall not weep?
For I bedew my pillow in my sleep,
Yes—yes; thank God! no grief like *that* clime shall keep;
No weary years.

Ay! it is well!
Well with my lamb and with their earthly guide;
There pleasant rivers wander thro' beside;
Or strike sweet harps upon its silver tide—
Ay! it is well!

Through the drear day,
They often come from glorious light to me!
I cannot feel the fair touch—their faces see—
Yet my soul whispers—"they do come to thee;
Heaven is not far away!"

[*Saturday Evening Post.*

LOVE,—ITS PURITY AND POWER.

How bright and beautiful is love in its hour of purity and innocence—how mysteriously does it ethereal ize every feeling, and concentrate every wild and bewildering impulse of the heart. Love—holy and mysterious love—it is the garland spring of life—the dream of the heart—the poetry of nature. Its song is heard in the rude hut of the poor, as well as the gorgeous palace of the rich—its flames embellish the solitude of the forest, and the thronged haunts of busy life, and its light imparts a brilliancy to every heart, no matter what may be its condition.

Love—pure, holy and deified love—can never change. Friends may forsake us—the riches of this world may soar away, but the heart that loves will cling the closer; as loud roars the storm and amid the wreck of the tempest, it will serve as a "beacon" to light us on to hope and happiness.

Love is the mystic and unseen spell that soothes the wild and rugged tendencies of human nature—that lingers about the sanctity of the fireside, and unites in closer union the affections of society; and the soul that loves truly, will love forever. Not like the wares of ocean, nor traced in sand, is the image impressed upon a loving heart. No, no—but it will burn on undefined in its lustre, amid the quick rush of the winds and the warring of the tempest cloud—and when our fate seems dark and dreary, then will love seek shelter in her own hallowed temple; and offer up as a sacrifice her vows and her affections.

IT was a pertinent and forcible saying of the Emperor Napoleon, that, "a handsome woman pleases the eye, but a good woman pleases the heart. The one is a jewel, and the other a treasure."

MOORE'S RURAL NEW-YORKER

ROCHESTER, FEBRUARY 4, 1854.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

☞ Our present number is issued early, and we think this and future numbers will be mailed in season to reach all subscribers on the principal mail routes in this and adjoining States, on or before Saturday of each week.

Advance in Breadstuffs.

EVERY steamer of late, has announced an enhancement in the price of breadstuffs abroad, and, as a consequence, a corresponding advance has taken place at home. Provisions have not as yet proportionately advanced, although corn and the other grains partially sympathise with the price of wheat. It is a well known fact, that the supply is not commensurate to the demand, and any extra drain abroad, must of necessity affect the home market. The farmer, the rural and producing classes, will rejoice at these events, which are manifestly for their advantage; while the consuming classes, the mechanic, the artizan, and the laborer, will be, at least for a time, essentially affected for the worse. Still, in the end the balance will be restored, for these latter classes must and will advance the prices of their products also; and the former will be competent, not only to pay higher in turn, but to purchase of the latter more liberally. Trade in town is never better than when the farming community are getting good prices and have plenty of cash.

The laborers of Europe will suffer most, and already riots have broken out in several towns of England, in consequence of the scarcity and high price of bread. If a general European war occur, many will be driven to join the army, out of sheer necessity, and offer their bodies as targets for bullets in return for bread, with the feeling mentally experienced, if not poetically expressed—

> "Oh God! that bread is now so dear,
> And flesh and blood so cheap!"

To the farmer we would say, plant and sow to the utmost of your power. It is for your own profit as well as an obligation you are under to your fellow men; for he who owns land and will not cultivate it at a time like this, is an unprofitable servant and wretched almoner of God's bounty. To the mechanic and artizan we would say, be prudent, sober and industrious.—*Eschew* tobacco, drive the spile tight into the whiskey barrel, save a little of your flour by using the wholesome, but coarser and cheaper grains, such as corn and buckwheat, and use vegetables and meats and other articles of diet that have not trodden in price on the heels of wheat, and you will carry yourself and family successfully through the present crisis.

Senatorial Toad-Eating.

WHEN the Pope's Nuncio, BEDINI, visited the U. S. Senate lately, all of the most conspicuous Senatorial candidates for the presidency in 1856, including Hards, Softs, Silver Grays, and Woolies, men who have ridden political hobbies to their political death, and men who are astride of fresh coursers under whip and spur, all vied with each other in playing the sycophant with the manifest intention of bidding for votes. CASS, EVERETT, DOUGLASS, and MASON stand at the head of the list in this shameful race.

We can admire clever humbuggery, when it accomplishes its end without its means becoming glaringly apparent, but this piece of political tom-foolery is so thin-skinned and obvious, that the Senatorial actors therein, deserve to be laughed to scorn.

THE DAILY DEMOCRAT appears in a new and beautiful dress—rendering our breakfast companion more radiant and readable than ever.—We congratulate our neighbor upon his prosperity, and trust his shadow and influence will never be less. Those of our friends in Western New York, who want a good political and commercial newspaper, will find the Democrat—now the leading whig journal in the State, west of Albany—worthy their patronage.

IMPORTANT DECISION.—The Supreme Court of the United States has rendered an important decision in the Telegraph case of MORSE vs. O'REILLY. It sustains MORSE's claim to the patent of his own machine, but rejects the claim set up by him to electro-magnetic telegraphing generally. Telegraphing by HOUSE's, BAIN's and other instruments of different construction, is therefore no infringement of MORSE's patent.

SHOCKING CASUALTY.—On Saturday, the 28th instant, a manufactory of ball cartridges at Ravenwood, L. I., blew up with an explosion that shook the houses for two miles around, instantly killing thirteen of the hands employed, most of them being young girls and boys, and mortally wounding three others.

The Coroner's Jury has brought in a verdict censuring the proprietor, and he has been held to bail in the sum of $2,000.

To Business Correspondents.

A CHAPTER FOR PEOPLE WHO WRITE TO PUBLISHERS.

THE great majority of the thousands who annually address us letters on business, usually do so in such manner—apparently aiming to be both plain and correct—that it is a pleasure to attend to their requests. But some people, who are perhaps equally well posted in the *theory* of doing business, are quite negligent in the *practice*, and often cause us much vexation and extra labor. These well-meaning friends have drawn so largely upon our patience of late, that we are constrained to say a few words, in all kindness, for their benefit, as well as that of all careless folk who have occasion to address publishers.

Be Careful, or *keep cool*, is our admonition to all who make mistakes in ordering papers, and visit the ire, caused by their own blunders, upon the devoted head of the publisher. From our experience, we are confident that editors and publishers get more *maledictions* for the shortcomings of others (and most frequently the complainants themselves,) than any other class. A case in point. Lately a person remitted us for the RURAL and W. G. & S. R., dating his letter at M———, adding no County or State, and the post-mark, was illegible—as is the case with a large portion of the letters we receive.—Of course we tried M———, N. Y. In a few days, however, we received another letter from the same person, censuring us for delinquency, but containing no additional light as to whether he resided in New York or elsewhere. The post-mark on this letter was indistinct, but by rubbing our specs, and close scrutiny, we finally deciphered what we thought was intended for Pa., and we changed the address accordingly. But lo! before the papers reach our anxious friend, he indites a third epistle,—yet, strange to tell, persists in giving only the name of his post-office, and again the post-mark is illegible! But we are confirmed in our opinion that he lives in Pa., for (beginning to doubt the integrity of his P. M.) he informs us that "this letter will be mailed at Pittsburgh."

This is but one of many similar, or worse, instances. The other day we received a money letter dated *Lebanon*—no County or State was mentioned—the post-mark was *blind*—and, finally, the writer omitted his own name! At first, this was a poser—for about every State contains a post-office named *Lebanon*; but the bills remitted were on the Bank of Tennessee, and the writer wished us to furnish a lost number of the RURAL for 1853. These items put us on the right track. We turned to Lebanon, Tenn., on our old books, and probably found the name of our modest friend—but we should still have been in a quandary had there been more than one subscriber, last year, at that office. As there was but one name, we assumed the responsibility of crediting and sending.

More recently we received a letter containing $30, with no signature; and another, with $25, unsealed. We frequently receive money letters without signatures, and sometimes have to write to the P. M. for information. Not a few neglect to date their letters at all—not even giving the name of post-office—and if the post-mark is not distinct, we are obliged to keep the epistle unanswered until we get another, and that other is usually a scorcher. If it don't call us hard names, it is pretty sure to talk very plain and unmistakable English.

In ordering papers for a number of subscribers, a name is sometimes omitted by the writer—or he gives an incorrect address. We follow orders to, or in, the *letter*,—and when the complaint arrives, if very severe, our chief clerk is in the habit of sending the original order in reply, just to account, as he phrases it, "for the milk in *that* cocoa-nut." In truth, so far as our experience extends, and it is not very limited, (for we have been in the publishing business some dozen years,) most of the errors charged to the account of publishers and mailing clerks originate with others.

A few words about directing letters to publishers, and we have done. In the first place, be sure to write *plainly* and *correctly*, the name of the person, post-office and *State*. In our case the latter is all-important, for there is a *Rochester* in almost every State north of Mason and Dixon's line. Many letters directed to us at Rochester only, have been mailed to other offices of the same name—in Mich., Ind., Ohio, Vt., &c. If money is enclosed it should be registered by the P. M.,—and it is well to have the fact that the letter contains an enclosure noted on the accompanying rate bill. Of late, many Post-Masters have adopted this course. Money letters, properly mailed, almost invariably reach us safely.

Now, if those having occasion to order the RURAL (or W. G. and S. R.) will remember the items in the first part of this already too long article, and address as under, their requests will receive prompt attention:

Registered.

D. D. T. Moore,
Rochester,
New York.

— The moral of all this, patient reader, is that people who write to publishers should "be sure they're right, then go-ahead." Be careful to give all names plainly with the proper address, and direct your letter correctly—and then if you "fail to connect," the publisher will be entitled to a few gentle anathemas. We know of one who is so accustomed to being held responsible for the sins of others, that it is refreshing (perhaps on account of its rarity) to receive a deserved overhauling!

The War News.

THE foreign news by the Atlantic, which arrived at New York on the 26th ult., is if possible, more bellicose than that by any previous mails, and seems still more decisively to threaten an involvement of all the principal European powers. And not the European powers only, but those of Asia and of Africa also; for Persia is already committed to the contest; DOST MOHAMMED, and his Afghan hordes, with bitter memories of a former war with the British East India Company's forces years ago; Circassia and her allies engaged in a struggle of life and death, with her Russian enemies; Mahometan nations with their traditional hatred of the very name of Christian; Egypt, with her accustomed sympathy and alliance with the Porte; Austria and her kindred despotisms on one side, and England and France, with their jealousies of the overshadowing progress of Russia on the other, all point to a bloody issue of the present difficulty.

The news of late, is unfavorable to the Turks. Since the naval battle of Sinope, they have daily and hourly lost ground, both in Europe and Asia; and, although two or three slight engagements have resulted in their favor, still it is not to be disguised or denied that their forces have on the whole, been decidedly worsted, and chased out of the contested territories. All their movements have been retrograde, which is of itself an acknowledgment of defeat. The advancement of the combined fleets into the Black sea, for the purpose of checking the hostile demonstrations of Russia, is proof also, that the hands of the Sultan need strengthening in order to cope effectively with her northern foe. Unless a favorable turn takes place in diplomatic affairs before the opening of spring, we may look confidently for hostile demonstrations on the part of Russia, that will trample the crescent unsustained and unaided in the dust. There is no mistake about it, however much people may deceive themselves, that unless Turkey is backed by some nation more warlike, and less degenerate than herself, she must inevitably come out worsted in the contest, and suffer spoliation of a large portion of her territories, if she does not suffer utter expulsion from Europe as was the case of the Moors in Spain.

America seems to be the only part of the commercial and civilized world not politically mixed up in this question, and if she has the wisdom, the prudence, and the virtue to remain so, she will prosper, let the result across the sea go which way it will. The danger is that demagogues, for the purpose of making political capital, will create and push forward questions as to which we may have decided opinions, but upon which we cannot legitimately enter upon any course of action. "Let us alone, and we will not interfere with you; but meddle with us or ours at your peril," should be our motto.—None of the belligerents will be over anxious to incur our enmity themselves, however much they might desire our aid.

The Erie Difficulty.

THE Railroad War at Erie, Pa., during the past two months, has very justly attracted considerable attention throughout the country, and been censured by both press and people, far and near. The last dispatch from the "seat of war" is dated Erie, Jan. 30, and is as follows:

"The track will be repaired to-day, and trains commence running to-morrow morning. It is feared, however, that the tracks will not be united, as the people are determined to prevent the connection being made by the Cleveland and Erie, and Erie and North East Railroad Companies."

Now, we are constrained to say the people of Erie are very unwise in their resistance—notwithstanding we have lost a good many subscribers for what we have previously said about their transactions. They undoubtedly have rights in the premises, but they have no moral right to disturb the peace and invade the privileges of others. If they are wronged, they should seek redress in a proper, legitimate manner—not to the injury of the traveling public and community generally.

— One word to our friends in Erie and vicinity. We beg to assure you that we have said nothing but what we believed, though our remarks might have been qualified for your benefit. In hastily commenting upon your acts, some weeks ago, we did not stop to inquire whether we should lose or gain subscribers, but condemned what we considered a wrong to community. When convinced that *we* were wrong and *you* right, an amende will be forthcoming—*and not till then*. The loss or gain of a few hundred subscribers is no consideration in the premises.

FIRES.—An unusual number of fires have occurred in various parts of the country during the past week. East, West, North and South, the cry of fire! fire! falls upon our ears with an alarming and a warning sound.

On Saturday last another fire occurred in New York, destroying property to the amount of $150,000. At Colchester, Conn., on the same night, Haywood's India Rubber Works were burnt, thereby throwing out of employment five hundred hands. At Oswego on the same day several warehouses and shops were consumed; also, simultaneously with the above, a large block of buildings at Worcester, Mass.—loss $50,000. On Sunday morning, the American Car Company's Works at Chicago were partially consumed. Loss not estimated, but probably very heavy. On Monday a fire broke out in the office of the *New York Sun*, but fortunately it was extinguished without much damage.—Jan. 24th, the town of Tahula, on the Mississippi, was destroyed by fire, with 8,000 bales of cotton.

Congressional Proceedings.

THE principal business in the Senate during the week past, has been the debate on the bill introduced by Mr. DOUGLAS, for the organization of the territory of Nebraska. There is a clause in the bill which repeals the Missouri compromise, which excludes slavery from territory north of thirty-six and a half degrees of latitude. Much feeling and excitement is created by this bill, both in and out of Congress. A debate arose in the Senate on the subject of the BEDINI riots, in which Messrs. DOUGLASS, EVERETT and MASON, took ground in favor of BEDINI, and Mr. WELLER against him. A resolution was passed calling for the correspondence between the Pope and the President, on the subject of BEDINI's mission. The correspondence shows that the Nuncio is not an accredited diplomatic agent in any capacity. Mr. SEWARD presented memorials in favor of cheap postage.

In the House, the matter of the Erie difficulties was discussed, but no action had thereon.

Mr. Benton, the Committee on Agriculture, was instructed to inquire into the expediency of establishing an Agricultural Bureau, to be connected with the Department of the Interior, and that they report by bill or otherwise.

Mr. Olds, from the P. O. Com., reported a bill to amend further the act of March, 1851, to reduce and modify the rates of postage. Returned.

The House took up also the resolution before offered by Mr. Ewing, requesting the Senate to return to the House the joint resolution adopted on the 18th inst., proposing a select committee on an amendment offered by him to the Constitution, to change the mode of electing President and Vice President of the United States.

Various other matters were considered, but of no very especial interest to the general reader.

LEGISLATIVE.—Our Albany letter from some cause failed to come to hand this week in time for our issue.

The Legislature has been engaged most of the week in considering private bills and matters of local interest, such as granting relief to plank road companies, amending railroad charters, authorizing subscriptions to connecting roads, erecting new towns, &c., &c., all of which will appear hereafter in the authorized publication of the laws.

FRANKLIN CANAL CHARTER.—The bill to repeal the Franklin Canal charter, has passed both houses of the Pennsylvania Legislature, and been sent to the Governor for his signature. It is on the strength of this charter, that the Erie and Cleveland railroad have connected with the Erie and Northeast, and probably no new bill will pass without a change of gauge at Erie.

OUR NEW DRESS, in which the Rural is said to appear very neat and becoming, was procured of Mr. NATHAN LYMAN, Type Founder, &c., of Buffalo. Mr. L. has one of the best establishments in the country, and we can conscientiously commend him to our brethren of the craft as correct and honorable in his transactions.

☞ It is understood that a dispatch has been received by the U. S. Marshal, at Erie, from Attorney-General Cushing, instructing him to proceed immediately with the repairs of the Railroad, and to forward word instantly to Washington if he was interfered with, in which case troops will be sent on without delay.

☞ The Auburn Daily Advertiser learns, that Mr. Crocker, Agent of the Christian Ambassador, in that city, a highly esteemed gentleman, has had his mind so much wrought upon recently by the "spirits" that he is now wild with insanity. Now read the following paragraph.

☞ A new semi-monthly journal, to be devoted to "modern and ancient spiritualism" is announced to appear shortly in New York. It is to be published by Partridge & Britton, and edited by Judge Edmonds and Dr. Dexter.

☞ The annual meeting of the American Colonization Society took place at Washington on Wednesday of last week. The receipts for the year are over $80,000, and the expenditure $100,000, leaving the Society a deficiency of $20,000.

☞ The Western Theological Seminary, Presbyterian Church, and Allegheny City Bank were burned to the ground at Pittsburgh, Jan. 24th. Half the library of the Seminary, which was very valuable, was saved.

☞ General Penzuela, the new Captain-General of Cuba, has declined receiving an addition of $6,000 per annum to his salary. Is the millennium approaching?

☞ Rev. Edward Everett Hale, of Worcester, Mass., has been awarded the premium of $100 for the best essay on "Juvenile Delinquencies."

☞ The Milwaukee Wisconsin has been shown a fifty dollar bill on the Buffalo City Bank, altered from a two. It was admirably executed.

☞ The Trustees of the Pilgrim Society are taking active measures to carry out the plans of erecting a suitable monument to the Pilgrims, at Plymouth.

☞ The proprietors of Tammany Hall, New York, have brought a suit against the democratic committee of 1853, to the amount of $1,617, for rent of rooms, liquors &c.

☞ There were 233,000 barrels of ale manufactured in Albany last year. 600,000 lbs. of hops are used, worth 35 cents per pound. The number of persons there employed is about 700.

☞ It is now one hundred and fourteen years that the Methodists have existed as a people.—They now number in the world 2,000,000 of communicants.

☞ Forbes Allison, a merchant of New Orleans, has absconded with $40,000 belonging to the St. Andrew's Society of which he was president.

☞ A clergyman in Cincinnati recently performed the marriage ceremony, receiving therefor $50 from the bridegroom, and from the bride a deed of a city lot worth $2,500.

News Brevities.

—— The bill dividing Ohio into two judicial districts has passed the U. S. Senate.

—— There were nearly a thousand applicants for the Canal appointments.

—— The Governor of Illinois has called an extra session of the Legislature.

—— The Whigs of Rhode Island have adopted the Temperance candidate for Governor.

—— In the present Congress, there are six Smiths, five Jones, three Wrights, three Allens, and three Stuarts.

—— About eighty thousand Bibles and Testaments were issued by the American Bible Society the past year.

—— There are 26 brush manufactories in Lansingburgh, with capital varying from five hundred dollars to one thousand dollars.

—— The taxable property of the State of Texas has increased one hundred per cent. in the last three years. It is now stated at $90,114.

—— Abby Folsom has been the object of a snow ball attack on the part of a lot of boys in Boston.

—— Rev. S. J. May, of Syracuse, advertises that he is going to show that "the doctrine of the Trinity" is of heathen origin.

—— The Legislature of New Jersey have passed a resolution that it is improper and inexpedient to charter or recharter any banks.

—— The ten hour labor law has passed the Kentucky House of Representatives. Query—does it include slave labor?

—— A boy of 11 years of age, named Thomas Daly, died in Boston, a few days since, from injuries received by being struck by a snowball.

—— The first train passed through the Great Tunnel on the Pennsylvania Railroad, between Pittsburg and, Altoona Jan. 27.

—— There were 128 railroad accidents in the United States in 1853; 231 persons were killed and 499 wounded.

—— The disease of which M. Bodisco, the Russian Minister, died, it is said was a species of dyspepsia.

—— The Hog trade at Cincinnati. The number of hogs slaughtered up to the 24th inst., was 687,000.

—— A negro blacksmith was sold, week before last at Augusta, Ga., for $1525, and a bricklayer for $1,250.

—— Thirty-seven thousand barrels of flour were sent out by the N. Y. Central Railroad from Buffalo, in the month of September last.

—— The Detroit Daily Inquirer urges the conveyance of the U. S. Mails over the Great Western Railway through Canada.

—— The Boston Post claims that there was a plot at Madrid to disgrace or murder Mr. Soule. Can the Post say that it has not succeeded?

—— The remains of Col. Bliss have been removed to Gen. Taylor's plantation, and interred along-side the remains of the old hero.

—— Col. Harrison, cousin of President Harrison, holds his commission as consul at Kingston, Jamaica, from Gen. Washington.

—— The Government has received advices that the emigration from Bremen to the United States, to the close of this year, will reach 55,000.

—— The Connecticut democrats hold their State convention at Hartford, on the 22d of February.

—— Forty thousand Partridges were sent in December by railroad from Detroit, Michigan to Chicago.

—— There are about one hundred steamers lying side by side at the Cincinnati levees, some frozen in and others aground.

—— About one-third of the citizens of Thibodeaux, La., it is stated, have been indicted for gambling.

—— An elopement took place the other day which caused some consternation. A dog ran away with a newly married man's rib—of beef.

—— The Supreme Court of Iowa has decided that the Liquor Law of that State is constitutional.

☞ Martin Koszta is now learning the Daguerreotype business with Messrs. Meade Brothers in New York.

—— The Tennessee river, says a dispatch from Charleston, dated January 25, is higher than it has been for six years.

—— The Maine Law bill is now under consideration in the Assembly. To give free scope to discussion, the House has resolved to take it up in evening session.

—— More than sixty criminals were executed in the United States during the year 1853, and quite a number are now in prison under sentence of death.

—— The Courier & Enquirer denounces Solon Robinson's "Hot Corn Stories," as ministering to a prurient appetite and unfit to be read in families.

—— Oil from cotton seed has been manufactured in New Orleans. It is said to burn with great brilliancy, and to be peculiarly fitted for using on machinery.

—— Twenty locomotives for different Western roads are detained at Erie by the "break."—The loss to companies and individuals, by this detention alone, is immense.

—— The sum of $25,000 was recently sent to the London Society for Propagating the Gospel in China, by a person signing himself "Less than the Least."

—— George Geddes, of Geddes, Onondaga county, has been appointed by the Canal Commissioners to superintend the draining of the Cayuga marshes.

—— Mr. Chas. Warner, near Penn Yan, had 40 sheep killed by dogs on the night of the 7th inst. The sheep lay all about the field horribly bitten and mangled.

—— They are about introducing the American railroad car into England. It is admitted to be, in almost every respect, superior to the car now in common use on English railways.

—— In 1645, by an agreement, each family in the Massachusetts Colony gave one peck of corn, or one shilling in cash, to Cambridge College.

—— The public debt of Austria is stated at over $500,000,000 at the present time—and the average annual deficit in its income, at $30,000,000.

—— In Barnstead, N. H., where there are but four hundred voters, there are 79 persons over 75 years of age, and more than twice that number between 70 and 75 years of age.

—— Three hundred thousand copies of "Uncle Tom's Cabin" have been sold in the United States, and the sale is still constant. In Europe the number sold amounts to nearly a million.

Foreign Intelligence.

Arrival of the Atlantic.

The Steamer Atlantic arrived at New York Jan. 27.

The Asia arrived out at 6 o'clock on morning of Monday, 9th inst.

On December 30th, part of the allied fleets entered the Black Sea; they were prevented entering sooner by the tempests.

Up to the last dates, the Russian Ambassadors had not withdrawn from London or Paris.

M. Kizeff, the Russian Minister at Paris, is reported to have said that he would await further instructions from the government.

From Vienna it is stated, seeming authentically, that Austria had asked Russia if she would consent to a European Protectorate over the Christians in Turkey. To this the Czar replied that he would consent to no interference whatever between himself and Turkey.

On the Danube but little was doing, owing to the weather. There had been three slight affrays; one between a forage escort and some Cossacks; another, a sally from Sistowa, and the third, an action between a steamer, two gun boats and the shore batteries of the Danube.—In all three the Turks were successful.

From Asia we have letter writers' accounts of previous affrays, but not one word of later news.

The Russians had warned their shipping not to venture out of the ports, unless under protection of a convoy. Convoys are to be organized for different trading ports.

The Pacha of Egypt on hearing of the Sinope disaster, immediately ordered the equipment of six frigates, two corvettes and three brigs to replace those destroyed. It is confirmed that the Wallachian peasantry are in insurrection.

Lord Dudley Stuart has had an interview with the Sultan regarding the employment of Poles.

It is reported that the British Charge has resumed negotiations with Persia, the Persians in Teheran having broken out in tumult against the Russians.

France has called out an additional contingent army of 80,000 men to replace 70,000 destined for Turkey.

Prussia is constructing a course of action with Denmark and Sweden, in view of the coming war.

The Marquis Turgot has been appointed grand officer of the Legion of Honor, supposed on account of Soule wounding him.

Young Soule has published a long letter, explaining his difficulty with the Duke of Alba.

The overland Indian mail has arrived with Calcutta dates of Dec. 6.

It was said that the Burmese had re-captured Pegu.

The Russians were repulsed at Kherab.

Trade in India was fair.

Shanghai, Nov. 19.—Insurgents had evacuated Amoy, and the Imperialists perpetrated a horrible massacre there.

Canton was quiet.

THE LATEST.

The sailors of the Russian Baltic fleet, who were on leave, are summoned to return to service by March.

A letter from Christiania states that Norway has decided on fitting out a squadron of 12 ships in view of approaching events.

But little sympathy for Russia exists among the Norwegians.

ENGLAND.

The enormous rise in the price of food has caused apprehensions in England of riots among the laboring classes.

Bread riots had already commenced in parts of Devonshire. At Topsham, mobs of women had threatened the bakers in consequence of the latter raising the price of bread.

At Crediton, also, bands of men, women and children had paraded the streets and attacked some of the bakers' shops, demolishing the doors and windows, and doing other damage. The market people were also molested, and their produce kicked about the streets.

The police were unable to put down the disturbance, and it was not until the report was spread that soldiers were coming, that they were quieted.

The steamer Sarah Sands, from Portland, arrived in the Mersey on the evening of the 10th.

The steamer Charity was to sail on the 15th for Portland.

Dates from Liberia of the 13th Dec., had been received in England. The coast was healthy.

President Roberts had delivered a satisfactory message to the Legislature. He informed them of the alliance of France and England with Liberia, and that Napoleon had sent a present of 1,000 stand of arms and accoutrements for native militia.

The receipts of the republic were $35,000; expenditures, $32,000.

At Lagos affairs continued unsettled. Kosco with 10,000 men, was in the rear of the town, threatening hostilities.

LIVERPOOL BREADSTUFFS.

Brown, Shipley & Co., report breadstuffs again advanced. Wheat 6d. per bush.; flour 2s. per bbl.; Indian corn 1s; Baltimore, Philadelphia and Ohio flour 42s. 6da45s; Canadian 44a 45s; Western Canal 42s. 6da44s.

White wheat 12a13s; red 11a12s. 2d. per 70 lbs. White Indian corn 51s; yellow 50s; mixed 49s.

PROVISIONS.—McHenry reports an improved demand for new Bacon, and imports are taken at full rates; ex-ship old Bacon neglected. Beef is more wanted, but without important change in value. Pork very dull. Cheese continues scarce. Lard down and in demand. Tallow has advanced 1s2s.

SPECIAL CANAL ELECTION.—The special election to vote on the Constitutional amendment for the Canal Enlargement is fixed for the third Wednesday of February proximo—the 15th.—Polls will be opened at sunrise and closed at sunset in every election district. The forms of the ballots will be thus:—

"For the proposed amendment in relation to the canals."

"Against the proposed amendment in reltation to the canals."

The ballots are to be endorsed,—

"Proposed amendment in relation to the canals."

MELANCHOLY COINCIDENCE.—The ill-fated steamer San Francisco cleared from New York December 17th, and on the same day the following ships cleared, all of which have met a similar fate: ships Commerce, Singapore and Borneo, besides ship Saxony, disabled and put into Halifax.

☞ The Sixty Policemen of Cincinnati who had a collision with the Germans who were about to burn Bedini in effigy, have all been held to answer at a higher court.

California News.

Arrival of the Ohio.

THE Ohio, from Aspinwall, arrived at New York, Jan. 30th, with the California mails of the 1st inst—300 passengers, and nearly $1,0000,000 in gold.

LATER FROM AUSTRALIA.—Advices from Sidney to Nov. 2d are received. A monster petition has been sent to the Governor for the Queen, against the new Constitution, to which he had given a decisive answer.

The gold regulations are highly satisfactory to the diggers generally. The general report from the mines is unfavorable, but there are a few exceptions. Labor still continues in demand in the agricultural districts. The rush to the mines causes a complete drain.

The Sidney Empire of October 27th, says that the general temper of business in Sidney continues firm and is likely to be sustained, owing to a comparative cessation in arrivals.

The steamer United States arrived at New Orleans, Jan. 25th, from Aspinwall with the mails, passengers and specie left at Aspinwall by the steamer Ohio for New York.

The Congress of New Granada had levied a duty of 10 per cent. on the estimated profits of vessels arriving at and departing from Aspinwall.

The sloop of war Cyane was at Aspinwall, and was about to leave for Carthagena, to convey the engineers who are to explore the route of the Oceanic Canal across the Isthmus of Darien.

It was reported that a revolution had occurred in Bolivia.

Dates from the city of Mexico have been received here. There was much excitement at Chihuahua in consequence of the new treaty of the United States.

The leading men say they will annex themselves to the U. S. rather than submit to the provisions of the treaty.

News Paragraphs.

☞ Messrs. Stillman & Allen, of the Novelty Works, of New York city, are now constructing the largest engine that was ever built in this or any other country. The diameter of the cylinder is 115 inches, and the length of stroke 12 feet. It is designed for the Bay State Company's new Fall River boat, which is to run in connection with the Fall River and Boston Railroad.

☞ The New York Times says, that the entire block of buildings on Broadway, known as the "Metropolitan Hotel," and "Niblo's Theatre," were purchased a few days since, from the Van Rensselaer Estate, by Alexander T. Stuart, Esq., for which he paid down in cash the enormous sum of $500,000, and the deed was duly recorded in the Register's office.

☞ Wednesday, January 25, was the coldest day of the season in Boston. At sunrise the thermometer was at zero, at noon four degrees above, and at sunset down to zero again. In towns a few miles from Boston the thermometer was at ten and twelve degrees below zero in the morning. At Montreal it was twenty-five deg. below.

☞ The Walnut Street Baptist Church of Louisville, Ky., at their last annual meeting, Dec. 2d, after voting their pastor, Rev. W. W. Everts, a salary of $1,200 for the past year, and $2,000 for the year 1854, voted a sum sufficient to pay a Life Insurance premium on a policy for $10,000, to provide for his family at his death.

☞ The newly appointed Bishop of Monterey, Mexico, was waylaid and robbed while on his way to assume the functions of his new appointment. In vain he appealed to the robbers to respect his cloth; he was treated with as little respect as a layman. He had the satisfaction of excommunicating the rascals, however.

☞ The fifth session of the Territorial Legislature commenced at St. Paul Jan. 4. New York has the honor of giving birth to 5 of the members, Maine 4, New Hampshire 3, Ohio 3, Canada 3, Minnesota 2, Pennsylvania 1, Virginia 1, Wisconsin 1, Missouri 1, Scotland 1, and Prussia 1.

☞ Governor Boone, of Florida, has issued orders to Brig. Gen. Johnson, of that State, to organise his brigade at once, in pursuance of an act of the last Legislature, providing for the final removal of the Indians, by force, if necessary.

☞ The Brattleboro Eagle chronicles the death of Miss Louisa Witt, who had just commenced her one hundredth term of school teaching. Parents, children, and in some instances grandchildren, had passed successively under her care.

☞ The British ship Riversdale, on her voyage to Valparaiso, having sprung a leak at sea, the vessel was hove down for repairs, when it proved that the tusk of a sword fish had pierced through the plank, which was of elm, three inches and a half in thickness.

☞ A train of cars on the Central R. R. was thrown from the track Jan. 27th, near Buffalo, in consequence of obstructions placed on the track. A reward of $500 is offered for the detection of the offender.

☞ The loss by the burning of Ashbrook's pork-house, at St. Louis, on the 15th ultimo, was $170,000. There was an insurance of $85,000 Twelve thousand hogs and thirty-four hundred tierces of lard were burnt.

☞ Capt. F. S. Aubrey reached Fort Yuma, on the 7th of December, with 15,000 sheep from New Mexico, destined for San Francisco. His route is nearly due east from the Tejon pass to Albuquerque.

☞ Professor Longfellow has resigned the professorship of Belles-Lettres and Modern Languages in Harvard College. He will continue to perform the duties of his office till his successor is appointed.

Marriages.

IN Cleveland, Ohio, Jan. 25th, by the Rev. F. H. Brown, Mr. L. K. BOWDISH and Miss SOPHIA A. PHILLIPS, both of Rochester, N. Y.

IN this city, on the 25th ult., by Rev. Mr. Thlebon, Mr. V. P. RICHE, of California, and Miss AMELIA D. MAGEE, of Hornellsville.

Deaths.

IN Litchfield, Conn., Jan. 1st, Mrs. ELECTA, wife of Tomalison Wells, Esq., and daughter of the late Ames Smith, of Litchfield.

IN Lyons, Wayne Co., N. Y., on the 11th ultimo, Mrs. SUSANNAH DURFEE, aged 78 years.

Commercial.

BUSINESS AND FINANCE.

THE steamship Washington took out $157,000, and the Europa about $200,000 more. The Ohio, from Aspinwall, arrived at New York, Jan. 29th, with a million in gold on board. During the week previous to the last trip of the Niagara from Liverpool, two millions of gold arrived at London from Australia, and two millions of silver from Mexico. The total amount of gold shipped from Melbourne during the past year, has been about $50,000,000.

The total revenues of Great Britain, for the year ending Jan. 5th, 1854, is in the aggregate £51,784,118.

The total imports arriving at New York, the week past, has been about $5,000,000; exports, exclusive of specie, about $1,600,000, of which one half was breadstuffs.

Money has again commenced flowing into the Sub-Treasury, and the balance in the Government vaults at N. York, is on the increase, standing now at about $1,500,000.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Feb. 1, 1854.

FLOUR and Wheat are both higher than at last quotations, as also several other of the leading staples; but there are indications of a slight reaction in the price of breadstuffs. Flour is quoted at $9,63@9,75, and Wheat at $2,06. It sold yesterday, in the street, at $2,09, but the former is the price to-day, and is high enough at that, *at least for consumers*, many of whom begin to repeal with some earnestness, "give us this day our daily bread."

Pork is a quarter of a dollar higher, and is selling from $5 to $5,25. Beef, also, is higher, being quoted at $4,50@5,50.

Chickens are rated at a cent advance, selling now at 7 to 8c. per lb.

Potatoes are up a penny, and sell from 44@50c ₩ bush.

Other slight changes in rates which may be seen by comparing the tables with previous quotations.

Stores—Yearlings—$13, 15@16.

Two Years old—$19, 22, 25@30.

Three Years old—$29, 31, 34@39.

Sheep and Lambs—$1,50, 1,75, 2, 2,75; Extra, $4,00, 4,50, 5@6.

Swine—No demand for lots to peddle, one lot sold 4¾@5½c; barrows 5½c. At retail from 6@6½c.

PHILADELPHIA CATTLE MARKET—Jan. 23.

Beef Cattle—There were offered during the past week about 1,750 head of Beef Cattle, of which near 500 were driven north. Prices range from $7@7,50 per 100 lbs., with a moderate demand.

Cows range from $12 to $36 each.

Hogs are arriving slowly—about 120 head sold at 5½@6,-37½, which is a slight decline. About 1,000 head were taken for packing. Prices of killed hogs are steady.

Sheep and Lambs come in slowly, and command $2@6 each, according to quality. The supply is inadequate to the demand.

THE REASON WHY.—Of late some of our agents and subscribers complain, because we do not mail all the papers a office where we have clubs in one package. If they knew how desirous we are to mail all together, and how earnestly we labor for that object, we should have less complaint. The truth is, it has been impossible for us to get all the names received during each week, on our books in time for mailing—and hence we have been obliged to mail from books so far as the names were entered, and the recent orders from letters. This is owing, in part, to the fact that two of our best clerks were ill and absent for some days—and we could not obtain competent substitutes. They are now at their posts, and there is a fair prospect of entirely obviating the cause of complaint in the course of one or two weeks.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ TO CANADIANS.—As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 2½ cents per copy to the club rates of the RURAL,—in adding the lowest price to Canadian subscribers $1,50 per year.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ MR. O. MOORE, is duly authorized to act as Agent for the RURAL NEW-YORKER in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

☞ PERSONS who have forwarded $10 for a club of ten, can extend the number to TWENTY for $10, but all the subscribers must begin at one date.

☞ IT is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ THE postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

☞ PERSONS entitled to club premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to add in augmenting its circulation.

☞ ALL business letters, communications, &c., should be addressed to H. D. T. MOORE, Rochester, N. Y.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the RURAL NEW-YORKER, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary Journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, IN CASH, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the RURAL NEW-YORKER—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, IN CASH, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, IN CASH, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, IN CASH, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, IN PLATE OR BOOKS, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, IN PLATE OR BOOKS, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

In order to reach and reward EVERY ONE who may lend a portion of influence in support of the RURAL NEW-YORKER, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, IN CASH, or a copy of WEBSTER'S UNABRIDGED DICTIONARY, (or $6 in Agricultural Books,) to EACH PERSON sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the RURAL, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the RURAL for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the RURAL, and four (the present and three past) volumes of The Wool Grower and Stock Register—or, if preferred, an extra copy of the RURAL and $1,50 in Books.

5th. To every one remitting for TEN copies ($15,) an extra copy of the RURAL and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the RURAL, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1845 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1845 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

ALL competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

TWO DOLLARS A YEAR. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

Advertisements.

THORP, SMITH, HANCHETT & Co.,

PROPRIETORS OF THE SYRACUSE NURSERIES, Cultivators of, and Dealers in, all kinds of Nursery Productions, offer for the Spring Sales a very large stock of *Apple, Pear, Cherry and Peach Trees, both Standards and Dwarfs*, as well as a good supply of Plum, Quince, Apricot and Nectarine Trees, and all the best and most popular sorts of the smaller fruits; *Currants, Raspberries, Strawberries and Gooseberries.*

The stock of *Raspberries* includes Yeslold, Franconia, Knevitt's Giant, Large Monthly, the Antwerps, and Dr. Brinckle's Seedlings; of *Currants* all the leading kinds; and of *Gooseberries*, 3,000 fine plants of the best Lancashire sorts.

Grapes.—*Native*, one, two, and three years old, in large quantities; *Foreign*—Forty best sorts.

Ornamental Trees and Shrubbery, in great variety.

Roses.—One of the best and purest collections in the country; including, of course, Mr. Mathews' matchless Seedling, the *Augusta*,—of the most luxuriant growth and foliage, profusion of bloom, splendor of its flower, and of the most exquisite perfume. The price, as will be seen by our Catalogue, is very much reduced.

Dahlias, Phloxes, Bulbous Roots, Green-house and Bedding Plants, including all the novelties of the season.—*Hedge Plants, Rhubarb and Asparagus* in large quantities.

Evergreens of choice varieties, as well as many thousands of *Balsam, Norway, European, Silver and Scotch Firs, Austrian Pines, Chinese and American Arbor Vitæ*, &c., &c., all in fine condition.

☞ Among their stock of Pear Trees, they have in large proportion, the *Virgalieu, Onondaga and Oswego Beurre*, both Dwarf and Standard. No more desirable kinds of early bearing, productiveness and great excellence, can be cultivated extensively for market. They have also several hundreds of *Extra Sized Fruit Trees* of the finest growth and form, cultivated and trained into bearing for themselves, which the necessity of changing their grounds to those much more extended requires them in part to remove. These trees consist of Cherry, Plum, Standard and Dwarf Pears. They have furnished the greater portion of the specimen fruits exhibited by the proprietors at the State Fairs for two years past, and are offered at from $1 to $3 each.

The products of their Nurseries having a reputation second to none in the country, those now favoring them with their orders may rely upon that reputation being sustained. They annex a few commendations selected from many of a like nature, both as to the quality of their trees, and that other essential, the excellency of their packing, to which they invite attention.

"The trees were all well packed, and are very fine—not one article but I am perfectly satisfied with."—From Layden, Cook county, Illinois.

"The trees were well packed, and came to hand in fine order."—South Bend, Indiana.

"The trees, though long delayed on the way, arrived in good condition, and opened well. I must say they were evidently taken up and packed with much more than ordinary care."—Delaware, Ohio.

"And now about the trees. If you had *trimmed* them [a novel complaint,] they would have been the finest lot of trees I have ever seen from your State. I never saw finer roots."—From Springfield, Ohio. [The trees here spoken of, let it be remembered, were set out from the Syracuse Nurseries as their *second class trees.*]

☞ "The trees, in appearance, [having been delayed on the way,] were in good order, and better trees than I have ever seen west of the Lakes."—Kaccee, Ill.

☞ The proprietors have also been favored by a customer with the following certificate, made after an examination of a large lot of their trees:

"We, the undersigned, do hereby certify, that we have personally examined the lot of fruit trees which Mr. —— now has in the village of Marshall, and we do not hesitate to say, that they are the best lot of Fruit Trees, to all appearance, that has ever been offered for sale in this county. Dec. 14, '53." [Signed,] Abner Pratt, Circuit Judge; Supreme Court; Erastus Hussey, Co. Clerk; H. A. Noyes, Judge of Probate; J. R. Montgomery, M. D.; D. Darwin Hughs; T. A. Randall; J. A. Van Horn; Jas. A. Way.

☞ *Catalogues furnished gratis to all post-paid applications, enclosing a letter stamp to pre-pay the same.*
Syracuse, N. Y., Feb., 1854. 213-3teow

SHORT-HORN BULLS AND SUFFOLK PIGS

FOR SALE.—I have three One-Year old Bulls for sale, got by my imported Bull *Young Tempest*—colors, Roan and Red. Also, a few pair Suffolk Pigs, bred from my imported stock.
J. M. SHERWOOD.
Auburn, N. Y., Jan. 20, 1854. 212-3t

FARM AND HORTICULTURAL RESIDENCE,

FOR SALE.—DAVID THOMAS, near Aurora, Cayuga Co., N. Y., wishing to retire on account of feeble health from the care of his farm, offers it with all its improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of fertile land, has a spacious and comfortable dwelling, with a laborer's cottage, and various outbuildings, together with extensive orchard and fruit gardens, and a large ornamental and kitchen garden—the whole forming a completely furnished, comfortable, pleasant and retired farm residence; and if applied for soon will be sold at the low price of $1,200. For further particulars, apply personally to DAVID THOMAS, on the premises, or to J. J. THOMAS, Macedon, Wayne Co., N. Y. 212-3t.

POLAND OATS—AGAIN.

For seed, a good supply of the celebrated Poland oats, at $1 per bushel, delivered at my residence, or $1,25 if sent by railroad. Each bushel to weigh at least 40 pounds.
J. A. CLARK, Marion, Wayne Co., N. Y. 211-4t

KETCHUM'S MOWING MACHINE.

THIS machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season.
H. G. WHITE & CO.,
Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 211tf.

Poetical.

[Written for Moore's Rural New-Yorker.]

AUTUMN'S GRAVE.

Come, ye bright spirits
Of earth and of air,
Pale Autumn is dying—
The gentle and fair,
Gone is her bloom
Snow-flakes are falling,
Chill winds are calling,
Over her tomb.

Gather ye round her
From forest and dale,
Raise a wild chorus
On winter's fierce gale:
Death is your song,
Leaflets are sighing,
And hoarse winds replying,
Bear them along.

Tear-drops are raining
Upon the cold sod,
And Autumn's fair tresses
Lie low 'neath the clod;
Hushed is their gale,
Waked from the sleeping,
The echoes are weeping,
Joining the wail.

Lay her down softly
In silence to rest,
Gather the snow-shroud
O'er her pale breast:
Sweet let her sleep,
Let the winds, hushing
The noise of their rushing,
Watch o'er her keep.

JENNY.

Rural Sketch Book.

THE FOND WIFE;

OR, FIRMNESS OF THE FEMALE SEX.

I had for several months been in constant attendance on Mrs. St. ———, a young married lady of considerable family and fortune, who was the victim of the terrible scourge of the female sex, a cancer. To great personal attractions, she added uncommon sweetness of disposition; and the fortitude with which she submitted to the fearful inroads of her malady, together with her ardent expression of gratitude for such temporary alleviations as her anxious medical attendants could supply, contributed to inspire me with a lively interest in her fate. I can conscientiously say, that during the whole period of my attendance, I never heard a word of complaint fall from her, nor witnessed any indications of impatience or irritability. I found her one morning stretched on the crimson sofa in the drawing-room; and though her pallid features and gentle corrugated eyebrows evidenced the intense agony she was suffering, on my inquiring what sort of a night she had passed, she replied in a calm, tremulous tone, "Oh, Doctor, I have had a dreadful night; but I am glad Captain St.—— wasn't with me, for it would have made him very wretched!" At that moment a fine flaxen haired little boy, her first and only child, came running into the room: his blue, laughing eyes glistened with innocent merriment. I took him on my knee and amused him with my watch, in order that he might not disturb his mother.—The poor sufferer, after gazing on him with an air of fondness for some moments, suddenly covered her eyes with her hand, (how, slender! how snowy! how almost transparent was that hand!) and I presently saw tears trickling down her fingers, but she uttered not a word. There was the *mother*. The aggravated malignity of the disease rendered an operation at length incritable. The eminent surgeon who, jointly with myself, was in regular attendance on her, feelingly communicated the intelligence, and asked whether she had fortitude enough to submit to an operation. She assured him with a quiet smile of resignation, that she had for some time been suspecting as much, and had made up her mind to it, but on two conditions—that her husband (who was then at sea) should not be informed of it, and that she should not in any wise be bound or blindfolded.

Her calm and decisive manner convinced me that remonstrance would be useless. Sir ——— looked at me with a doubtful air. She observed it, and said, "I see what you are thinking of, Sir ———; but I hope to show you that a woman has more courage than you are willing to give her credit for."

In short, after the surgeon had acquiesced in the latter condition—to which he had especially demurred—a day was fixed for the operation, subject, of course, to Mrs. St. ———'s state of health. When the Wednesday arrived, it was with some agitation that I entered Sir ———'s carriage, in company with himself and his senior pupil, Mr. ———. I could scarcely avoid a certain nervous tremor—unprofessional as it may seem—when I saw the operating-case on the seat of the carriage.

"Are you sure you have everything ready, Mr.———?" inquired Sir ———, with a business-like air which somewhat irritated me.—On being assured of the affirmative, and after cautiously casting his eyes over the instruments to make assurance doubly sure, we drove off. We arrived at St.———'s, who resided a few miles from town, about two o'clock in the afternoon, and were immediately ushered into the room in which the operation was to be performed—a back parlor, the window of which looked into a beautiful garden. I shall never be pardoned, I fear, for acknowledging that the glimpse I caught of the pale and disordered countenance of the servant, as he retired, after showing us into the room, somewhat disconcerted me; for, in addition to the deep interest I felt in the fate of the lovely sufferer, I had always an abhorrence for the operative part of the profession, which many years of practice did not fail to remove. The necessary arrangements being at length completed—consisting of a hateful array of instruments, cloths, warm water, &c., &c.—a message was sent to Mrs. St. ———, to inform her that all was ready.

Sir ——— was making a jocular and not very well-timed allusion to my agitated air, when the door was opened, and Mrs. St. ——— entered, followed by her two attendants. Her step was firm, her air composed, and her pale features irradiated with a smile, sad, however, as the cold twilight of October.

She was then about twenty-six or seven years of age—and, under all the disadvantageous circumstances in which she was placed, looked at that moment a beautiful woman.—Her hair was light auburn, and hung negligently over a forehead and neck white as marble. Her features were regular—her nose and mouth exquisitely chiseled—and her complexion fair, almost to transparency. Indeed, a very eminent medical writer has remarked that the most beautiful women are generally the subjects of this terrible disease. A large Indian shawl was thrown over her shoulders, and she wore a white muslin dressing gown. And was it this innocent and beautiful being who was doomed to writhe beneath the torture and disfigurement of the operating knife? My heart ached. A decanter of port wine and some glasses were placed on a small table near the window; she beckoned me towards it, and was going to speak.

"Allow me, my dear madam, to pour you a glass of wine," said I, or rather faltered.

"If it would do me good, Doctor," she whispered. She barely touched the glass with her lips, and then handed one to me, saying with assumed cheerfulness, "Come, Doctor, I see you need it as much as I do, after all. Yes, Doctor," she continued, with emphasis, "you are very, *very* kind and feeling to me." When I had set down the glass, she continued, "Dear Doctor, do forgive a woman's weakness, and try if you can hold this letter, which I received yesterday from Captain St. ———, and in which he speaks very fondly, so that my eye may rest on his dear hand-writing all the while I am sitting here, without being noticed by any one else—will you?"

"Madam, you really must excuse me—it will agitate you—I must beg—"

"You are mistaken," she replied with firmness; "it will rather compose me. And if I *should*—," expire, she was going to have said, but her tongue refused utterance. She then put the letter in my hand—hers was cold, clammy, but I did not perceive it tremble.

"In return, madam, you must give me leave to hold your hand during the operation."

"What—you fear me, Doctor?" She replied with a faint smile, "but do not refuse my request." At that moment, Sir ——— approached us with a cheerful air, saying, "Well, madam, is your tete-a-tete finished? I want to get this matter over, and give you permanent ease." I do not think there ever lived a professional man who could speak with such an assuring air as Sir ———.

"I am ready, Sir ———. Are the servants sent out?" she inquired of one of the women present.

"Yes, madam," she replied, in tears.

"And my little Harry?" Mrs. ——— asked in a fainter tone. She was answered in the affirmative.

"Then I am prepared, she said, and sat down in a chair that was placed for her.

One of the attendants then removed the shawl from her shoulders, and Mrs. St. ———, herself, with perfect composure, assisted in displacing as much of her dress as was necessary. She then suffered Sir ——— to place her on the corner side of the chair, with her left arm thrown over the back of it, and her face looking over her right shoulder. She gave me her right hand, and with my left I endeavored to hold Captain St. ———'s letter, as she had desired; she smiled sweetly, and as if to assure me of her fortitude; and there was something so indescribably affecting in the expression of her deep blue eyes, that it almost broke my heart. I shall never forget that smile as long as I live. Half closing her eyes, she fixed them on the letter I held, and did not once remove them until all was over. Nothing could console me at this trying moment, but a conviction of the consummate skill of Sir ———, who now, with a calm eye and steady hand, commenced the operation. At the instant of the first incision her whole frame quivered with a convulsive shudder, and her cheek became ashy pale.—She prayed inwardly that she might faint, so that the earlier stage of the operation might be got over while she was in a state of insensibility. It was not the case, however; her eyes continued riveted in one long burning gaze of fondness on the beloved hand-writing of her husband; and she moved not a limb, nor uttered more than an occasional sigh, during the whole of the protracted and painful operation. When the last bandage had been applied, she whispered almost inarticulately, "is it all over, doctor?"

"Yes, madam," I replied, "and we are going to carry you up to bed."

"No, no—I think I can walk—I will try," said she, endeavoring to rise; but on Sir ——— assuring her that the motion might perhaps induce fatal consequences, she desisted, and we carried her, sitting in the chair, up to bed.—The instant we had laid her down, she swooned, and continued so long insensible that Sir ——— held a looking-glass over her mouth, apprehensive that the vital energies had at last sunk under the dreadful struggle.

She recovered, however, and under the influence of an opiate draught, slept for several hours.

* * * * * *

Mrs. ——— recovered, though very slowly; and I attended her assiduously, sometimes two or three times a day, till she could be removed to the sea-side. I shall not easily forget an observation she made to me during the last visit I paid her.

She was alluding one morning distinctly and delicately to the personal disfigurement she had suffered. I, of course, said all that was soothing.

"But, Doctor, my husband"—said she suddenly, while a faint crimson mantled on her cheek—adding falteringly, after a pause—"I think St. ——— will love me yet."—*Diary of a Physician.*

True friends are like stars—they shine out only in the night of misfortune.

HOTEL BELLES.

There is a growing disposition on the part of a certain portion of the fashionable people, to spend a considerable part of their days of leisure at hotels. In the summer months, the hotels at Saratoga and Newport are resorted to as the burning points of the fashionable world; in winter, Washington comes in for a share of the same or a similar class of society. In addition to this, there are persons, married and single, who prefer a life in a fashionable hotel to the solid comforts of home; partly from erroneous notions of economy, and partly because housekeeping is connected with certain inconveniences, in the shape of supervisions or labor, from which boarding affords comparative relief.

We decidedly object to the taste of a married woman who can be better satisfied in a hotel than in a house of her own; who can cheerfully substitute a public life for the private one, and the bustle of a public drawing room for the retirement of a home with her husband and children. We think that a hotel life is the very grave of conjugal tenderness and affection, and feel assured that a properly constituted woman, in any sphere of life, will submit to it only temporarily, and from necessity. We would as readily believe that flowers can blossom without dew or sunshine, as that delicacy of sentiment, and sound morals, can be cultivated without retirement and the undisturbed play of the affections in the family circle around the domestic hearth. A woman who can find pleasure and happiness away from her own fireside, has already lost the greatest charm of her sex, and is sure to become, in the end, a burden to herself and husband.

But there is a class of ladies, longing for the distinction of being considered belles of a particular fashionable hotel, and admired as such, not only by their acquaintances, but by strangers. This, assuredly, is in wretched bad taste, and as vulgar as it is wretched. The idea of dressing all the time for strange company, and endeavoring to please whom you do not care for, admitting everybody into your society who can afford to live in the same house, and be observed, criticised, and perhaps slandered by persons you can take no notice of, because they are beneath your notice, is enough to make any rational woman who has been more than a year out of boarding school, detest a life in a public hotel, be it ten times as gorgeously furnished as the St. Nicholas or the Metropolitan.

We say nothing of the "flirtation galleries," and bridal chambers which are usually exhibited in the hotels with so much pomp and vulgar significance. We have no fancy for courtship under a chandelier. A woman of true delicacy and refinement will neither exhibit her charms nor her graces nor her accomplishments, to the public. Exclusiveness is the very essence of ladies' society, as domestic retirement is the very soil in which grows every female virtue. The most poetical beauty of a woman is the blush on her cheeks; the hotel belle has usually but one color, and that not always her own. If a man wants to know what sort of feeling a belle of the genus we have described, inspires him with, let him put the question to his heart: how would I like to have that woman for a wife? and he will have no difficulty in understanding himself.—*Philadelphia Ledger.*

THE MIND AND THE CLOCK.

In moments of excitement, the mind is apt to have most exaggerated notions of time.

"How long was I gone, do you suppose?" asked a young husband, who, at the time of a railroad accident, had found himself obliged to leave his bride for a few minutes in an "unprotected" situation.

"Why, it was all of an hour," replied the trembling creature.

"You seriously think I was away from you an hour?" said he.

She declared that her estimate fell short of the time, if anything; when he informed her that, having looked at his watch—not being at all alarmed at what had given her such fright—he knew that his absence had been protracted to the extent of just eleven minutes and a half!

A few years ago, a man whom we will call Mr. B——, had a leg broken in some machinery about a saw-mill. The limb was mangled in a shocking manner; and a surgeon being called, it was decided that immediate amputation was necessary. A number of witnesses, besides the assistants, were present, when the operation was performed; and, of course, it was in the midst of considerable excitement that the surgeon went through with the work.

Afterwards, Mr. B——, on recovery, not only refused to pay the surgeon but sued him for damages, on the ground that his leg had been taken off in a bungling and unworkmanlike manner. When the case came to trial, one witness testified that the operation had occupied, in his estimation, half an hour; while professional men stated that it should not have occupied more than five minutes. Another thought it had taken twenty-five minutes at least; a third was positive of three quarters of an hour; and others testified to a similar lapse of time. Only one witness, however, called by the defence, professed to be exact. An upright, intelligent, cool-headed old farmer, when questioned, said he held his watch in his hand during the operation, which occupied precisely four minutes and three-quarters—not a second more. On the strength of his evidence the surgeon made a successful defence, and the plaintiff was compelled to "fork over" the fee.

Who is truly Great?—The truly great man is he who chooses the right with invincible resolution, who resists the sorest temptations from within and without, who bears the heaviest burdens cheerfully; who is calmest in storms, and most fearless under menaces and frowns; whose reliance on truth, on virtue, on God, is most unfaltering.

There is not so poor a book in the world, that would not be a prodigious effort, were it wrought out entirely by a single mind, without the aid of prior investigations.

THE CHURLISH MAN.

Sensible and prudent men who travel, will always provide themselves with small change to meet their little incidental expenses. Good men are always supplied with a stock of good nature, which they keep for the purpose of paying out to whomsoever may render them a service; and it's astonishing how quickly the turnpikes on the way of life will open by the payment of a small toll of good feeling. The churlish man is always a selfish man. He has no thought but for himself. He is entirely indifferent to what opinion may be formed of him. The good will and approbation of his fellow creatures is a matter of perfect indifference.—It is not difficult to determine the exact value of such a man in any community. He never projects or takes part in any public undertaking, unless he can clearly see that his own interests will be advanced. The thought never entered his head or heart of assisting a public measure for the general good, although he would be no loser. He must see that his own individual good is to be promoted, or he will have no hand in the matter. His style of answering the most polite question is that of a man apparently offended with the querist.—See him at a hotel, a brutal character of the creature comes out with a peculiar force.—He abdresses the waiters as though they were made on purpose to be trod upon by persons whom fortune had favored with a better position; and the fun of it is, he thinks he adds to his own importance by showing airs to menials. But never having considered the feelings of others in his life, he has not the remotest idea that these despised waiters form a just estimate of his character, by whispering behind his back that the man in number one has never been used to the luxury of a servant, or he would know better how to treat them. If the churlish man ever by accident, does a favor to another, it is always performed in a style that makes the obligation mighty painful to bear.—As Dickens said of a turnpike gate keeper who was seldom from his post, "that he would have made a capital oyster if he had been brought up in that station of life;" and so would the churlish man have made a splendid hedge-hog if nature had been as liberal in giving him the form as she was in bestowing the disposition.—*Germantown Telegraph.*

Wit and Humor.

A DISGUSTED CITY COCK-SPARROW.

First Sparrow.—Why, what's the matter, Charley?—ain't you goin to dance?

Second Sparrow.—Ah—you can't imagine what has happened. When I came in, I met a wallah on the stairs with a tallow candle in his hand, and the disgusting odour quite overcome me, and made me sick. Do get me a glass of brandy and water. I am so disgusted and faint-ah!

A MOVING EPISTLE.

Specimens of the style of letter by which W. F. Smith, the Manchester bigamist, persuaded four or five women to become his wives:

"My love for you is More than My tung Can Express or pen Describe if it Would be for your happiness for Me to be tortured how Willingly Would I Assend the Scarfold hour Calmley Could I resine My life if I Could once More behold you And see you happy And to know that you Will for give me O that I Could Dy by your side O that your pure And Stainless hands Would Strike the Dagger to My heart And Extinguish the last Sparke of life if I Could but know this how quick Would I present Myself before you but Alass it cannot be so yet I Ask you I besage And intreat of to for give What Erer your pure Eyes have seen Amess in Me My Dear M Will you be so kind As to Allow Me to Call and Se you please Ask Mr Cross if I can Come And Not be Molested if I Can I Can Satisfy you that in Memory respects I am innocent My Dear Mary I love you better than life With you I am happy Without you Miserable."

Mrs. Harris says, foreigners resemble each other so much that she can't more than half the time tell an ourang outang from a Frenchman. The lady is getting not only impatient, but personal.

A Correspondent writes to us thus:—"Sir, I rote a few lines to you some fore weaks ago in anser to piece headed," &c. His communication *opposes Free Schools.— Cleveland Plaindealer.*

Punch says that the reason why editors are so apt to have their manners spoiled, is because they receive from one correspondent and another such a vast amount of evil communications.

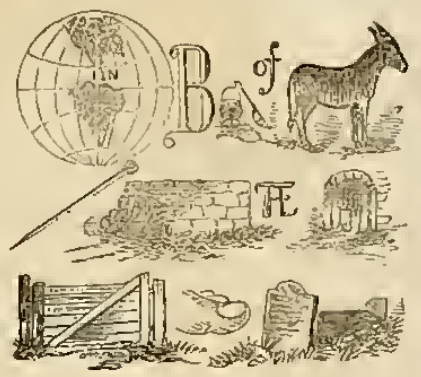
Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS, NO. 7.

☞ Answer in two weeks.

We will forward the Rural three months, free of charge, to *each* of the first *four* persons (residing out of the city) who send correct answers, by mail, to the above Rebus previous to the publication of the solution.



Answer to Illustrated Rebus No. 6.—*In crossing the Isthmus, beware of Aspinwall, the great gate to the grave.*

The first four correct answers to above were received from V. V. Bullock, Frances M. Sheldon, J. McIntyre, E. W. Dennis, whose names are entered on our books for the Rural three months.

Answer to Acrostical Enigma in No. 4.—*Israel Putnam.*

[For the Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 35 letters and 7 words.
My 2, 1, 4, 15, is a girl's name.
My 9, 7, 8, 6, 17, 18, 23, 24, 22, 14, is a city in England.
My 12, 5, 29, 30, 31, 28, all should possess.
My 24, 31, 13, 7, 30, 29, 3, all ought to shun.
My 12, 11, 21, 28, 26, 6, 5, 14, is a town in Europe.
My 6, 31, 28, 14, 4, 15, is a fruit of which all are fond.
My 29, 34, 21, 18, is an instrument printers use.
My 35, is a letter of the alphabet.
My 31, 1, 10, 22, is an American statesman.
My 17, 34, 13, is a town in Asia.
My 9, 31, 26, is a paper published in New York.
My 2, 20, 16, 6, 17, 28, 10, 21, is an Irish Patriot.
My 11, 26, 8, 21, 32, is part of the body.
My 7, 21, 10, 28, 8, is a general of the Revolution.
My 1, 19, 22, 29, 15, is the writer's name.
My 17, 7, 14, 3, is an animal.
My 33, 20, 21, 12, 32, 4, is dug out of the earth.
My 31, 1, 16, 14, 22, 27, is a passion.
My 9, 7, 25, 21, is a Scripture name.
My 2, 11, 24, 6, 31, is a very simple and useful invention.
My whole is a curse to the nation.

A. S.

Hamilton, C. W., Jan. 25, 1854.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $16; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—6 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Non-Subscribers into whose hands this number of the Rural may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

ORDER ON THE FARM.—NO. I.

Order is not complex, but consists of doing only one thing at a time, and that, at the proper moment. To bring about order, therefore, one must not overrate his ability, and so plan more than he can fulfil, else, when he would look for order, confusion only would be seen. This suggests that order in thought and plan is paramount at the outset. There must be regularity in every movement and motion—not a stereotyped mechanical movement, but that motion that has definite objects in view and moves with precision to their accomplishment. All this requires unceasing vigilance—which is just as peremptory whether the proprietor has paid workmen or has none.

But how few there are of the mass of us farmers who reduce our farming operations to a thorough-going, systematized method. We need a long and severe schooling under an inexorable master to teach us how to bring order out of our chaos, and turn gaunt care into sleek-sided profit. We do indeed serve a hard master, but with all our schooling we fail to get what the wise man enjoined us—Wisdom—and we rotate along the same beaten paths insensible to the proper discharge of those great duties required of us by the laws of progress.

With the man of order, whether his operations be limited or extended, every thing is done at the proper time and in the best manner, so that every advantage that can well be taken of circumstances is gained at the right moment. Hence all the results are favorable, and fortune is said to "smile on the man."—"Chance favors him." Let us glance at a few items in his system.

His buildings are neat and tasty, are got up compactly and placed with their surrounding yards so that the greatest convenience possible is attained, both for the animals and the humans. The consequence is, a great many steps are avoided, much time saved, and the comfort of all sooner and better administered.—Not only are the buildings in their proper places—but every thing in and around them is where and just as it should be. Here, then, a very large item is carried to the credit of order.

So with the arrangements of the fields and the fences—the latter being well made and well kept, secure his crops from inroads of vicious cattle, whilst his own creatures repose quietly in their proper pastures. If, however, a rail gets down, or a board off—the vigilant eye soon detects it—and it is substantially replaced and no weak places permitted to lure a poaching creature into tempting crops. He counts no losses on this score, and this item is also credited to the benefit of order.

His lands, too, are properly tilled—plowed in the best manner and at the proper time, when the earth is most thoroughly pulverized and made friable. All the means at command are used to enrich his soil, while the too abundant moisture is carefully led away, that the plants may find their aliment in the best possible state and in the greatest required abundance. The effects of this are more visible by contrast in in the hot, scorching days, when his neighbor Stir-but-little's field over the fence is looking so very parched and stunted. Now the man of activity and order rejoices his heart in the abundant growth of his crops, and passes this item to the credit of order also.

Nor is he content with casting his seed upon a well prepared field only. His lore of system stops not here. He follows up the work thro' its growth to maturity, and whenever he finds a weed stealing the fertility, he at once arrests the poacher. Looking after the weeds in their time, he is sure to "nip them in the bud," and so with vastly less labor rid the crop of the intruders and completely defeat them of their perpetuity. And further, the crop is benefited by the timely stirring it receives, so that the man of order finds his perseverance rewarded not only by an increase of crop, but in hastening the time when he shall have every pest of his land conquered. That he shall fully root out every vestige of weeds he is not so sanguine as to hope for, till that millennial time of good farming shall come, when every man shall join determinedly in the crusade. He cannot prevent the winds from wafting the thistle and other seeds from the neglected fields of neighbor Stir-but-little, and though he has reasoned with him upon the matter, he submits to the annoyance with what amount of good nature he can—but suffers none from his own lands to plague others or himself.

T. D. T. M.

BEET-ROOT SUGAR.

Sugar is now not only a luxury, but a *necessary* of a civilized community—indispensable to the enjoyment and comfort of human life. Its sources are various and inexhaustible, being found in greater or less quantities in nearly every vegetable. It is divided by chemists into two kinds, *cane sugar* and *grape sugar:* the former being principally obtained from the cane, beet-root, maple and palm trees; and the latter existing in the grape and nearly all fruits. Cane sugar can be easily converted into grape sugar, but the inverse conversion has not yet been effected. Their composition is as follows:

	Cane Sugar.	*Grape Sugar.*
Carbon,	47.1	36.7
Hydrogen,	5.9	6.8
Oxygen,	47.0	56.5
	100.0	100.0

Cane sugar is readily obtained in a hard crystallized form, but grape sugar is crystallized with great difficulty, and is usually found in the form of molasses. Starch is convertible into grape sugar by the use of diluted sulphuric acid, and in the malting process the starch of the grain is converted into sugar by *diastase.* By the use of yeast, or other *nitrogenous, fermenting* substance, sugar, from whatever source obtained, is convertible into carbonic acid and alcohol, the intoxicating ingredient of all spirituous liquors, wine, beer, cider, etc., etc.

The cane contains about 18 per cent. of sugar, though by the present process of manufacturing it, little more than seven per cent. is obtained. This is owing principally to the difficulty of expressing all the juice from the cane. Thus, while the cane contains 84 per cent. of juice, the average quantity secured by the manufacturer is but 50 per cent., and in some cases not more than thirty per cent. is obtained.

Beets have long been used in France for the manufacture of sugar; and though they were first grown and extensively used for this purpose during the continental system of embargo, when sugar was a dollar per pound, yet they are at the present time grown to a great extent in France, with considerable profit, and sugar at eight cents per pound. They are also being grown in Ireland; but it is yet problematical as to whether they will pay there, the price of sugar being but six cents per pound, and the climate, being colder, is not so well adapted for the formation of sugar in the beets. The composition of the beet, the mean of several analyses, is as follows:

Water,	87
Sugar,	8
Woody tissue,	5
	100

By the processes of manufacturing now adopted in France and Belgium, from 4 to 6 pounds of fine, white, crystallized sugar is obtained from 100 lbs. of beets; and it is but reasonable to suppose that by further improvements in the machinery, and possibly in the cultivation of the beets themselves, *all* the sugar they contain will be obtained, and this quantity augmented by special manures and better cultivation.

The cultivation of the sugar beet is not essentially different from that of common beets and mangel wurzel. The soil should be a light loam, well drained, deeply and thoroughly pulverized, and very rich. If the soil is not too sandy, we should prefer to plow it deep and well, immediately after the wheat crop is off; and if it could be manured at the same time, so much the better. In the spring it should be plowed again, dragged, rolled, cultivated, &c., till a fine tilth is obtained. It may then be marked out in rows, twenty inches apart, and the seeds be dropped in the rows at a distance of twelve inches, four or five seeds in a hill. If about a quarter of an ounce of good superphosphate of lime was dropped in each hill with the seed, the benefit would be *very great,* and abundantly remunerative. The seed should be sown the latter part of May and first of June. The plants will be ripe about the last of August. Sixteen tons per acre is the average in France, though thirty tons are sometimes obtained on very rich land. We think twenty tons per acre might be usually obtained in this country by careful cultivation and judicious manuring. Taking five per cent. as the average amount of white sugar obtained by the common manufacturing process, a ton would give 100 lbs.; or an acre of beets of 20 tons, *one ton* of sugar. This, at six cents per pound, would be $120 per acre; and this besides the leaves of the plants and the residue of the bulbs, which are very valuable as food for cattle and hogs. The value of the beet-root in France, is estimated at $3 per ton.—The cost of raising a crop of beets in this country cannot exceed $35 per acre, leaving, at this estimate, a profit of $25 per acre for interest on land, &c. Of the cost of extracting the sugar from 20 tons of beet in this country, we cannot speak very definitely; but where wood or coal is cheap, it appears more than probable that it could be done and leave a good round sum as profit for $60.

The process of reducing the beets to pulp and pressing out the juice, is very similar to that commonly adopted in the making of cider. When the juice is obtained, it is placed in a furnace and about 300 grains of pure lime added for every gallon of the liquor. It is then heated and kept as near the boiling point as possible, without ebullition, for about half an hour. This is for the purpose of freeing the liquor from impurities. The clear juice is then run off, passed through filters of animal charcoal, or burnt bones, and concentrated by evaporation, till the sugar crystallizes. In France, about four hours are occupied from the time the beets are ground till the liquid is in the crystallizing pans, though this time is considered much too long, and efforts are making to shorten it. It is necessary that great expedition should be used to prevent loss from fermentation, which proceeds with great rapidity in warm weather, and greatly reduces the amount of sugar. In the Patent Office Report for 1849 and '50, page 405, there is a most interesting article by Mons. Maumene, detailing a series of experiments on the best means of checking fermentation of the pulp and juice during manufacture, from which it appears that bi-sulphite of lime, added in small quantities, prevents fermentation and removes any discoloring matter, which often injures the sale of beet sugar. By the aid of this discovery, the pulp and juice can be kept for any length of time without injury, and the necessity for hurry is in a great measure removed. The cost of the bi-sulphite of lime must be little, as the materials, sulphur and lime, are everywhere abundant and cheap, and the mode of manufacture easy and simple.

The cultivation of the sugar beet, if it can be rendered profitable, will greatly increase the fertility of the farm, as nothing is exported from it but sugar, and all the nitrogen, alkalies, and phosphates, retained as food and manure. If any of our readers have had experience in the growth of sugar beets, and the manufacture of sugar from them, we should be pleased to hear from them.

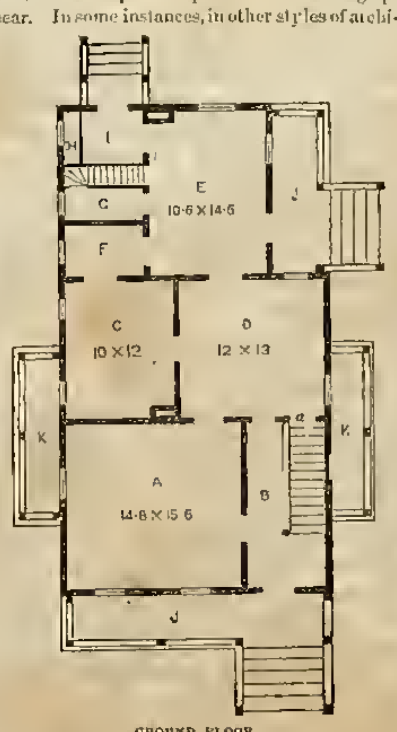
CHEAP COTTAGE IN THE SWISS STYLE.

The above design for a cheap cottage in the Swiss style, was furnished to the *Horticulturist* by Merwin Austin, an architect of this city. Though it exhibits an excess of ornamental work, the design is much to our taste in other respects. We need hardly say that it is not intended for a farm house, but designed rather for professional men, mechanics, &c., residing in or near rural villages, or city suburbs. We are happy to observe a growing taste for the improvement of such residences, inasmuch as, while there are many exceptions, the generality of rural cottages are remarkable for everything but beauty, simplicity and good arrangement.

It is our intention to devote no little space to Rural Architecture in the present volumes and we shall be glad to receive designs for Rural Cottages, Farm Houses, &c., or what is still better, descriptions and plans of such as are already built and found convenient.

The following is Mr. Austin's description of the accompanying design:

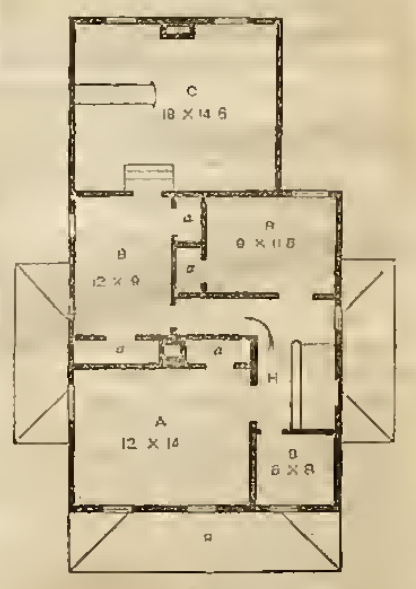
"This style of architecture is very convenient and suitable for this climate, and about the cheapest kind of building that can be erected.—The beauty of this style of architecture is, that while it admits of being constructed on almost any kind of ground, it is particularly adapted to a hilly country, as the more uneven the surface, the more picturesque will the building appear. In some instances, in other styles of architecture, a beautiful front is seen, perhaps crowded with ornaments, and the eye wanders from one object to another seeking a place to rest; but the details are so fine that the eye turns involuntarily away, finding no bold object on which it may rest and contemplate its beauty.—



GROUND FLOOR.

The main building is 24 feet front by 25 deep, exclusive of kitchen wing, which is 15 by 19.—In these dimensions the different piazzas and balconies are not included. The height of the principal story of the main building is 9 feet between joists; second story, 8 feet; first story of kitchen part, 8 feet. There is also ample room in the chamber story of kitchen, which is divided into bed-rooms for domestics. Under the entire building is a cellar, 7 feet 6 inches high, divided into fuel, vegetable, dairy, larder, and other apartments suitable for a country dwelling.

The building is entered by an easy flight of steps, landing upon the piazza, F, opposite the front door, which opens into the hall, B, off which there is a parlor, A; this hall also leads into the dining-room, D, attached to which is the nursery, C, having a bathing-room, F. The kitchen, E, is entered from the dining-room, and



SECOND FLOOR.

off which there is a closet, G, and a scullery, I, with sink, H. There is also a back entrance through the scullery to the kitchen. There are two flights of stairs: 1de main one in hall, B; and the back one, which is entered by means of a door in the closet, G. The back stairs also lead to the cellar, which is shut off by a door at the head of the stairs in the kitchen. Off the dining-room and parlor are balconies, K, which, in summer time, afford a pleasant retreat. These balconies, also piazza, J, are protected from the weather by canopy-heads; the roof of the kitchen wing forms also the roof of the rear side piazza. The second story is ascended by the back and main stairs, the back stairs leading into the servants, apartment; by an entrance access is also had into the chamber story of the main part, which is conveniently divided into suitable sleeping rooms, A, B, P, having closets, a, attached to each. R shows the roof of the front piazza; on the chamber plan are shown the roofs of side balconies.

Construction.—Foundation walls, of stone, 16 inches thick, built up even with the principal floor joist. Superstruction to be framed work, 4 by 4 inch studs, and can be covered with weather boards, or ceiled with planed and matched boards; the latter most preferable; the boards to be put on horizontally. The roof is covered with inch boards and shingled; gutters made of tin; the piazzas and balconies supported with brackets. The railings are of 1¼ inch boards, with ornamental work sawed out, the lines running perpendicular. The facework of the cornices are made of inch boards sawed out, as seen in the plan. The interior finish of the building should be quite plain; doors four panelled, casings about six inches wide, finished with a beveled band. Plastering, in principal story of the main part, should be three-coat work, the remainder two. The estimated cost of the design will not exceed twelve hundred dollars.

Communications.

FEEDING CATTLE IN WINTER.

Mr. Moore:—An inquiry is raised in the Rural of the 28th ult., in relation to feeding cattle but "twice a day" in winter, instead of three times, as is practised by our best stock growers. I would respectfully state, that the former has been my practice in winter feeding from thirty-five to forty cows, for the past 15 years. My *good luck* in this course of feeding—having in one instance winter-fed forty cows, all of which came into the dairy without accident—has confirmed me in the opinion, that mine is the best way.

Much care and regularity should be given to the business of winter feeding cattle. They should be separated, the stronger from the weaker, and not more than twenty head should go to one place for their food or drink. A larger number increases their liability to accidents. I have been accustomed to give my cows all they will eat, at night in the stables, and the same quantity of hay at the stacks in the morning—in the middle of the day they get nothing. Feeding cattle once a day at the stacks, does much to improve the meadows; at the same time the air and exercise obtained in going to their feeding places, keep the animals in a healthy condition. To the question, "Why is it better to omit the noon feeding?" I answer, the same quantity of hay at twice feeding gives a larger portion to the weaker animals, and keeps a nearer equality of flesh in the herd.

The above remarks apply only to winter feeding, as after the departure of the snow it would not be proper to throw out a full feeding of hay on the muddy ground. At that season all kinds of stock will do much better to be fed only in the stables, or in racks suitably arranged in the yard. The injury done to the meadows by the tramping of cattle to the stack at morning and noon, feeding in the spring, is avoided by feeding in stables. A great saving of hay at the time when it is the most valuable in market is also effected, which will more than re-pay the labor of removing the hay to the barn.

It is hoped that the attention of stock growers and dairymen may be drawn to this subject, as a full and fair discussion of all matters that pertain to the business of the farm, cannot fail to elicit truths derived from practical experiments, which are the sure and most certain means of attaining successful and profitable husbandry. Geo. B. Clarke.

Leonardsville, N. Y., 1854.

"WILL UNDERDRAINING PAY?"

Eds. Rural:—In the October number of the Rural, I reported a product of 546 bushels of wheat from a field of 13½ acres, in which had been put 398 rods of drains. The products of the field hitherto had been daisies, strawberry vines, moss, wild grass, June grass, and flags, with a sprinkling in some parts of white and June clover, and a little herds grass. Swales and springs, and flag swamps, were the striking characteristics of the field. The principal flag swamp did not get sufficiently settled to plow, and the flags were mowed and burned, and the wheat harrowed in. The roots, of course, were not disturbed much, and consequently, wheat and flags grew up together, presenting an anomalous appearance. At harvest, a number of stooks were green with them, and the straw stack discloses them now to the eye of the passer-by. Well, this aggregate product, you will observe, is something over an average of 40 bushels to the acre, which I have just marketed at $2 per bushel. Estimating straw at $3 per acre, which it would bring out here in the country, we have a total of $83 per acre, in a single crop. This, bear in mind, is away out among the hills of Steuben—a county of which some of your northern farmers have a despicable opinion, *but can they beat it?* What say you, proud old Ontario, Seneca, and Livingston, and boasting, swaggering Genesee? Enter the lists with Steuben, *if you dare!* W. B. Pratt.

Prattsburgh, N. Y., Jan. 27, 1854.

Carrot Crop.—I noticed in the Rural of Jan. 7th, an account of a carrot crop, from B. Works, which I think I can excel. I raised, on a village lot containing one-fifth of an acre, 200 bushels of most excellent carrots. The soil, sandy loam. The account of the crop is as follows:

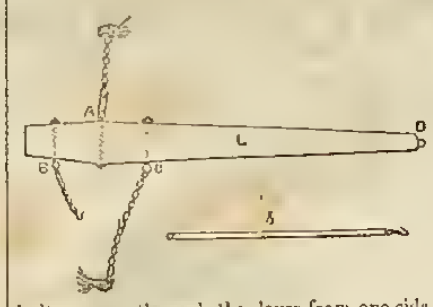
Dr.	
To four loads of manure, at 25c per load,	$1,00
Drawing manure and plowing twice,	2,00
Raking ground, seed, sowing by hand	1,06
Weeding and hoeing 6 days,	4,50
Harvesting 4 days with team,	4,00
Interest on land,	8,00
Total,	$20,56
Cr.	
By 200 bushels carrots at 25 cts. ₱ bush.	$50,00
	20,56
Clear profits,	$29,44

Elmanson Chesebro.

Phœnix, Oswego Co., N. Y., Jan. 1854.

STUMP MACHINE.

Having noticed an inquiry in a recent number of the Rural, respecting a stump machine, I will endeavor to give an illustration of one I have used, which is constructed on a very simple plan. A very powerful machine can be built after this model, for fifty dollars. The stumps which I had to pull, were very large, and I went to no great expense to get one up. It consists of a wooden lever represented by L, 22 feet long, with three iron bolts 1½ inches by ⅝, put through the large end of the lever, at the distance of 2 feet apart. Two of these



bolts B C, go through the lever from one side, with a short chain attached to each, about 4 feet long, with hooks on the ends. The other one, A, goes through from the opposite side, with one long link attached to it. Extend a chain from bolt A, to the bottom of a solid stump for an anchor. Then extend a chain from bolt C, to the *top* of the stump to be pulled, so as to gain more purchase. Then swing round with the team hitched to B, toward the anchor stump, and the large end of the lever will move towards the stump to be pulled; then hitch up with the short chain attached to bolt B, as short as possible, and turn the team back towards the stump you are pulling, as far as they can go, and then take up with chain C, and turn again, and three or four turns will pull most any stump. The chains that go round the stumps should be made with short links, and a ring on one end, and a hook on the other. One chain more only is necessary, to hook into next to the lever, which should be about 8 feet long, with long links, in order to hook handier. Besides these three chains, I use square bars, b, of different lengths, with an eye on one end, and a link and hook on the other, which are much handier and quicker made than chains. With my chains, which will stretch about six rods, I can pull several stumps with one anchor. My chains are made of five-eighths round rod, and the bars three-fourths of an inch square. I get the power of about twelve yoke of cattle from one yoke.—Cost of my machine about $25. n. b. c.

ANSWERS TO SEVERAL QUESTIONS.

Eds. Rural:—In the Rural for Feb. 4th, Mr. D. Grofper asks, "How many solid feet of hay in the mow will make a ton?" I answer, 500 cubic feet. Having had some experience in buying as well as selling hay, I am satisfied that the answer here given is sufficiently correct for practical purposes. It is true that much depends on the quality of the hay, and the manner in which it is put in the mow. Coarse hay, in a dry condition, would require a few more feet than if it was fine hay, put in in a greener state.

2. "How many pounds of hay does a cow require per day to keep her in good condition through the winter?" A very intelligent physician informed me, a few years since, that he could not winter a cow short of three tons of hay. He resided in a village in the east part of this State, and used to put his cow up the first of November, and did not turn her out until the first of June, making a period of two hundred and twelve days, which would be a fraction short of 200 lbs. per week, or 28 lbs. per day. From my own observation, I am convinced that any large sized cow will consume that quantity without waste.

3. He may keep eggs, perfectly, by putting them in gypsum, and setting the vessel in a cool, dry place.

4. As I cannot answer this question satisfactorily to myself, I will detail my experience in wintering cows on potatoes and straw. I had two cows—a half-breed Durham, and a half-breed Hollderness, and fed them one-half bushel of potatoes each, daily, from the last of November till May, and what oat straw, and gleanings from the manure heap of the horses they could obtain, which, as I was short of hay, was but little.

The oat straw was not considered of much value; the main object being to convert it into manure. The potatoes were what are called the merinoes, and did not cost me, to raise them, 7 cents a bushel. I thought then, and still think, I wintered those cows cheaper than I could have done in any other way.—A. G. Percey, *Newark, N. Y., Feb.* 4, 1854.

Luther Butterfield furnishes the *Country Gentleman* with some experiments with superphosphate of lime. He used it on wheat, oats, corn and potatoes, and watched anxiously for the result, "and beholdl what? Nothing, nothing, all moonshine." He used it on beets, carrots and peas, with a slight benefit during their early growth.

AGRICULTURE IN IOWA.

Eds. Rural:—The first No. of the Rural for '54 is at hand. It certainly fulfils the indications of "Progress and Improvement."—Your Model Western New York Born makes us wish there were not a few of the "same sort" in Iowa. Rail pens are our granaries to begin with on a prairie farm. Log pens for stables, for horses. Cows, oxen, young stock, &c., are generally left to shirk for themselves. Rather abusive treatment for winter, yet they invariably look fat and sleek in summer. Our Prairie shows visible and striking marks of progress and improvement.

But a few years since, Uncle Sam owned all the land; now there are a few farms that $15 an acre would not purchase. The threshing season is about over, for this year. One machine (eight horse power) has already threshed 25,000 bushels of grain, two thirds wheat. Crops of all kinds have been abundant. Farmers have met with a considerable loss in the oat crop, in consequence of their growing so large as to fall down, which makes the harvesting of them cost all they are worth.

We could afford to pay a premium, if the Rural or any other source would instruct us how to manage our fertile prairie soils in raising oats, to make them stand up till ready for harvest. I have never seen any land manured for a crop in this country. Asa C. Bowen.

Bowen's Prairie, Jan. 18, 1854.

ANOTHER CARROT CROP.

Eds. Rural:—Observing in a late number of the Rural an account of a Carrot crop, with which my own crop the past season would compare rather favorably, I thought an account of it might be acceptable to your readers. Anticipating only an ordinary crop, and having no thought of publishing the result, I kept no account of the cost of cultivation; but should judge that it would not differ materially from the account given by Mr. Works.—Soil—a light sandy loam, in carrots the preceding year. The manure applied was principally from the hog-pen;—quantity of ground, 24 rods,—yield, 170 bushels. Planted in drills 18 inches apart.

About three fifths of the ground was sown with the *long orange*, and the remainder with the *white*. The plants of the former did not stand close enough in the drills to produce a full crop, (the seed not being good,) neither did they grow as large as the white, which yielded at the rate of 1,400 bushels per acre. The ground was plowed some time before planting—not so deep as it should be, and in the meantime was rendered hard by heavy rains.—My opinion is, that considerably larger crops can be produced here under favorable circumstances. A. Kniffen.

Union, Monroe Co., Jan. 23, 1854.

A Cheap Fence.—I wish to lay before the readers of the Rural, a plan for building a good substantial fence, for the Western States, where timber is scarce. In the first place, cut a ditch 18 or 20 inches wide and lay the soils close to the edge of the ditch, and fill in behind with loose dirt. Dig the ditch the length that you want the fence, then leave a space 2 feet wide for the foundation, and cut another ditch like the first one. Throw the dirt up 3 feet high, and run it up sloueing; then put in posts 16 feet apart. If wire is used, put in two, one foot apart, and you will have a fence that will last a life-time. Sow on some grass seed to make a sod. This fence will cost about 31 cts. a rod. Clean out the ditches well, and you have a chance to drain the water off the land. —E. Ivens, *Port Ontario, N. Y.*

Depth of Roots.—Having occasion some years since, to remove some dirt from the bottom of my cellar, I found that the roots from a locust tree, standing about 12 feet from the house, had penetrated under the wall, and extended near the surface nearly across the cellar, working their way down through a clay soil at least five feet.

In the neighborhood is a well 50 feet deep, walled up with brick except 3 feet at the bottom, which is stoned. The roots from a poplar tree, standing near the mouth of the well, extended down below the brick, then through the stone wall, and so clogged the well that it became necessary to remove them, in order to get the water, which never rises above the stone.—A. Cone, *East Bloomfield, N. Y.*

PROFITABLE COWS.

Mr. Moore:—I have two cows from which was made from May 1st to Jan. 1st, 600 lbs. butter,—from May 21st to June 21st, one month, 146 lbs.—and from May 27th to June 4th, one week, 37 lbs. These are the only cows I kept, and besides the butter, supplied the new milk and cream required in a family of four persons.

So far as I have noticed, this is ahead of anything you have yet published in regard to good cows. I consider one of the cows better than the other. I am still making butter.

Yours, &c., Y. H.

Agricultural Miscellany.

PRICE OF WHEAT.

The *Mark-Lane Express*, the best English authority on this subject, says:

If we compare present quotations (in the price of wheat,) with those current in May, the rise will be found to amount to 35s. to 40s. per qr. ($1,5 to $1,20). That this could not have occurred with free trade, if the deficiency in the last crop had not been very serious in several of the principal continental wheat-growing countries, as well as in Great Britain, is certain; and this being admitted, it is not easy to fix a limit to the rise. That great efforts will be made to collect wheat in the interior of America, and that we shall obtain all that the continent of Europe can spare, there can be no doubt; but looking at the ease with which all that has hitherto reached us has been absorbed, it must be admitted that a possibility, if not a probability, exists of supplies falling short of demand, more especially during the next two or three months, there being little prospect of the northern ports being freed from ice, in time to allow supplies to reach us from thence, before April or May.

Journal of the U. S. Ag. Society.—We are indebted to W. S. King for Nos. 3 and 4 of the Journal of the United States Agricultural Society. They are bound together, and, with the two preceding numbers, complete the first volume. They are most decidedly an improvement on the first number, which was filled principally with long and not very judicious extracts from the British Agricultural journals and papers, and bore obvious marks of hasty preparation. The second number was much better, containing more original matter and articles adapted to the wants of the American Farmer; and we are happy to say that the last numbers are still better in these respects, and approximate, *to some extent*, to what the *United States* Agricultural Society's Journal should be. We have not now space to notice the various articles, but shall allude to some of them in future numbers.

Ohio Enterprise.—A correspondent in Licking county, Ohio, writes us that "this county is one of five, which produces more wheat than the *whole* of the rest of the State. It has 160,000 sheep, or more by 40,000 than any other in the State. At the last annual Fair, the ground was found too small to accommodate the assembled multitude, and the officers of the Ag. Society have purchased the "Old Circular Fort," situated about a mile from Newark, and containing upwards of forty acres. The cost of the land and necessary fixings will be about $8,000. The farmers are now raising this sum, and contribute with great liberality and promptitude."

Price of Flour.—The *New York Tribune*, after mentioning the fact that there are now in this city (Rochester,) 23 flour-mills with 111 run of stone, and that each run of stone can turn out about 60 barrels of flour per day, says:—"Let us take courage. We shall not starve yet. Wait till the canal opens, and it will take more yeast than the flour speculators can raise to keep flour effervescing as it has lately."

Pennsylvania State Ag. Society.—At the annual meeting of this Society, the following officers were elected for the ensuing year:

President—Frederick Watts. Corresponding Secretary—A. L. Elwin. Chemist and Geologist—S. S. Halderman. Librarian—David Mumma, Jr. Treasurer—George H. Beecher.

Connecticut State Ag. Society.—The following officers are elected for the ensuing year:

President—Sam'l. T. Huntington, Hartford.

Recording Secretary and Treasurer—Prof. John A. Porter, New Haven.

The Presidents of the County Societies are ex-officio Vice Presidents of the State Society.

The Next Ohio State Fair.—The State Board of Agriculture lately held a meeting in Columbus, and resolved to hold the next State Fair at Newark, Licking Co., on the 17th, 18th, 19th and 20th of September, 1854. They decided that the premium list on cattle should remain as it was last year. A premium of $25 was offered for the best hedge of 50 rods.

Lewis Co. Agricultural Society.—At a recent meeting of the Lewis County Agricultural Society, the following officers were duly elected for the ensuing year:—Chauncey Foster, President; Sanford Coe, Vice President; Charles Kent, Recording Secretary; M. M. Smith, Treasurer, and Harrison Barnes, Corresponding Secretary. Executive Committee—William Phelps, Norman Gowdy, Albert Foster, Ellis A. Cook, Joseph A. Willard.

At the late Birmingham Poultry Show, the receipts, exclusive of subscriptions, amounted to $11,000, the number of visitors being 37,000, and $10,000 worth of poultry was sold.

The *Boston Cultivator* mentions a lot of Cotswold wethers, which weigh, without head, feet, or other offal, from 130 lbs. to 185 lbs. each.

Inquiries and Answers.

Shrunk Wheat as Seed.—I have some spring wheat that is badly shrunk. Perhaps you, or some of your numerous correspondents, can tell me whether it will answer for seed or not. If so, you will much oblige me.—A. S. W., *Pulaski, Oswego Co., N. Y., Feb.*, 1854.

Can you tell me where the book, entitled "A Home for All, or the Gravel Wall and Octagon Mode of Building," can be had, and what is the price?—C. H. G., *Waukesha, Wis.*

It is published by Fowlers & Wells, New York, and for sale by most city booksellers. Price, 75 cents.

Sweet Potatoes—Again.—I have read with much pleasure, the communication from S. T. W., of Chatham, Columbia Co., N. Y., giving directions for raising Sweet Potatoes. I should like to know how the hot-bed is to be prepared, if glass is to be used over the surface; and also, why it is necessary to break off the sprouts from the potatoes, at transplaning? Why will not the Sweet Potato nourish and support the plant as well as other potatoes? Where can seed be obtained?—I. W., *Wyoming, N. Y., Feb.*, 1854.

Draining Tile.—Can you tell me what is the durability of tile for ditches? and whether they will last longer than the common way of stoning.—C. Nicholson, *Bennettsburgh, N. Y.*

It is difficult to give a very definite answer to this question. We have seen stone drains which have been laid 90 years; they were discharging a large quantity of water, and were undoubtedly just as good as when laid. We do not see why they would not last for ever.—We have seen tiles that had been buried upwards of 50 years, which exhibited no signs of crumbling or decay. We do not see why they should not last as long as bricks, and that is so long that we need not trouble ourselves about it.

PREMIUM CROPS.

At the last annual meeting of the Pennsylvania State Agricultural Society, the following premiums were awarded:

To Benjamin Corert, of Fayette county, the first premium of $10 for the best crop of corn. He claims to have produced 158 bushels and 7 quarts of shelled corn, pure yellow-red cob gourd, upon one acre of land—at which proof was furnished by actual measurement.

To John M'Corl, of Bradford co., the premium of $20, for having produced an average of 51½ bushels of white blue stem wheat per acre, upon a field containing seven acres, fifty-two perches.

To Amos Stone, of Erie co., the premium of $10, for having produced 140 bushels of white wheat by weight, on 3½ acres—being an average of 40 bushels per acre.

To James Sampson, of Erie co., the premium of $10, for having produced 334½ bushels of barley, weighing 48 lbs. per bushel, upon a field containing seven acres and ninety-six perches; being a yield of 43⅛ bushels per acre.

To John Rathrauff, of Franklin co., the premium of $20, for having produced 322 bushels of barley weighing 48 lbs. upon 6 acres 112 perches.

The committee recommend, among other things, that the amount of these premiums be hereafter greatly increased, so as to secure a larger number of claimants. There were four competitors for the premium for corn, two for wheat, and two for barley.

CORN AND WHEAT IN OHIO.

The Cincinnati *Railroad Journal*, in the course of a carefully prepared article on the agricultural products of Ohio, says:—"Averaging all seasons and all lands, Ohio produces, uniformly, 16 bushels of wheat, and 35 bushels of corn per acre. In a good season, on the two millions of acres in wheat, we shall have over thirty millions of bushels; and on the corn lands, seventy millions. We have raised more than that in wheat. At the rate of the last three years, we have raised wheat enough (at the European allowance) for four millions of people, which is double the population of the State. Our corn and cattle are in proportion. So that, somewhere in the world, we feed two millions of other people. One million of these people, fed by Ohio, are in New-England, to which we sell a million of barrels of flour, with pork and lard to match. We can feed a million more, and those will be in Europe chiefly. Without at all infringing on a proper proportion of woods, meadows, pastures and fallow, Ohio might cultivate twelve millions of acres in arable ground. At our present averages, this would give us eighty millions of bushels of wheat, and one hundred and sixty millions of corn—full enough for the support of twelve millions of people!"

TO BRING THE DROWNED TO LIFE.

Intended to be put in every Man's hat.—Immediately as the body is removed from the water, press the chest suddenly and forcibly downward and backward, and instantly discontinue the pressure. Repeat this violent interruption until a pair of common bellows can be procured. When obtained, introduce the muzzle well upon the base of the tongue. Surround the mouth with a towel or handkerchief, and close it. Direct a bystander to press firmly upon the projecting part of the neck, (called Adam's apple,) and use the bellows actively.—Thou press upon the chest to expel the air from the lungs, to imitate natural breathing.—Continue this at least an hour, unless signs of natural breathing come on.

Wrap the body in blankets, place it near a fire, and everything to preserve the natural warmth as well as to impart an artificial heat if possible. Everything, however, is secondary to inflating the lungs. Send for a medical man immediately.

Avoid all frictions until respiration shall be in some degree restored.—*Valentine Mott.*

Orchard and Garden.

THE STRAWBERRY QUESTION.

There has been a great deal of controversy among a portion of the Horticultural world, about the sexual character of the strawberry plant, and varieties have been generally classed as *staminate* and *pistillate*, or "male" and "female." It has been held, as we find it concisely stated in the *Prairie Farmer*, "that the strawberry plant, when grown from the seed, takes upon itself one of the three following forms of sexual character. It is either what is called perfect—i. e., having perfect stamens, or male organs, and perfect pistils or female organs; or it has almost or quite wholly a male organization—being fully provided with stamens, but no pistils; or it has only a pistillate organization with no stamens. Whatever be its character in this respect, it is said to maintain it fixedly through all its propagations—the runners will always produce the like to the plant which sends them out. It has also been held, that no plants wholly pistillate will alone ever produce a fruit. Perfect plants will be fruitful, and pistillate will become so by the presence of a staminate plant for their impregnation; and a staminate plant will also prove fruitful in some small degree."

This theory has been before the world for many years, and many a wordy war has been waged *pro* and *con*. Our object is to state what is considered as pretty well settled about it.

1. If strawberry plants are grown from the seed, they will come up characterized by differences in sexual organization. Some will have perfect flowers; others will be very nearly staminate—others, still, pistillate; and between them, all possible variations. But a close microscopic observation will detect the rudiments of both stamens and pistils in all flowers—though the stamens are, in the purer pistillate varieties, generally insufficient for the purposes of fertilization.

"Hence," says Thomas, "the greatest bearers are mostly of the pistillate varieties, fertilized by staminate sorts, planted within a few feet for this purpose. Without this assistance derived from staminate flowers, pistillates are either barren, or the fruit is imperfect or distorted, only a part of the outer portion of the berry nearest the stamens being impregnated by the scanty supply of pollen from the stamens."

In staminate varieties, imperfection of the pistils often produces the same results, though there are more marked cases of productive staminates than of pistillates.

2. As to fixity of sexual character—that the runners of a pistillate, for instance, will invariably produce pistillates—this is now questioned, by many close observers—because there are facts which go to disprove it. Runners from a pistillate parent have produced plants whose flowers were perfect, in more than one or a dozen instances. Still, generally, the product of the runners is the same as that of the parent. So that it is well to have staminate sorts for fertilizing the pistillates.

3. Pistillate plants have borne fruit without the presence of a staminate—having borne it up a season or in circumstances, when no staminate influence could be exerted. Our neighbor, Mr. R. B. Watkins, had several fine stems of ripe berries on Hovey's Seedling, last October, when no staminate varieties were in blossom or had been, for some months. Other instances have occurred, and a new idea has been started by a writer in the *Pennsylvania Farm Journal*, to account for it. It is that fruit may be grown on a pistillate flower without impregnation, and the seed be wanting, or infertile, in consequence of the lacking pollen from a staminate flower. The *Prairie Farmer* quotes facts from the animal world to sustain this theory;—hens laying without male birds, and aphides born with fertile ovaries, &c.,—and concludes it very probable. It is an idea which time will develop—sharp observers are looking to it.

4. Soil, culture, moisture, air, &c., influence the strawberry plant, causing the many changes—the variations—which spoil the pretty theories got up for its guidance, so that no man or set of men need pretend to know all about it. We do not—and we have only tried to give in brief the state and ground of the strawberry question.—B.

Genesee Valley Horticultural Society.—At the annual meeting of this Society on Saturday last, the following officers were elected for the ensuing year:

President—H. P. Norton, Brockport.
Vice Presidents—John Williams, Rochester; Selah Mathews, Brighton; Robert Brown, Greece; H. Hooker, Irondequoit; Z. Burk, Perinton; Samuel Shamhart, Scottsville.
Cor. Secretary—H. E. Hooker, Brighton.
Rec. Secretary—Jas. Vick, Jr., Rochester.
Treasurer—J. H. Watts, Rochester.

The thanks of the Society were tendered, by vote, to J. J. Thomas, for the fidelity and efficiency with which he discharged the duties of President during the past year.

PEAR-SHAPED QUINCE.

We give above, a fine engraving of a Pear-shaped Quince. Its good qualities consist principally in the beauty of its outline, in ripening much later than other varieties, and the great length of time it can be kept before preserving, thus rendering it of great value for distant marketing. The *New England Farmer* says of these quinces:—"We have kept them three months in a damp cellar before preserving and then found them rich, tender and delicious." Mr. Downing says, "The pear-shaped quince is larger and of finer texture than the apple-shaped. It is rather tough when stewed or cooked, the flesh is less lively in color, and it is therefore much less esteemed than the apple-shaped variety. The fruit is of medium size, oblong, tapering to the stalk, and shaped much like a pear. The skin is yellow. The leaves are oblong ovate. It ripens about a fortnight later, and may be preserved in a raw state considerably longer." It is but a moderate bearer.

SHORTENING IN PEACH TREES.

Eds. Rural:—I find, as far as my experience and observation go, that the shortening in system does not come up to the anticipations of those who have practised it on peach trees, as recommended by Downing. Peach trees in this northern cold latitude are apt to have a portion of their fruit buds killed when the mercury falls below zero, especially when they have become somewhat swollen by previous warm weather, during the fall or winter. By shortening in, another portion of the buds are destroyed, leaving very few to set for fruit. All of our fruit bearing trees, while the branches remain upright, bear but little; but place them in a horizontal position, and they are rendered fruitful. It is often remarked by people, when the branches of trees are weighed down almost to breaking by snow and ice, that the next year will be great for fruit. This shortening in has a tendency to keep the branches upright and cause an excess of leaves to grow while the trees are young. I have found in all cases that when an excess of leaves grows on peach or pear trees, that the fruit is astringent and ill-flavored, and not properly developed. But at the south, where the peach trees actually bear themselves to death, this shortening in should be practiced, thereby rendering their trees longer lived. In this northern country, to succeed in peach growing, there are a few things very important, but which are commonly overlooked; hence so much disappointment. First, it is necessary to have land with a dry, warm subsoil of gravel, sand or loam. Second, adopt a regular system of cultivation to some hoed crop, such as beans, corn, potatoes, until the trees come into full bearing. Then the cultivation should be continued, but the ground should not be planted, nor should any weeds be allowed to grow, as the latter would have as bad an effect on the crop of fruit as if planted to either of the former crops. I have known peach trees when planted on clay soil with a retentive subsoil, to be loosened by the high winds of autumn and be switched and twisted until the texture of the roots was destroyed or rendered incapable of furnishing further nourishment to the tree. In this case, although apparently alive, they would not leaf out in the spring. There is one notion in regard to peach trees, which I will here mention. It is to place snow and ice around the trees in winter, and cover it with straw, saw-dust, tan, &c., to prevent it from melting and by this means prevent the trees from blossoming early, or not until the frosts of spring are over. Now, for the benefit of your readers, I will say that such a notion is entirely fallacious; for a peach tree will blossom and leaf out if not diseased to a certain degree, without any assistance from the roots. Who does not know that a peach tree transplanted when in full bloom, will grow admirably? Such is the case, because the roots have not yet started to grow, but do immediately after. Another instance will illustrate this. Plant a grape vine outside of a greenhouse where the ground is frozen. Take the top through an aperture in the wall to the inside, where the atmosphere is warm, and this vine will put out shoots, blossom and set for fruit, while the roots are yet frozen; but if kept too long in this state, it will perish.

I noticed not long since an article in your paper, relating to a wonderful discovery, made by some Professor, by which he had been completely successful in grafting peach trees; and for the further benefit of your readers, I will give my experience. I have found that by selling grafts in peach wood of two seasons' growth, no older and no younger, that in most cases they would live and grow admirably.—Should any of our nurserymen have a lot of peach trees in which the buds have failed to grow, they can graft them to apricots the next spring, and thus make quite a saving. They should be cleft grafted close to the ground, or below the surface. Set them in two years old wood, also. I. Hildreth.

Yates Co., N. Y., 1854.

Grape Mildew.—Perhaps some of your readers may like to have another proof that sulphur will destroy mildew on vines. The vinery here is 80 feet in length, and 18 feet wide. Last year I lost the greater part of the grapes on it from mildew; I washed the pipes with sulphur, and put fires on, but that did not stop it; this year the mildew made its appearance before the vines were in bloom. As soon as I saw it, I dusted them all over with sulphur, throwing it in by handfuls about the foliage. The mildew disappeared, and I have had an excellent crop of well colored grapes. Great care must be taken in stopping thinning, and not to shake the sulphur on the grapes.—I did not syringe the vines, but kept the house very damp until the grapes began to ripen. I used 7 lbs. of sulphur.—*H. Morgan, Gardener, Raynham Hall, Norfolk.*

The Delaware Grape.—Mr. Thomas J. Myers, of Dundee, Yates county, N. Y., writes that there is a Grape in Steuben county, where it has been cultivated for twenty years, that answers the description of the *Delaware* in every respect. He says the vine was owned by a queer old Dutchman, who never would give either a root or cutting of it even to his nearest neighbors; but that at length he has succeeded in getting cuttings, and will propagate it. It appears that the owner of this vine obtained it from a Mr. Musliehl, living between Philadelphia and Trenton; and that he brought it from Lisbon, and called it the "Lisbon wine Grape." Mr. Myers says it is perfectly hardy on the highest, coldest, barren hills of Steuben, and bears abundantly.—*Horticulturist.*

Protecting Pits, Frames, &c.—Nothing is equal to or so effectual and inexpensive for a protection to pits frames, &c., as glass crates stuffed with shavings, and placed all round these structures; they are dry non-conductors, and when packed together have a neat, tidy appearance. Trellis shutters also, stuffed with shavings, when laid over the lights, are very efficient in keeping out frosts. As mats are scarce and dear, and we are likely to have a sharp winter, the above method of protecting plants, &c., might become very general with great advantage, as it has three essential qualities—namely, durability, cheapness, and simplicity to recommend it.—*An Observer in Gardener's Chronicle.*

Luther Holden writes the *Mass. Ploughman*, that he has peach leaves which are quite green on several young trees, which came up from the seed last spring. The trees are within fifteen feet of a thermometer, which has several times during the winter been at zero, and one night two degrees below it. He wishes to know if others have observed a similar phenomenon.

Mildew on Gooseberries.—Samuel Edwards, La Moille, Ill., states that for several years his gooseberry bushes were badly affected by mildew. Last year he gave them a very severe pruning, mulched with coarse hay, top-dressed the soil with well rotted barn-yard manure, salt and leached ashes, *and he has had no mildew.*

Mechanic Arts, &c.

WATER PROOF COMPOSITION.

The *Ohio Cultivator* contains the following recipe for making a composition which it is said will render leather, cordage and water-proof, soft and durable. It is the invention of Dr. G. Miesse, a German physician, and it is said the first experiment he made with the composition was on a pair of boots which he dressed once in three weeks, and he has worn them almost daily for upwards of *seven years.* The composition is made as follows:

Take an iron pot and put into it 4 ounces of good gum elastic, (India rubber,) cut in strips or small pieces, and a pint of fish oil; set it on a fire of hot coals, and stir with an iron rod till the gum is all dissolved, (it will require much heat,) then add by degrees four quarts more of fish oil, stirring it well; take it off the fire, and pour it into a can or jug for use.

In using, warm the composition a little and apply with a brush or sponge, a liberal coat to the uppers and soles, so as to saturate the leather. If cold weather, it should be done in a warm room or near the fire. Repeat the application as often as every month in summer, and every 10 or 12 days in winter.

As this treatment will make boots and shoes non-conductors of electricity, as well as impervious to water, the Doctor says there should be a few copper nails (iron will do) driven in the soles to carry off the surplus electricity of the body, otherwise it will prove injurious to health, as is the case with gum elastic overshoes, if worn for a length of time.

To render ship's ropes, cordage, fishing lines, nets, &c., water-proof, it is necessary to let them sonk in the mixture.

Remember that no linseed oil, or lard oil, spirits of turpentine, tallow, or beeswax, are to be added to the mixture.

SUBMARINE MACHINE.

The following is the description of a new submarine invention:—The machine is of peculiar construction, being in fact a mechanical nautilus, having the power of ascent and descent at will, entirely independent of suspension. In connexion with the machine at the surface is a reservoir of condensed air, which, according to the depth of water, may contain from 20 lbs. to 120 lbs. pressure of air to the square inch. This compression is produced by a powerful pump, capable of throwing 4,000 cubic feet of air per hour. By an inferior arrangement of tanks, &c., a variable buoyance may be given to the machine, capable of lifting weights of ten or more tons. It can be held in suspension at any point of ascent or descent; thus allowing stones to be raised clear from the bottom, then transported and deposited in any precise spot. Movement is made in any direction by a series of three cables and anchors, worked from the inside. The whole bed of a river may be explored from bank to bank. Treasures, pearl shells, corals, sponges, and all products under water may be easily gathered and sent to the surface without requiring the machine to rise. An arrangement of the machine permits the digging of trenches under water, by which telegraph wires and water pipes may be placed below the reach of anchors. Foundations of piers may be prepared and then built upon, obviating all crane work for raising or lowering stone, as all work of lifting, transporting, and depositing is done by the machine itself. An arrangement is also made for attaching cables to sunken ships, in order to raise them by applying points of support directly to the timbers of the ship. In a word, the power of condensed air, acting as a motor, does the whole work merely requiring two men inside and one at the surface to manage it.

OUR FAVORITE POISON.

We extract the following remarks on "The favorite poison of America," from a work written by the late A. J. Downing.

In the signs of *physical health*, and in all that constitutes the outward aspect of the men and women of the United States, our people compare most unfavorably with those on the other side of the Atlantic. So completely is this the fact, that though we are unconscious of it at home, the first thing that strikes an American returning from abroad, is the pale and sickly countenances of his friends and acquaintance—the men look so pale, and the women so delicate. The national poison which causes all this, is not tobacco, nor patent medicines, nor coffee; it is nothing less than the vitiated air of *close stoves*, and the unventilated apartments which accompany them; in the continual atmosphere of close stores, breathed in our homes, in our rail cars, in our steamboat cabins, in our lecture rooms, concerts, and private assemblies, all over the country.

Pale countrymen and country-women, rouse yourselves. Consider that God has given you an atmosphere of pure, salubrious air, forty-five miles high, and—ventilate your houses.

White Lead.—A patent has been taken out in England for an improvement in the manufacture of white lead. The inventors take a quantity of fine ground oxyd of lead—litharge—and to every 100 lbs. thereof add about twenty-five pounds of the muriate of soda, which is mixed and triturated until the muriate of lead is formed. These materials are then well washed and 5 lbs. of the sulphuric acid of commerce is added to them in a glass vessel. This produces a white sulphate of lead in a few days. The vessel containing these ingredients should be kept in a moderately warm place, and when the sulphate is fully formed it is washed well with cold water and dried.—After this it is ground, and is fit for use as paint.

PURIFYING FISH OILS WITHOUT HEAT.

Take a gallon of crude fetid fish oil, and add to it one ounce of powdered chalk, and stir them well together. After they have been mixed for some hours, or a whole day, add one ounce of pearlashes dissolved in four ounces of water, and repeat the stirring as before. After the oil has been thus treated for some hours, add two ounces of common salt dissolved in a pint of water, and stir well.—When left standing still for some days, a deposit will be found at the bottom of the vessel. This contains many impurities that have been separated from the oil, which will be found to be much improved both in smell and color.

By repeating the same process several times, taking care to pour off the clear oil before every renewal of the chalk, &c., any oil, however fetid, and however dark in color, will be rendered free from offensive smell, and of a good color.

Sal soda, dissolved in water, about one ounce to the gallon, and stirred among impure and rancid oil, will render it very free from smell and greatly improve its color. The oil should be put on the fire in a brass or iron kettle (of any size according to the quantity to be purified,) and the soda lye added when the oil has attained to about 100° Fah. The whole should be stirred together for at least half an hour, and the scum skimmed off as it rises.—After this draw the fire from under the kettle, and let it cool and settle. A thick sediment will then fall to the bottom, and when fully settled, the oil may be drawn off, which will be found greatly improved indeed. This is an excellent way to purify oil that is to be used for the lubrication of fine machinery.

Rancid oils are rendered sweet and clear by agitating them for some days with new charcoal reduced to a powdered state.

Connecting Hubs With Axles.—W. M. Newcomb, of Eden, Vt., has applied for a patent upon an improved mode of connecting and disconnecting the hubs of carriages, &c., with their axles, which consists in a key hole formed in the side and near the end of the cap of the hub, and covered by a horizontal spring slide in combination with an open slot formed in the end of the hub, and in the nut which secures the hub and axle together. This slide allows the key to be inserted without the necessity of taking off the cap when it is desired to disconnect the hub from the axle, and serves when they are connected, to close the key hole and thereby exclude dust.

Manufacture of Fire Kindlers.—George Marriott, of Hull, England, has patented a composition made by mixing 18 lbs. of rosin oil, and 48 lbs. of tar, which were boiled for two hours in an iron vessel to drive off the water; after this, 66 lbs. of resin are added and melted. This composition is mixed with charcoal dust, to a proper consistency, and then made into neat cakes in moulds, and used for kindling fires rapidly.

Threshing Machines for California.—On Saturday, (24th ult.,) one of "Pitt's Patent Separators," manufactured at Hanson's machine shop, was shipped from this city, for California. At New Orleans, it will be taken on ship-board, and will go round the Cape. Probably it is the first shipment of the kind ever made from the West. The price to be paid at its destination is $1,200.

Domestic Economy.

To Preserve Hams.—Hams commence to spoil at the joint, inside. To prevent this, take out the bone opposite the shank end to the joint—this lets out the joint water. Rub the hams with pulverized nitre, and let them remain three or four days in the cellar. Smoke a barrel three or four days by simply turning it over a kettle of smoking cobs, or any other way that your ingenuity may suggest. Make a brine so strong that an egg will float in it—leaving a portion of the egg about the size of a dime above the brine. Into this brine put a half pint of molasses and a large tea-spoonful of Cayenne pepper to each ham. Put in your hams, the work is done, and your hams put away for the year.

Good Baked Potatoes.—Pare the potatoes and place them in the dripping pan with the meat; it matters not whether it be beef, veal, mutton or pork, though the fattest meats are preferable. Pour into the pan a gill or more of water, unless the meat is very fat, in order that there may be a sufficient quantity of gravy. Bake three quarters of an hour, according to the size of the potatoes. The oven should be quite hot in order to give them a fine brown color.

Baked Ham.—Most persons boil ham. It is much better baked, if baked right. Soak it for an hour in clean water and wipe it dry; next spread it all over with thin batter, and then put into a deep dish with sticks under it, to keep it out of the gravy. When it is fully done, take off the skin and batter crusted upon the flesh side, and set it away to cool. You will find it very delicious, but too rich for dyspeptics.

Wilson's Cake.—Take one tea-cupful of sugar, one egg, a lump of butter as large as a walnut, one tea-cup of sweet milk, one pint of flour, a teaspoonful of cream tartar, one-half spoonful of soda, beaten well together. By using sour milk or cream, the cream tartar may be dispensed with.—*Ohio Cultivator.*

To Clean Paper Walls.—The very best method is to sweep off lightly all the dust, then rub the paper with stale bread—cut the crust off very thick, and wipe straight down from the top, then begin at the top again, and so on.

NATURE'S LESSONS.

PREPARED EXPRESSLY FOR MOORE'S RURAL NEW-YORKER.

POETRY BY ALFRED B. STREET, ESQ. MUSIC BY PROF. T. H. BOWEN.

ALLEGRETTO.
1. Nature is full of wisdom high, If we would but mark her plan; Ocean and mountain, forest and sky, Are talking for - ever to man.
For the first part of 2d, 3d, 4th, and 5th stanzas, see Recitatives, below; after the 5th stanza, pass to Final Chorus.
Talking for - ever of lofty themes That el - e - vate heart and soul, Showing our life no round of dreams, That earth holds not our goal.
* I thought that thus should the heart be strong, And tower a - bove its care, And though the wild tempest should dash along, Its trials it calmly should bear.
† I thought that thus should life progress; That action its rule should be; That object on object should forward press, From the sleep of the sluggard free.
‡ I thought that thus is our changeful life By light and by darkness shared I farther thought that for calm or strife, We ever should be pre - pared.
‖ I thought that thus by death's cold hand Our race in the dust are strewed; But summoned forth from the "better land," We rise to a life re - newed.
RECITATIVE, TENOR or SOPRANO. In a bold, speaking style, without regard to time. (The letters show the chord to be struck at the rests.)
Return to the sign 𝄋
2. I marked the mountain— sub - lime its form— C E G F C Its head was above the cloud; On its stern bosom was dashing the storm, But its look was unmoved and proud; *
4. I marked the sky— it was smiling bright; The clouds were all smooth and fair; Again I looked, it was black with night, And the storm was resounding there.
RECITATIVE, BASS or ALTO.
Return to the sign 𝄋
1. I marked the ocean— its mighty breast C E G F C Was heaving in ceaseless play; Heav - ing— Heaving— no - ver at rest, Though peacefully smiled the day. ‡
5. I marked the forest— November's blast Was strewing the leaves a - round; But I knew when spring should come at last, New leaves would again be found. ‖
FINAL CHORUS. With great energy and force.
We rise we rise we rise to a life re - newed. We rise we rise we rise to a life re - newed.
We rise we rise we rise to a life re - newed. We rise we rise we rise to a life re - newed.
We rise we rise we rise to a life re - newed. We rise we rise we rise to a life re - newed.

Entered, according to Act of Congress, in the year 1854, by D. D. T. MOORE, in the clerk's office of the district court of the Northern District of New York.

Sunday Reading.

THE AGED PASTOR.

He stands in the desk, that grave old man,
With an eye still bright, though his cheek is wan,
And his long white locks are backward roll'd,
From his noble brow of a classic mould,
And his form, tho' bent by the weight of years,
Somewhat of its primal beauty wears.

He opens the page of the Sacred Word—
Not a whisper, nor low nor loud, is heard;
Even folly assumes a serious look,
As he readeth the words of the holy Book;
And the thoughtless and gay grow reverent there,
As he opens his lips in fervent prayer.

He stands as the grave old prophet stood
Proclaiming the truth of the living God—
Pouring reproof on the ears of men,
Whose hearts are at ease in their folly and sin,
With a challenge of guilt, still unforgiven,
To the soul unbitted, unmeet for heaven.

O, who can but honor that good old man,
As he numbereth his three-score years and ten—
Who hath made it the work of his life to bless
Our world in its woe and wretchedness;
Still guiding the feet which were wont to stray,
In paths of sin, to the narrow way.

With a kindly heart through lapsing years
He hath shared your joys, hath wiped your tears,
He hath bound the wreath on the brow of the bride,
He hath stood by the couch when loved ones died;
Pointing the soul to a glorious heaven,
As the ties which bound it to earth were riven.

Methinks you'll weep another day,
When the good old man shall have passed away,
When the last of his ebbing sands have run,
When his labors are o'er and his work is done;
Who'll care for the flock and keep the fold,
When his pulse is still'd and his heart is cold?

You'll miss him then: every look and tone,
So familiar now, when forever gone,
Will thrill the heart with an inward pain,
And ye long and listen for them in vain;
When a stranger form and a stranger face
Shall stand in your honor'd pastor's place.

Independent.

TRUE RICHES.

A LITTLE boy sat by his mother, looking steadfastly at some distant object. He seemed to be lost in his own reflections. Then as the deep thought began to pass away, his eye grew bright, and he spoke.

"Mother, I wish I could be rich."

"Why do you wish to be rich, my son?" said the child said, "Because every one praises the rich. Every one inquires after the rich.—That man yesterday asked who was the richest man in the village. At school there is a boy who does not love to learn. He takes no pains to say well his lessons. Sometimes he speaks evil words. But the children blame him not, for they say his father is rich."

The mother saw that her child was in danger of believing that wealth might take the place of goodness, or be an excuse for indolence, or cause those to be held in honor who lead unworthy lives. So she asked him, "What is it to be rich?" He answered, "I do not know. Yet do tell me how I may become rich, that all may ask after me and praise me!"

The mother replied, "To become rich is to get money. For this you must wait until you are a man." Then the boy looked sorrowful and said, "Is there not some other way of becoming rich, that I may begin now?"

She answered, "The gain of money is not the only, nor the true wealth. Fires may burn it, the floods drown it, the winds sweep it away, moth and rust waste it, and the robber make it his plunder. Men are wearied with the toil of getting it, and they leave it behind at last. They die, and carry nothing away. The soul of the richest prince goes forth like that of the way-side beggar, without a garment. But there is another kind of riches which is not kept in the purse. It is kept in the heart. Those who possess them are not always praised by men, but they have the praise of God."

Then said the boy, "May I begin to gather that kind of riches now, or must I wait till I grow up, and am a man?" The mother laid her hand on his little head, and said, "To-day, if you will hear His voice; for He hath promised that those who seek early shall find."

And the child said, "Teach me how I can become rich before God." Then she looked tenderly on him and said, "Kneel down every night and morning, and ask that in your heart you may love the dear Saviour, and trust in him. Obey his Word, and strive all the days of your life to be good, and do good to all.—So, though you may be poor in this world, you shall be rich in faith, and an heir to the kingdom of heaven.

THE CLOUD OF MERCY.

How vast the range of blessing your prayers may take! Who can tell the history or trace the wandering of yon cloud that sails in light and glory across the sky, or indicate from what source its bosom was filled with the vapors it is yet to shed back upon the earth? Perhaps though now wandering over the tilled field and the peopled village, its stores were drawn from some shaded fountain in the deep forest, where the eye of man has scarce ever penetrated. In silent obscurity that fountain yielded its pittance, and did its work of preparing to bless the far-off lands that it shall yet be glad for.—And even thus it is with the descending Spirit. Little do we know often of the secret origin of the dews of blessing that descend on the churches of God. In the recesses of some lowly cottage, in the depths of some humble heart, may be going on the work of pious intercession, in answer to which the grace of Heaven descends on us and our children, on the labors of the wandering and joyful pastor, and on the hearts of the far heathen. All the wilderness and the solitary place are glad for them. —*Dr. W. R. Williams.*

THE folly of one man is the fortune of another; and no man prospers so suddenly as by the errors of others.

Educational.

(For the Rural New-Yorker.)

PHYSICAL AND MENTAL TRAINING.

A MATERIAL error of our present system of juvenile education, it appears to me, lies in attempting to reverse the natural order of things, inasmuch, as it requires a passive state of the physical powers, when they are most active, and too much action of the mental, when they are comparatively weak and passive. Physical exercise is as necessary to the growth and maturity of the mental faculties, as sunlight and cultivation are to vegetation; and to produce the best results in either case, nature must be assisted in her efforts, instead of being retarded by contravening her laws,—requiring thorough knowledge, in both the cultivator of the soil and of the mind.

Tracing the natural consequences of causes, or of actions, is a branch of education adapted to juvenile capacity, both mental and physical; because, lessons can be accompanied with experience, (the most reliable guide to knowledge,) in social intercourse and amusements, over which a competent teacher should be required to preside, to guide, instruct, and explain the natural consequence of actions, whenever occasions occur, or at every deviation from correct moral and social principles, explaining the good or evil effects of all actions that have influence upon others and on themselves.

S. GRAVES.

Marcellus, Feb. 1 1,851.

THE SCHOOLS OF THE STATE.

THE leading points of the report of Secretary of State upon the condition of the Common Schools, are as follows:

The whole number of schools is eleven thousand six hundred and eighty-four, showing an increase of 144 during the past year. The average time during which these were open was seven months and twenty-three days.

There are living within the organized school districts 1,150,532 children between the ages of four and twenty-one. Of these 622,268 have attended school more or less, 3,255 attended throughout the year, 82,795 only attended for less than two months. This leaves 528,264 who do not attend at all.

The schools on an average, have each had one inspection during the year, and the majority of them two. The total number of inspections was 19,956.

The Libraries in the various districts now contain 1,604,210 volumes This shows an increase of 34,079 since last year's report. The amount expended upon the libraries was $49,-419,39.

The wages of Teachers during the same time amounted to $1,931,870 18. School house sites, buildings and repairs cost $487,878,95.—Thus the total expenditure upon the school amounts to $2,469,248 52. There is still the sum of $310,631 51 left unappropriated. The amount appropriated for the present year exceeds the appropriation for the same purposes last year $5,000.

The following exhibits the amount of school moneys for 1854, apportioned and unapportioned:

Apportioned from income of Common School Fund	$135,000,00
Apportioned from income U. S. Deposite Fund	165,000,00
" " Avails of school tax	000,000,00
" " balance of excess in hands of Superintendent	1,240,84
Total sum apportioned	$1,101,240,84
Unapportioned balance in hands of Sup't	59,65
" sum due from Scholastic co.	544,31
	$1,101,844,70

The capital of the Common School Fund proper, on the 30th of September, 1853, was $2,383,257 23.

So far the incorporated public schools.—There are in addition fifteen hundred and seventeen unincorporated, select and private schools, which have, on an average, 36,844 pupils. There are 28 schools for colored children, having 1,680 pupils.

The principal recommendations of the Report are:— 1st. The distribution of the school moneys on a more just and equal footing. 2d. More active measures to facilitate the collection of school moneys, where districts have been overpaid. 3d. More strict accuracy in the reports of town superintendents; and 4th. That it may be well for the Legislature to take into consideration the propriety of expressing thro' statutes, the will of the people of the State, in regard to making religious exercises a compulsory part of school discipline.

WHAT IS VIRTUE?—To a student who put this question to the late Dr. Archibald Alexander, his simple and admirable reply was, "*Virtue consists in doing our duty, in the several relations that we sustain, in respect to ourselves, to our fellow-men, and to God, as known from reason, conscience, and revelation.*"

A GEM FROM A PERSIAN POET.—The heavens are a point from the pen of God's perfection; the world is a bud from the bower of his beauty; the sun is a spark from the light of his wisdom; and the sky is a bubble on the sea of his power.

A NOBLE BOY.—"Why did you not pocket some of those pears?" said one boy to another; "nobody was there to see." "Yes there was – I was there to see myself, and I don't ever mean to see myself do a mean thing!"

Miscellaneous.

A CHILD EMBRACING ITS MOTHER.

BY THOMAS HOOD.

Love thy mother, little one!
Kiss and clasp her neck again—
Hereafter she may have a son
Will kiss and clasp her neck in vain.
Love thy mother, little one!

Gaze upon her living eyes,
And mirror back her love for thee—
Hereafter thou may'st shudder sighs
To meet them when they cannot see.
Gaze upon her living eyes!

Press her lips the while they glow
With love that they have often told—
Hereafter thou may'st press, in woe,
And kiss them until thine own are cold.
Press her lips the while they glow!

Pray for her at eve and morn,
That Heaven may long thy stroke defer,
For thou may'st thus the hour forlorn
When thou wilt ask in die for her.
Pray for her at eve and morn!

OLD GEMS RE-SET.—NO. II.

MR. MOORE:—The flowing verse,—the terse and sounding diction—of the poet and philosopher, DARWIN, renders every subject he touches luminous with beauty and sublimity. His harmonious numbers beautifully describe the then recent absorbing subject of electricity, and FRANKLIN'S discovery of the identity of that power with lightning so brilliantly, that no one can but admire his lines.

The recent honors paid to FRANKLIN'S memory, by the craft, render the following extract peculiarly pertinent and timely:

Nymphs! your fine hands ethereal floods amass
From the warm cushion and the whirling glass,
Brand the bright cylinder with golden wire,
And circumfuse the gravitating fire.
* * * *
Yon thin gold leaves in crystal lanthorns hold,
Approach, attracted, and recede, repelled—
While paper nymphs instinct with motion rise,
And dancing fauns the admiring sage surprise;
Or if ou wax, some fearless beauty stand,
And touch the sparkling rod with graceful hand,
Through her fine limbs the mimic lightnings dart,
And flames innocuous eddy round her heart—
Her hair unbow the kindling lustres glare,
Blue rays diverging from her bristling hair.
* * * *
You crowd in heated jars the denser fire,
Pierce the thin glass and lose the blazing wire,
Dart the red flash throughout the circling band
Of youth and amorous damsels hand in hand,
Starts the quick ether through the fibre trains
In dancing arteries and the tingling veins—
Heads each fine nerve, with new sensations thrilled,
Bends the reluctant limbs with power unwilled.
* * * *
You led your FRANKLIN to your glazed retreats,
Your air-built castles and your silken seats—
Bade his bold arm invade the lowering sky,
And seize the tip-toe lightnings ere they fly—
O'er the young sage your mystic mantle spread,
And wreath'd the crown electric round his head.

The following is a beautiful tribute to his science and his patriotism. It was written at the close of the Revolutionary war, and is as happy and prophetic as it is creditable to the author, who was English, but of liberal and patriotic feelings:

Led by the phosphor light, with daring tread,
Immortal FRANKLIN sought the fiery bed
Where, nursed in night, incumbent tempest shrouds
The seeds of thunder in circumfluent clouds,
Besieged with iron points, his airy cell,
And pierced the mountain in his slumbering shrill.
* * * *
So borne on sounding pinions to the West,
Where tyrant power had built his eagle nest,
While from his eyry shrieked his famished brood,
Clenched their sharp claws and champed their beaks for blood—
Immortal FRANKLIN watched the callow crew,
And clubbed the struggling vampyres ere they flew.
The patriot flame with quick contagion ran,
Hill lighted hill, and man electrified man;
Her heroes slain awhile, COLUMBIA mourned,
And, crowned with laurels, *Liberty* returned.

If you publish these extracts I shall continue, and consider they meet your approbation.—The reading and copying serve to while away the long, boreal evenings for the writer, and I trust their perusal will also for many of your readers. B. MANLY.

STEAM-SHIPS OF WAR.

A WRITER in the National Intelligencer, in an article commenting on the immense sums wasted by the government in fruitless attempts to get up a steam navy, says:

"Misfortunes beget wisdom. We know our errors and can avoid their repetition. We also know what is wanted. We want no more side-wheel war steamers that a grape shot may destroy, each costing a million, to carry *six* guns, and the transportation of a coal mine after her to keep her going; no more 'submerged propellers,' nor 'bomb-proof' ships, nor patent 'Lamb & Summer' boilers, &c., nor speculative steam men of war of any sort; but a real down-right *ship* of war, be she a sloop, frigate, or a line-of-battle-ship, with a full ship rig, of full sail power, backed by the simple full power steam engine driving a two-bladed propeller, capable of being lifted when out of use and stowed as conveniently as a bower anchor, such as are now in full and successful operation in all the modern war steamers of the British navy. Add to these indispensable requirements a fresh water condensing apparatus for daily use connected with the cooking galley, on which to rely for your supply, and we have the war steamer fit for any service. Such is the modern screw war steamer of the British navy, as I have seen them. The boilers are below the water-line, as well as all the engine, except the smoke stack. A single tank of fresh water is the whole supply, the necessary quantity being made by the condenser daily, fuel and provisions taking the place of water tanks."

PROVERBIAL PHILOSOPHY.

THE enunciator of a terse axiom, sometimes becomes not only the benefactor of his own age, but of all succeeding ages. We were forcibly struck with this truth, in reading the following from the Philadelphia Ledger, on the "Value of a Proverb." The proverbs quoted are very neatly grouped, and the lessons they teach worthy of consideration. Those on business are capital:

A proverb is practical, every-day wisdom, condensed into its smallest space. What diamonds are to other gems, proverbs are to language. Like the diamond also, a proverb is the slow deposit of ages—it is the common sense of the people crystallized by time.

The English tongue is full of invaluable proverbs. No man can realize how thoroughly practical our British ancestors were, until he has studied the sayings they had in common use, and compared them with those of other people. For social comfort, for success in life, and for moral culture, our mother tongue supplies the best collection of proverbs in the world. "Manners often make fortunes," says one of these old proverbs, and vainly might we seek to express this truism more pithily.—"Never fall out with your bread and butter," is as applicable in our day to the fools who are above their business, as it was generations ago, when the proverb was first started. "Every path hath a puddle," refutes the discontent of those who fancy their own lot worse than that of their neighbors, as summarily as it did three centuries back.

In a similar manner, weakness or ignorance in the management of business, are aptly hit off by some old proverb or proverbs. "An oak is not felled by a blow," says one, a perfect homily, in eight words, on perseverance.—"Much would have more, and lost all," is another; and a capital warning it is against excess of greed. "Never light your candle at both ends," is a third, suggestive of whole volumes against extravagance, and only equaled by a fellow proverb, "no alchemy is equal to saving." Never was the wisdom of forethought more tersely inculcated than in the saying, "Provide for the worst, the best will take care of itself." Every over sanguine speculator should remember the proverb, "Never quit certainty for hope." Even the despondent can find a salve in that homely old consolation, "Patience and time run through the longest day." What man, at the head of a business, has not felt the force of the remark, "The eye of the master does more work than both his hands." Even Insurance Companies, modern institutions as they are, were recommended in advance, if not foreshadowed, by the ancient phrase, "Venture not your all in one bottom."

So also, in morals, these old proverbs teach us all that reformers and preachers, even in this enlightened day, profess to impart. Has Neal Dow ever spoken as severely, or in so few words, against intemperance, as that venerable saying, "Drunkenness is a pair of spectacles to see the devil and all his works?"—Has pride of birth, or arrogance of fashion, or the inflation of wealth, ever been rebuked better than in the proverb, "It's not the gay coat makes the gentleman?" Has the spirit of that Gospel, which so many profess to honor, yet so few really obey, ever been set forth, in scented sermons, more forcibly than in "Write injuries in dust, but kindnesses in marble?" Has the harvest to which the profligacy and wastefulness of the young spendthrift leads, ever been told as summarily as in five little words, "Reckless youth makes rueful age?" Or has avarice ever been more sharply rebuked than by the stern warning, "The covetous man is his own tormentor?" And we might multiply illustrations almost without limit.

Even in matters relating to domestic affairs, these old proverbs are full of wisdom. Says one, "A great dowry is a bed full of troubles," a thought which we recommend to all fortune hunters. Says another, and this we quote for the sex, "A man must ask his wife leave to thrive." Says a third, "All things are soon prepared in a well ordered house." Says still another, and a pity 'tis true, "A hungry man is an angry man," but being true, all sensible wives will lay it to heart. Not to be prolix, we finish with a fifth, which we commend to all of either sex, who are ever fond of gratifying their vanity, by giving expensive entertainments, "Fools make feasts, and wise men eat them."

THE GOLD FIELDS OF THE WORLD.

GOLD abounds to a greater or less extent in almost every country. It has been found in small quantities in Spain, Portugal, Sweden, the Germanic States, Turkey, and even in England. The produce of the Russian gold mines is from $15,000,000 to $20,000,000 annually.—Besides Australia, gold is found in Hindostan, China, Malacca, Japan, Borneo, New Guinea and New Zealand. It has also been discovered in considerable quantities in Lower Canada.—The eastern gold region of the United States is considered as beginning in Virginia, extending through North and South Carolina into Alabama. In 1843, $1,200,000 was dug from the mines of Virginia. The west coast of America is the region having the greatest number of gold deposits. It is found in all the South American States, and is also procured from various parts of Africa, to the amount of about $2,500,000 yearly. It is estimated that the total yield of gold during the year 1853, was $250,000,000; and it is now supposed that the whole stock of gold and silver now in circulation is $2,500,000,000.—*Boston Journal.*

GOOD ACTIONS.—When we have practiced good actions awhile, they become easy; and when they are easy, we begin to take pleasure in them; and when they please us, we do them frequently; and by frequency of acts they grow into a habit.

WHEN the idea of any pleasure strikes your imagination, make a just computation between the duration of the pleasure and that of the repentance that is likely to follow it.

DULL CHILDREN.

No fact can be plainer than this, it is impossible to judge correctly of the genius or intellectual ability of the future man by the indications of childhood. Some of the most eminent men of all ages were remarkable only for dullness in their youth. Sir Isaac Newton, in his boyhood, was inattentive to his study, and ranked very low in school until the age of twelve. When Samuel Wythe, the Dublin schoolmaster, attempted to educate Richard Brinsley Sheridan, he pronounced the boy an "incorrigible." The mother of Sheridan fully concurred in this verdict, and declared him the most stupid of her sons. Goldsmith was dull in his youth, and Shakspeare, Gibbon, Davy and Dryden do not appear to have exhibited in their childhood even the common elements of future success.

When Berzelius, the eminent Swedish chemist, left school for the university, the words "Indifferent in behavior and of doubtful hope," were scored against his name; and after he entered the university he narrowly escaped being turned back. On one of his first visits to the laboratory, when nineteen years old, he was taunted with the inquiry whether he "understood the difference between a laboratory and a kitchen." Walter Scott had the credit of having the "thickest skull in the school," though Dr. Blair told the teacher that many bright rays of future glory shone through that same "thick skull." Milton and Swift were justly celebrated for stupidity in childhood.—The great Isaac Barrow's father used to say that, if it pleased God to take from him any of his children, he hoped it might be Isaac, as the least promising. Clavius, the great mathematician of his age, was so stupid in his boyhood, that his teacher could make nothing of him till they tried him in geometry. Correci, the celebrated painter, was so inapt in his youth, that his masters advised him to restrict his ambition to the grinding of colors.

"One of the most popular authoresses of the present day," says an English writer, "could not read when she was seven. Her mother was rather uncomfortable about it, but said as everybody did learn, with opportunity, she supposed her child would do so at last. By eighteen, the apparently slow genius paid the heavy but inevitable debts of her father from the profits of her first work, and before thirty, had published thirty volumes." Dr. Scott, the commentator, could not compose a theme when twelve years old; and even at a later age Dr. Adam Clark, after incredible effort, failed to commit to memory a poem of a few stanzas only. At nine years of age, one who afterward became a chief justice in this country, was during a whole winter, unable to commit to memory the little poem found in one of our school books.

Labor and patience are the wonder workers of man—the wand by whose magic touch he changes dross into gold, deformity into beauty, the desert into a garden, and the ignorant child into the venerable sage. Let no youth be given up as an incorrigible dolt, a victim only to be laid upon the altar of stupidity, until labor and patience have struggled with him long enough to ascertain whether he is a "natural fool," or whether his mind is merely enclosed in a harder shell than common, requiring only a little outward aid to escape into vigorous and symmetrical life.

THE NEW SLED.

"MOTHER, here is my new sled," said a rosy-cheeked little fellow, tugging his sled into the house in order to show it to his mother; "and the first thing it shall do is to go on errand for you. What do you want me to fetch you home from the store? And the next thing it shall do shall be to carry Alice to ride. She's a little girl, and would like a ride on my new sled, I dare say. Would it not please her dearly, mother? After that I'll go on the hill and slide with the boys."

This is one of the best order of exercises for a new sled that I ever heard of, and I wish every boy to make it. First and foremost was Jamie's sled to be used to help his mother, then to give delight to his little sister, and not until lastly did he mean to use it for his own special amusement. I venture to say most boys would have begun with themselves first, would they not? Mother and sister would have come last, or come not at all, or had perhaps only a grudged share in the new sled; as, for instance, when you came home from sliding down hill, your mother should have asked you to go an errand for her, and you would have said "how tired you were," or asked "if to-morrow would not do," and wished "somebody else would go on errands." Or if your sister had said, "Oh, take me a little ride on your new sled," you might have roughly answered, "It's my sled; I shan't take girls on it," or some unkind answer like this, which boys are too apt to make.

But do you think this would have been the best way to enjoy your sled? No, I think not. James had learned the true secret of taking the greatest amount of enjoyment with *his*, and that was *not* beginning with himself first.—There is a great sale of sleds about this time, and I hope every boy who reads this will try James' way of enjoying his.

THE EXTINCT AMERICAN RACE.—Amidst the plains of North America, some powerful nation, which has disappeared, constructed circular, square, and octagonal fortifications; walls, 6000 toises in length, tumuli, from 700 to 800 feet in diameter, and 140 feet in height, sometimes round, sometimes with several stories, and containing thousands of skeletons.—These skeletons are the remains of men less slender and more squat than the present inhabitants of those countries. On a vast space of ground at the Lower Orinoco, as well as in the banks of the Casiquiare, and between the sources of the Essequibo and the Rio Blanco, there are rocks of granite covered with symbolic figures. These sculptures denote that the extinct generations belonged to nations different from those which now inhabit the same region.—*Humboldt's Travels.*

For the Ladies.

THE BRIDE'S NEW HOME.

FAR from her childhood's sunny bowers,
A New Home melts the fair young Bride;
Now duties claiming now the hours,
And stranger scenes on every side.
But when the twilight hour has come,
And Memory's holiest depths are stirred,
Sees she not then the dear old home,
Where late her step and voice were heard?

And thinks she not of childhood's dreams,
That thrilled her with their witching spell;
Of youth's more wild, romantic schemes
She loved to foster all so well?
And sees she not those absent friends
Who miss the dear ones gone from them,
With each of whom some memory blends,
Now treasured as a priceless gem?

But the deep sense of loneliness
That weighs so heavily on the soul,
When thoughts like these upon her press,
Yields to affection's sweet control—
That strong affection which incites
To almost any sacrifice,
Which is to those whom it unites,
An antepast to Paradise.

The Bride's New Home! Religion there
Should ever have her sacred shrine,
And morning praise and evening prayer
Be breathed for every gift divine.
Poor human love will never wane,
Nor idolize its objects here,
Where Piety has reared a fane,
And the heart offering is sincere.

The Bride's New Home! Peace be within,
And every hallowed grace employed;
A mother's prayer an answer win;
A father's blessing full enjoyed;
A sister's wishes realized;
A brother's hopes fulfilment find;
Each dear friend's benediction prized,
And all with odorous thoughts the mind.

The Bride's New Home! Let music wake
Her soul-entrancing measure there,
And melancholy's dirge ne'er break
In darkling cadence on its air,
Let Love's perfume its halls pervade,
That echo but in gentle words,
So shall the Bride's New Home be made
The fairest dwelling earth affords.

DON'T TEACH CHILDREN TOO MUCH.

BY MRS. M. W. H.

In Two Numbers—No. I.

PERHAPS there is less need of this caution now, than existed thirty years ago, when parents were thought to be very negligent, if their children were not sent to school at three or four years of age, and even then, they were expected to know as much as I think children ought to know at seven. I say there is not so much need of this caution, that I have adopted for my motto, as formerly existed, as far as it regards the knowledge obtained in schools, because I believe that parents entertain better views on this subject; besides, facilities for imparting instruction and lessening the *labor* of learning, have increased a hundred fold in the time.

Parents are beginning to understand the idea, that children, especially those of delicate constitutions, cannot bear to have the brain too severely taxed, without re-action, on those physical energies requisite to a proper development. When a child, I frequently heard the remark made, that it always made children indolent to go to school. I knew that in my own case, the *fact* applied, but of course I knew nothing of the philosophy. There is but little danger of injuring a child by study, who has not an active brain, and even those who have are less liable to it, as schools are now managed, than they were, when the least deviation from the text in the recitation of a lesson was regarded as a failure, and the victim of confinement to benches without backs, was visited with punishment if caught making pictures on the slate, or trying to relieve the aching limbs or spine by assuming some position besides that of right angles. I now wonder that children could have been even compelled to study so many hours with so little variety in their lessons.

But my object is not so much to speak of the injuries resulting from too much teaching at school, though that evil in some cases exists as to put in a plea for a class of sprightly, delicate children who are taught too much at home. To illustrate this part of my subject, I will give instances of the management of two children in the same family. The eldest, a bright, precocious, delicate little girl, began to talk very early, and was very interesting, especially to the parents, who could scarcely wait for the natural development of the faculties, but were constantly urging some new accomplishment upon the little victim, of whom they were sufficiently proud on finding her the mistress of nearly all the alphabet, and able to repeat little verses at two years of age. In two years more they found she could not learn so easily as they expected, and the poor child was often made to suffer from imputed carelessness, when it was only the result of extravagant expectations on the part of the parents, who alone were in fault. But their vanity was destined to receive a shock. When little MARY was five years of age, she was sent to her grand-parents, to attend school. The father and mother expected to receive some flattering compliments on the child's proficiency—not so; the good old grandfather wrote to his children, lecturing them severely for their negligence of MARY'S education—for though they had been literally cramming her mind, from the first dawn of intelligence, and she could read fluently, yet with all her acquirements she did not "know the multiplication table." In a few years it mattered not how little, or how much she knew; too frail for earth's rude teachings, she was transferred to that school whose Teacher is the brightness of that Father's glory, who knows the capacities and wants of all his children.

Before the fourth child, also a little girl, was old enough to be taught, the parents had learned a better course. Much like her sister in constitution and temperament, they resolved not to hurry her at all, but let her take her own course in regard to learning from books. When about six years of age, she began to wish to read stories; she knew the alphabet, which was about the extent of her school lore. A gentleman gave her the ballad of the "Little Orphans," illustrated with colored plates. Her curiosity was excited, and her mother having forbid its being read to her, she mastered it for herself in three weeks, without any urging.—At seven years of age she was sent to school, and at ten was in advance of her elder sister when at that age; and, what was better, the mind was not taxed to the detriment of the body.

I will not here stop to argue the philosophy of this subject; common observation will point out to parents or teachers those whose temperament, and activity of brain, are such as to need a constant curb, while those of the opposite character will bear urging without injury. Who ever saw an easy, lymphatic person made insane by study? I know it is hard to overcome parental, or professional pride and apply this curb, but when we consider the fact that nine-tenths of these precocious children, if they arrive at maturity, come to a stand-still before they have realized the promise of their childhood, we may well turn with more hope, and less coldness, to those children who are slower in learning—whose perceptive faculties must be allowed to receive and examine before they respond. Where the perceptives of children in the same family vary, parents are in danger of allowing a partiality, in outward seeming at least, to creep in, which is destructive of happiness and harmony.

BEAUTY.

"The wind passeth over it, and it is gone."

HOW often we hear men eager in the pursuit of partners for life, inquire for a beautiful woman; and yet how brief the existence of what they seek, and how unproductive of happiness is its possession.

We know full well the satisfaction that sleeps beneath the snow white lids of a beautiful eye; in the haughty curl of an exquisite lip, in the blush of a rose that leaps into a budding cheek, in the fine turn of a swan-like neck, the gentle motions of a symmetrical form, or in the shadowy redundance of dark and beautiful flowing tresses. The hearts of the young and passionate leap gladly, and are filled with wild impulses whilst gazing upon these things—but when the soul is scrutinized and found unblessed by elevated thoughts and generous imaginings, when the intellect is uncultured, and the imagination cold, the slumber of forgetfulness will soon fall upon the dream of beauty, and the flame of affection be quenched with apathy and disgust.

With men of genius, strong feelings and powerful passions are ever associated, and if beauty is unmingled with the qualities of will, thought and affection, if delicacy and virtue are not admirably blended with mental attractions, the light of love will soon be extinguished, and the generous impulse of the bosom chilled by apathy and contempt.

Many men of intellect may yield a momentary homage to a beautiful woman, dispossessed of other fascinations; even a village urchin will chase the gilded wings of a butterfly, but in both cases the external splendor falls upon their senses, and something of an innate character is sought for, to sustain the regard which beauty excites. Nothing is so fluttering to the feelings of man, as the exhaustless and quenchless regard for females, and no incense so rich can be offered upon the shrine of a woman's ambition, as the avowed and enthusiastic affection of a man of genius. Beauty, thou art a poor and unmeaning joy, when contrasted with depth of feeling and power of mind, and she who would aggrandize to herself consequence, from the little ambition of personal beauty, is too imbecile in her aspirations, to merit the affection of an elevated thinker.

A GEM.—Who wrote the following beautiful epitaph upon an infant? It speaks to the heart:

Beneath this stone, in sweet repose,
Is laid a mother's dearest pride;
A flower that scarce had waked to life,
And light and beauty, ere it died.
God in his wisdom has recalled
The precious loan his love had given:
And though the casket moulders here,
The gem is sparkling now in heaven.

MARRIAGE.—Marriage between persons of the same age is an institution of God. Marriage between an old man and a young woman is an institution of man. Marriage between an old woman and a young man is an institution of the devil.

THE criterion of true beauty is that it increases on examination; if false, that it lessens. There is something, therefore, in true beauty that corresponds with right reason, and is not merely the creation of fancy.

MOORE'S RURAL NEW-YORKER

ROCHESTER, FEBRUARY 11, 1854.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in lots, less, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

☞ For a variety of particulars relative to terms, &c., see Publisher's Notices on next page—which answer most of the questions propounded by agents and other friends.

The Foreign News.

The tide of war, like the tide of the ocean, has its ebb and flow. By the previous arrivals, the Turkish affairs looked extremely dubious, and defeat and disaster seemed to menace them on every hand; but the news by the Asia has put a new face on the affair, at least so far as the Danubian provinces are concerned. It is now said and undoubtedly with truth, that on the 4th of January the Turks gained a brilliant victory, and captured the Russian entrenched camp at Citale, near Kalafat, and put 2,500 of the enemy to the sword. The Turks also attacked a body of 18,000 Russians, sent to relieve Citale, and, after a sharp encounter, compelled them to retreat. The Russians are thus driven back from the positions by which they hoped to cross the Danube. The Turkish force in battle was 15,000 men and 15 cannon.

The allied fleet have entered the Black Sea, and will probably blockade the Russian vessels in the harbor of Sebastopol. This will render the navigation of the sea comparatively safe for Turkish transports, and enable them to throw supplies of men and stores upon the Asiatic coast, in order to retrieve the losses lately experienced there. As before stated, the hopes of the Turks for ultimate success, depend upon the active interference of the Western powers in her behalf; for without this aid, the overshadowing potency of Russia will be sure to crush her in the end.

Matters have now reached a crisis, and must be decided either the one way or the other ere long. The activity of France and England has heretofore been manifested in quiet preparation and in the department of diplomacy; but the movement of the fleet into the Black sea, and the submission of a final proposition as a basis of settlement to the Autocrat, must decide the alternative of peace or war.

The arrival of the Arabia, at Halifax, Feb. 4th, with seven day's later news, has not yet solved the problem, but the telegraph states that Europe was waiting with trembling anxiety for the final answer of the Czar, which it was apprehended would be of a character equivalent to a declaration of war against England and France.

Amendment to the Constitution.

On the 15th instant, the people of our State will be called to pass upon an amendment to the fundamental law. The question is one of vital importance to the interests of this State, and of all the West, and it will settle the canal policy for all time to come. The question is whether the canals shall be finished at once, and put into efficient working order so as to stand before and out of reach of all competition in the carrying trade of the great West, or whether the public works shall be suffered to linger along for an indefinite period, or perhaps never be completed at all. Over sixteen millions have already been expended and nearly unproductive for years past, simply because the canals cannot be used in their enlarged capacity until completed throughout; and the length of time that must elapse yet during all which period the expenditure will be a dormant investment, unless the amendment passes, ought to open the eyes of all prudent and right thinking men. That the enlarged canal, besides conferring incalculable benefit on the State and on the nation, will pay for itself without a dollar's expense to any man, is as clearly demonstrable as that the sun will rise in the east. The vast saving in distance, for over 30 miles of sinuosities will be cut off—the vast saving in the traction of boats, for three horses will draw an enlarged boat of 240 tons, as easily as two horses will now draw one of 90 tons—the vast economy of time, for two days at least, will be saved each trip—the vast saving in interest, for the money already expended will then be made a productive and active capital, and a thousand other considerations for, and not one against the enlargement, all call trumpet-tongued to the voters of the entire State, to put an end to this torpid and vascillating policy, which policy, if an individual or a private corporation should pursue in the management of their affairs, would render them a by-word and a reproach. The previous Legislature passed the law by a large majority, and the present one without distinction of party passed it again unanimously in the Senate, and will: but one dissenting vote in the house; and the people will honor, as they deserve, an eternal reproach if the bill is finally lost through their supineness.

Readers of the RURAL in this State! go to the polls and call out your friends, and let one unanimous aye be deposited in the ballot-box, on the canal question, if your would leave posterity rise up and call you blessed!

Congressional Proceedings.

JAN. 31.—Nothing of importance done in the Senate.

In the House, Mr. Richardson, from the committee on Territories, reported a bill for organizing Nebraska and Kansas.

Mr. English, a member of the committee, said the bill in its present shape did not meet the approval of all the members of the committee.

Feb. 1.—SENATE.—A resolution of inquiry, as to the propriety of constructing a National Foundry in Pennsylvania, was adopted.

HOUSE.—In the House, considerable discussion took place on the Erie Railroad trouble, and the disposition of the bill to punish mail abstractions, but nothing definite was done.

The House went into committee on the Deficiency bill, but without coming to a conclusion.

Feb. 2.—SENATE.—The Printing Committee reported against the establishment of a Government Printing Office.

The House bill, granting five years' additional time for the location of bounty lands issued for war soviers in 1812, was passed.

Mr. Clayton's Sandwich Islands resolution was passed.

A resolution offered by Mr. Bright, calling for Koszta correspondence, was also adopted.

The Phelps (Vt.) case, was discussed and the question was postponed until Thursday.

After a short Executive session, the Senate adjourned.

HOUSE.—An amendment to the Deficiency bill, appropriating $40,000 for completing the custom house at Louisville, was agreed to, as was also one offered by Mr. Benton, appropriating $100,000 for a custom house at St. Louis, and another appropriating $125,000 for a custom house at Wilmington, Del. The committee rose without concluding the business.

The report of the directors of the Philadelphia Mint was received and ordered printed.

Feb. 3.—SENATE.—The Senate acted on the private calendar. When that was through with, the Nebraska bill came up, and Senator Chase spoke. The galleries and lobbies were filled to excess, and even the reporters were driven from their seats by women.

HOUSE.—Twenty-six private bills were passed. Correspondence relative to persons claiming the protection of this Government, between Secretary Marcy and our Charge de Affairs at Austria, was submitted, in which the case of one Simon Taussic, claiming protection as a citizen of the United States, is canvassed. But it being shown that Taussic is a subject of Austria, the Secretary decided that this Government cannot interfere in his behalf. The House adjourned till Monday.

The Pope's Nuncio.

THE Pope's nuncio, BEDINI, who has been perambulating the United States and causing so much excitement, finally departed for Europe Saturday last, in the Collins' steamer Atlantic. Politicians, revolutionists, and sectarians have made the appearance of this Roman functionary among us, the occasion of extraordinary activity and excitement, not unattended with the shedding of blood. So far as his own conduct on this side of the Atlantic is concerned, we do not find anything offensive or out of place; and the same acts in any other individual would have been passed by as unworthy of any sort of notice. The whole trouble has arisen in consequence of one portion of our foreign population regarding him as a man of extraordinary sanctity, and one who could not be spoken to or about except with a reverence such as is due to the head of the church manifest in the flesh, while another portion of the same population do not hesitate to pronounce him a blood-thirsty tyrant, hiding his head under a bishop's miter.

So far as Americans themselves are concerned, except a few toad-eating politicians and office-seeking or office-holding waiters on Providence and the pulls, his coming, abiding, or departure, has been a matter of perfect indifference. We are glad he is gone, however, for if he is the butcher his opponents assert, we certainly do not want him here; and if he is not, the resident Roman Catholic clergy even then are quite as competent to take care of their flocks, as a foreigner who is unacquainted with our language or laws, and who labors under at least a suspicion of tyranny.

JANUARY AND JUNE; being Out-door Thinkings and Fire-Side Musings. By BENJ. F. TAYLOR. Illustrated. New York: S. HUESTON,—1854.

THIS is a *live* book—abounding in life-like sketches, and delineations of Nature's handiwork and teachings, from preface to finis. We received it several weeks since, but (as we rarely commend a book on trust, from appearances, or what "other people say,") delayed noticing until more than a glance could be given its contents. Having at last an opportunity to open it, we did so, and read one sketch, then another, and another,—until we finally perused nearly half the volume, of some 280 handsomely printed pages, at one sitting. And yet it's not a book which should be read hastily—it contains too many gem-thoughts for that,—but is just the companion for long boreal evenings, or June days—for those addicted to thinking or musing. The author is a true poet, and, though favorably known for some years as a racy sketcher, JANUARY AND JUNE will give him an enviable reputation. The volume embraces some fifty prose, and ten poetical, comings from the genuine mint. The book will *pay*—not the author and publisher only, but the *reader* also. So believing, we commend it, thinking or musing friend, to your perusal.

Notices of several books necessarily deferred.

Our Albany Correspondence.

Albany, Feb. 6, 1854.

THE leading topic of legislation for the past fortnight has been the Maine Law. What is somewhat peculiar is, that both houses are engaged on the same question at the same time. Generally, a measure is passed by one branch and then taken up by the other. This bill receives the conjoint discussion of both, which may be accounted for by the transcendant importance of the subject, and the necessity of having the bill perfect in all its details. The Hon. Mr. DEWEY from Jefferson County has brought in a report from the minority of the Assembly Committee, which is acknowledged to be one of the ablest papers of the session, and it will do much toward pruning the bill of the majority from errors and unconstitutionalities. There seems to be a desire on the part of the friends of the bill, to make it so strong that it shall not only stand the test of judicial scrutiny, but shall appeal to the intellect and conscience of the entire people, being impressed as they are with the idea that no law can long be efficient that does not come up to such a standard.

The Assembly hold an afternoon session to consider this all-important measure. They have already passed over about half of the sections, and have made some wholesome amendments. One is to strike out the clause which provided a fee to the complainant. It is clear to be seen that a reward to the person who should make complaint against a vender of liquors, though it might do some good, would work much injury, as persons would be charged with entering a complaint to get the fee. This would destroy the moral force of the law, and it was therefore struck out. The matter of searching for liquor on the complaint of three witnesses has been slightly modified to do away with some of the objectionable features.

But the enemies of the bill seem to lose all discretion in their debates, and their amendments. One moves to include opium. Another will cure this great evil by making drunkenness a punishable offence, and so on, with a view of befogging the subject, or its friends, or so choke it with amendments, as to insure its defeat.

NEBRASKA.

The Nebraska question has been opened by the introduction of resolutions of instruction to our representatives and Senator in Congress, in opposition to the Douglass scheme. As this involves the Slavery question, the occasion is taken to let off a little of the pent-up bile of 1850.—But without enumerating farther on that phase which is foreign to the main point at issue, I will remark that there is a probable majority opposed to the repeal of the Missouri compromise which pledged all territory north of 36° 70 min. to freedom. Another objection to the organization of the new territory is that it was set apart as the future residence of the Indians. And Senator BROOKS has introduced a resolution to the effect that the Indian title shall be extinguished before the government can be organized.

THE CONTESTED SEAT.

The case of ADAMS and WILLIS, the occupant and contestant of the seat from 2nd district of Jeff. Co., has been decided in favor of Mr. WILLIS. The opponents of the Maine Law made strenuous efforts to retain Mr. ADAMS till that measure should be disposed of, as Mr. WILLIS was elected as Maine Law candidate. But the House got out of all patience with such delays, and came to a direct vote last Friday.

STATE SUPERINTENDENT OF SCHOOLS.

This long-deferred measure has finally been reached, and will probably receive, as it justly demands, *careful* and *prompt* attention. Senator ROBERTSON has brought in a report and a bill creating the office, and providing for the election of the Superintendent by the joint ballot of the Legislature on the first Tuesday of April next, and every three years afterwards, the salary to be $2,500, and a deputy and clerks to be allowed sufficient to perform the labor. It is his duty, in addition to those performed by the Secretary of State as now organized, to visit schools and examine into the discipline and condition thereof, and report the same to the Legislature. This measure will find great favor with the friends of education throughout the State.

STATE NORMAL SCHOOL.

The exercises at the Normal School have been of a very interesting character. SAMUEL S. RANDALL, Esq., addressed the literary societies on Saturday, Jan. 28. Essays and Music constituted a part of the order. The young men did themselves great credit, and Mr. RANDALL pronounced one of the best addresses I ever heard. The examination of pupils, in the Normal department, was conducted on a more comprehensive plan than that heretofore pursued, each class being reviewed in all the studies pursued. I understand that these examinations are regarded as tests of the standing of pupils, and not as an entertainment to visitors. The closing exercises took place last Thursday, before a large and intelligent audience. Gov. SEYMOUR addressed the pupils, and Prof. WOOLWORTH conferred the diplomas. Such is the demand for teachers who graduate from this institution, that a very large number of the class first graduated are already engaged, and several commence their labors today. I should say more of these exercises if space would permit.

POULTRY AND STATE AGRICULTURAL SOCIETIES.

Preparations are actively making for the show of Poultry, and for the session of the Agricultural Society. It is said that barrels are provided for those chickens that eat corn from their tops, and other "fixins" of which I will speak in due time. The Assembly have resolved to give up their chamber for the Agricultural Society.

ADJOURNMENT OF THE LEGISLATURE.

The Legislature will adjourn from the 10th to the 16th, in order to allow the members to vote at the Special Election on the 15th. "OWL".

News Paragraphs.

☞ Gov. Stevens, of Washington Territory, writes from Olympia, Puget's Sound, Dec. 5th, that, having made a thorough survey of the Northern Pacific Railroad route, he is convinced of its entire practicability. He describes the country as well wooded and watered, and admirably adapted to settlement and cultivation. In each of the mountain ranges two passes were discovered through which a railroad can be easily constructed. The distance from Mississippi to the Pacific, is 1,800 miles; that the country is rich and level, and the grade 40 feet to the mile, through Cadotte's Pass.

☞ A bequest of a hundred thousand francs has been made to the French Institute, as a premium for the discovery of means of curing the Asiatic Cholera, or of the cause of the pestilence. There is no limitation as to country. Thus—our medical savans may enter into the competition. According to the London papers, 15 or 20 deaths by cholera now occur daily in Paris.

☞ The Buffalo Rough Notes states that hydrophobia prevails to an alarming extent on the Indian Reservation, at Cattaraugus Creek.—Several of the family of Bluesky, one of the chiefs of the tribe, have died within a few days, from eating the flesh of a cow which was bitten by a rabid dog, and Bluesky himself is thought to be beyond medical aid.

☞ The Parliament house at Quebec was destroyed by fire Feb. 1st. The fire originated in the south wing, from the furnace, it is believed. Part of the valuable library was saved, but the literary and historical library and apparatus was almost entirely destroyed. Insurance on building, £30,000; on provincial library, 50,000.

☞ The present equipment of the Great Western C. W. Railway, consists of 22 locomotives, 25 passenger cars costing $2,500 each, 150 covered freight cars costing $700 each, and 200 open freight cars costing $350 each. The passenger cars are 45 feet long and 8 wide, with seats for 66 passengers.

☞ The new Mayor and Aldermen of Boston, have taken preliminary steps to enforce the prohibitory liquor law of Massachusetts, in that city. The Chief of Police is directed to use the most efficient measures in the power of his department to secure the immediate enforcement of the statute.

☞ Flame and smoke still issue from the ruins of Lafarge Hotel. In the centre of the waste of brick and mortar there are two immense coal heaps, containing, together, 1700 tons, which heat the bricks above almost to whiteness. It is now a month since the conflagration occurred.

☞ The Livingston Republican says:—Some years ago we were told by an aged farmer residing about two miles south of Mount Morris, that he had drawn his wheat crop to this village and had received therefor one yard of common cotton cloth per bushel!

☞ The U. S. Senate passed a bill granting six months' extra pay to the surviving army and navy officers, soldiers and seamen, who were on board the San Francisco, and giving pensions to those who were rendered widows and orphans by the sad calamity.

☞ Over thirty tons of silver coin was weighed in the United States Mint last Monday week, and is now ready for distribution. Under these circumstances there is no more need of a shinplaster circulation than there is for a fifth wheel to a wagon.

☞ The correspondents in Washington, says the National Era, generally credit the report that is known in high quarters here, that there will soon be a coup d'etat in Spain, and that the new government will offer Cuba for sale to our government.

☞ Prince Albert, who has heretofore been content with his position as husband of the Queen of England, is now said to have been busy with the war question, throwing his influence in favor of Russia.

☞ The Hudson River Railroad is doing an immense freighting business. The Albany Atlas says the enormous quantity of 18,666,886 lbs. have been shipped on this road, from the station at East Albany, during the month of January.

☞ A cotemporary says that war on the Danube—cholera in England—conflagration at home—wrecks on the sea—have given to the present winter a pre-eminence among disastrous seasons.

☞ It is stated that the young King of Portugal is about to marry his Coburg cousin, the Princess Charlotte of Belgium. The consequences will be the production of a few more royal fools.

☞ Steps are being taken to establish a Literary and Theological Institution in California. In June last, at a meeting of the San Francisco Baptist Association, the California Baptist Association was formed.

☞ The Hon. Wm. Appleton, of Massachusetts, presented to the Colonization Society the sum of $2,400—the amount necessary to secure the emancipation of the 80 slaves of a Mr. Bell, and their colonization.

☞ About two hundred persons are employed in the straw manufactory at Nantucket. Among the operatives are the daughters of some of the leading men in town. Some of the young ladies make five dollars a week at the business.

☞ Gen. Cass's allegation that "violence" had been offered to the Nuncio in New York, is indignantly repelled by the press of that city, and the venerable Senator called on for his proof.

☞ Two shocks were felt at Palmer, Mass; Depot last week, the first on Tuesday and the second on Wednesday morning. They were accompanied by a short rumbling sound, and caused the buildings to oscillate sensibly.

☞ The Boston Post says:—"There are 13,000 marriageable girls now in the factories at Lowell. It is pleasant to know in this world of misery, that there are 13,000 men yet to be made happy."

☞ The Louisville papers tell of a young couple leaving that city for Cincinnati to be there tied in the bands of wedlock. They were a Mr. Webb, aged 16, and a Miss Susan Hinly, aged 13, both scant.

☞ The Cleveland Plaindealer, says, A. U. Gray, proprietor of an iron yard in that city, has handled since 1849, 131,565 tons of Railroad iron, or sufficient to lay 1,400 miles of track.

☞ The number of students in attendance upon the lectures at the four Medical colleges in Philadelphia, is between thirteen and fourteen hundred.

News Brevities.

—— It is said that every Judge in the State of Tennessee is a Son of Temperance.

—— The number of students at present attending Victoria College is 150.

—— The town of Brockville was lighted with gas for the first time on Thursday last.

—— The Mayor of San Francisco has prohibited Sunday evening theatrical performance.

—— The Mississippi is frozen over at St. Louis, and there is excellent crossing on the ice.

—— The first part of Bunyan's Pilgrim's Progress, translated into Chinese, has just been printed in London.

—— The revenue of New Brunswick for the years 1851, 1852 and 1853, was respectively, £117,362, £138,220 and £180,850.

—— The mansion house on the Mount Vernon estate is now one hundred and eight years old, having been built in 1745.

—— The North River is frozen over as far as Tarrytown, and the ice, at that place, is thick enough to admit its being crossed in vehicles.

—— The Rochester American says that the county of Monroe produces more wheat, yearly, than the six New England States together.

—— The Washington Star says, that M. Belini will receive a passport such as is accorded to an ambassador.

—— The ship Hartford, 90 days out from Liverpool for Mobile, has not been heard of and is supposed to have been lost.

—— The St. Louis Cathedral was injured to the extent of $10,000 by fire on the 26th. It was insured.

—— The Ministers in Maine are endeavoring to break up the practice of burying the dead on the Sabbath.

—— The Portsmouth Journal nominates Edward Everett as the next whig candidate for the Presidency.

—— The epaulettes worn by Prince Albert, when in full costume, are worth £500; a small farm on each shoulder.

—— There are now six thousand men at work on the Lake Erie, Wabash, and St. Louis Railroad.

—— There died at Moscow, on the 11th of October, a certain Peter Sosnovsky, aged 122 years, 1 month, and 25 days.

—— Dr. Perkins, of Oroomiah, Persia, writes that the Nestorians now have the Bible complete in both the ancient and modern Syriac.

—— The refractory New York Alderman, Sturtevant, is locked up in jail, awaiting the setting of the full bench of the Supreme Court.

—— A writer in the North British Review remarks, that the novelist and the poet have come to rival the preacher in influence.

—— A pair of oxen are on exhibition in Boston, which weigh eight thousand pounds. They belong to the Messrs. Cone of West Stockbridge.

—— The Missouri Iron Works, at Wheeling, were entirely destroyed by fire on last week Tuesday. The loss is estimated at $60,000.

—— The steepest railroad grade in Europe, is upon the Piedmontese Railroad, between Turin and Genoa, and the ascent is one hundred and eighty-five feet to a mile!

—— A dividend of $30 per share has been declared by the Minnesota Copper Company, which is $8 more than had been paid in by the stock-holders.

—— The distance from the Mississippi to the Pacific by the northern (Gov. Stevens') route is 1,800 miles. By the southern it is upwards of 2,500.

—— The son of the Emperor of Hayti, an intelligent and gentlemanly youth, has arrived in England, to complete his education under a clergyman at Bawlish.

—— A man named Butterfield was found frozen to death in Concord, N. H., on Sunday morning of last week. He was found dead in the road.

—— The consumption of water in Boston has reached thirteen millions of gallons in 24 hours! The supply is not equal to this demand, or rather this waste.

—— The underwriters have accepted the abandonment of the clipper ship Great Republic. They pay on her about $250,000, and her wreck is to be sold at auction.

—— At the late term of the Superior Court, held at Concord, N. H., no less than 40 applications were made for divorce, of which 33 were granted.

—— A teamster in Boston injured his eye a few days ago by the end of his whip-lash. He took cold in it, and in three days died from lockjaw.

—— It is stated as a fact that Sir Robert Cotton rescued the original Magna Charta from the hands of a tailor, who was on the point of cutting it up for patterns.

—— The steamer Eagle, from Columbia to Apalachicola, was burnt on Monday of last week, together with 1,300 bales of cotton. Four negroes were also burned.

—— Major Howell, a brother-in-law of Col. Jefferson Davis, Secretary of War, is about to learn New Orleans, it is said, with a volunteer corps to aid the Turks.

—— Fred. Douglass accepts the appointment to address the Literary Societies of Western Reserve College, Hudson, Ohio, at the commencement in July.

—— A meeting of the people of Massachusetts to express their opposition to the project of repealing the Missouri Compromise, will be held in the Faneuil Hall, on the 16th inst.

—— Thirty thousand men are employed in the United States in iron castings; twenty-five thousand in the manufacture of pig iron; and fourteen thousand in wrought iron.

—— The Hon. Malcolm Cameron, Postmaster General of Canada, has reduced the postage on Weekly Newspapers from 2s. 2d. per annum to 1s. 1d. when the postage is paid in advance.

—— At Onondaga, Otsego county, N. Y., a man sent his boy, ten years of age, in a distillery for whiskey. The boy drank about a pint, and died the next day.

—— One of the Boston Editors thinks that the raising of the physicians' fees in that city, will have a very beneficial influence on the health of the population.

—— The Scientific American contains a communication of H. A. Frost, of Worcester, in which he claims to have invented a "marine locomotive" which will cross the Atlantic in four days.

—— The New York Methodist Book Concern turns out about 5,000 bound books daily, or about ten per minute, allowing ten hours as a day's work.

Foreign Intelligence.

Arrival of the Asia.

The steamship Asia arrived at New York on the 31st of January.

The latest rumors from St. Petersburg were more pacific, and had tended in some measure to restore confidence in a speedy adjustment of the difficulty.

The Asia left Liverpool on Saturday, the 14th. On the 15th she passed the America, bound in for Liverpool.

The Allied fleets have entered the Black Sea. The first division of the Turkish fleet accompanied the Allies. The second division is anchored at Therapia.

The Czar is not disposed to view the entry of the fleets as a declaration of war, but he has ordered all his own fleet to return to Sebastopol.

On the 6th of January the Turks gained a brilliant success on the Danube. They stormed and captured the Russian entrenched camp at Citale, near Kulafat, and put 2,000 of the enemy to the sword.

They also attacked a body of 18,000 Russians, sent to relieve Citale, and after a sharp encounter, compelled them to retreat. The Russians are thus driven back from the position by which they hoped to cross the Danube. The Turkish force in battle was 15,000 and 15 guns. It is admitted that Omer has brilliantly outmanœuvred the Russian commander.

Other advantages on the Danube are formally noticed by the Divan to the Ambassadors of the four powers. Details are not given, but supposed to be the storming and capture of Kurakal, with several skirmishes of less moment.

In Asia, the defeat of the Turks under the weak generalship of Abdi Pasha, is confirmed, but Gen. Gugon has gone to the army with full powers and the spirits of the Turks have revived.

Now that the allied fleets are in the Black Sea reinforcements can be sent to Asia with safety.

Schamyl has sent a message to the Porte announcing that he has now proposed to act energetically against the Russians; meanwhile negotiations go on.

The Sultan's *Irade* is published, approving the decision of the Grand Council, to open negotiations on the footing proposed by the powers—Turkey to send a report to the Conference in a neutral city.

It is confirmed that Persia has resumed negotiations with Great Britain, and will not at present attack the Turks.

The ostensible cause of the difficulty with Britain was the claim of Abdal Kuril, a British subject, against the Persian Government.

Hev. James C. Richmond complains that he is detained prisoner by the Austrian police at Kechenet, Hungary, and calls on the U. States for redress.

China news state that Amoy was recaptured by the Imperialists, who massacred 1,000 of the inhabitants.

The Latest News.—*London*, Friday.—Rumors were circulated this P. M., on the Paris Bourse, that pacific news had been seen from St. Petersburg.

Rumors of fresh successes by the Turkish army in Wallachia, have alarmed Vienna. It is rumored that the Emperor of Austria leaves for Warsaw, in order to have a conference with the Czar on the Eastern question.

From Persia, we learn that the Affghan envoy left Teheran before the arrival of the new Russian plenipotentiary, with the threat that if Persia formed an alliance with Russia, the Affghans would invade the Persian territory.

Liverpool Breadstuff Market.—Denniston & Co., report that the market was active, and prices continued rapidly to advance till Tuesday evening, the 10th inst., but since then there has been less doing, and prices have fallen off, leaving, however, an advance in the week equal to 1d@2d. on wheat, 1s@1s. 6d. on flour, and 2s on Indian corn—the present quotations being for western canal flour, 42s. 6d@43s.; Philadelphia and Baltimore, 42s. 6d@44s. 3d.; Ohio, 42s. 6d@45s.; interior and sour 37s@38s. and 39s.

White wheat 12s. 4d@12s. 7d.; others say 12s. 9d. Mixed 12s. 2d.

White Indian corn, 39s@51s.; yellow and mixed, 49s@50s.

Arrival of the Arabia.

The royal mail steamship Arabia, from Liverpool on the 21st of Jan., arrived at Halifax, Feb. 4th, bringing 79 passengers.

The Pacific from New York on the 7th inst., reached Liverpool at noon on the 18th ult.

The Golden Age steamer from New York, via Liverpool for Australia, put into St. Vincent for coal and sailed again on the 19th of December, all well.

Up to the sailing of the Arabia there had been no definite intelligence from St. Petersburg, as to the decision of the Czar in regard to the last note of the four powers. Europe was waiting with trembling anxiety for the final answer of the Czar, which it was apprehended would be of a character equivalent to a declaration of war against England and France. His answer was hourly expected.

Richardson & Brothers, in referring to breadstuffs, quote heavy market in the fore part of the week, but at the close a better feeling, and prices improved. Flour, Wheat and Corn sold on Friday, at about the rates current on the 17th inst., say Western Canal Flour 42s. 6d@43s. 9d; Baltimore and Philadelphia, 44s. 3d@44s. 6d.

White wheat 12s. 6d@13s.

Corn was firm at the rates current on the 14th ultimo.

Gardner & Co. quote provisions firm and rather higher. For lard there was a large speculative inquiry, and sales had been made at 58s.

Increase of the British Navy.—The British government intends to raise the number of seamen and marines for 1854-5 to 53,000 men, which is an increase of 8,000 on the number voted last year, and 13,000 since 1852. The ministerial journal, after giving this *on dit*, proceeds to show in detail the strength of the British steam fleet. It appears that there are in the navy 23 screw steamers, eleven of which are line-of-battle ships carrying 1,547 guns, and of 10,340 horse power; that omitting vessels of inferior class, there are nine powerful paddle-wheel steamers, carrying 169 guns, and of 4,730 horse power, whilst there are now building, and will probably be afloat in a few months, 13 screw steamers, carrying 1,056. All these of course are in addition to the sailing fleet of Great Britain, amounting to above 500 vessels of all denominations.

☞ Emigrants embarked at Limerick during the past year of 1853, for Canada, 5,226; United States, 2,304. Total, 7,530, in 45 vessels from that port.

St. Valentine's Day.

St. Valentine's Day, which is near at hand, has been rendered sacred or rather accursed on account of a superstitious notion formerly entertained, that upon this particular day the birds of the forest chuse their mates. The idea must, as of course it did, originate in another country and another clime than ours, for there are no birds in our denuded and cheerless forest to choose mates at this inclement season, except the poor little chick-a-dee and the carrion crow; the latter, certainly anything but a sacred or a poetical bird.

In imitation of these supposed tendencies of the feathered songsters, the genus *hominum* has made St. Valentine's day an occasion for love-making demonstrations, and divers epistles and missives, in the shape of spitted hearts, nude babies with wings, &c., &c., circulate to and fro. It is not this foolish custom so much as its profanation that we condemn, for it is made the special occasion for the free venting of spleen maliguity, envy, hatred, and all uncharitableness; and gives opportunity for the display of all the evil passions and unamiable traits of human character. The disgusting array of caricatures and vulgar prints just now on exhibition in some of our shop windows, is as shocking to good taste as it is perverting to moral principle, and any young man who would even select a gingerbread and paper-laced five dollar Valentine, out of such a company of pictures, ought to receive a peremptory dismission from his lady-love.

A five dollar present, in the shape of an interesting and valuable book, from a young man to the girl of his heart, is an act worthy of all praise; but a useless piece of cut and bedizzened satin paper for a present, is not worth the sixpence paid the post-boy for its delivery. To the young men then, we would say—if you desire to make a present to a young lady, give her a good book or something capable of improving both the head and the heart; if you cherish any ill will against any one, dismiss it at once, for anger resteth only in the bosom of fools; and above all, do not hide yourself behind the veil of an anonymous correspondent, or a disgusting Valentine, for it is an act of cowardice that ought to make the perpetrator ashamed to look even a decent dog in the face.

A Powerful Locomotive.—A new and powerful coal-burning locomotive has just been completed for the Baltimore and Ohio railroad. It is designed for the heaviest of the mountain grades, commencing at Piedmont, 207 miles from Baltimore, and running about 60 miles.—The engine has ten wheels, six of which are drivers, and a truck of four wheels. The drivers are 50 inches diameter, and the truck 30. The cylinders measure 19 inches in diameter, with 20 inches stroke of piston. The cylinder part of the boiler is 43 inches diameter and 14 feet long. The drivers are connected, and have a weight of 45,000 lbs. equally distributed between them by means of levers and springs.—The whole weight of the engine in running order is 60,000 lbs. or 30 tons, and the entire length from back of foot-board to point of fender in front, 28 feet. It is supplied with a cut-off, for working steam expansively. This engine is intended to draw five passenger cars up the heavy grades at a speed of twenty miles per hour.

A True Yankee.—A young man in this city, wrote to a gentleman in Northampton, recently, signifying that he had unexpectedly been thrown out of employment, and requested the person whom he addressed to procure him "a situation." He said he would like to work at "sawing, or making doors and blinds—few [said he] can beat me at that; or I should like to get into a livery stable; or any of the stores, as salesman, for I am a good one, and understand the business; or, to drive a team, I will be on hand; or, a chance to peddle stoves; or, a chance to tend a saw-mill; or, almost anything else; —geb me a chance, and I will be on hand." Of course such a young man was not destitute of employment many days. He has got a "smart chance," and a right smart fellow he is improving it.—*Springfield Republican.*

Death of Missionaries.—Three female Missionaries of the American Baptist Missionary Union have recently deceased—Mrs. Rose, of the Mission in Arracan, British Burmah, and Mrs. Shermer and Mrs. Crocker, of the Mission to the Basas, West Africa—all within a year of their residence. Mrs. Rose was the wife of the Rev. A. T. Rose, and sister of the late Rev. H. M. Campbell, of the Arracan Mission. Mrs. Shermer was the wife of the Rev. H. B. Shermer, who is himself obliged to retire from the mission by ill health. Mrs. Crocker was the widow of the late Rev. W. G. Crocker, and had resided in the country since his death, and was re-appointed to accompany two missionary families sent out about a year since.—*Boston Trav.*

British Vessels.—The number of vessels belonging to the several ports of the British Empire in the year 1814, was 24,418, with an aggregate capacity of 2,616,965 tons, and employing 172,786 men and boys. In 1853, the total number was 34,102 vessels, with a tonnage of 4 424,392 tons, employing 243,512 men and boys—showing an increase of 41 per cent. of vessels, 72 per cent. of tonnage, and 40 per cent. of men. In the year 1852, 733 sailing and 9 steam vessels of an aggregate tonnage of 143,785, belonging to the United Kingdom, were wrecked; and 78 sailing and 29 steam vessels, of an aggregate tonnage of 7,212, also belonging to the United Kingdom, were broken up.

Death of a Revolutionary Veteran.—We learn from the Worcester Transcript, that Mr. J. Howe, of Spencer, died at his residence in that town, a few days since, at the age of 93. Mr. Howe was a patriot of the Revolution, and had for many years been in receipt of a pension from government. He leaves a widow and ten children to mourn his loss. His death, which resulted from a fall, was the first which had occurred in his family during a period of *sixty-three years!*

☞ The ferry master at Detroit says that at least nine hundred fugitive slaves have crossed at that point into Canada during the past year. It is also estimated that some two hundred and fifty had crossed over at Cleveland.

Commercial.

BUSINESS AND FINANCE.

One interesting feature in the finance department, which was mentioned last week, still continues, to wit: the almost entire cessation of shipments of the precious metals abroad. The foreign demand for breadstuffs at such high figures, added to the usual supply of the great American staple, cotton, will have a tendency more nearly to equalize our exchanges with foreign nations. The total specie exports for the week have been only about $60,000; but small as that figure is, it exceeds the imports, as there have been no California arrivals in the mean time.

The total coinage of gold for January at the mint was $3,274,388, exclusive of $363,553 in bars. Whole amount of gold passing through the Mint, $3,643,271. The silver coinage was in halves, quarters and dimes, and amounted to $567,000. There were also coined during the month, $80,221 cents. The total deposits of gold bullion was $4,201,000 against 5,440,817 deposited in December. Silver bullion deposited $103,000.

The total amount of gold coinage at the four U. States Mints during the the year 1853, was $55,213,000; silver, $9,077,571; copper $67,060; a grand total of $64,357,631.

The total amount of receipts from the canals of the State for the fiscal year ending the 30th of Sept., was $3,204,718-95. In 1851 the receipts were $3,329,391 60; and in 1852 $3,118,244 39. The expenditure for the present year, including the enlargement fund, was $371,284 98. The am't expended during the year 1852 was $824,535 63.

The Central Railroad paid out in dividends on the 1st inst, more than a million dollars. The Rochester and Niagara Falls road, which is now a portion of the consolidated line, has also declared a surplus dividend of 2 per cent on its original stock.

The Commercial Bank of this city has declared a semi-annual dividend of five per cent.

Market Intelligence, &c.

Rural New-Yorker Office, }
Rochester, Feb. 8, 1854. }

At last quotations some sales of Wheat were made at $2,00, although the market prices had not become fixed at that figure. It has now settled down under present advices, and may be fairly quoted at $2,03 per bushel.

Flour the same as last quotations, $9,63@9,75.

The price of corn has stiffened, and now averages 75c for good qualities. Oats also are in better demand at 42c.

Pork and Beef rule somewhat higher—the former being quoted at $5,25@5,63, and the latter at $5@5,50.

Poultry also higher; Chickens selling at 8@8½c.—and Turkeys at 9c. per lb.

Potatoes go at an advance, and are quoted at 50@62½c. per bushel. Salt a shilling lower.

Great activity is manifested in our streets, the excellent run of sleighing bringing in outsiders with all such articles as are not liable to injury by the frost.

NEW YORK MARKET—Feb. 6.

Flour—Increased firmness in our market for Western and State flour, with active demand, mainly speculative, on the spot and to arrive—better grades quite active at improved prices. Canadian in request and better; sales at $8,94@9, for common to straight State, and $9@9,25 for mixed to fancy Mich. and common to good Ohio. Included in sales are 7,500 bbls. at $9@9,25 for Ohio. Rye flour in good request at $6,87½@6,94 for super. Corn meal firmer and in good request.

Grain—Wheat held higher and at prices above the views of buyers. Sales Long Island in lots at $2,00@2,07—common Genesee $2,30. Rye higher and quiet; sales at $1,14 @1,15 at R. R. depot, and $1,18@1,20 delivered. Oats 50@52 for Jersey, 64@67c for State and Western. Corn better, and in good demand for export and the east and home trade. Sales at $1@1,02 for new damp Jersey—$1,02@1,03 for Southern white and yellow—closing buoyant.

Provisions.—Pork less firm, and for present use inquiry light, but for the future there is a brisk demand. Sales at $16,87½@18 for mess—$13,65@13,87½ for prime. Lard 10¾@10¾c. Butter 13@16 for Ohio, 17@22c for State.—Cheese firmer 10@12c. per lb.

ALBANY MARKET—Feb. 6.

Flour—In moderate request at steady prices. Buckwheat is selling in the street at $2,62@2,69. Rye $1,06¼c. Corn 69c. Oats 50@51c. Barley 85@90c. Dressed hogs are in light supply, with limited sales.

NEW YORK CATTLE MARKET—Jan. 31.

At Washington Drove Yard—Offered to-day, 2,603 Beef Cattle; offered during the week 2,183.

Prices, etc.—A good business has been done during the week, at prices about the same as those quoted in our last report—say from 8@10c per lb.

Cows and Calves sold at from $30 to $60.

Veal Calves at from 4@7c. per lb.

Sheep $2,50 to $12. Swine 6@5½c per lb. 250 Cattle left over.

At Browning's—(Lower Bull's Head)—At market, 84 Cows and Calves, and 3,471 Sheep.

Cows and Calves from $25 to $50; as in quality.

Sheep from $2,50, 3,50@5; Lambs $2 to 3,00@5. Extras, $6, 7@8. A lot of extra Cows and Calves brought $60.—About 20 unsold.

At Chamberlain's—(Hudson River Bull's Head.)—At market, 325 Beeves, 30 Cows and Calves, 20 Veal Calves, and 3,100 Sheep and Lambs.

Beeves sold at from $7,50 to $10, as in quality.

Cows and Calves from $25, 45@50.

Veal Calves at 5c to 7c. Sheep $3, 4,62@7,50. A fine lot of Sheep from Bucks Co., Penn., (228 in all) sold for $6,75.

At O'Brien's—(No. 9 Sixth street)—Offered 320 Beef Cattle, and 40 Cows and Calves. The former sold at from $6,50 to $9, and the latter at from $25, 35@50 ₩ head.

ALBANY CATTLE MARKET—Feb. 6.

At W. Woollard's Bull's Head, Washington street.—Beef Cattle—700 at market. Prices—Extra $7,50; first quality $7; 2d do, $6,50; 3d, $5,50@6.

Cows and Calves—Few in market. Prices at from $25, 30 @50.

Sheep and Lambs—1,200 in market. Prices at from $4 to 6,50.

Swine—380 in market. Prices—Fat hogs $5,50; Stores, $4.

CAMBRIDGE CATTLE MARKET.—Feb. 1.

At market 1010 Cattle—900 Beeves, 100 Stores—consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

Prices—Market Beef.—Extra $8,00 ₩ cwt; first quality $7,50; 2d, $6,50@7; 3d do, $6,50; ordinary $5,75@6.

Hides—$8,50 ₩ cwt. Tallow, $8,50@9.

Pelts $1,37@1,50. Calf skins 12c ₩ lb.

Veal Calves—$6, 7@9.

Barreling Cattle—$5,75@6,25.

Stores—Working Oxen—$98, 125, 150@154.

Cows and Calves—$22, 25, 27, 30, 32, 37, 41@52.

Yearlings—None.

Two years old—$24, 27, 30, 32, 36, 41@52.

Three years old—$36, 40, 45, 59@61.

Sheep and Lambs—2,812 at market. Sales slow and hard to effect, unless at loss to the holders.

Prices—Extra $5,50, 6, 7, 8@10.

Ily lot—$2,25, 2,50, 3@3,50.

Swine—None.

Remarks.—The market largely stocked, and sales slow.—The large amount of Sheep and Beef in the carcase materially affected the sale of live stock.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. Moore, of Gerry, Chau. Co., N. Y., is duly authorized to act as Agent for the Rural New-Yorker, and the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. D. Landas in the last named county.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ Those who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ The Rural is published strictly upon the cash system—send no longer than paid for—and all orders should be in accordance with terms.

☞ Our *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the Rural, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ In remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Persons who have forwarded $15 for a club of ten, can extend the number to twenty for $10, but all the subscribers must begin at one date.

☞ It is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ Persons entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ Additions to clubs may be made at any time, at the price per copy paid for the original club.

☞ Extra numbers of the Rural will be forwarded to all disposed to aid in augmenting its circulation.

☞ All business letters, communications, &c., should be addressed to D. D. T. Moore, Rochester, N. Y.

Advertisements.

Advertisements.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

GRAPE CUTTINGS AND ARBOR VITÆ TREES.

I am now prepared to furnish to Nurserymen and others, for planting the coming season, at least 20,000 well ripened Isabella Grape Cuttings, (each containing three buds,) and will pack them in the best manner, and will deliver them at the Railroad without extra charge. Price $5, per 1,000.

I will also furnish any quantity of American Arbor Vitæ trees (Thuja Occidentalis) from 8 inches to 2 feet high, at the proper season for transplanting them, the late part of May; put up in boxes with moss and delivered at the Railroad depot, free of charge. Yearling plants, from 8 to 12 inches high, at $7 per 1,000. Two and three year old plants from 1 to 2 feet high, at $10 per 1,000. From 2 to 3 feet high at $20 per thousand. These will be furnished from their native localities, but from cleared dry ground.

Also, ready for delivery this fall, 14,000 Arbor Vitæ plants, cultivated in dry ground, very thrifty, thickly branched, and well filled with fibrous roots. Plants from 10 to 15 in. high at $20 per 1,000. From 18 to 30 inches high at $25 per 1,000.

The subscriber has one acre of Isabella Grape Vines, planted in the spring of 1848, with *yearling* vines, which bore $100 worth of fruit last year, and at least $500 this season. The most of these vines measure over a foot around the body, and some of them 17 inches.

Also a barrel of the pure juice of the grape at a low price if sold by the barrel.

Address E. A. McKAY, or H. T. McKAY,
214-13 Naples, Ontario Co., N. Y.

CHERRY SEEDLINGS.—A large quantity of Black Mazzard Cherry Stocks for sale, 1 year old.
214-4t J. C. CAMPBELL, Rochester, N. Y.

DISSOLUTION.

The Limited Co-partnership heretofore existing between the subscribers, under the firms of Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo, is this day dissolved. Norman C. Miller, of Auburn, and Eugene Mulligan, of Buffalo, each, and they alone, are authorized to sign the names of the late Firms in liquidation.

JAMES C. BERBY,
ELLIOT G. STORKE, NORMAN C. MILLER,
EDWARD MUNSON, WILLIAM ORTON,
CHARLES F. COFFIN, EUGENE MULLIGAN,
Special Partners. *General Partners.*

Dated at Auburn and Buffalo, Feb. 1, 1854.

CO-PARTNERSHIP.

Norman C. Miller, William Orton, Eugene Mulligan, Elliot G. Storke, Edward Munson, and Charles F. Coffin, being purchasers of the *entire list of Publications, Stereotype Plates, Copyrights, Type, Presses, Stock, &c.*, of the late firms, will, with increased facilities continue the business as Publishers, Importers, and General Booksellers, at Auburn and Buffalo, under the firm of

MILLER, ORTON & MULLIGAN,
214-3t Dated at Auburn and Buffalo, Feb. 1st, 1854.

A VALUABLE FARM FOR SALE.

The subscriber offers his Farm for sale, containing about 160 acres. Said Farm is situated in Cayuga Co., two miles southeast of Cayuga Village, a little over one mile from the Lake, and six miles from Auburn, 1½ mile from a Plaster Mill. The Auburn and Rochester Railroad runs thro' one corner of said farm, giving a splendid view of the Cars for nearly one mile. Said farm is under a good state of cultivation, well suited for raising Wheat, Clover Seed, and all kinds of Grain. Over 60 acres seeded down with Clover, and over 20 acres of Wheat on the ground. A good Orchard of Grafted Fruit, containing Apples, Peaches, Pears, Plums, Cherries of the best quality, well fenced, well watered, and about 20 acres of good wood land. A good Dwelling House well finished, a good Wagon House and Stable 30 by 38, with a loft to hold 20 tons of hay, and good Barn 30 by 46. Corn House and other necessary Buildings. Price $55 per acre. The purchaser by paying $4,000 down, can have a reasonable time to pay the remainder. For information inquire of the subscriber on the premises.

214-11* JOHN KYLE.

FOR SALE.

A Noble Stallion, coming 4 years old in June next; sired by the great horse North of England; imported and owned by Mr. Stephen Powell. Said colt is a perfect model of a draught horse, and is offered at a great bargain, $250.

Also—To Rent, a good wheat farm (5 miles east from Niagara Falls,) of 81 acres cleared land, in a high state of cultivation; good stone House, frame Barn, a great spring near the house.

Letters (post-paid) addressed to the undersigned, will be promptly answered. C. H. WYMER.
214-4t Suspension Bridge P. O., Niagara Co., N. Y.

A VALUABLE FARM FOR SALE.

The Subscriber offers for sale his Farm, consisting of 50 acres, on which is a good Dwelling House, Barn, Sheds, and other necessary out buildings. An abundance of all kinds of fruit, and under good improvement. Situated in the Town of Pultney, Steuben Co., N. Y., eighty rods from the west bank of Crooked Lake, and 2½ miles from the Village of Bridgeport. A part of the purchase money will be required down, the balance on time to suit the purchaser.

For further information inquire of S. BOOTH, Branchport, or the subscriber on the premises.

DAVID W. MILLER.
Pultney, Feb. 1st, 1854. 214-tf

APPLE SEEDLINGS WANTED.

I want a quantity of Apple Seedlings fit for root grafting, two years old. Any person having them for sale, please address information, giving price, quantity, &c.

T. G. YEOMANS.
Walworth, Wayne Co., N. Y. 214-1*

$50 TO $150 PER MONTH

Can be easily made in selling the Popular Books, published by Miller, Orton & Mulligan, successors to Derby & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo.

From the wide-spread reputation of our Publications, Book Agents, Colporteurs and Canvassers, can be sure, with ordinary diligence, of doing well, as there is hardly a family in the country but would be glad to purchase one or more Books from the list, if they were brought to the door. They are all good Books, well Printed, strongly bound, and sell readily wherever offered.

To all those desirous of aiding in the noble work of disseminating a Pure and Wholesome Literature throughout our land, we offer a Rare Chance to Make Money and do great good.

☞ Catalogues of our Publications, containing full particulars, furnished on application (post-paid) to

MILLER, ORTON & MULLIGAN,
214-4t Publishers of Popular Books,
Auburn and Buffalo, N. Y.

A CHANCE TO MAKE MONEY!

Profitable and Honorable Employment!—The Subscriber is desirous of having an Agent in each county and town of the Union. A capital of from $5 to $10 only will be required, and any thing like an efficient, energetic man can make from three to five dollars per day; indeed some of the Agents now employed are realizing twice that sum. Every information will be given by addressing, (post-paid,)

214-13* WM. A. KINSLER, Box 601, Philadelphia, Pa.

THE PEOPLE'S JOURNAL.

An Illustrated Record of Agriculture, Mechanics Science, and Useful Knowledge.—One Dollar a Year—50 Cents a Volume. Splendid Engravings!

Every Number contains 32 Large Pages of Letter-Press, beautifully printed on fine paper, and profusely illustrated with Engravings, forming, at the end of each year, two Splendid Volumes, comprising Four Hundred Pages, and illustrated with about Five Hundred Elegant Engravings, the entire cost being only One Dollar.

The People's Journal was commenced in November, '53, and has already attained a large circulation. The November No. contained 40 engravings, the December No. 72 engravings, the January No. 47 engravings, and the February issue has 61 engravings, making in all 220 illustrations, although only four numbers have been published. These relate to Science, Art, Mechanics, Agriculture, and Useful Knowledge, in accordance with the general plan of the work. No publication of the kind has ever been produced with such magnificence or at so cheap a price. It is admired and taken by every one who sees it.

Terms.—To Subscribers—One Dollar a Year, or Fifty Cents for Six Months. Subscriptions may be sent by mail in coin, post office stamps, or bills, at the risk of the publisher. The name of the Post Office, County, and State, where the paper is desired to be sent, should be plainly written. Address, postage-paid,

ALFRED E. BEACH,
No. 80 Nassau-street, New York City.
Editor of the People's Journal.

A liberal discount to Post-Masters and Agents. Single copies 12½ cents. Specimens sent on receipt of four postage stamps. 214-4t

THE PEOPLE'S PATENT OFFICE.

This well known establishment is still carried on under the personal superintendence of its founder, Alfred E. Beach, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, &c., are prepared with the utmost fidelity and despatch.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly private and confidential. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the invention. No fee or charge is made for such examination.

The first step, always, in securing a Patent in this country, is to prepare a *model*, from which the necessary drawings are made. If the undersigned is engaged to prosecute the application and prepare the various papers, the model must first be sent to the People's Patent Office, 80 Nassau St., New York, after which it will be forwarded to Washington.

Models from a distance may be sent by express or otherwise.

For farther information apply to, or address, post-paid,

ALFRED E. BEACH,
Solicitor of American and Foreign Patents.
People's Patent Office, 80 Nassau-St., New York. 214-3t

PATENT CLOVER AND TIMOTHY SEED SOWER.

The above cut represents a very desirable hand implement for sowing Clover and Timothy seed. It is a simple hopper, ten feet long, with a zinc bottom perforated with holes at equal distances. The seed is distributed by a notched rod, which is vibrated by means of a lever attached to the top of the hopper. It sows the seed accurately, and is so arranged as to sow any desired quantity, from 2 to 16 quarts per acre.

Warranted to give satisfaction. They can be forwarded to any part of the country by Railroad or Stage. Remittances by mail at my risk. All orders (which should give full directions for forwarding,) promptly attended to. Price, $5. Manufactured and sold by

E. D. HALLOCK,
214-1t* 24 Exchange St., Rochester, N. Y.

FRUIT AND ORNAMENTAL TREES.

200,000 choice Apple Trees, from one to four years old, together with a good variety of other Fruit and Ornamental Trees, will be sold cheap the coming spring, at wholesale or retail. Persons wishing to purchase, will do well to call and examine our stock and price, before purchasing elsewhere.

Commercial Nurseries—sale ground a few rods west of the Syracuse House, on Genesee st.,

Syracuse, N. Y., Feb. 1, 1854. E. & O. S. FORD. 213-2t*

THOROUGH-BRED FRENCH STALLION for SALE.

The Subscriber has a Thorough-bred French Stallion, which he will dispose of. He is a dark brown color, stands fifteen hands high, is well proportioned, and weighs 1,000 lbs. He was six years old last spring, and is quiet to drive either single or double. This horse will more than pay the price of himself the coming season, and is worth the attention of those who wish to breed good stock. He was bro't from Montreal about a year ago. Price, $300. For any further particulars, address the subscriber, at Whitby Post-Office, Canada West. [213-2t] JOHN S. M. WILLCOX.

DEVON BULL FOR SALE.

The Subscriber has a pure bred Devon Bull for sale, one year old last spring. Price $75. REED BURRITT.
Burdett, Tompkins Co., N. Y., Jan. 19, 1854. 2t*

SHORT-HORN BULLS AND SUFFOLK PIGS

For Sale.—I have three One-Year old Bulls for sale, got by my imported Bull *Duke Tempest*—colors, Roan and Red. Also, a few pair Suffolk Pigs, bred from my imported stock.

J. M. SHERWOOD.
Auburn, N. Y., Jan. 20, 1854. 212-3t

FARM AND HORTICULTURAL RESIDENCE.

For Sale.—David Thomas, near Aurora, Cayuga Co., N. Y., wishing to retire on account of feeble health from the care of his farm, offers it with all its improvements for sale. It is pleasantly situated near Cayuga Lake, contains 118 acres of fertile land, has a spacious and comfortable dwelling, with a laborer's cottage, and various outbuildings, together with extensive orchard and fruit gardens, and a large ornamental and kitchen garden—the whole forming a completely furnished, comfortable, pleasant and retired farm residence; and if applied for soon will be sold at the low price of $7,200. For further particulars, apply personally to David Thomas, on the premises, or to J. J. Thomas, Macedon, Wayne Co., N. Y. 212-5t.

POLAND OATS—AGAIN.

For seed, a good supply of the celebrated Poland oats, at $1 per bushel, delivered at my residence, or $1,25 if sent by railroad. Each bushel to weigh at least 40 pounds.

211-4t J. A. CLARK, Marion, Wayne Co., N. Y.

GENUINE COCHIN CHINA FOWLS.

I have for sale, by the pair, young Cochin China fowls, warranted genuine, and desirable for their symmetry, great size and beauty of plumage. They are of the latest, largest and best importations in the United States. The *genuine* Cochin Chinas have no superiors. Circulars, with a large illustrative engraving, sent to applicants. Lyons being on the New York Central Railroad, fowls can be forwarded by Express, daily, to all parts of the country. Address, post paid, RODNEY L. ADAMS, Lyons, N. Y.

Poetical.

[Written for Moore's Rural New-Yorker.]

SUCCOR THE NEEDY.

TO MISS M. A. C.

You called me "Old Batch"—a half of a man;
Just as if *I alone* could prevent it!
Now I think 'tis ought be right, If as soon as I can
I should *pretty severely* resent it.

And you think me in fault; so at least I infer,
And you spoke in a way quite sucerb,
Nor did you point out how a chance might occur
To escape from so direful an evil.

'Tis an old rule you know—that those who find faults
Should help if they can to amend them;
And 'tis said that no virtue more highly exalts,
Than to help those who need—and befriend them.

Now I'll give up resentment, and own the charge true,
(For my temper is very forgiving,)
If now that you see you've a duty to do,
You will do it—or not be unwilling.

This fault you well know *I alone* cannot mend;
Yes! you know it, you mischievous elf,
And I'm sure you would act but the part of a friend
Should you help me to mend it *yourself*.
Aurelius, Jan., 1854. "OLD BATCH."

Rural Sketch Book.

[For Moore's Rural New-Yorker.]

HOME INFLUENCES;
OR, BETTER TO RIDE THAN DRAW.

BY EDWARD WEBSTER, ESQ.

A MOTHER'S or sister's influence upon the destinies of men for weal or woe, though generally acknowledged, is scarcely appreciated in all its force. The judicious or injudicious training of the young, the bending of the twig in the right or the wrong direction, the gentle admonition and reproof properly administered, the word of encouragement fitly spoken, sink deep into the youthful heart. In nine cases out of every ten, if a man be characterized through life for uprightness in his dealings, generous sympathies for the woes of others, benevolence in his actions, and gentleness and suavity in his manners, you may read in all his conduct the holy influences of a mother's love, a mother perchance long since departed to another and a better world. False shame eradicated, perverted tastes timely corrected, normal tendencies encouraged, peculiar talent in any given direction early detected and called forth, if historically sought out in most instances of success in life, will be found clearly traceable to the gentle pruning and training of a woman's hand.

These reflections are suggested by a single turning point in the lives of two young lads and school-mates, the circumstances of which we will endeavor briefly to detail. The one was the son of an intelligent, although humble mechanic, whose wife was among the best of mothers and wives; the other an orphan boy who inherited some property from his deceased parents and resided in the family of an uncle, whose wife was the vain and foolish representative of too many of her sex.

"I wish you to go on an errand up to the village for me, this evening, WILLIE," said Mrs. PRESTON to her son one day after he had come home from school.

"I do not see how I can do it, mother," answered the boy. "To-morrow is speaking day, and I am afraid my piece is not properly committed. Will not next evening do as well?"

"No, it will not, I am sorry to say," rejoined the mother. "I am expecting company to-morrow, and must have some groceries from the store, and it is necessary to send for them to-night. Your father will be in late from his work, and besides, he will be too tired to go. I do not like to interrupt your school duties at any time, and particularly on an occasion like this, for our friends will be at the school to witness the exercises to-morrow; but this time must be an exception. Be as quick as you can, and the interruption will not hinder your success."

"Well, mother," said the boy, brightening up after a pause, "I can manage it, I think. Sister HATTY can hear me speak before I go, and if there is any portion of the piece not yet committed, I can study that awhile, and then repeat the whole on my way up town;" so whistling merrily, he set about those chores always necessary to be done, in every household. He piled up a snug heap of wood beside the hearth, fed the pigs and the poultry; and then, resolving himself and his elder sister HARRIET into a committee of the whole, she taking the chair, he stood up to the full height of four-feet-six, in his thick soled boots, with all the dignity and seriousness of a statesman who feels that his every word and action is big with the fate of empire, and began:

"*Mr. President:*—It is natural for man to indulge in the illusions of hope. We are apt to shut our eyes against a painful truth, and listen to the song of the syren, until she transforms us into beasts." Thus he went on, now and then stumbling over a more than usually long or sonorous sentence, and now and then throwing in a gesture out of time and out of place, all of which the good taste of HARRIET, added to his own acute sense of propriety, enabled him in a great measure to correct. After repeated trials and frequent repetitions of those portions defectively committed, the "Committee rose, reported progress, and asked leave to sit again." Then harnessing himself into a hand sled laden with pails and jugs, he went merrily up the smooth and well trodden snow path, repeating as he went along:—"It is natural for man to indulge in the illusions of hope!" The air was keen and cold, the sky was bright and frosty, and the moon and stars looked down through the deep blue vault above, in all the cloudless glory of a December night. The sleighing was very fine, and the snow crisped and creaked under the swift hoofs of the horses and the sleigh shoes, as they dashed past, the sounds mingling harmoniously with the jingling of bells and the merry ringing laugh of the numerous pleasure parties, enjoying the ride.—Our hero tramped along on foot, not a whit envious of the enjoyment of others, for he had pleasant reflections of his own. As he neared the village, however, a dashing cavalcade came up behind, led by six splendid gray horses, decked out in all the trappings of a first class livery establishment. The sleigh was constructed in the shape of a boat, and was of sufficient capacity to accommodate thirty persons. It was filled with a juvenile party of both sexes, and their merry voices and ringing laugh reached his ears long before the vehicle bove in sight. WILLIE paused beside the road and looked back as the sleigh approached, and as it came opposite the place where he was stumbling, HAMILTON JENCKS, the school-mate spoken of before, rose up in his seat between two young girls of their mutual acquaintance, and called out superciliously:

"Hallo there, WILL! harnessed in, are you? Look here once; better to ride than draw!" and he sat down again without waiting for any reply. Every one knows how weak a jest is sufficient to create a laugh, where the whole company are bent on being pleased; and of course a shrill cheer arose from the voices of the united throng. The quick ears of the pedestrian, or his excited imagination, detected above the shouts of the rest, the laugh of his school-mate and that of a bright eyed girl, who had captivated WILLIE's boyish fancy.

The jeer and the insult, accompanied by the aggravating concomitants, stung him to the very soul. For the first time in his life, he experienced a feeling of shame at his own position, and envy for that of others. An idea of degradation, as connected with labor, crossed his mind, and he tore himself out of the mimic harness he had fabricated with so much pride and pleasure, and was half tempted to kick his unoffending sled, with its contents, into the ditch beside the way. The expression, "better to ride than draw," rung in his ears, and a poison commenced rankling in his heart, which, unless extracted with a gentle hand, would bring forth bitter fruit. As he passed in front of the hotel which was brilliantly illuminated, and prepared for an evening ball, his sharp eye detected HAMILTON JENCKS in one of the drawing-rooms, in a close tete-a-tete, with the identical young lady who had laughed so heartily at the dull joke which had caused our hero so much pain. He was dressed in a fashionable suit, with a gold guard chain dangling from the button-hole of his vest, a white handkerchief half way out of his pocket, and he was sporting white kids, in all the conscious importance of a brainless fop. Poor WILLIE was too much blinded by his ill humor, and too little used to polished society to detect the incongruity and bad taste displayed, and he hurried by with secret repinings that he was forbidden to shine also, in that butterfly circle, whose charmed circumference was an impassable barrier to him.

After the order at the store was filled, he took the opposite and less frequented side of the street toward home. The orchestra was in full blast, and the dancers were whirling past the windows in the giddy mazes of a waltz.—He paused opposite, just long enough to see his school-mate and partner spin down the side of the hall, and then hurried away.

"You have been quick upon your errand, WILLIE," said his mother, as he entered hastily. "I did not expect you yet for a half hour."

"I have not been quick enough to escape disgrace, though," responded the boy. "It is a shame to be harnessed to a sled, like a dog! I have been laughed at and despised, and I do not wish ever to go on errands in this way again."

"Why, WILLIE!" exclaimed she, with surprise, "what does all this mean? How have you been laughed at and despised, and how have you been disgraced for doing cheerfully, your mother's bidding?"

"HAM JENCKS and the girls he had with him going to the ball, and all the rest who were with them in the sleigh! they jeered and laughed me to scorn, as they passed by me in the street. He was dressed in a broadcloth coat and wore a gold chain, while I had on only a homespun frock. He was riding in a splendid sleigh, and I was on foot drawing a sled; and as he pointed me out to his companions he said to me triumphantly, at which all the rest cheered:—"better to ride than to draw."

"And you are ashamed to have HAMILTON JENCKS, dressed in broadcloth, wearing a gold chain and riding in a splendid sleigh, see you dressed in a homespun frock and on foot, drawing a sled! You are ashamed to be seen doing your duty before men! You are nettled at the utterance of a sentiment, false in its essence and false in its application! WILLIE, WILLIE, this is all wrong. HAMILTON JENCKS is no pattern for you, nor his motto one for you to adopt. Industry is pleasing to the Creator, and you must not be the boy to violate Heaven's law. Are you ashamed to stand up beside HAMILTON JENCKS in the day-school, or in the Bible class? Does he laugh you to scorn in the recitation, or the lecture-room, or does the school-master or the pastor respect you any the less because you wear a homespun frock and go cheerfully on an errand for your mother? Think better of it, my dear boy, and never be ashamed to be seen, by God or man, in the discharge of your duty. Labor in some way must be performed by all men, and he who despises it, or those who do it, is despicable himself."

"Oh, mother—mother! I am ashamed of myself for being so silly, and think better of it now. I will never be guilty of the like again. I am neither ashamed nor afraid to stand up beside HAM JENCKS any where, or under any circumstances. He is a dunce of a scholar, and the laughing-stock of the whole class. I was vexed more on account of the girls he had with him, than his own."

"Sensibility to the good opinion of the other sex is highly commendable, if properly directed; but the good opinion which is forfeited on account of your prudent and industrious habits is not worth possessing on any terms."

Entirely reconciled at length, to the circumstances of the case, through the wise admonitions and gentle influences of his mother, WILLIE applied himself once more to the exercises of the next day; and before bed time, he had thoroughly mastered the task. The Wednesday afternoon exercises were of a somewhat public character, and the parents and patrons of the school, with a commendable interest in the prosperity of the institution, were in the habit of attending, to witness the performances; in consequence of which, much anxiety and honorable emulation to excel, existed among the boys. WILLIE was early at the school-room, after a refreshing night's rest, healthful and animated in body and in spirit. HAMILTON JENCKS came in late, with eyes heavy and red, and an air of physical exhaustion that plainly indicated a total unfitness for any mental exertion. He dragged through the exercises of the forenoon in so wretched a manner, that, in addition to a tardy mark, he had one for a bad recitation also, scored against his name. Among the numerous spectators present, in the afternoon, to witness the exercises, were the very girls, together with their parents, whom young JENCKS had escorted to the party; and when it came his turn to speak, he advanced to the stage more with the air of a felon, mounting the scaffold, than an orator the rostrum. After mumbling over a dozen half inaudible and halting sentences, he came to a dead halt, and was unable to proceed another step. In vain the prompter essayed to lead him on, now repeating leading clauses, now half sentences, and now whole ones; but when he stopped, the speaker stopped also; until at length the teacher was compelled to interfere, and bid him take his seat in disgrace. All the self-assurance and lofty assumption of the previous evening had disappeared, and he sneaked away behind his desk, like a cowed hound.—HAMILTON JENCKS, in broadcloth and kids, whirling a giddy girl through the mazes of a waltz, and HAMILTON JENCKS in a school-room, going through an intellectual exercise in the presence of spectators, were quite other and different individuals.

It now came WILLIE PRESTON's turn to speak. He mounted the rostrum with some trepidation, for his natural shyness was strong upon him, and the awful presence of the village dignitaries was nearly overpowering; but, catching the encouraging eyes of HATTY and his mother, he bowed to the audience with a good deal of simple dignity and grace, and then began. His enunciation was slightly tremulous at first, but it was slow and distinct; and after he had uttered a few sentences and became accustomed to the sound of his own voice, he threw himself in imagination at once into the ideal presence of that august and majestic body of men, who framed and endorsed the Declaration of American Independence.—A mental hallucination seemed to come over him like a summer cloud, through the rifts of which his brilliant young intellect shone out in all the glory of the noon-day sun. For the moment, and for the occasion, he was the veritable PATRICK HENRY himself; and, as he came to the startling peroration, and exclaimed, "*Give me Liberty, or give me Death!*" the whole school and the spectators broke out into a unanimous demonstration of applause. That effort and its consequences fixed his destiny.—The triumph was so pointed and so gratifying, and trod so closely on the heels of the previous evening's humiliation, that he would not have exchanged it for all the eclat of the President's levee, or of Queen VICTORIA's drawing-room.

"Poor LAD," he said to his mother, after reaching home; "he reversed his motto to-day, and not only had to draw, but to draw up hill."

"Yes," she answered, "and you on the other hand, have been riding on the breath of popular applause. You must not be too much puffed up at your success, for although very fair and creditable, in its kind, it is really no great triumph after all. You were only thinking the thoughts, and speaking the words of another person, and not your own. It is one of the lowest steps in the great ladder of oratorical fame: but you have mounted that, and with perseverance and earnest cultivation of the mind and heart, the others can be mounted also. Mental toil is indispensable to success, and you may never expect to be able "to ride, unless you first learn to draw."

From that time forward WILLIE PRESTON never faltered or gave back; never hesitated or felt ashamed to labor, either mentally or physically. His father's humble circumstances admitted of but moderate aid to his son, in the acquisition of an education; but what he did was done cheerfully and encouragingly, under the dispensing hand of a wise and prudent mother; and the balance was made up by the boy himself, in the capacity of a teacher, at a later period of his life. He graduated at one of our best literary institutions, and subsequently became one of the most distinguished scholars and brilliant orators of his time.

HAMILTON JENCKS, on the other hand, became disgusted with school duties, through want of judicious home influences and encouragements. As he grew up he became careless of his reputation, squandered in route and revels and bad company the little fortune left him by his deceased parents. He was true, however, to his motto, "better to ride than draw," for when last seen by the writer, he was the hired John of a hack, running between the railroad depot and a hotel, on a salary of twelve dollars a month and found.

WORTH KNOWING.—Whenever an artisan resident in one of the filthy places leaves off strong drink, the usual course of proceeding is this: He begins to pay his debts; he purchases decent clothing for himself and family; he makes his habitation clean, and provides good furniture; he buys a few books, takes his family to a place of worship; and if not content with being clean and decent among surrounding dirt and wretchedness, he looks for a better residence in some airy and salubrious locality, leaving his unimprovable residence to be occupied by one like his former self, who prefers drinking, smoking, and gambling, to the comforts and decencies of domestic life.

Wit and Humor.

HORRIBLE!

"CATHERINE JANE, for the last time, I ax you, will you 'ave me?"

"William Henry, no! If all your pantaloons were lined with gold, I'd still say no!"

"Cathering Jane! 'are pity! Call to your mind's heye, the many 'appy days that's parst. The strolls we've 'ad—the sparkling foliage of the Pawk—and more than all, remember my devoted love to you."

"Young man, 'ad you permitted me, I would 'ave spared you a pang of hanguish; but now, in your mental hagony, recollect you brought it on yourself! William Henry, I hinves another."

"May all the part of his existence vich bears any similarity to molasses or sweet, be turned to bitter gall—may he hexperience all the tortur' that I feel now; and at last, when life's weary pilgrimage draws to a close, may he rush to meet a fate to vich mine's henjoyment.—Farewell, Cathering Jane, farewell!"

AGREEING WITH HER.—A clergyman, who was a bit of a humorist, once took tea with a lady of his parish, who prided herself much on her nice bread, and was also addicted to the common trick of depreciating her viands to her guests. As she passed the nice warm biscuit to the reverend gentleman, she said, "They were not very good," she was "almost ashamed to offer them," &c. The minister took one, looked at it rather dubiously and replied, "They are not so good as they might be!" The plate was instantly withdrawn, and with heightened color, the lady exclaimed, "*They are good enough for you!*" Nothing further was said about the biscuit. — *Portland Transcript.*

"TOM, why did you not marry Miss G—?"

"Oh! she had a sort of hesitancy in her speech, and so I left her."

"A hesitancy in her speech! I never heard of that before,—are you not mistaken?"

"No—not at all; for when I asked her if she would have me, she hesitated to say yes, and she hesitated so long, that I cut for another girl."

"YOUNG AMERICA" is precocious in California. A story is told of a promising youth of some eight summers, who accosted a man in a gambling saloon, and offered him $10 to hold him up so that he might *bet on a faro-table.*

A GIRL in Pittsburg being struck dumb by the firing of a cannon, it is said that a number of married men in that interesting village have, in consequence, invited the military company to parade upon their premises.

Youth's Corner.

"Although the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS, NO. 8.

MATHEMATICAL QUESTION.

A MAN bought a horse, a cow and a sheep, and was asked by his neighbor what he paid for each. He answered, for the cow I paid five times as much as I did for the sheep, and for the horse, two and one-third times the price of the cow and sheep together, and they all cost me £20 13s 2d 2 86-12ths qrs. How much did they all cost him in Federal money, and what was the price of each? C. B. S.

Ransomville, N. Y., 1854.

THE HORTICULTURIST,

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854

RAIN WATER FILTERS.

I CONTINUE to furnish Filters as usual, much improved in the inside fixtures, for which I have obtained "Letters Patent." They are now complete and can be sent to any section of country in safety—as family living in those sections of country ought to dispense with their use—as whatever is taken into the circulation, has much to do with health, as a preventative of disease. They have been fully tested by hundreds of our first class citizens, within the last ten years. I make four sizes at $6, $8, $8 and $10 each,—they will last from two to four years without repacking, which can easily be done by any one with proper directions. Orders for Filters, or Rights of Territory will be attended to at once. JOHN KENZIE.

Rochester, January, 1854. 212-tf

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $20, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to prepay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 24 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

The Wool Grower and Stock Register is the only American Journal devoted to the WOOL and STOCK GROWING INTERESTS. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at ONLY FIFTY CENTS A YEAR—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

NON-SUBSCRIBERS into whose hands this number of the RURAL may fall, are requested to give it an examination, and, if approved, their support. See prospectus, Premium List, &c., on preceding page.

MOORE'S RURAL NEW-YORKER

VOLUME V. NO. 7.} ROCHESTER, N. Y.—SATURDAY, FEBRUARY 18, 1854. {WHOLE NO. 215.

Moore's Rural New-Yorker:
A QUARTO WEEKLY
Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,
ASSISTED BY
JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. BIXBY,—H. C. WHITE.—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

Progress and Improvement.

ORDER ON THE FARM.—NO. II.

ANOTHER exhibition by which the man of order is known, is in the procurement of the best animals, seeds and implements within the command of his means. He is sure, however, to keep himself so well posted, that he rarely runs into a humbug—or if he does, it is with such cautious steps that it turns out more a blessing than a curse. His animals show that they are well cared for at regular hours—and are well sheltered from all the inclemencies of the weather. His stables are airy, warm and convenient. Their food is prepared with care, so that it shall not only be in the best order, but, that the greatest amount of nutriment shall be obtained from it at the least expense to the animal economy. Their sleek, soft hides show better than words can tell the profits they bear to the side of order. For with this man the native or grade will rank higher and command more profit than the best of the Improved Breeds with the unskilled, unsystematic Farmer, so much does care and system have to do with this branch of Farm Husbandry.

So with his grains and seeds; when he finds a new variety that promises to be more productive under given circumstances, he loses no time in procuring it, knowing full well that the greater the yield from a given area and with a given amount of labor, so correspondingly greater is the profit. But he does not make haste to discard well tried varieties and embrace something new because it is new, and has acquired a great name. He discards novelty entirely, but tests carefully and fully before he decides upon a change. His motto is to hold fast that which is good until a better is secured. Under his rigid discipline, his seeds do not deteriorate and run out. They are constantly improving under his judicious culling and selecting. The very best—that which is the most matured and the most fully developed—which comes to maturity soonest and exhibits a tendency to increase in a greater fold, he is sure to save for his own use. This is the great secret why his crops always are the plumpest—the freest from blight and rust, and readily command a premium price in market.

Not unfrequently does his practiced eye detect some strongly marked head of grain in his field—which preserved and fostered shows a new variety of great productiveness, or possessing some other quality that renders it a great acquisition to the agricultural community. In this department, the man of order may credit himself large gains.

His implements are of the best pattern and make—and, so far as his means will permit, those which will save the greatest amount of human toil. Hence it is, he lifts by all practicable means, labor from the human muscle and transfers it to the insensible thews of metal and wood. By these means the manipulations are done in less time, and a still greater advantage than ever taken of circumstances; more leisure is gained, the mind enlarged and plans laid for greater triumphs of order. With much care these tools are preserved and housed at all times when not in use. Order reigns paramount here also, and whatever it be, it is found where it should be, and just as it should be.—The credits here are not small ones.

In the household the same presiding genius holds sway, and all moves on harmoniously.—Not a jar, not a grating of a cog, but the whole machinery moving and turning like one great whole.

The man of order is moreover a thorough going "Book Farmer." Not one that is wholly made up of theory—but one that reads, thinks, digests, and acts accordingly. His powers of observation are great, and he makes the best use of them. However plausible a theory may be woven, he scans it through and through, sifts it of its crudities and appropriates the truth to his every day practice. His library is well stored with good and sound books that serve to enlarge the mind and make it better. His children are trained up in the good paths, and the world calls him and them blessed.

In fact, he undertakes nothing but is conceived, planned, carried forward and fully executed in order. Like the building of Solomon's temple; the several parts of his business have been so accurately and timely performed, that the great structure rises in its grandeur, without noise or jar, to a glorious consummation.

But how few, alas! how few of us are properly imbued with the spirit of order in our works. How few of us can point to our farms and say, Behold how order reigns within their borders. See how every thing is properly performed—at the time it should be, and in the manner it should be. Mark how the fields laugh with their fatness, and the herds and flocks speak their gratitude. Let us lay these things more to heart, and work and think more to some effort, than the great mass of us have done heretofore. Let us cry one to another, in the words of our RURAL, "EXCELSIOR!" T. E. W.

SULPHATE OF LIME AS A FERTILIZER.

GYPSUM, plaster, or more properly sulphate of lime, contains in its natural state about 46 per cent. sulphuric acid, 33 lime, and 21 water.—When it is burnt at a red heat, it loses this water and becomes what is commonly known as Plaster of Paris. In this state, when made into a paste with water, and allowed to dry, it becomes as hard as stone, and is therefore admirably adapted for moulding, stereotyping, &c. Plaster of Paris is of course more expensive than unburnt gypsum. And, moreover, from its setting or hardening property, it would be likely to have less effect. What is commonly known by farmers as plaster, is the unburnt gypsum, and when we speak of plaster we refer to the sulphate of lime as it is taken from the bed or quarry and ground for use.

That plaster is eminently fertilizing on some soils, and for certain crops, is beyond question. That it is good on all soils, or for all crops, is contrary to all experience. On what soils, or for what crops it is profitable to use it, we have no theoretical means of judging. The *cause* of the beneficial effect of plaster is at present enveloped in great uncertainty. There are many different theories, each of which, in some particulars, conflicts with well observed facts. One learned Professor thinks the value of plaster consists in its converting the volatile salt, carbonate of ammonia, existing in rain water and the atmosphere, into a sulphate of ammonia which is not volatile, thus preventing its evaporation and retaining it for the use of plants. If this were true, it should do more good on wheat than on any other crop. But is such the case? Another able Chemist ascribes the value of plaster to the sulphuric acid it contains, saying that it is found that meadows near Paris, sprinkled with dilute sulphuric acid, are as much benefited as when dressed with plaster. Another is quite positive that the lime is the principal constituent of plaster that is of use. Others, again, ascribe the value of plaster not to its supplying plants with any of their constituents, but simply in drawing moisture from the air and supplying it to plants.

It were a useless task to examine each of these theories; probably there is *some* truth in all of them. While the Doctors are disputing, it will be more profitable for us to examine some of the effects of plaster. LIEBIG in some of his voluminous writings has said that plaster does most good on low meadows. Such, however, does not accord with our observation. We think plaster has seldom any beneficial effect on low land, whether applied to clover, corn, potatoes, or permanent meadows. It appears to be best suited to light, sandy soils, and dry seasons, and has the greatest effect on red clover and Indian corn. When in Massachusetts last fall, several farmers in Berkshire Co. informed us that they found plaster on *dry upland* a very good and profitable manure for potatoes. The experiments of Mr. EASTMAN, published in the Transactions of the N. Y. State Ag. Society for 1852, do not sustain this opinion. He found that the unmanured plot gave 166 bushels per acre, and that a tablespoonful of gypsum applied in the hill, gave 162 bushels, and a table-spoonful applied when the plants were up, gave still less, or 156 bushels per acre; while hog manure, applied in the hill, gave 271 bushels, or 105 more than the unmanured acre. We regret to say that these experiments are on too small a scale to render them entirely satisfactory. The results, however, are in accordance with general experience. And we are inclined to think that plaster will not be found of much benefit to the potato crop.

On wheat, barley, oats and timothy, we have usually observed little benefit derived from plaster, but should be glad to hear from various parts of the country of any experiments that have been made on these crops. Under certain circumstances it has a marked effect on Indian corn, and where it can be obtained for less than $5 per ton, its application, at the rate of one to two bushels per acre, is generally profitable. On clover, in Western New York, it has frequently a magical effect, and as anything in the hands of a judicious farmer which increases the clover crop increases the following wheat crop, plaster, though of little direct benefit to the wheat plant, thus becomes of great indirect value. By the use of plaster on red clover many farms have been made to produce at least a third more wheat than before their introduction.

EXPERIMENTS ON MILCH COWS.

WM. F. PORTER furnishes the Essex County (Mass.) Agricultural Society, an interesting report of some experiments he has made on the comparative value of carrots, shorts, oil-cake, Indian corn and rye as food for milch cows.—The first experiment was on new milch cows, and commenced in January, 1851. He gave to 12 cows, in addition to good English hay, five bushels of carrots per day, and the whole increase of milk during this week *was not two gallons.* He made several other trials with carrots, and became *"fully satisfied it would not pay to raise carrots for milch cows."*

In Dec., 1852, he selected three new milch cows for the purpose of testing the comparative value of shorts, corn, oil-cake and rye. 350 lbs. of English hay, and 70 lbs of salt hay were weighed and given to the three cows each week. The quantity of the additional foods given, was regulated by their cost.

The first week each cow was allowed 42 lbs. of shorts *per day*, scalded and fed night and morning. During this week the three cows gave a total of 239¾ quarts.

Second week, 35 lbs. oil-cake meal, fed in the same way, gave 251¼ quarts.

Third week, 32¾ lbs. of Indian corn meal, fed in the same way, gave 253¼ quarts.

Fourth week, 26¼ lbs. rye meal, fed the same way, gave 243¾ quarts.

The weeks on which the cows had shorts and rye meal, they eat up all their hay; but the weeks on which they had oil-cake and corn meal, they left 58 lbs. of hay per week. Mr. PORTER concludes from these and other similar experiments, which our space prevents us from giving, that Indian corn meal possesses the highest value for producing milk, differing, however, but little from oil-cake meal.

We are not surprised at the result obtained with feeding carrots, under the circumstances. We are inclined to think, moreover, that they are better calculated to form fat than milk.—We should have expected somewhat better results from the oil-cake than from the Indian corn meal. And we believe that had the test been *butter*, rather than the quantity of milk, the oil-cake would have come out best.

FRENCH MERINO BUCK, "OLD TIGER."

THE above engraving is taken from a daguerreotype of a French Merino buck owned by A. V. STOCKWELL, Brattleboro, Vt. "Old Tiger" is five years old, and weighs 175 lbs.—His fleece, one year's growth, well washed on the back when four years old, and without the "Cornwall finish," weighed 11 lbs. 8 oz.; and cleansed for the card and well dried, 6 lbs. He sheared when five years old, 16 lbs. 11 oz.

Mr. STOCKWELL is apparently a most enterprising and judicious breeder, not merely of the French but also of the Silesian and Spanish Merino. Any of our friends who wish to purchase good sheep to improve their flocks, would do well to give Mr. STOCKWELL's sheep an examination.

THE EMPLOYER AND THE EMPLOYED.

NUMBER I.

THE relation between the farmer and his "hired help" is one of much responsibility to either side. It does not follow because Farmer A. has agreed with John B. for a portion of time to be devoted to his service for so many dollars and cents, that said John must toil and slave more like a dumb beast. The servant is as much a sentient being,—or ought to be—as his master, and should therefore be treated in all respects like a man of the realm—a peer of the land, as we all boast ourselves to be in this clime of Freedom. Labor is ennobling, and he who manfully meets its requirements, and does well his part thereof, is a nobleman, whether he receives his compensation at so much a day or month, and wears rustic homespun; or takes his emoluments in dividends, and sports kids and fine broadcloth. It is the duty of Farmer A., therefore, to cheer John by every good word and work, by looks and actions, and so make him feel you care for him as a fellow man. In so doing you make him a fast friend and gain his toil, willingly performed, which is far the most effective and profitable. Don't show that you feel yourself as a unit of a higher order of beings, and that he is unfit to associate with, or to be cared or felt for, and altogether too low to eat at the same table.—Such conduct among all well thinking, well bred men and women, is marked as characteristic of very small minds—minds just shallow enough to ape a would-be aristocrat.

Again, Farmer A. should furnish John with all necessary and proper tools, and those of the best kind, and in the best condition, that his work may be well done, more effectively performed, and with less fatigue. In this respect, Farmer A. is a double gainer. Nor is John a loser. His gain may be negative—yet it is so appreciable to his feelings, that he feels really thankful, and strives the more to please and benefit his employer. Beyond he gains in that manly pride which helps him along to a higher manhood. Never mind if John be a little awkward at first with some of your improved implements; have a little patience and kindness, and he will quickly "get the hang of it," as he says,—and then you will find him all the more efficient.

Nor should Farmer A. be all the while in a bustle or hurry. Things don't move any faster for it—nor is order one whit better secured.—Besides, John can see just as far into the stone as he who picks it. Take things in their time, do them up when they should be, and do all thoroughly; but do not undertake to do as much work with your "hired man" as would be consistent for a third one to perform—and you will have no occasion to fret and rattle ahead. And then you will find plenty of time to give John quite a "nooning" in the warm days, to rest his wearied limbs, and recruit his mind with good reading. You will find it no loss either, but a gain. All these things, and many other little ones that may often occur, may be looked to, not from mercenary motives, but from a goodness of heart, and they will so impress John with a better spirit, that you will find him leaving off many of his little foibles, becoming a better man, your steadfast friend that will make from choice your interest his interest, and so remain with you as long as you like, or until he has gained enough to set up for himself, and become truly an independent and most worthy citizen. The law of kindness is of universal application, and will work wonders on the farm as well as elsewhere.—Give it a faithful trial, all ye who would argue against it, and see how well you will be charmed in the result.

But if John is really a vicious, bad tempered fellow, and all your kindness is wasted, do not harbor him for any consideration, however otherwise valuable his labor may be. Not only will he be a thorn in the flesh, but a plague spot to all that is pure and innocent in youth within his contact. Such ought not therefore to be permitted to remain, unless they show unmistakable signs of penitence in character. But a course of love may win back even the really bad, and thus save many a gem to adorn the brow of manhood. T. E. W.

CHURNING IN WINTER.

I HAD supposed that long churnings in the winter were, like stage traveling, among the things that are past, until late numbers of the RURAL showed to the contrary. I think I have done with them entirely, for the butter which is made from my two cows in weekly churnings, is usually produced in five minutes—never exceeding eight. One of the cows is so old that she eats hay with difficulty, and therefore receives daily, in two messes, a pailful of boiled potatoes, turnips, or apples, mixed with cut hay,—she is farrow. The other is a heifer, which will come in next spring, for the second time. She being in good order, receives no extra care; but they are both kept well sheltered, and with dry beddings.

The milk, when brought into the house, is warmed in the morning at least, upon the kitchen stove, and put away where it seldom freezes. Before churning, the cream is warmed on or near the stove, is stirred occasionally, having received of saleratus or soda, sufficient to make the cream sweet, which is usually about a table-spoonful for cream sufficient to make four or five pounds of butter. The butter has a good taste and a good appearance. Whether it is the treatment which the cows, the milk, or the cream receives, or all together, which effects the object, let others judge. W. D.

Orangeville, Wyoming Co., N. Y., 1854.

N. Y. STATE AGRICULTURAL SOCIETY'S ANNUAL MEETING.

The Annual Meeting of the State Agricultural Society was held at Albany on the 7th, 8th and 9th insts. The attendance was quite large from different sections, embracing some of the best farmers and stock-breeders of the Empire State. The business meetings were unusually spirited and harmonious, the only distracting question now, as heretofore, being the location of the annual Fair.

From the report of the Secretary, B. B. Kirtland, Esq., we learn that the entire receipts for the year were $12,684 77, and the expenditures $11,882 07, leaving the cash balance on hand $802 68. It also appeared that at the winter meeting in 1852, the Society had in cash on hand and money invested $11,000, and at the present time on hand and invested only some $3,000 — showing a loss of $8,000 in the past two years. The officers attribute the loss to a bad season, on account of cholera &c., at Utica, and the very bad weather and worse location of the Fair last year at Saratoga. To our apprehension two other causes more important and nearer the truth could readily be named. The first of these is that the Society has been for more than ten years under the control of a dozen individuals, nearly all of whom are more or less interested in stock breeding, and the premiums have been so arranged that a large share of those offered have been taken by these breeders — we do not say unfairly—but to so great an extent has this been the case that small farmers and breeders have become jealous, and do not go to the Fairs, either as exhibitors or observers.

Again, the expenses of the Agricultural Rooms, and the salaries of those connected therewith, have been increasing until it requires near $3,000 to foot the bills annually.—Moderate and economical farmers look upon these things with so much distrust that the Society has lost the essential element of popularity, which very much curtails its capital and usefulness. To complete the long line of acts which alienate it from the body of the farmers of the State, it has been voted to hold the next Fair in the city of New York. Competent and energetic officers have been chosen, and without doubt a good Fair will be got up in the Metropolitan city—but our word for it, it will not be a Fair of the farmers of the State of New York. We regret this exceedingly, and propose to say more upon the subject at another time.

The Winter Show of Fat Cattle, Sheep, Dressed Meats, Poultry, Grain, Seeds and Implements, at Woolsford's, Bull's Head, was creditable to the farmers and to the Society. Monroe County was ably represented by a pair of fat oxen owned by James Upton, of Greece, and the three spayed Devon heifers of George Shaffer, of Wheatland. The latter, we venture to say, cannot be excelled in the Union, if any where else. There were many other very fine specimens, as the premium list will attest, but our limited time prevented particulars. Of Grain the show was the finest we have ever seen in the State. The competition was so close that in some instances an equal premium was awarded to all the competitors. There were a few cheese and tubs of butter, though nothing to what the State should present on such an occasion, *principally for want of encouragement.*

All the Agricultural Rooms we found some excellent samples of winter fruit, Apples and Pears, nine-tenths of which were from Monroe Co., and not embracing as many specimens as could be found at a well attended winter meeting of the Monroe Co. Ag'l Society. It is poor recompense to transport fruit 250 miles and get an award of Barry's, Thomas's or Downing's work on fruits, when one has an abundance of the same at home.

There are many other things in this connection to which we would gladly refer, but time and space both admonish us to forbear.—H. C. W.

POTATOES IN DRILLS.

I have seen several articles in your valuable and instructive paper, on the cultivation of the potato, especially in reference to soil, manure, and the variety planted. But I have seen nothing about how they should be planted, in hills or in drills. The English farmer always plants in drills and gets large crops, and I think this is by far the best method. I would like to hear from your correspondents why they prefer to plant in hills three or four feet apart each way, instead of in drills sufficiently wide apart to admit of horse hoeing and plowing, &c., and eight to ten inches apart in the rows. I imagine I hear them say it would be more labor because by planting in drills they could not be cultivated both ways. But instead of its being more labor, I believe it is less, for in order to obtain the same crop you have only to prepare and cultivate about one acre instead of three. When they are to be gathered, you can take a horse and plow and take a furrow from each side of the drill, and then pass the plow under the potatoes, and then you have them ridge ready for the basket. J. Davis.

So. Butler, N. Y., Feb. 7, 1854.

Communications.

ADVICE TO FARMERS.

Mr. Editor:—A recent article in the *New York Tribune*, copied extensively into other papers, recommends to farmers to plant and sow spring grains extensively, in order to meet the great demand which the present state of European affairs seems to indicate will be made upon our productions. The last Rural has an editorial bearing upon the same point. Intelligent farmers are not uninformed as to the state of the markets, and need not the application of stimulants to awaken their attention to matters connected with their interests. High prices are always exciting, and there is danger that this extraordinary state of our markets may lead farmers into extravagant enterprises, which may hereafter be deeply regretted. We are all aware that a steady, uniform system of agriculture tends to prosperity, and that sudden changes from one system to another are always disastrous. Every farmer ought to have a well digested system of farming, adapted to his circumstances, as to soil, climate, markets, &c.,—and when he is sure he is right, then he should go ahead. Some of our farmers have turned their attention to the growing of wool, others to raising cattle, and others to the products of the dairy, and they have found each of these departments of husbandry highly remunerative.

Now, I think there is danger that some of these farmers will be influenced by extravagant prices, to swerve from their purpose. We are none of us above the effects of such influences. Hence, a word of caution, at this time, may not come amiss. A little calm reasoning will show, that although wheat first feels the influence of this foreign demand, all other agricultural products will follow, according to their relative value as food for man. After man has been fed, he must be clothed, and numerous other wants supplied, which, although not so imperative in their demands, can by no means be neglected. The wheat grower has reaped a rich reward for his crops—but should the wool grower and dairyman turn their attention to wheat, by the time their lands have brought forth, the market is glutted, and other products take the ascendency; and thus the farmer is kept in a constant excitement, and never ready for the market until the high prices have gone by. Many farmers have instituted a system of rotation of crops, by which their lands are constantly improving. But this system is in great danger of being laid aside by a desire to compete for these high prices.

The *Tribune* recommends to farmers to sow to oats and plant to corn, all the lands they can make available for these crops. Suppose farmers follow this advice, would not their meadows and pastures be in danger of encroachments, to the serious damage of their stock? Would it not be better advice to plan with great care his future operations, and keep steadily on in the same course he has found successful in former years? Thorough culture is the text which needs most to be enlarged upon at this time. Let speakers and writers dwell upon this topic, and they will not lead farmers into any visionary speculation. Let farmers practice it, and whether prices rule high or low, they will have their reward.

Myron Adams.

East Bloomfield, N. Y., Feb. 6, 1854.

I DON'T LIKE TO SEE.

I don't like to see a cess-pool of mud and dirt around the homestead of the farmer; old hats and oiled paper used as substitutes for squares of glass in the windows; a garden overrun with weeds, and pigs and poultry acting as gardeners; a farmer's daughter so refined that she cannot condescend to darn the holes in the heels of her stockings; a mother acting as maid-of-all-works before her young daughters; a farmer borrowing a newspaper, who is perfectly able to take one for himself; a person going two or three miles, in order to carry home tools borrowed twelve months ago; a man keeping more dogs than he has hones for; a miserable old log school-house by the way-side, and the little urchins slily peeping through the openings; loafers lounging over the merchant's counter, when they want nothing to buy; tobacco-eaters squirting their saliva over the floor of the meeting-house; young pigs endeavoring to extract comfort, on a tempestuous day, through the rails of their three-cornered pen, in the crook of an old Virginia fence; the groceries and taverns of a village outnumber the churches and school-houses; a shoemaker's children ill-shod, or a farmer's children ill-fed; a hard-working man make his labor still harder, by working on the Sabbath; a man burying what he has no need of, and so be, perhaps, soon obliged to sell his necessaries; a man and his wife going to different places of public worship; a farmer throwing his dung into the river, or allowing it to go to waste, as if he did not know the use of it! N. D. R.

Tongue-ail or black tongue, it is said, is immediately cured, by half a pint of melted lard, or sweet oil, to which a strong solution of salt is added, sufficient to fill a junk bottle, with which the animal is drenched.

BROOM CORN.

Messrs. Editors:—Having observed in the Rural of Jan. 28th, an inquiry over the signature of J. C. Knapp, in regard to the cultivation of broom corn, accompanied by a request from you for information from any who have cultivated it; we have taken the liberty to send you a few facts gathered from our experience, having raised it more or less for the last twenty years. We think broom corn is generally a paying crop; but whether it will be the coming year is somewhat doubtful, from the fact that present appearances indicate that the prices of all kinds of grain will be exceedingly high. We have succeeded best by planting on the inverted sod of an old meadow or pasture. Any kind of soil that is adapted to the growth of Indian corn, will produce good broom corn. We have never applied any fertilizer, having always selected land that was rich without it. We consider broom corn a very sure crop, as we have failed only once, and that was owing to late planting and an early frost.

An average yield would be about four hundred brooms per acre—one hundred pounds of cleaned brush making about seventy brooms of the medium size. Our rule is to prepare the ground the same as for a crop of Indian corn, only we would pulverize with the drag and cultivator a little more, as the seed is smaller and requires a finer tilth to insure its germination. We would mark the rows, 3 feet apart, north and south, to allow the rays of the sun to strike more directly upon the roots of the corn, and plant the hills about eighteen inches from each other, putting from ten to twenty seeds in a hill. It is best to plant as early as the season will admit. As soon as the corn is high enough to trace the rows, commence cultivating and hoeing, taking care to leave no more than three or four stalks in a hill; we usually hoe twice. There are two methods pursued in harvesting,—one is to cut the brush as soon as it comes to maturity, carrying immediately to the barn, removing the seed and spreading the brush upon boards to dry. By this method the brush will retain its bright green color, and the brooms will sell for a little more, perhaps, but the seed is generally worthless. The other is to let it stand until the seed is fully ripe, then cutting it and leaving it in the field two or three days to dry, when it is taken to the barn and placed upon a scaffold, where the air can circulate freely through it, to prevent its moulding. The seed can be taken off whenever convenient. By the last method we have from thirty to fifty bushels of good seed per acre, which is worth about as much as the same quantity of oats for feeding poultry, cows, sheep, &c.

Meadon, N. Y., 1854.

ABOUT THOSE SQUASH SEEDS.

Friend Moore:—Will you please publish the following card:

To those "Lovers of Pumpkin Pies:"—*Ladies and Gentlemen*—I promised you ten seeds of the Sweet Potato Squash, but your orders are so numerous, that I trust you will be satisfied with half the quantity, when I assure you that all cannot be supplied at that—though I have taken some pains to look up more seeds of the same variety, and shall probably add about another quart to my stock; but when the supply is exhausted, I shall send instead, a few seeds of "Apple Squash," a summer variety, and superior, in my estimation, to any with which I am acquainted. They are a light cream color, and about the size and form of the Baldwin apple, and very prolific; when ripe, hard shelled and yellow. But do not infer from this that I deal in nothing but squashes. I have many other rare seeds to draw from when squashes are done. Every additional three cents will entitle you to another sample of rare seeds from my stock. As I have commenced, I am determined to continue until my stock of seeds is reduced to my individual wants. So send on your orders—and success to the Rural New-Yorker.

Yours truly, J. W. Briggs.

West Macedon, N. Y., Feb. 9, 1854.

Featherless Fowls.—Three years ago the coming spring, I had three chickens covered with down, instead of feathers, and have had more or less each succeeding year. The color of the females is black, but the males are a light blue. They invariably have a crown of down upon the head, and noisier fowls I never heard. They cannot fly much and are not very hardy. They were produced from eggs of the common variety. They afford my visiting friends much pleasure.

I am a constant reader of the Rural, and welcome it as a harbinger of good tidings.—Success to its able editors, for their untiring efforts for the dissemination of useful knowledge.—E. P. Phelps, *Castile, N. Y.*

Measurement of Hay in Bulk.—Multiply the length, breadth and height of the hay into each other, and if the hay is somewhat settled, ten solid yards will weigh a ton. Clover will take 11 to 12 yards to a ton.

Agricultural Miscellany.

N. Y. STATE AG. SOCIETY.

ANNUAL MEETING—OFFICERS—PREMIUMS.

In addition to the article published elsewhere (containing some strictures in which we do not fully concur,) we give below the main *results* of the Annual Meeting of the N. Y. State Ag. Society, held in Albany last week. The following officers were elected for the current year:

President—Wm. Kelly, Rhinebeck, Dutchess.
Vice President—J. C. Jackson, New York; A. B. Conger, Clarkstown, Rockland Co.; Geo. Vail, Troy, Rensselaer Co.; Leroy Murrey, Greenwich, Washington Co.; J. C. Wooldruff, Syracuse, Onondaga Co.; J. Harber, Homer, Cortland Co.; D. H. Hazen, Geneseo, Livingston Co.; S. M. Burroughs, Medina, Orleans Co.
Corresponding Sec'y—B. P. Johnson, Albany.
Recording Secretary—E. Corning, Jr., Albany.
Treasurer—B. B. Kirtland, Greenbush.
Executive Committee—Edgar C. Dibble, Batavia, Genesee Co.; Elon Comstock, Rome, Oneida Co.; Charles Morrell, Ludlowville, Tompkins Co.; T. B. Adams, Phillipstown, Putnam Co.; Ambrose Stevens, New York.

After considerable discussion, the Society finally decided to hold its next Annual Fair in New York City. The vote stood 52 for New York, and 50 for Syracuse.

The following premiums were awarded:

FAT STOCK.

Best fat Ox, 4 years old and upwards, Jas. Upton, Greece, Monroe co., $20; 2d, W. P. & C. S. Wainwright, Rhinebeck, 25; 3d, Jas. Upton, Greece, 20.

Best fat Steer, 3 years old, Hobt. Rome, Geneseo, $25; 2d, W. V. Sackett, Seneca Falls, 20; 3d, do. do., 15.

Best fat Cow, 4 years and upwards, R. Rome, Geneseo, $20; 2d do. do. do. $15; 3d do. Henry Hazen, Martinsburgh, $10.

Best Fat Heifer, 3 years old, Robert Rome, Geneseo, $15; 2d do. do. do. $10; 3d do. do. do. $5.

Best spayed Heifer, 3 years old, Robert Rome, Geneseo, $15; 2d do. do. do., $10; 3d do. do. do., $5.

Three best long-wooled sheep, 2 years old and upwards, R. Rome, Geneseo, $10; 2d do. John L. Pratt, Cambridge, Washington co., $8.

Three best cross bred Sheep, 2 years and upwards, Nathaniel Brownell, Pittsford, $10; 2d do. do. do. $8.

George Shaffer, Monroe, 3 superior spayed Heifers, not presented for competition, but owing to their excellence, committee recommended an award of $15.

D. A. Buckley, Williamstown, Mass., a fat Ox, $10.

GRAIN AND SEEDS.

Best 5 bushels winter Wheat, Levi Shaw, 63 lbs. per bush., $3; 2d do., H. Howland, Owasco, 62 do., 5; 3d do., O. Howland, Owasco, 62 do., $4.

Best 5 bushels spring Wheat, David Conradt, Brunswick, 63 lbs. per bush., $5; 2d do., H. Howland, Owasco, 63 do., $4; 3d do., David Hess, Fenner, 63 do., $3.

Best 5 bushels of Rye, David Conradt Brunswick, 56 lbs. per bush., $5; 2d do., Levi Shaw, Brunselerville, 53 do., $3; 3d do., E. W. Bushnell, Hillsdale, 55 do., $2.

Best five bushels two-rowed Barley, O. Howland, Owasco, 48 lbs. per bush., $3.

Best 5 bushels two-rowed Barley, J. Ripslie, Rochester, 51 lbs. per bush., $5; 2d do., Wm. Davidson, Hartwick, 51 do., $4; 3d do., O. Howland, Owasco, 51 do., $3.

Best 5 bushels Oats, David Hess, Fenner, 45 lbs. per bu., $5; 2d Peter Crispell, Hurley, 45 do, 3; 3d Jas. W. Jolley, Cayugaus, 33 do, 2

Best a team, yellow Corn, Quincy Burgess, ——, 60 lbs. per bush, $5; 2d O. Howland, 60 do, 3; 3d E. S. Hayward, Monroe, 60 do, 2.

Best 5 bush. white Corn, Levi Shaw, Brunselerville, 58 lbs. to the bush., $3; 2d O. Howland, 58 do, 2; 3d David Conradt, 58 do, 1.

Best 5 bush. Peas, O. Howland, $5.

Best 5 bush. white Beans, H. Howland, $5; 2d David Hess, 3.

Best 5 bush. large Clover Seed, O. Howland, 62½ lbs. to the bush., $5.

Best 5 bush. small Clover Seed, Douw Van Vechten, Mohawk, 62 do, $5.

Best 5 bush. Timothy Seed, O Howland, $5; 2d D Van Vechten.

Discretionary premium of small silver medal and Transactions was awarded to C. F. Crosman, for varieties of Peas, Beans, &c. Another to H. T. Buckley, of Williamstown, Mass., for large varieties of Wheat, Corn, &c., $5.

FIELD CROPS.

Best crop of Wheat, not less than 2 acres, nor less than 40 bush. per acre, J. W. Waterbury, North Adams, Jefferson co., 2 acres, 96 bush., $20.

Best crop of Spring Wheat, not less than 2 acres, 30 bu., Chas. W. Eells, Westmoreland, Oneida co., 2 acres, 1 rod, 76 bush. 56 lbs., $15; 2d Hial Massey, Watertown, Jefferson co., 2½ acres, 91 bush., $10.

Winter Wheat.—Hon. T. C. Peters, Darien, Genesee Co., 2 barrels very fine white, plump grain, weighing 62 lbs. per bushel;—award silver medal and Transactions.

Best crop of Indian Corn, not less than 2 acres, to be shelled and weighed between 20th Dec. and 5th Jan., 80 bu. Geo. R. Eells, Clinton, Oneida, 2½ acres, 218½ bu., $20; 2d Ira Ashburp, Rigs, Monroe, 2 acres, 183 bushels, $15; 3d E. S. Hayward, Brighton, Monroe, 2 85-100 acres, 180½ bu. $8.

Best crop of Barley, not less than 2 acres, 40 bu., H. W. Dean, Turner, Madison, 10 acres, 13 roods, 35 rods, 770 25-48 bushels, $15.

Best crop of Rye, not less than 2 acres, 25 bush., E. W. Bushnell, Hillsdale, Columbia, 3 acres, 3 roods, 20 rods, 163 2-56 bush., $15; 2d H. Converse, Pamelia, Jefferson, 2 12-100 acres, 81 bush., $10.

Best crop of Oats, not less than 2 acres, 70 bush., J. W. Jolley, Cayugaus, 1 acre, 74½ bush., $10.

Best crop of Buckwheat, not less than 1 acre, 25 bush., Chas. W. Eells, 1 acre, 6 rods, 32 bush. 25 lbs., $8.

Best crop of Peas, not less than 1 acre, 25 bushels, J.W. Jolley, Cayugaus, 1 86-100 acre, 88 bush., $8; 2d, N. Hitchcock, Homer, 1 acre, 3 roods, 6 rods, 74½ bush., $5.

Best crop of Beans, not less than 1 acre, 25 bushels, Duval Conradt, Brunswick, 1 acre, 12 rods, 30½ bushels, $5.

Best crop of Carrots, not less than half an acre, 60 lbs. to the bush., 400 bushels, E. S. Haywood, Brighton, Monroe Co., ½ acre, 278 bushels, $9.

Best acre of Timothy Seed, D. Van Velchen, Mohawk, 1 acre, 5 bushels, 27 quarts, $5.

Experiments with Potatoes.—1, H. H. Eastman, Marshall, Oneida Co., $125. 2, Pelney Burgess, Chatham, Columbia Co., $15. 3, J. H. Morse, Cazenovia, Madison Co., $50. Special premium recommended to N. Culver, Arcadia, Wayne Co., of plate valued at $25.

DRESSED MEATS AND POULTRY.

Best carcass of long wooled Sheep, Patrick Downey, Albany $5; 2d do. do., 3.

Best carcass of middle wooled Sheep, O. Howland, Owasco, $5; 2d, Geo. Halbell, 3.

Best carcass of cross breed, Nathan Brownell, $5; 2d do. do., 3.

Best dressed Hog, weighing over 350 lbs., J. Winnie, $5; 2d do. do., 3.

Best pair of dressed Turkeys, O. Howland, $2; 2d do., 1.

Best pair of dressed Geese, O. Howland, $2; 2d W. Davidson, 1.

Best pair of dressed Ducks, Wm. Davidson, $2.

Best pair of dressed Capons, O. Howland, $2; 2d do., 1.

Best pair of dressed Fowls, O. Howland, $2; 2d do., 1.

One carcass of Beef, by James Ballersby, Albany. Committee recommend premium of $3.

DAIRY.

Butter.—Best 3 lbs or firkins of Butter, Joshua Ballard, Homer, cup, value $15; 2d, Geo. R. Powell, Milton, Saratoga Co., cup, value 10; 3d, H. Daniels, Greenfield, Saratoga Co., 5; 4th N. Hitchcock, Homer, Trans.

L. L. French, Warren, Herkimer Co., discretionary premium 3 tubs of Butter, small silver medal and $3.

Cheese.—Best 3 Cheese, John Winslow, Watertown, cup, value $15; 2d, Moses Eames, Rutland, Jeff. Co., cup, value 10; 3d, Geo. Clark, Otsego Co., 5.

Committee recommend a premium of Trans. to George Clarke, for Old Cheese.

FRUIT.

Apples.—1st Premium, H. R. Brown, of Greece, Monroe Co., 25 varieties, silver medal; 2d do., and largest collection, A. B. Rose, Wyoming Co., 25 varieties, Downing fruits; 3d, E. & E. S. Hayward, Monroe Co., 21 varieties, do.; Frank Atwater, Ithaca, 10 varieties; Henry Truman, Richfield, 14 varieties; C. F. Crosman, Rochester, 12 varieties,—each a copy of Barry's Fruit Garden; Isaac Merrill, Monroe Co., Hart Massey, Watertown, Jeff. Co., 11 varieties, B. B. Kirtland, Rensselaer, Co., 5 varieties,—copies of Thomas on Fruits; J. H. Watts, Rochester, Isaac Foster, Hillsdale, Wm. Bacon, Richmond, Mass., Wm. Robison, Westmorland, Oneida Co.,—each vol. Transactions.

Pears.—Ellwanger & Barry, 27 varieties, all fine size and beautiful appearance, which was awarded silver medal and diploma.

Grapes.—John S. Gould, Albany, Golden Chasselas, Catawba, and Isabella, in fine condition, grown in open air, and kept in cotton; awarded copy of Barry's Fruit Garden.

Inquiries and Answers.

Is Red Clover a Biennial?—Your assertion in last week's Rural, that Red Clover is a biennial plant, is a new idea to me. I have always supposed it as strictly perennial as any other vegetable, and have now, meadows six years sown in Clover and Timothy, without any diminution in the Clover. It will hardly do to assert that it is continued by sowing its own seed; as it is difficult often to make it take on fresh ground, much more so on a stiff meadow sward, and I am quite confident you are mistaken. Will you set me right on this subject, and give your authority for that assertion?—H. Y.

We supposed every one admitted that the common cultivated red clover of the Northern States (*Trifolium pratense*) was ordinarily a *biennial* plant. In its *wild state, it is a perennial*, and as botanists usually examine *uncultivated* plants, they generally call it a perennial. There are many eminent botanists, however, who, from a consideration of its deportment under cultivation, have come to the conclusion that it is a *biennial*.

Torrey says:—"Root perennial according to most authors; biennial according to some." He does not give his own opinion, but quotes an author who says it is *biennial*. Sinclair, in *Hortus Gramineus*, calls red clover a *biennial*. Darlington says:—"Authors generally consider this species a perennial; but a distinguished agriculturist of New England asserts positively that it is a *biennial, and my own observation inclines me to the same opinion.*"

Loudon, in *Encyclopedia of Agriculture*, page 872, says:—"The red clover (*Trifolium pratense,*) a *biennial*, and sometimes, especially on chalky soils, a triennial, known from the other species by its broad leaves and reddish purple flowers, in its *wild state* perennial."

Cuthbert W. Johnson, in *Farmers' Encyclopedia*, says:—"Being a *biennial* plant, clover leaves the field after the second year, unless allowed to seed itself."

Wood says it is *biennial.*

Allen, in *American Agriculture*, says:—"The common red or Northern clover, (*Trifolium pratense,*) a *biennial*, and occasionally, on calcareous soils, a triennial, is the species most generally in use in the United States."

We do not know of a single *Agricultural* writer of any "*authority,*" except our correspondent, who calls it a perennial.

Muck Shells, &c.—I have on my farm about one acre of muck, lying above the level of a creek, and was probably at one time a cove.—The top layer for four feet thick is muck, and below this for four feet, and I know not how much further, is a deposit of small shells in various stages of decomposition, from fine white powder to whole perfect shells. I have poured strong vinegar upon some of it, and it foams like saleratus or pearlash. What I wish to know is, how shall I determine its value? It is evident it contains some lime; how shall I determine the quantity? Is it necessary to apply to a regular chemist; and if so, where is there one I can send it to? What quantity of it would be sufficient for the test, and the probable expense?—If you will answer these inquiries as far as you can, you will do me a great favor.—Horace Gardner, *West Burlington, Otsego Co., N. Y.*

The probability is, that the shells are principally carbonate of lime. Burn some of them, and see if they do not afterwards exhibit the well-known characteristics of lime. If so, by burning a given weight, and weighing the ashes, you can estimate the amount of lime they contain. To determine its fertilizing value, the most decisive method would be to apply the most thoroughly decomposed part of the mass to various crops, and mark the result.—It is true that a complete analysis would furnish some valuable information respecting it, in less time; but such an analysis would be well worth $25 or $30. A qualitative analysis, costing only a few dollars, would give some indications of its value, and show whether a more critical analysis would pay. Dr. Salisbury, Albany, N. Y., is perhaps the best chemist we could name to you. Five pounds would be sufficient.

State Poultry Society's Exhibition.—The first exhibition of the New York State Poultry Society, held in Albany, last week, exceeded the expectations of its most sanguine originators and friends. The excitement it produced may be judged from the fact that upwards of 1,200 *single tickets* were sold in one day. We will give the official premium list election of officers, &c., next week.

Le Roy Agricultural Society.—At the Annual Meeting of this spirited town Agricultural Society, the following officers were elected for the ensuing year:

President—C. K. Ward. Vice President—A. Robertson. Secretary—J. R. Bartlett. Treasurer—J. H. Stanley. Executive Committee—J. W. Sheed, Alex. McPherson, C. G. Brinsmaid, J. S. Combs, J. J. Gallup.

Elihu Cross, Hoosick, Rensselaer Co., N. Y., has a maple tree, only two feet three inches in diameter, from which he says he made last spring, *thirty-three pounds of sugar!*

Orchard and Garden.

WONDERS AT KEW GARDENS.*

A Museum of Botanical curiosities has recently been established at Kew, and it already contains an abundance of interesting specimens. From the rambling notices of the Review, we condense the following catalogue.

Strange uses of vegetables are here disclosed. The Cannon-ball Tree, *Couroupita Guianensis*, of Guinea, though it does put forth odd-looking globes, does not actually furnish ammunition to the South Americans. Its shells are not dangerously explosive, but are used, like the calabash, for domestic purposes. Its fruit is said to be vinous and pleasant when fresh, and the only mischief it does, is to emit when decayed, an insupportably offensive odor. But the Turks Gourd, *Luffa Ægyptiaca*, is used both as wadding for guns and as a sponge. The Bottle Gourds are well known—and the epidermis of the *Andromuchia iguiaria* (Quito,) used as tinder, is only one of a numerous list of similar substances. The spathe which protects the flowers of *Maximilliana regia*, is used as a canoe; the natives paddle themselves across a stream in one, and then throw it aside. A specimen in the gallery is seven feet six inches in length and nineteen inches in breadth.—There is also a pair of vegetable bellows made of the leaves of a tree, and used *for smelting iron* by the natives, south of the Sone river, India. The Sand-box, *Hura crepitans*, of Jamaica, affords a natural alarum. It has a large circular seed vessel, which, unless confined with a string or wire, splits into a number of pieces, and scatters its contents with a sound loud enough to wake a sleeping botanist.

Many of our readers will be surprised to hear of the Cariee, or Pottery-tree of Para. The bark is burnt and ground, and the ashes are mixed with clay to make vessels. It enables them to stand the fire without breaking, and in the vast alluvial plains of the Amazon is doubtless a valuable succedaneum. In one single compartment of a case are shown leaves, wood, bark, ashes, and earthen vessels, all the produce of the pottery-tree.

The Ivory-nut Palm, *Phytelaphas macrocarpa*, from New Grenada, is fully illustrated. Here is the stem of the plant, a portion of the wood—if such it can be called—the spathes—the flowers—the aggregate fruit, like a negro's head,—the nuts—a nut with the radicle and plumule just germinating—besides various articles manufactured of this vegetable ivory.

The museum has, also, a small collection of *dairy plants*—a bottle of milk from the Cow Tree, *Galactodendron utile*, and a portion of its stem; leaves of the Milk-tree, *Massrranduba*, of Para, a little loaf of the milk in a concrete state, and a portion of the stem with the milk exuding; Shea butter from the Niger, made from the kernels of the *Bassia Parkii*, with the kernels themselves and leaves of the tree. As a pendant to the dairy-plants the light-giving ones may be adduced. There are candle-wicks from China, made of the pith of a plant, as well as our own rush-light wicks, the pith of the *Juncus effusus*. Then there are seeds of the Chinese Tallow-plant, *Croton sebiferu*, with candles manufactured therefrom; candles from the acorns of an oak of New Grenada, from the wax of *Myrica parvifolia*, and *M. mucrocarpa*.

Many of the fruits in the museum differ much from what we expect to find them. The *Nux Vomica* is a capsule like a large discolored, dried orange, containing a number of flat seeds which furnish the poison. The Sacred Bean, *Nelumbium speciosum*, of the Egyptians, so often seen in their monumental decorations, looks in its dried state, like a circular piece of over-baked pudding stuck full of hazel-nuts. The *Bunksias*, from New So. Wales, give the idea of shell fish, rather than of fruit. They resemble a number of little oysters, naturally adhering around a cylindrical stick, and embedded in mossy sea-weed, the kernel representing the contained mollusc.

It is singular to how many purposes *barks* are turned. Besides the papers and cloths made from them, and their use in coloring and tanning, they furnish natural sacks—from the Sack-tree, *Lepurandra saccidora*, with a section of the tree left at one end to form the bottom. Another bark, that of the *Bertholletia excelsa*, serves at Para, for caulking ships.—Several barks are employed as cigar-tubes—others as real pipes. And the museum has a rude sort of a guitar from Panama, made of a single joint of bamboo; the back on one side is raised in four strips, answering to strings—a bridge at each end gives the requisite tension—a sounding hole is cut in the middle—and the thing is done. A native performer, says the reviewer, might produce effects which would charm native ears; but we may believe it was not this instrument with which Orpheus led the brutes. No, that was probably a *Cornstalk fiddle*. The museum will be forever incomplete until some Yankee presents it with this original and unique musical instrument.—u.

* Concluded from page 31, this volume.

DWARF PEARS ON QUINCE STOCKS.

THE ADVANTAGES OF DWARFING PEAR TREES.

No pear can be brought into bearing on its own root or stock in less than seven or eight years, and often double that time; but with many varieties, when properly dwarfed on quince stocks, only three or four years need pass before they become productive. Such trees generally bear more freely and certainly, and produce larger and finer fruit, than those grown on free stocks. They are also, by their small height and size, better adapted to gardens and restricted grounds; easier managed, and giving greater room for variety, as well as presenting fruit easy of access, and secure from high winds, which are often very injurious to the fruit of standard trees. Well-trained dwarfs are also beautiful objects. Both form and foliage are elegant, and the trees at once productive and ornamental.

Dwarf Pear Tree.

In order to secure these advantages, it is necessary that the right varieties of the pear be selected, the right stocks be used, the right culture be given, and the right system of pruning and management be adopted. Of all these we intend to speak.

PEARS WHICH SUCCEED ON THE QUINCE.

Mr. Barry gives in the "Fruit Garden," a list of "twenty-five varieties for the garden, on quince stocks," which he says may be chosen without any risk of failure. They are, Blood good, Bartlett, Dearborn's Seedling, Rostiezer, and Tyson,—summer pears;—Beurre Diel, Beurre Golden of Bilboa, Bergamotte Cadette, Belle Lucrative, Beurre d'Amalis, Duchesse d'Angouleme, Doyenne White, Doyenne Gray, Henry IV., Louise Bonne de Jersey, Napoleon, Seckel, Steven's Genesee, Seran's Orange,—autumn pears;—Beurre d'Aremberg, Beurre Easter, Glout Morceau, Vicar of Winkfield,—winter pears;—and the Pound pear, for baking, &c., also a winter pear. Other writers add to the list, and need do so to suit different sections of the country.

SELECTION OF QUINCE STOCKS.

All varieties of the quince are not fit for pear stocks. Many experiments have been tried with different kinds, and the great requisite has been found to be a free, vigorous and rapid growth. Those of slow and feeble habits soon fail, and disappoint all the expectations of the grower. There are but two or three varieties known in France, where much attention has been given to this subject, which answer fully as stocks for dwarfing. One of these is the Anger's quince, which grows very rapidly, making strong shoots three feet in length in a single season. It is known in some districts as the "broad-leaved quince." Another variety known as the "small-leaved," is equally prized, and much employed, according to the "Fruit Garden," by the Paris nurserymen.

—From the last two paragraphs it will be seen that discrimination is necessary both in the choice of the graft and the stock, and purchasers as well as dealers should assure themselves that all is correct in these respects, before proceeding farther.

PLANTING AND MANURING.

Good pears cannot be grown on poor and shallow soils—they need a deep and rich one. Those who give their attention to the subject, will see that a highly cultivated, and in part, artificial tree, cannot be neglected with the same impunity as one of more natural growth; its improved mode of treatment must be continued in order that it may fulfil the conditions of its present usual life. The pear, like other fruit trees, needs a deep, mellow, well-drained and fertile soil, and in such only should it be planted. Analysis of the fruit shows that phosphate of lime and potash are needed constituents of the soil, and their application has been found especially beneficial. Care should be taken, however, not to manure very highly at first, as the growth pushed too rapidly retards early bearing.

PRUNING. — THE PYRAMIDAL FORM.

Dwarf pears should always be trained in the pyramidal form, as more beautiful, taking less room, and giving better fruit. This form is attained by systematic pruning and pinching. The stem of the yearling tree or growth from the graft, is cut back or shortened in to a few buds so as to produce branches near the ground. Some trees require cutting lower than others; and it is found the less vigorous the development of the buds, the closer they need to be cut. A tree whose growth has been a shoot four feet high, should be cut according to the condition of the roots and the prominence of the buds, leaving from 20 to 10 inches above the stock. The bud cut to, if possible, should be one of the best on the stem, and on the side of the tree opposite to the insertion of the bud in the stock, so as to continue the stem in a straight line. When the proper branches are thus produced, the after treatment consists in heading down and shortening in, on the same principles, to produce the form desired.

It is of much importance, after the trees are permanently planted, that the pruning of pyramid trees be carefully attended to, both the spring-time cutting-back of the wood, and the autumn shortening in of the growing shoots.—The tendency of the sap toward the upper part of the tree must be checked by diminishing the number of buds, so as to promote the growth of the lower branches for the base of the pyramid. Nearly every branch needs shortening in, and when the head of the tree is too upright or compact, if the bud to which the shoot is cut back is on the outer side, it will lead the branch from the trunk, and if the head is too open and spreading, it should be cut to an inner bud. The knife should be sharp, and the cut clean, and always near a bud.

In autumn or late in summer, the trees should again be pruned, or straggling and perverse shoots pinched off. If a side shoot seems to be getting the advantage of its neighbors, its extension should be stopped by pinching the end off. The form of the tree should be regulated by these means, always bearing in mind the principles of pruning, of which we have already spoken in these columns. Experience alone can give ready judgment in these matters, but that experience will be all the sooner acquired by the careful study of horticultural lore, as found in books and periodicals. —B.

We are indebted to Eben Wight, Esq., for the Reports of Committees of the Massachusetts Horticultural Society for 1853, and the Schedule of Prizes for 1854. The reports embody much valuable and interesting information.

THE SUNFLOWER.

I do not think there is sufficient attention paid to the cultivation of this plant. The sunflower is a native of South America, but is easily cultivated in any common soil, either by sowing the seed early in spring, or by slips or offsets from the roots. It is now a common and well-known production, having long since become naturalized throughout the United States. The manner of planting and cultivating it, is not dissimilar to that adopted in growing Indian corn, and its agreable product exceeds that of the most prolific cereals. The principal uses to which the seed of the sunflower is ordinarily applied, are the manufacture of oil, for painting and burning, and the feeding of horses, sheep, beeres and swine.—The oil is clear, thin, and inodorous when burnt, though of an agreeable taste. For painting, it is said to be preferable to any other oil now in use. As a feed for hens, it is highly prized. Being of an oily nature, it approximates more nearly to the character of animal food than any grain that can be fed to them, and supplies to a considerable extent, a very efficient substitute for meat. The sunflower requires good soil, and may be managed in the same manner as Indian corn, when grown on soils that are friable, rich and moist.

RAISING GARDEN SEEDS.

A good lesson is contained in the following paragraph from an exchange:

Some years since, in pulling my English turnips, (raised from imported seed,) though a great yield, they ran too much to tops with fleshy crowns. Finding one only with a small top and small root, shaped like two saucers put together, I preserved it for seed, and the next year sowed what I got from it among my potatoes, then beginning to be affected with disease. They mostly died; but I got 75 bushels of turnips "true to seed." I saved and set out 8 bushels of the most beautiful I ever saw.—This was in Springfield. All who saw them admired them, and spoke for some of the seed, which I circulated freely at one dollar per pound. Tops barely enough to pull up the single root, little bigger than a pipestem.—They were as good as handsome. All this goes to encourage me in selecting the best roots and employing the best means possible for obtaining the very best seed, from which to secure the reward for the best care and culture of the orchard, field and garden.

Grape Culture in Ohio.—After many years of experimental culture in Cincinnati and neighboring counties, grape culture has at length become well understood, and is becoming profitable. By a recent communication in the Columbian of that city, we learn that within a circle of twenty miles around Cincinnati there are 1,200 acres planted with the vine, 800 acres of which were in bearing this year, and produced an average of 400 gallons of wine to the acre, making an average of 320,000 gallons. Some of the best vineyards yield 600 and 800 gallons to the acre, but others where the "rot" prevailed did not average over 150 gallons per acre.

The quince requires a deep, rich soil, and good cultivation. It is not by any means solely adapted to moist soils. Some of the finest quinces we have seen, grew on dry upland.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending January 31, 1854.

H. A. Anthony, of New York, for improvement in presses for looking miniature cases.

P. H. Benedict, of Syracuse, N. Y., for improved daguerreotype plate holder.

E. Boughton, East Bloomfield, N. Y., for improvement in cultivators.

Wm. Cozil, Garrettsville, Ohio, for improved mode of fixing likenesses in monuments.

Wm. Cleveland, of Orange, N. Y., for improvement in fountain pens.

Wm. O. Davis, of Pittsburgh, Pa., for improvement in presses for moulding glass.

S. L. Denny, of Christiana, Pa., for improvement in divided railroad axles.

C. J. Fay, of North Lincoln, Me., for improvement in cotton presses.

E. W. Johnson, of Perth Amboy, for improvement in saw mills.

Harvey Leach, of Boston, Mass., for improvement in propellers.

Thos. Longking, of Brooklyn, N. Y., for improved apparatus for cleaning and dulling daguerreotype plates.

T. O. Cutler, of Jersey City, for improvement in quartz crushers.

Harvey Lull, of South Coventry, Conn., assignor to Harvey Lull and Richard Porter, of Wheeling, Va., for improved shutter hinges.—Ante-dated Jan. 2, 1854.

Jas. McCarty, of Reading, Pa., for improvement in rollers for scoring the edges of skelps for lap welded tubes.

John L. L. Morris, of Reading, Pa., for improvements in steam hammers.

Charles G. Page, of Washington, for improvement in electro-magnetic engines. Patented in England, May 3, 1851.

Wm. Palmer, of New York, for improvements in water gauges for steam boilers.

Ebenezer G. Pomeroy, of Pittsburgh, Pa., for improvement in manufacture of sheet iron.

Benj. Underwood, of Brooklyn, N. Y., for improvement in the construction of printing blocks.

F. J. Tring, of New York, for improvement in carpet bags.

Edward Town, of Jersey City, for improved machine for paging books.

P. L. Weimer, of Reading, Pa., for improvement in steam hammers.

I. L. Dickinson, of Richmond, Ind., for improvement in churns.

Le Roy S. White, of Chicopee, for improvement in fruiture casters.

RE-ISSUE.

S. G. Dugdale, of Richmond, Ind., for apparatus for opening and closing gates. Patented Oct. 11, 1853.

THE FRESNEL LIGHT.

The Fresnel Light is a revolving or flashing light, about ten feet high and six feet in diameter, made in the shape of a twenty-four sided glass, terminating in a truncated cone or dome, and containing over one thousand lenses or prisms, nicely fitted together, and reflecting an immense body of light.

There are four different orders of these instruments, ranging in size according to the position they have to occupy, and the distances they are required to be seen. Each order is subdivided into fixed, revolving, or flashing, and fixed varied by flashes. The flashing lights can be varied by the duration of the flash and eclipse, and in some cases colored flashes have been employed for the sake of distinction. The apparatus now on exhibition is of the first order.

The light is produced by a single lamp, placed in the common focus. It is a carcel lamp, with a burner of concentric wicks, the largest being nearly four inches in diameter.—The wicks are kept constantly saturated with oil, which is pumped up from a reservoir below, thus preventing undue carbonization, and producing the maximum brilliancy. The supplying pumps are moved by clock-work. The lamp, consisting of the clock-work, reservoir, and burner, sits on a tripod, resting on the stationary part of the apparatus, and, by means of set screws, can be very nicely adjusted in the focal plane.

A cast iron column or pedestal sustains the whole structure, and has on it a shoulder with a bed plate of steel, with a beautiful arrangement of friction wheels and rollers, by which the movable frame-work is supported and enabled to revolve. Motion is given to this by a handsome piece of clock-work. The whole machinery, and all the iron and brass work, are very complete.

The power of the light exhibited is not accurately known. The illuminating effect of Fresnel's great lens has generally been taken at 3,000 argand burners—the value of the flame at its focus being about 16—thus giving the increasing power of the lens 180. These lenses, with the upper and lower rings of this apparatus, will, of course, produce a much greater effect.

The consumption of oil in the lamp is about 600 gallons per annum. Comparing the amount of light with the quantity of oil consumed—revolving lights on the dioptric or refracting principle, use oil more economically than those in the catoptric or reflecting plan, in the ratio of 3.6 to 1.

The power of these lights is also a great consideration in their favor—enabling them to penetrate fogs and be visible at times when a feeble light would be lost. They can be seen as far as the curvature of the earth will admit; and a case is known where the elevation of the light on the coast of France, and of the observer on the English shore, was such as to make the French light distinguished at the distance of fifty miles. They are almost entirely employed in France and on the continent of Europe, and are gradually being put up in England.—*N. Y. Evening Post.*

Writing Paper Made from Straw.—This paper is advertised in London, and is said to possess a smooth, firm surface, and is well adapted for either quills or steel pens. The proprietors undertake to supply it at about half the price usually charged for the ordinary kinds of paper.

FROSTING GLASS.

The most accomplished artisan cannot frost a pane of glass after the style of yesterday morning's finery work. Put the two pieces of work side by side, and look at them through a magnifying glass, and then see how poor the imitation is.

We notice that a patent was granted in 1851 for frosting the surface of glass plates, by placing the plate flat on the bottom of a box made to rock like a cradle, and then covering it with sand, pebbles, and water. The rocking motion caused the sand and pebbles to slide over the glass by their gravity from one side to the other, and thus produce the fine abrasion of the surface that imparts the frosted appearance.

During the last year there has also been a patent granted, modifying the process so as to make the glass slide beneath the sand; but the effect produced in each case is very similar, being in both a fine abrasion of the surface; whereas the frost which nature produces, is, even when magnified, the most exquisite tracery the eye of man was ever delighted with.—Compare them one with another, and see the difference.—*Albany Express.*

Cisterns.—The *Working Farmer* says:—In our neighborhood, cisterns are made with the Roscodale cement. We first dig a hole in the ground of the desired size, and then with a brush coat the side with a thin cream of hydraulic cement and water. The limid portion is absorbed by the soil, and this thin coating prepares the surface to receive a coating of one and a half to two inches, of a mixture of one part of hydraulic cement to two parts of sand, when the side and bottom of the cistern may be coated, with the assistance of a common plastering trowel. This cement wall reaches to within eighteen inches of the top of the ground, when one course of brick is laid on the top of the wall, and projecting beyond and outside of it, also laid in the cement. On this brick timbers and flooring are laid across, and then covered with earth. Such cisterns will last as long, and are as tight as any other, and may be made at light cost.

Awards at the Crystal Palace.—The whole number of silver medals is 115, which indicates that the juries have bestowed them with considerable liberality. Of bronze medals there are 1,186, while 1,210 exhibitors (or articles) receive the more simple distinction of an honorable mention. The greatest number of silver medals falls to the lot of the United States. The next country in rank is France, which has 15; while Great Britain has 9, Germany 5, and Switzerland, Australia and Italy one each. Of the bronze medals, the United States has 505, Great Britain 133, France 153, Germany 106, Prussia 30, Belgium 10, Switzerland 29, Holland 12, Austria 18, Italy and Sardonia 44, British Possessions 26, &c.

Setting Carriage Axles.—G. W. Fink, of Circleville, Ohio, has invented a new device for setting Carriage Axles, whereby the distance that the shoulders of different sized axles should set apart can be ascertained, and also the proper length, taper and set that should be given to the axles or journals, all of which can be ascertained in much less time than by the old method. The inventor has made application for a patent.

An invention has been lately patented, which promises to effect a new era in locomotion. It consists in the application of India-rubber, working, when extended in contrary directions, on two axles, which communicate with the wheels of the carriage. The model, it is said, works admirably, and it has been pronounced by some of the first engineers in Manchester as likely to be eminently successful.

Domestic Economy.

New Recipe for making Ice-cream.—The following recipe is from a Connecticut lady. It is the best and quickest method of making ice-cream we have seen. "Take one tea-cup of cream, one tea-cup of sugar, one egg; heat the egg and the sugar well together; flavor as you please, and then stir in light snow until it is frozen stiff as you wish. It is quickly made and first-rate.

Wheat Meal Pudding—Fine Flavored.—Beat five eggs, add to them four cups sweet milk, one of sweet cream, with salt. Into this stir a cup full of flour and wheat meal, sufficient to make a batter a little thicker than for griddle cakes. Boil one and a half hours.—Serve in the same manner. The water should be boiling when the puddings are put in, and kept so till they are done. It is necessary to turn them occasionally, as they will rise to the top.

Lemon Pies.—A lady tells the Agriculturist how to make lemon pies. Grate the peels of four lemons, and squeeze the juice into the grated peel. Then take nine eggs, leaving out half of the whites, one pound of loaf, or white sugar, half a pound of butter, one pint of cream, or of milk, and four table-spoonfuls of rose-water, and beat them well together, and add the lemon. Divide into four pies, with undercrust, and bake.

An Oil for Strains.—Take of olive oil, two ounces; of camphor, rubbed well with a little oil, and then added to the whole, one drachm. Very little of this should be used at a time, and to be rubbed gently on the parts before the fire.

Buckwheat Cakes.—To one coffee cup of old buttermilk, add two of water, one teaspoonful of saleratus and one of salt, stir up thin and cook immediately.

Educational.

[For the Rural New-Yorker.]

THOUGHTS FOR THE SCHOLAR.

Eds. Rural:— Several valuable articles addressed to the Teacher, have of late appeared in your columns. I am aware that there are high and noble duties enjoined upon the teacher; but at the same time, there are also duties which are due the teacher, from the scholar.

Supposing, as a matter of course, that into whatever family your valuable paper finds its way, it is read by every scholar of that family—that its precepts, if correct, are put in practice; and that its counsels, if good and wise, are given all due heed and caution, I would make it a medium, through which to suggest to the scholar a few brief thoughts, by way of stirring up those lively and pleasing emotions which should ever actuate him, both as it regards his own interests, and contributions to the happiness and pleasure of the teacher. From the relation which exists between the teacher and scholar, it is evident that one of the first duties due the former from the latter is respect. This is seen at a single glance; and though I may fail in imparting to you any new ideas on this subject, yet I shall at the same time have gained my point, if by way of a remembrancer I can be instrumental in renewing your diligence.

He is a kind and faithful teacher who toils with unceasing labor, both mentally and physicially to contribute to the happiness of those under his charge—to impress upon their minds the invaluable worth of a thoroughly cultivated brain, and a well disciplined conduct. Shall such a one be treated with disrespect? It is cruel thus to do. Does he make any reasonable request? then at once obey. He does it for your best interests. He does it because he loves you, and your prosperity. Though many times it may seem crossing to your nature, and improper, yet remembering that he is your teacher—superior to you in wisdom, it becomes you at once to yield. Then we see that out of sincere respect for the teacher, springs up obedience. There are numberless little petty things rising up, calculated in themselves to perplex and try the patience of the teacher.—Now the scholar can effect a great deal in assisting the teacher, both by discountenancing the wrong, and pulling down errors in their outset. Every teacher knows this to be a fact. Scholar, do you know what kind assistance you may render your teacher by setting a good example before your school-mates? When care-worn and weary, do you know how much you may relieve his burden by a kind smile, and an affectionate sympathy? Did you, would you ever call him harsh and improper names?—Would you disobey his proper and just requirements? I hope there are no readers of the Rural who do the latter; should there be, I trust they will persist in them no longer. What a sin thus to grieve him, and make his heart ache with your wrongs, when his chief aim is to benefit you, and prepare you for future usefulness, that you may fill its stations creditably! It is said that "idleness is the parent of mischief:" are you aware of this, scholar? Then be on your guard lest its snares entrap you before you are aware. Cast your eye about your school-room, and I will guaranty you, with perhaps a few exceptions, you find a scholar not engaged in study, and the time will not be long before you will see him engaged in some mischievous operation, amusing himself at his own expense, perhaps that of others. It needs no great dexterity to attract the attention of the whole school. Then let me entreat you to be cautious; that as you would insure the happiness and comfort of your teacher—as you would gain his respect and esteem—as you would have him speak well of you, whenever or wherever your name may be called in question, that you treat him with all due respect and deference. Then I am certain that as you respect him, you will also be obedient to him,—that you will do all his bididings when consistent and practicable.

Let me say in conclusion, that in general, such scholars, when going home at night, are not only gentlemanly in appearance; but they are seen with books under their arms, indicating that their leisure hours, and evenings especially, are not wasted in idleness and vain recreation; and instead of resorting to the company of the vicious and profane, they are treasuring up knowledge which "neither moth nor rust doth corrupt, nor thieves break through and steal." A. H. B.

Murray, N. Y., 1864.

A man's genius is always in the beginning of life, as much unknown to himself as to others—and it is only after frequent trials, attended with success, that he dares to think himself equal to the undertakings in which those who have succeeded, have fixed the admiration of mankind.—*Hume.*

If you have great talents, industry will improve them; if moderate abilities, industry will supply their deficiencies. Nothing is denied to well directed labor; nothing is ever to be attained without it.

JOHN PIERPONT.

The Rev. John Pierpont, whose portrait accompanies this sketch, was born at Litchfield, Conn., on the 6th of April, 1785. His great-grandfather, the Rev. James Pierpont, was one of the original founders of Yale College, at which institution the subject of this memoir graduated in the year 1804. After graduating, Mr. Pierpont devoted himself to teaching for several years; and from 1805 to 1809 was private tutor in the family of Col. William Alston of Charleston, South Carolina, where he had ample opportunity to witness the practical workings of the institution of slavery, and imbibed that deep aversion for the same which has distinguished his subsequent career.

After Mr. Pierpont's return home from the south, he entered the law school at Litchfield, and having there completed his legal studies, he was admitted to the bar and commenced the practice of the profession at Newburyport, Mass. But soon after, having abandoned legal pursuits, he entered upon a mercantile career, and resided a few years at Baltimore.

In trade, however, as in the law, John Pierpont was out of his element; so making another and a final shift, he entered on the study of Theology at Harvard University; and after being a member of the Divinity School for a year, he was ordained and settled as pastor over the Hollis Street Unitarian Church in Boston in 1819, which position he continued to hold until he voluntarily withdrew in 1845.

Pierpont is a fearless reformer, and scruples not to condemn with unmitigated severity whatever he deems to be wrong. Among the members of the Hollis Street Church and society were men of wealth and influence engaged in the manufacture and sale of inloxicating liquors. Their pastor's chastisements from the pulpit excited their enmity, and for seven years a very bitter spirit of opposition was kept up against him, but he maintained his ground, and defied their wrath. At length, after letting the world see that he could not be crushed, he sent in his resignation, and was the same year called to the pastorship of the First Unitarian Church in Troy, where he remained about four years, and then removed to Medford near Boston, at which place he still resides in the exercise of his sacred calling.

We cannot more appropriately close our memoir than with the following remarks from the able pen of a contemporary:

"The Rev. John Pierpont, is a man on whose shoulders the mantle of true genius has fallen. His pen is never elegantly feeble. He never gives you the glitter of fine words for the gold of pure thought. He does not cringe and creep, and bow and lisp like a literary fop, but like a brave, honest, earnest man, as he is, speaks the sentiments that are born in his soul. He is an artist, who thinks the picture of more consequence than the frame. He will not spoil a good thought for the purpose of saying a good thing. He loves nature more than he fears the critic, and never commits infanticide on his ideas, at their birth, for fear that they should hereafter be murdered by some hypercritical reviewer. The themes selected by him are congenial to his heart. Is there a temple to be dedicated to the service of God, his muse, with harp in hand, stands between the porch and the altar. Is there a monument to be erected over the dust of departed heroes, he there builds a pyramid of verse that will stand when the stones shall have fallen in decay. Is there a crisis in the cause of reform, when the great heart of humanity must speak or break, his words are its throbs, his songs its sentiments.

Pierpont is emphatically the Temperance poet. See him standing in that magnificent music hall, reading his poem before the members of the Mercantile Library Society. He is straight as a palm-tree fanned by the "airs of Palestine"—his snow-white hair looks like a halo of glory about his head, and the rosy glow of health upon his face shows that his heart can never grow old. Few men of years (he is now nearly seventy) have been young so long as he; few men of his age are so young as he is now."

"Act considerately," is the practical version of "know thyself."

[Written for Moore's Rural New-Yorker.]

BENJ. FRANKLIN:— PRINTERS' BANQUET.

BY PROF. DEWEY.

The late Printers' Banquet, in our own city, in honor of Franklin, excites anew the attention to the history of this wonderful man.—For, he *was* a wonderful man in various respects, and it was appropriate for the Printers' of our city to hold a festival in regard to the memory of this Printer, who was distinguished by his strong common sense; his power of reasoning and facility in composition; for his literary, political, and philosophical writings; for diplomatic talents and success; and for the fascinating influence of his simplicity of character, frankness of manner, unvarying firmness of purpose, and unaffected wisdom and philanthropy.

Scarcely any man of that period, in Europe, was known to exert his powers with such uniform success, in so many and so different departments of knowledge. Certainly no man was so distinguished a favorite among all classes of men, as kings and courts, lords and ladies, mechanics and philosophers, literary men and legislators, the laborers and the poor. One reason for this is found in that *utilitarianism*, which predominates in all his writings and all his works. He labored to advance the interests and promote the elevation and happiness of his fellow men. Take his maxims in *Poor Richard's Almanac*, as the evidence, and then add to this view all his writings on philosophy and economy, legislation and freedom, and his plans for public improvement by schools, libraries, and loan of money to the industrious poor. And another reason starts up, viz., the practical application of his wisdom, for the practicability of his principles was ever prominent. Hence it was said of him, that he was more extensively known than any wise man of his age. The great discoveries of even Newton could not be so generally understood, as they required talents of a peculiar kind to apprehend them, and to carry out their application to practical effects, so that the world is only entering upon the knowledge of the results. Franklin's wisdom can be applied by the common mind, and its results enjoyed by the common people. The erection of the lightning rod is the simple and common illustration of his practical wisdom, and is characteristic of all his philosophy.

The simplicity of his presentation of his most important thoughts and conclusions, is most admirable. He never seems to estimate them highly or to anticipate any renown from them. He treats subjects as if any person, whose investigations should be turned in that direction, must think, and see, and write, and develop the same things. He never dwells upon or magnifies their importance or utility. Offering them in his peculiar, clear, and direct style, he leaves them to work out their results on the minds of men.

His language was simple and colloquial, abounding in Anglo-Saxon words. This was true at least till he had long passed the middle of his life, and had familiarized himself with the higher and more highly educated ranks of men. Even then, indeed, he preserved much of Anglo-Saxon plainness. It must be conceded that his style gave his writings great power, in the way of ease of comprehension. Though the words from the Latin and Greek give dignity to style, and enhance the beauty of our language, and ever abound in the higher efforts of eloquence, they do not bring the thoughts into so full contact with the general mind. The Anglo-Saxon is especially fitted for the colloquial manner and simplicity of expression, though not for great eloquence.—Hence it was, perhaps, that he was a pertinent and pointed speaker, but not an eloquent one. What he uttered was often of great power, but it was power of the thing, and simplicity of language, not of rhetorical energy. He either found the lightning ready formed for use, or he poured it into the subject. Franklin's speech in the Convention which formed the Constitution of the United States, at the conclusion of the debates upon it, and immediately after which that instrument was adopted by all the members, was of this Anglo-Saxon character. With all its plainness, it contained a powerful argument for the adoption of the Constitution.

The Anglo-Saxon of Franklin is prominent in his letter to Mr. Strahan, a copy of which follows:

Philadelphia, July 5th, 1775.

Mr. Strahan, —

You are a Member of Parliament, and one of that Majority which has doomed my country to destruction,—You have begun to burn our Towns, and murder our People.—Look upon your Hands!—They are stained with the blood of your Relations!—You and I were long Friends:—You are now my Enemy, —and, I am, yours, B. Franklin.

This letter has very few words from the Latin tongue, and none from Greek, and is full of spirit and force. A people of such spirit and energy must be victors.

Franklin was deeply impressed with the belief of the presence, power, and goodness of the Divine Being, and of his obligations to be virtuous, to be like Him and to secure His favor. In the prayers which he used for a considerable time, are expressions to show his dependence upon God for the aid to form and preserve his heart in virtuous action. Take the petitions, "Increase in me that wisdom which discovers my truest interest: strengthen my resolution to perform what that wisdom dictates;" or these, "Save me from folly, vanity and vice, from every low pursuit: fill my soul with knowledge, conscious peace, and virtue pure." He made too, a list of thirteen virtues, as, temperance, frugality, industry, sincerity, justice, chastity, all which he made positive and extensive, and the first and last of these he designed to carry out in their full extent, and became a distinguished example of their power. Had he only adopted the Christian faith, he would have been considered the best of men, as he was actually one of the most philanthropic.

He was usually a listener, and not a speaker, for he adopted "silence" in the class of virtues. In familiar conversation with friends, without the forms of social intercourse, his colloquial powers are said to have been fascinating and commanding. Hence, he was the favorite of men of science, literature, taste, and ethics. There must have been a mighty charm about him, when a philosopher so destitute of principle and so full of vanity and egotism as Voltaire, should have been delighted with his society.

It is not wonderful that Franklin should have been lauded with the highest commendations after his death. He was styled an "honor to human nature," by one author; by others, "a citizen of the world," "a friend to all men, and an enemy to none."

Franklin was born Jan. 17th, 1706, and his death occurred on April 17th, 1790. Consult the "Life and Writings of Benjamin Franklin," in two volumes, Philadelphia, 1834.

PERSEVERANCE OF WATT.

A young man, (says Sir R. Kane,) wanting to sell spectacles in London, petitions the corporation to allow him to open a little shop, without paying the fees of freedom, and he is refused. He goes to Glasgow, and the corporation refuse him there. He makes acquaintance with some members of the university, who find him very intelligent, and permit him to open his shop within their walls. He does not sell spectacles and magic lanterns enough to occupy all his time; he occupies himself at intervals in taking asunder and re-making all the machines he can come at. He finds there are hooks on mechanics written in foreign languages; he borrows a dictionary, and learns those languages to read those books. The university people wander at him, and are fond of dropping into his little room in the evenings, to tell him what they are doing, and to look at the queer instruments he constructs. A machine in the university collection wants repairing, and he is employed. He makes it a new machine. The steam engine is constructed; and the giant mind of Watt stands out before the world—the author of the industrial supremacy of this country, the herald of a new force of civilization. But was Watt educated? Where was he educated? At his own workshop, in the best manner. Watt learned Latin when he wanted it for his business. He learned French and German; but these things were means, not ends. He used them to promote his engineering plans, as he used lathes and levers.

VASTNESS OF THE UNIVERSE.

Prof. Hitchcock in one of his scientific works, aptly illustrates the vastness of the universe. Light, although apparently visible instantaneously, really requires an appreciable time to travel. A flash of lightning occurring on earth would not be visible on the moon till a second and a quarter after; on the sun until eight minutes; at the planet Jupiter till 52 minutes; on Uranus till two hours; on Neptune till four hours; on the star of Vega, of the first magnitude, till 45 years; on a star of the eighth magnitude, till 180 years; and stars of the twelfth magnitude, till 1,000 years—and stars of this magnitude are visible through telescopes—so that this flash of lightning would not reach the remotest heavenly body till more than 6,000 years—a period equal to that which has elapsed since man's creation.

Sunday Reading.

FAME.

This is a translation of one of the most perfect of the lyrics of Schiller, and so well done that it loses little by transfer into our language. There is a thought in every line:

What shall I do feel life in silence pass?
And if I do,
And never prompt the-bray of noisy brass,
What need'st thou rue?
Remember, aye the ocean deeps are mute;
The shallows roar;
Worth is the ocean—fame is but the fruit
Along the shore.

What shall I do to be forever known?
Thy duty ever.
This did full many who yet slept unknown—
O! never, never!
Think'st thou, perchance, that they remain unknown
Whom *thou* know'st not?
By angel trumps in heaven their praise is blown,
Divine their lot.

What shall I do to gain Eternal life?
Discharge aright
The simple dues with which each day is rife:
Yea, with thy might.
Ere perfect scheme of action thou devise
Will life be fled,
While he, who ever acts as conscience cries,
Shall live, though dead.

NO SABBATH.

In a "Prize Essay on the Sabbath," written by a journeyman printer in Scotland, there occurs the following passage:

"Yoke-fellow! think how the abstraction of the Sabbath would hopelessly enslave the working classes, with whom we are identified. Think of labor thus going on in one monotonous and continuous and eternal cycle—limbs forever on the rack, the fingers forever plying, the eyeballs forever straining, the brow forever sweating, the feet forever plodding, the brain forever throbbing, the shoulders forever drooping, the loins forever aching, and the restless mind forever scheming.

'Think of the beauty it would efface; of the merry-heartedness it would extinguish; of the giant strength it would tame; of the resources of nature that it would exhaust; of the aspiration it would crush; of the sickness it would breed; of the projects it would wreck; of the grooms it would extort; of the lives it would immolate; and of the cheerless graves that it would prematurely dig! See them, toiling and moiling, sweating and fretting, grinding and hewing, weaving and spinning, sowing and gathering, mowing and reaping, razing and building, digging and planting, unloading and storing, striving and struggling—in the garden and in the field, in the granary and in the mill, in the warehouse and in the shop, on the mountain and in the ditch, on the roadside and in the wood, in the city and in the country, on the sea and on the shore, on the earth, in days of brightness and of gloom. What a sad picture would the world present if we had no Sabbath!"

DENYING OUR LORD.

It is a fatal mistake to suppose that there can be no apostasy from Christ, where we are not absolutely called on to deny his name, or to burn an incense to an idol. We deny our Lord whenever, like Demas, we, through love of this present world, forsake the way pointed out to us. We deny our Lord whenever we lend the sanction of our countenance, our praise, or even our silence, to measures or opinions which may be popular or fashionable, but which we ourselves believe to be sinful in themselves or tending to sin. We deny our Lord whenever we forsake a good man in affliction, and refuse to give countenance, encouragement, and support to those who, for God's sake, and for the faithful discharge of their duty, are exposed to persecution and slander.—*Bishop Heber.*

Original Christianity.—Monks shut up in cells; a priesthood cut off by celibacy from the sympathies and most interesting relations of life; and universities enslaved to a scholastic logic, and taught to place wisdom in verbal subtilties and unintelligible definitions—these took Christianity into their keeping; and at their chilling touch, this generous religion, so full of life and affection, became a dry, frigid, abstract system. Christianity, as it came from their hands, and as it has been transmitted by a majority of Protestant divines, reminds us of the human form, compressed by swathing bands, until every joint is rigid, every movement constrained, and almost all the beauty and grace of nature obliterated.—*Dr. Channing.*

Bright and Gloomy Hours.—Ah! this beautiful world. Indeed, I know not what to think of it. Sometimes it is all gladness and sunshine, and heaven itself is not far off. And then it changes suddenly and is dark and sorrowful, and the clouds shut out the sky. In the lives of the saddest of us there are bright days like this, when we feel as if we could take the great world in our arms. Then come the gloomy hours, when the fire will neither burn in our hearts nor on our hearths; and all without and within is dismal, cold and dark. Believe me, every heart has its secret sorrows, which the world knows not; and oftentimes we call a man cold when he is only sad. —*Longfellow.*

By seeming to countenance vice in others, we insensibly countenance it in ourselves; for there is a subtle and almost mysterious sophistry which she employs as her chief agent in pacifying mutinies of conscience and seducing reason from her vigilance.

A look into Eternity.—When Summerfield was on his death-bed, he exclaimed, "Oh, if I might be raised again, how could I preach! I could preach as I have never preached before; I have had a look into eternity!"

Miscellaneous.

EMOLUMENTS.

BY WM. R. E. KNOWLES.

All honors, whether of the camp or hall,
Are won by toil. Yet up the steep ascent
We climb with weary feet, and find that all
Our hopes are dimmed with doubt and discontent.

There is no smoothen'd pathway here to fame,
No path to glory with an open door,
And he who strives for either, finds the same
Impediments that checked those gone before.

And many more have started, and turned back
Again, than winners in the life-long race;
Whose feet grew weary as they pressed the track,
Rugged and rough, with dangers face to face.

The youthful toiler at my side feels none
Of this. He longs for glory and a name;
And shrinks not, though his task has first begun,
In climbing up the steep ascent for fame.

And to his sight, from out the distance streams
A glory-light, like that of many fires,
And a strong feeling, deep within him, seems
To raise him up to all that he aspires.

A golden halo wraps his form in light,
And floats around him like an atmosphere;
And guardian angels pass before his sight,
And beckon on to higher flights from here.

How thrills his heart—how quick its pulses beat,
As up the rugged pathway he ascends,
And sees the golden-pointed turrets meet
The skies of fame—at which his journey ends.

Then from the distant altitude surveys
The slow ascent of pilgrims toiling there;
And, like a stoic, calmly feels that days
Are few, since he too toiled up stair by stair.

And yet it was for no emoluments,
Like hero-tributes of the camp and field,
That bore him on, through doubt and discontents,
To heights unknown and oft-times unrevealed.

'Twas but the humble wish to rise above
These earthly aspirations and desires;
And teach the heart the worth of human love,
Which longs for sympathy as it aspires.

[Written for Moore's Rural New-Yorker.]

LIFE'S PAGE.

What shall we write on the page of life? It is spread out before us in the glorious hours of childhood, blank, pure, and unsullied, ready to receive any impression which we may make upon it. Our words and actions, in time, are indelibly stamped upon it, and our thoughts live and sparkle on its glowing surface. Each day of our existence is but a page, or a leaf it may be, of the great book of life, in which we are all writing. If at times we would but pause and read what has been so truthfully written,—how would the heart be saddened, yet chastened and purified in its desires by the bitter regret of blighted hopes. The living and immortal mind linked to infinity of tho't, would recoil from error so clearly seen, and be nerved to great exertions in the accomplishment of good. The affections tainted and poisoned by the miasma of envy and hatred, would be purified and warmed into a holy and sympathetic feeling.

Yet each line traced is not a source of painful emotion, nor each page but the reflection of sorrow. There are many beautified with excellence and adorned with virtue; many glowing with innocent pleasure and unaffected simplicity. In this book of remembrance, on a page simple and chaste, is traced an incident of child-life.

It was a calm, still evening. Beneath the shade of an elm, venerable and hoary in time, were seated two youthful forms. They were children on whose sweet and cheerful countenances beamed the expression of love, of tender and mutual affection. Though scarce twelve summers of activity had given the rich hues of health to the features of the boy, yet his noble form and manly dignity, thus early evinced, contrasted finely with the light and graceful figure—the simple modesty of his sister, two years younger than himself, sitting by his side.

"Sister," said he, looking with pride and tender regard upon her beaming and intelligent countenance, "Sister, do you feel the soft air fanning your cheek and tossing the curls of your hair,—and do you breathe the sweet fragrance of the flowers from the garden bower? Do you hear the song of the nightingale, soft and musically low, thrilling sweetly on the ear, singing its last good-night? See the moon sailing through yonder fleecy clouds, and at intervals sending down silvery rays upon us—even now upon your little face, as you look at it. How beautiful! See the stars scattered all over the sky, as flowers on your little flower-bed. How they twinkle! How brilliant in beauty!" Thus did the child-boy teach his little sister.

His mother had taught him these lessons, had inspired his infant mind with a love of nature's gifts, and opened his heart to the beautiful and good. So he taught his sister to be good and to love the works of nature, to listen to the songs of birds, to the gentle flow of the brooklet as the dying cadence of melody; to gaze upon the lambent clouds as the shining robes of heaven, and the stars as the gems set in the diadem of creation.

But years have passed away, and the cycles of time have unceasingly rolled around. Shall we, fair friend, look in again upon those two young creatures? You hesitate, as if fearing that the innocence and beauty of early childhood had fled, and left no trace of what once was so amiable and admirable. But pause not at fancied shadows of ill, and despond not over sorrow's existing only in the imagination. Let us then, after an interval of ten years has passed away, look again at those interesting beings. Let us see if the promised anticipations of youth have been realized. Clouds that have so long veiled the past, concealing its changes and incidents, roll away and disclose to us the life and destiny of those fair young creatures.—Ah! do you see the noble form, the dignified and manly appearance of that young man?—A generous and magnanimous nature is traced on his countenance, and the very element of goodness and kindness beams from his bright eye. And the young woman by his side, how lovely she is in her unadorned beauty,—in the sweetness of unstudied grace, and the simple modesty of every virtue. As children, they were revealed to us years ago, on a summer's evening, seated under the shade of an old elm, and listening to the voice of nature, heard in the sweet melody of her wild-wood songsters, in the musical flow of her rivulets, and in the gentle tones of her whispering zephyrs. The vision of youth is realized. The simple beauty and moral worth of childhood-scene is marred by no imperfection. But the rich coloring, the fine pencilings of lovely character, have received a deeper tint and a firmer setting.—The brother has grown up under the sweet and genial influence of a sister's kind regard, which imparts to his sterner nature the more refined and gentle qualities: while the sister has been fostered by the brother's care, and watched over with anxious solicitude.

University of Rochester, Feb., 1854. A. J. E.

AGASSIZ ON THE RACES OF MEN.

Agassiz recently delivered a very able and interesting lecture on the races of men, and we give a brief extract, descriptive of the characteristics of each race:

The first race to be considered is one peculiar to the Arctic regions, a race differing much from any inhabiting the temperate zone, and still more from those of the tropics. This race comprises the Esquimaux of this continent, the Laplanders of Europe, and the Samoyeids of Asia. They are all characterized by a broad face, short in its vertical diameter, a low forehead, and great length of body when compared with the shortness of the legs.

The races of the temperate zones are three. The Mongolians in Asia, the whites in Europe, and the aborigines in America; and it is remarkable, also, that these races occupy the same territories as the faunas previously described. In Asia has been described the terrestial Japanese fauna, insular Japanese fauna, the Chinese fauna, and the fauna of the Caspian regions, intermediate to that of Europe and Asia. Inhabiting precisely the same countries, are the Japanese, Chinese and Turks.

The Indians of North America are a distinct race, (on this point Professor Agassiz disagrees with Dr. Pickering,) differing from the races of the Old World, as the inferior animals of North America differ in species from those of the Old World. It is only within a few years that the animals of North America have been considered not to be identical with those of Europe. The aboriginal Indian race is identical, from the Artic regions to Terra del Fuego, the only difference being one of tribes, not of races. These tribes are divided into an infinite number of small tribes, a fact perfectly in accordance with the distribution of the inferior animals upon this continent.

We have seen that a great mountain chain, extending from the Canadas to Patagonia, connects North and South America, and produces a certain uniformity in their faunas; that their faunas are subdivided into those of the Pampas, and Antilles, the Andes, the Southern States, the Canadas, the table lands west of the States, and those of Oregon and California.—In the same manner the aborigines are subdivided into a large number of small tribes, which are circumscribed within narrow limits. They form no great nations, as do the Chinese Tartars and Japanese of the east.

The Caucasian race is widely distributed and divided into many nations. Those inhabiting the eastern part of Africa, the northern part of Arabia, Mesopotamia, Asia Minor, &c., all constitute different nations with different languages. The Teutonic branch, including the German, Dutch, English, Danish, &c., the Sclavonian branch including the Russians, Poles, &c., each have a nationality and language peculiar to themselves. But they all have a feature in common, viz: a noble expression of the face, above that of all other races, a mirror of the innermost movements of the soul; and it is this branch, also, which is capable of the highest moral culture and the highest degree of civilization.

Africa has one characteristic race, the negro. But the interior of the great desert, Nubia and Abyssinia, have races different from the negro. The Hottentot lives at the south, and the western shores have their peculiar tribes. It was possible, even, during his recent visit to the southern states, to recognize among the negroes those belonging to the several African tribes.

In the East Indies are three distinct species: the Malay, Telinguan, and Negrillo, (like the negro, only dwarfish.) The Australian is a tribe peculiar to that country. The features are those of the negro, but the hair is straight and flowing. The inhabitants of Madagascar are a peculiar tribe, but our information concerning them is scanty. They are not negroes, but resemble more the inhabitants of the Sandwich Islands.

He that is most worthy of fame is often the most careless of it—while the would-be great is ever in fear of losing caste.

A LEAF OF MEMORY LOST.

An old man's memory is a queer place. Indeed, it resembles an old-fashioned garret, full of relics and souvenirs of the past; the rubbish of to-day, but the riches of yesterday.

In conversation yesterday with an old man, who has spent a long and useful life, and with whom it is now Indian summer, we were impressed with a remark he accidentally made.—He had seen the opening of near seventy springs; at first the winters came and went, but by and by unmelted snow-flakes lingered in his hair, and he saw them drifting over the graves of one after another, whose feet with his, had brushed the morning dews together. At last they whitened over his old wife's last resting place—over her who knew him when the shadows fell to the westward, and the day was before them both—who never thought him old, though all the world pronounced him so. Every body said when she died, 'it's a terrible blow to the old man,' and a few did all they could to make him forget, but there was no need of that, 'for,' said he, 'they didn't seem to know where the blow fell, they so deplored—they didn't know *how much I missed somebody to help me remember!*'

Those few words, indeed, contain a world of meaning. He *did* miss *the other leaf* from memory's table. Two pair of eyes had but one rainbow; but one pair beheld it now.—Two hearts had lived over again the past; but one remembered it—and imperfectly now.—Who would have life's little thread extended, 'till he too,' should be compelled to take up the words and say, 'I miss somebody to help me remember?'—*N. Y. Tribune.*

OUR CHANGING CLIMATE.

The following beautiful passage by Washington Irving, might almost make a November day cheerful;—"Here let me say a word in favor of those vicissitudes of our climate which are too often made the subject of exclusive repining. If they annoy us occasionally by changes from hot to cold, from wet to dry, they give us one of the most beautiful climates in the world. They give us the brilliant sunshine of the south of Europe with the fresh verdure of the north. They float our summer sky with clouds of gorgeous tints or fleecy whiteness, and send down cooling showers to refresh the panting earth and keep it green. Our seasons are full of sublimity and beauty. Winter with us has none of its proverbial gloom. It may have its howling winds, and chilling frosts, and whirling snow-storms; but it has also its long intervals of cloudless sunshine, when the snow-clad earth gives redoubled brightness to the day—when at night the stars beam with intensest luster, or the moon floods the whole landscape with her most limpid radiance. And then the joyous outbreak of our spring, bursting at once into leaf and blossom, redundant with vegetation, and vociferous with life! and the splendors of our summer—its morning voluptuousness and evening glory—its airy palaces of sun-lit clouds piled up in a deep azure sky; and its gusts of tempest of almost tropical grandeur, when the forked lightning and the bellowing thunder-volley from the battlements of heaven shake the sultry atmosphere! and the sublime melancholy of our autumn, magnificent in its decay, withering down the pomp and pride of a woodland country, yet reflecting back from its yellow forests the golden serenity of the sky! Truly we may say that in our climate, the heavens declare the glory of God; and the firmament showeth his handiwork. Day unto day uttereth speech, and night unto night showeth knowledge."

CORKING THE JUG.

A correspondent in the Philadelphia Sun, writing from Cohassett, Mass, relates a good anecdote of a physician residing in that place, which he says is a fact, and the best temperance lecture he ever heard. Some thirty years ago, this doctor was addicted to hard drinking, and neglected his professional duties in such an extent, that the people were obliged to send to Boston for a new physician, a younger man, whom they colonized amongst them.—Things went on very well for a time, the old doctor losing patients, and the new doctor finding them. At last this brace of pestles met in the town store, "the old doctor purchasing a jug of rum," and the "young doctor buying a barrel of flour." Some invidious remark of a bystander called forth a sneer from the younger and more flourishing of the two doctors. This was noticed and interpreted by the old one, who with a calm, deliberate air, put the cork into the jug of rum, and turning to the sneering opponent, he said, "I have put the cork into that jug, and I will never take it out again, until I have starved you out of the town of Cohassett." He kept his word, and in about a year from that time he had regained all his old patients and friends, and obliged the young doctor to evacuate, for fear of starving.

ARCHIMEDES.

Archimedes far exceeded all other men of ancient times in mechanical ingenuity. He was familiar with the doctrine of specific gravity, and practically applied it in detecting the fraud of Hiero's jeweler, in debasing the Crown. When Marcellus besieged Syracuse, Archimedes, from the walls of that city, raised out of the water and destroyed the hostile galleys or hurled great stones into and sunk their ships, and by means of mirrors, he so concentrated the rays of the sun, as to burn the fleets of the enemy at a distance. So highly was this man esteemed for his mechanical constructions, that when Syracuse was taken and sacked, his house alone was ordered by Marcellus to be spared! And yet such, at that time, was the disposition of philosophy towards the Mechanic Arts, that Archimedes expressed himself as ashamed of these great works, and it was with difficulty, that he could be persuaded to divert his mind to them, from mere speculations and abstractions. He regarded his great mechanical works as trifles, with which a mathematician was permitted only to amuse himself.

For the Ladies.

HOME.

BY MONTGOMERY.

There is a spot of earth supremely blest,
A dearer, sweeter, than all the rest;
Where man, creation's tyrant, casts aside
His sword and sceptre, pageantry and pride,
While in his softened look benignly blend
The sire, the son, the husband, father, friend.
Here woman reigns; the mother, daughter, wife,
Strews with fresh flowers the narrow way of life;
In the clear heaven of her delightful eye,
An angel guard of loves and graces lie;
Around her knees domestic duties meet,
And fireside pleasures gambol at her feet.
Where shall that land, that spot of earth be found?
Art thou a man? a patriot? look around:
Oh, thou shalt find, howe'er thy footsteps roam,
That land thy country, and that spot thy home.

DON'T TEACH CHILDREN TOO MUCH.

BY MRS. M. W. H.

In Two Numbers.—No. II.

While we deprecate the forcing of the young mind, we should not be careless of the quality of the mental aliment furnished to these little gormandizers. Such is the tendency of an active brain to crave an exciting diet, that it instinctively turns to that kind of reading which most abounds in thrilling incidents. With boys, those characters that display the most adventurous activity, daring, and cunning, whether those qualities are employed in a bad cause or a good one, at once become their heroic models. There is a class of boys, in cities particularly, that are in general smart, active lads, who read little or nothing but dying confessions of criminals, stories of robbers and villains outwitting honest men—Jack Shepard, and kindred publications. Once in a while one of these boys comes out unscalled and becomes a worthy citizen, but for every one who thus escapes, the lives of half a dozen others are recorded in the annals of our prisons.

There are various ways in which children can be taught too much. I do not think it would be right to send them forth into the world, ignorant that dishonesty, crime, rapine and murder exist, but I do think too many *details* of these atrocities are given to the public in the columns of our family newspapers.—Familiarity with these details has a tendency to lessen a natural and wholesome abhorrence of the crimes. It is true there are among the members of the press, some honorable exceptions to this practice, and where they are found, I think such papers should have the preference. The dying speeches of criminals suffering capital punishment, are generally calculated to excite the sympathy, and if any credit is given to their assertions, an excuse (lame it may be, but plausible to the child,) is frequently given for the commission of the crime, and too often a prejudice excited against the authorities by whom they were tried. Is it right to invest criminals with this posthumous fame, when every motive of humanity and justice towards his innocent children prompts us to forget that the guilty father died a felon's death? But while these things are daily read and talked of in families, parents should be constantly guarded and careful that their comments shall be such as to give children proper views. It is not always true that

"*Vice* is a monster of such frightful mien,
That to be *hated* needs but to be seen."

We ourselves sometimes find it difficult to withhold our sympathies from the criminal under peculiar circumstances, and when such cases occur, let us be careful, while we exercise due charity towards human weakness, not to approve *crime*, in our sympathies with the criminal. Children are acute observers, and none can doubt the truth that "the child is father to the man."

Young people, as well as children, may be taught *too much*. In the present "lightning race," in which all are plunged, except those who are content to settle down in the spot their grandfathers occupied, there is decidedly *too much* taught by the ambition of authors to acquire fame, if not riches, by the most startling originality of thought and description. When this originality on which they depend, is employed in detailing in the minutest manner, crimes that we charitably hope exist only in the brain of the writer, or if they do exist, are such that nine-tenths of their readers stand no chance of being exposed to them, the plea of fortifying the mind against contingences, does not appear to me to be a sufficient excuse for the mischief it may do to the majority. I never can read these exaggerated descriptions of human or inhuman depravity, without feeling that the writer's mind has been intensified by familiarity with scenes that approach the nearest to those descriptions. Writers of fiction assume a great responsibility, both in regard to themselves, and the effect their works produce on others; and happy is that individual who can feel that he has never written a line, "that dying he would wish to blot." I can scarcely forgive a "weaver of fancies," who forgets that everything of the kind should possess a wholesome and tangible moral.

A recent No. of the *N. Y. Courier and Enquirer*, contains some well-timed remarks on a recent publication, that I think will apply to all works of the character to which I allude.—The writer says:—"The readers of this book are chiefly young people—precisely that class whose moral health is most dependent on the moral atmosphere they breathe. The virtuous young mind is here carried to places altogether strange to it, and set down amid scenes of which it never before had a conception. Interested by the novelty and unconscious of danger, it speedily grows familiar with the object of its survey. It becomes acquainted with all the vile characters before it, and comes to know their habits of life, modes of speech, turns of thought, and impulses of passion; it listens to their course jests, learns their lewd allusions. For the time, it thoroughly and literally makes their society its society. Now, do we need to go to poetry to learn the effects of growing familiarity with vice—the hating, enduring, pitying, and final embracing? Must we betake ourselves to Scripture, to prove that "Evil communications corrupt good manners?" Is it not a matter of every day observation that vicious companionship contaminates? Does not everybody know that, so far as regards mankind at large, there is no surer way of destroying the perception of moral purity, than to mix freely with corruption? Is not this especially true of the young mind which is in a formative stage, and peculiarly susceptible to every external influence? To believe that youth can make itself familiar with those descriptions, without injury to that delicate sense of right and wrong, and that instinctive feeling of honor and propriety, which form its best safeguard, is to believe that cold will not chill, nor fire burn.

MEN AND WOMEN IN AMERICA.

The ideal of the man of America seems to me to be, purity of intention, decision in will, energy in action, simplicity and gentleness in manner and demeanor. Hence it is that there is a something tender and chivalric in his behavior to woman which is infinitely becoming to him. In every woman he respects his own mother.

In the same way it appeared to me that the ideal of the woman of America, of the woman of the New World, is independence in character, gentleness of demeanor and manner.

The American's ideal of happiness seems to me to be, marriage and home, combined with public activity. To have a wife, his own house and home, his own little piece of land; to take care of these, and to beautify them, at the same time doing some good to the State or to the city—this seems to me to be the object of human life with most men; a journey to Europe to see perfected cities, and—ruins belonging to it, as a desirable episode.

Of the American home I have seen enough and heard enough for me to be able to say that the women have, in general, all the rule there which they wish to have. Woman is the centre and the lawgiver in the homes of the New World, and the American man loves that it should be so. He wishes that his wife should have her own will at home, and he loves to obey it. In proof of this, I have heard the words of a young man quoted: "I hope that my wife will have her own will in the house, and if she has not, I'll make her have it!" I must however say, that in the happy homes in which I lived, I saw the wife equally careful to guide herself by the wishes of her husband as he was to indulge her. Affection and sound reason make all things equal.—*Miss Bremer.*

A MOTHER'S LOVE.

How deep are the fountains of a mother's love! With what tender acts of filial devotion is it manifested to the loved ones of her charge. And when the children of her bosom, over whom she has watched with so much solicitude and care, are removed from her by death, how dear is the wound that is inflicted upon her heart.

We have seen the fond mother watch by the bedside of her prattling child, while its gentle spirit was about to take its flight to the eternal world. Then it was that the last hope of the mother's heart was about to be cut off, and when all that bound her to the gentle being by her side, mingled with the memories of the hour of death. We have seen her after her loved one was no more—when its mortal form was arrayed for its final rest. We have seen her when all was past, in the quiet shades of that home, so recently made joyous by the merry presence of a being that was too pure for earth.

Every fond incident that connected the object of her affections with scenes of earth, were more treasured up in her heart, and fastened indissolubly upon her memory.

Let not the cold-hearted skeptic scorn at this, for it is one of the holiest emotions of which the human heart is susceptible—the uncontaminated devotion of *a mother's love.*

Lady.—The name "lady" is an abbreviation of the Saxon "leofday," which signifies "bread-giver." The mistress of the manor at a time when affluent families resided constantly at their country mansions, was accustomed, once a week or oftener, to distribute among the poor a certain quantity of bread. She bestowed the gift with her own hand, and made the hearts of the needy glad by the soft words and gentle actions which accompanied her benevolence. The widow and the orphan "rose up and called her blessed;" the destitute and afflicted recounted her praises; all classes of the poor embalmed her in their affections as the "leofday," the giver of bread and dispenser of comfort—a sort of ministering spirit in a world of sorrow. Who is lady now?

"He was the sunshine of my soul, and like
A flower, I lived and flourished in his light."

MOORE'S RURAL NEW-YORKER

ROCHESTER, FEBRUARY 18, 1854.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

☞ For a variety of particulars relative to terms, &c., see Publisher's Notices on next page—which answer most of the questions propounded by agents and other friends.

New York Canals.

WILLIAM J. MCALPINE, late State Engineer, has submitted to the Legislature a most able and conclusive report on the subject of the public works, which scatters to the winds the false and unfounded allegations, that the business is decreasing on our state canals. It shows on the other hand the most astounding increase of business from year to year, and demonstrates the absolute necessity of an immediate enlargement of the Erie, and completion of the lateral canals.

The tonnage of the Erie canal from the Western States alone arriving at tide water has been as follows:

In 1840.....	158,148	tons.	
1845.....	304,551	"	Increase, 146,403
1850.....	841,501	"	" ..536,950
1852.....1,151,978		"	" ..310,477
1853.....1,213,690		"	" .. 61,712

The increasing ratio of the business from the Western States, will fully occupy the augmented capacity which can be annually given to the Erie canal by its enlargement and improvement until it is completed.

The report shows by facts and figures, that the Western business of the New York canals is three times as much as that of all the Canadian canals, all the New York railroads, all the Pennsylvania canals and railroads, and the Baltimore and Ohio railroad put together!

It shows that railroads cannot compete with water lines in the carriage of freights; that the Central road brings more business *to the canal* than *it takes from it*; and that the freights of the farmer are principally articles that cannot be carried on the canals at any price, such as milk, live stock, fresh provisions, and other kinds of perishable property, and articles requiring a rapid transit.

The daily freights of the present Erie canal, arriving in the business season at tide water, would require a train of railroad cars *fifteen miles long!*

The War Question.

No important movement of the belligerents has taken place since our last previous advices, unless, indeed, a late but indefinite rumor is true, that ten or fifteen thousand Russians have crossed the Danube.

The peril of a general war is still more threatening than has appeared from anything heretofore received; and even the *London Times*, a paper slow to commit itself upon a point of such importance, says, that if a late declaration of the Czar, transmitted in that paper from Vienna, is authentic, the last hope of peace seems to be excluded. The declaration referred to is to the effect that his (the Czar's) quarrel is, and has been from the beginning, a quarrel with the Porte alone, and he thinks fit to ignore the fact that the continuance of this war, or the conclusion of peace, has become a matter of primary importance between himself and every other great Power. In the same spirit he names as Plenipotentiary, not an envoy, to be sent to a conference in some neutral town, as he had previously offered to the Austrian Government to do, but Prince Gortschakoff, the commander of his forces on the theatre of war. This Plenipotentiary is only to be approached by the suppliant Ottoman Government on two conditions,—the one that no demand laid down by Prince Menschikoff is to be departed from; the other, that the present difference is to be settled between Russia and Turkey alone.

If this statement be true, there can be no course left for the Western Powers to pursue, except either to recede from their position, or to fight.

Lower California.

THE fillibustering movements in Lower California, seem to be successful, Col. WALKER having been proclaimed President, and a Republic organized. The inhabitants are reported to have submitted cheerfully to the new order of things, and to have given in their adhesion to the new Government. A decree has been issued by the President, condemning to death all persons guilty of plundering the property of the friendly inhabitants.

These, and other corresponding statements, are derived, however, from sources favorable to the expeditionists. There is no doubt that if the expedition is thus far successful, and has gained a foothold in the territory, as is altogether probable it has, the whole power of Mexico will be insufficient to drive them away; and we shall soon see the Texas drama re-enacted, to wit, independence of Mexico, a brief but unsuccessful national existence, and then absorption by the United States.

Our Albany Correspondence.

Albany, Feb. 13, 1854.

To say that there have been busy times here for the week past, would be a tame expression. It has been a week of great interest and excitement. First came the MEDICAL SOCIETY—the Doctors in formal convention—to deliberate upon the thousand and one ills which flesh is heir to, together with the means of cure that each required. They represented the various sections of the State, and their proceedings were not only able and orderly, but really interesting and practical. Among the resolutions passed was one in favor of the bill now pending before the Legislature to promote Medical Science. This bill is designed to provide lawful means for physicians to obtain subjects for dissection. Heretofore, they have been forced to steal them, and no small degree of trouble and anxiety has been the result. It proposes to give up the bodies of those who die in the poor houses of our large cities, provided no relative or friend claims them, or the deceased made no request while living to be buried in the usual manner. That there should be some *honest* way by which physicians can learn their profession, is too evident to need any argument; and it is supposed that the present bill removes the objections that generally arise on this subject, and it is surrounded with such safeguards as to make it satisfactory to the public mind. Various committees were designated to investigate particular subjects and report at the next meeting. In this way, much new and valuable information may be obtained, and all receive benefits which without associations of this kind would be enjoyed exclusively by few, if indeed by any.

THE STATE POULTRY EXHIBITION.

Next in order of history, is what is familiarly called here, "the Chicken Convention." Nor is the term wholly inappropriate, for they (the chickens) are remarkably gifted in crowing.—Some of the conservative Albanians (for be it remembered that they inherited a large share of cautiousness from their fathers) had concluded that the exhibition would be a speculative swindle, and were tempted to withdraw their influence entirely; but all now concur in the opinion that it "couldn't be beat." I cannot particularize the many kinds and qualities on exhibition; suffice it to say that the best specimens obtainable in the State were shown, comprising Shanghais, Cochin Chinas, Brahma Pootra, Chittagong, Calcutta, Javas, Hong Kongs, Black Spanish, Derking, Hamburghs, Game, Polish and Bantams. There were also several varieties of geese, pigeons, rabbits, turkeys, Guinea fowls, Pea fowls, ducks, and rat-terrier dogs. The receipts were in the neighborhood of $1,200, and the premiums awarded were about $300.

THE STATE AGRICULTURAL SOCIETY.

Next came the farmers—noble fellows—to look over the Agricultural interests of the State. They brought with them some choice fruit and grains. Some mutton and beef, some pork and poultry, and a good representation of live stock. The display of fruits was choice, but very limited, not at all to be compared to former occasions. The dressed meats were fine, and the live stock were superior. Of course it will not do to compare a winter exhibition with the fall fairs. But the farmers themselves had something to do. After a warm discussion on the place for holding the next State Fair, New York City was agreed upon. The officers for the ensuing year were elected. The President, Mr. KELLY, of Rhinebeck, made a fine *extempore* address on his inauguration. He will make a valuable officer. Notices were given of two amendments to the constitution. One by Mr. STEVENS, of New York, in favor of a permanent place for holding State Fairs, and the other by H. C. WHITE, of Buffalo, to make the President elective by an executive board, consisting of the Presidents of the various County Societies.—The latter is a very desirable change, as it will cement the various societies into one grand State Society, instead of having separate and often antagonistic interests to promote. This measure should be adopted.

The Agricultural College was up for discussion, and good speeches made in favor thereof by Messrs. KING, PATRICK and others, and opposed by Senator DICKINSON. The latter gentleman thought that experience was the best school master. A man don't want to know the chemical properties of milk, for if he wishes to know which is the best cow, let him measure the cream. So in farming, let them try the grain on different lots and see which is the best. But Major PATRICK showed the absurdity of such a practice in so forcible a manner as to entitle him to no small credit. Such a College *is* desirable. Appropriate resolutions were passed to the memory of the late JOHN DELAFIELD, and warm eulogies pronounced upon his life and services.

THE LEGISLATURE.

I must not forget to pay my respects to the Hon. the Legislature. The resolutions of instruction on the Nebraska question were passed by a strong vote. The discussion became quite heated between the "Woollies" and "Silver Grays," but the latter seem to be of small account in this latitude. Farther south they may thrive better. Nebraska and slavery would be a bitter pill for New Yorkers to swallow, however well it might be sugared.

The Maine Law has been referred back to committees to report complete. The Senate committee is the one originally appointed, and of course will bring in nearly the original bill; But the House committee is new, consisting of the following members: SESSIONS, LITTLEJOHN, JOY, MALLORY, LOZIER, MORRIS and STERLING.—It is feared that this committee will not agree. Some think there will be four separate reports. If so, it will become a mixed mess. I think the majority of the committee will consult the Senate committee, and bring in such a report as shall be at once adopted and the bill passed, for there will be other important business to be transacted after election.

The State Engineer has made his report to the Legislature, and it is conceded to ablest document of the session. The Senate voted to print 17,000 copies of it.

The contested seat from New York was considered, but finally laid over till next Friday.

A bill has passed the Senate appropriating $115,000 to bottom out the canal so as to allow the passage of the largest class of boats. The other legislation is unimportant.

To-morrow the Women's Rights Convention is to commence in this place. This will fill up the tedium caused by the absence of the Legislature. Indeed it might be a question whether *two such distinguished bodies should be in session at the same place at the same time.*

The Rev. Dr. ONCKEN, Baptist Missionary to Germany, preached a sermon yesterday, in his native tongue, and administered the ordinance of baptism to nine converted Germans, who are to form the nucleus of a German Baptist Church in this city. The services were very impressive, though the language was entirely foreign. Some things can be understood in any tongue; among them music and prayer. "OWE".

Congressional Proceedings.

Feb. 6.—SENATE.—The Nebraska Bill was debated on the adjournment by Mr. Wade, of Ohio, in opposition to Mr. Jones, of Tenn., in favor, and others, but without definite action.

HOUSE.—In the House, Mr. Olds, from the committee on P. O., reported a bill containing a provision for discontinuing the extra compensation to the Collins steamers, for carrying the mail. Also for annulling other contracts with ocean steamers and purchasing the steamers agreeably to law.

Feb. 7.—SENATE.—Senator Sumner presented a memorial from the Geographical Society of New York, urging the revision of weights and measures by some universal standard.

The bill granting pay and bounty land to Elizabeth Smith, who served in the Mexican war, under the assumed name of Ben Newhouse, was taken up and passed.

The joint committee reported expressing the thanks of Congress to the rescuers of the San Francisco.

Several private bills from the House were taken up and referred.

HOUSE OF REPRESENTATIVES.—The House are engaged in debating the Senate's resolution, regulating the disbursement of the Senate's contingent fund.

Feb. 8.—SENATE.—Several memorials from Quakers and others were presented against the Nebraska Bill. The Nebraska bill was then taken up.

Mr. Everett delivered an eloquent speech against it. Mr. T. Smith got the floor and after the executive session the Senate adjourned. In the House Mr. Cutting asked leave to present the remonstrance of the Tabernacle meeting at New York against the Nebraska Bill. McDonald objected, and Cutting withdrew his motion.

House then went into Com. on the Deficiency Bill.

Feb. 9.—IN SENATE.—Mr. Smith, of Ct., continued the debate on the Nebraska Bill. The Senate confirmed ex-Governor Vroom as Minister to Prussia. Daniel E. Sickles was also confirmed as Secretary of Legation at London.

In the House the Deficiency Bill was brought to a direct vote and rejected. Yeas, 57; nays, 93. A motion to reconsider was subsequently laid on the table by the casting vote of the Speaker, Boyd.

Feb. 10.—SENATE.—Mr. Smith, of Conn., concluded his speech on the Nebraska bill.

The Mexican treaty with recommendations of amendments was sent to the Senate to-day and taken up and referred to the executive session.

Nothing of importance done in the house and both houses adjourned over to Monday.

STEAMBOAT CASUALTIES.—The Steamer America was burned on the Alabama river, on the 29th of January, and fifty lives were lost. It is understood that a gentleman moving west was on board with a large number of negroes. The Steamer Columbus, from Columbus to Apalachicola, with 1,300 bales of cotton, was burned February 3d.

On the next day, (Feb. 4,) a great fire occurred among the shipping at New Orleans, which resulted in the destruction of six steamboats and other property, amounting in the aggregate to a million dollars. Several lives are supposed to have been lost.

FIRES.—A fire occurred in New Orleans, Feb. 5th, which destroyed two valuable stores and other property to the amount of $100,000.

In Toledo, Ohio, Feb. 6th, a boarding house was destroyed by fire, and four persons burned to death. On the same night, four buildings, occupied by fifteen families, in Brooklyn, N. Y., were consumed; and Feb. 7th, a building occupied by several printing establishments in Boston, was also burned.

THE EDINBURG REVIEW, for January, has been received and is for sale by DEWEY, in the Arcade,—who has also BLACKWOOD for the same month, and other reprints of valuable foreign periodicals.

"THE CHILD IN HEAVEN," is the title of a neat little Sabbath-school volume of one hundred and fifty pages, from the pen of the Rev. L. D. DAVIS. DARROW has it for sale.

News Paragraphs.

☞ We learn from the Amherst Express that ten boxes of sculptured alabaster slabs and clay bricks from the ruins of ancient Nineveh, sent by D. Labdel, of the Mosul Mission to Amherst College, have recently arrived. They were brought more than four hundred miles on the backs of camels across Asia Minor, and are a good deal broken, so that a considerable time must elapse before they can be fitted up for examination.

☞ The Albany Evening Journal, whose editor has recently traveled, does not believe in the horrible stories about Austrian cruelty to foreigners. It says:

American travelers who find difficulties in Austria must go out of their way to seek them, for nowhere on the Continent are strangers treated with greater courtesy and kindness than in Austria.

☞ The amount of the stock and securities in the English chancery is about £46,000,000; the annual payments in and out of court, £259,000; the amount of suitors' cash in court, including the balance, £2,500,000. The "Surplus Cash Fund," or "Accumulation Fund," is said to amount to £1,211,188 stock. Some chancery suits have been in court for a hundred years!

☞ The works for the fortification of the harbor of San Francisco, have been commenced on Alcatraz Island and Fort Point. The former position will have 40 heavy guns, the latter 110. Another appropriation is wanted for the completion of the fortifications. The works on Lime Point, opposite Fort Point, have not been commenced.

☞ The omnibuses now running in London number about 3,000, at a cost of £400 per omnibus, making £300,000. Each has two horses; the value of these is £900,000. It has been calculated that the number of persons who annually ride in these conveyances amounts to 300,000,000, an amount equal to one-third the population of the world.

☞ The culture of tobacco in Connecticut is said to be becoming extensive and profitable.—In many of the river towns, tobacco is the principal crop grown. In order to promote its culture, a company has been formed in Hartford, with a capital of $25,000, for the purpose of opening a tobacco inspection warehouse in that city.

☞ A New Park is about to be opened in London. It is to be called the Albert Park.—The estimated cost is £250,000, of which sum the Government is to grant £50,000, the balance to be supplied by the borough, in the shape of an improvement rate, extending over a long period. The park will contain about 400 acres.

☞ The Selma Sentinel says that the number of persons who have emigrated from the State of Alabama since the first of October, has averaged at least 500 a day, and will continue to average that number until spring, making 75,000 inhabitants who have already left or will leave before March.

☞ The Indiana Sentinel says that at least $2,000,000 of the capital of Indiana merchants which would otherwise have gone to Philadelphia, will be diverted to New York or Boston, in consequence of the Erie rints, and the countenance they have received from the city of Brotherly Love.

☞ The Knickerbocker N. Y. Ice Co. have now employed at Rockland Lake over 1000 men, and about 50,000 tons of ice of excellent quality have been harvested. Their houses will hold 120,000 tons. Besides this, they have two other houses at Highland Lake and Rhinebeck, capable of holding 35,000 tons.

☞ The present population of California, is composed of 250,000 Americans, 25,000 Germans, 25,000 French, 17,000 Chinamen, 20,000 of Spanish blood, 5,000 miscellaneous foreigners, 20,000 Indians, and 2,500 Negroes. Of these, about 65,000 are women, and perhaps, 30,000 children.

☞ The clipper ship Chariot of Fame, sailed from Liverpool for Boston, on the 11th of Jan. with a cargo of three thousand tons weight, valued at £100,000. It is said to be the largest and most valuable cargo that has ever been taken from Liverpool to the United States.

☞ Mrs. E. C. Judson, late Baptist missionary, is seriously ill. Her brother, Mr. Chubbuck, who is now visiting her, states that she has been rapidly fading for the past few weeks, and that her physicians have but little hope of her recovery. Her disease, it is feared, is a seated consumption.

☞ A letter from Madrid, of January 12, says:—"It is stated that M. de Turgul, who was wounded in the duel with Mr. Sunle, will be able to get up to-morrow. The ball has not been extracted, and is supposed to be buried in some tendon."

☞ Hook and Ladder Companies Nos. 1, 3 and 4 of the Brooklyn Fire Department have agreed upon a race with their trucks on the Union Race Course at as early a day as the weather will permit, for a purse of $500 a side, with forfeit.

☞ The report of Comptroller Flagg of New York, shows the expenses of the government of New York City for 1853 to be $7,027,740; the receipts during the same period were $8,823,851,17. The present indebtedness of the city $18,080,858.

☞ In 1847, there were scarcely a dozen white inhabitants in St. Paul, Minnesota Territory.—The village now contains 700 houses, and 4,500 inhabitants. The amount of taxable property in 1853 was $901,437. The capital at present invested in business is $825,000.

☞ S. Chipman, Esq., who visited every penitentiary, jail and workhouse in the State of New-York, states that more than five sixths of the persons committed on criminal charges are intemperate.

☞ The Murray river, Australia, is navigable for vessels 1,200 miles from sea. Vessels had ascended that distance, the navigation was perfectly safe, the depth of water varying from 18 to 36 feet.

☞ Clap-boards were originally called "clore-boards" because they were "clroven" out by hand, instead of being made with a saw as other boards. In process of time they were called clabboards, clauboards—clapboards.

☞ The British Admiralty give notice that if nothing definite be heard of Sir John Franklin and his crew before the 31st March next, they will be considered as dead, and their names be struck off the books of the Navy.

☞ The Church of England, by its separate centralized exertions, raises above £400,000 per annum for religious objects, out of which £250,000 is applied to foreign missionary operations.

News Brevities.

——The salary of the Lord Lieutenant of Ireland, is $100,000 a year, and he spends $130,000.

—— It is estimated that about 31,500,000 of the population of the world died in the year 1853.

—— For the past year the taxes in Kingston have been 2s. 10½d in the pound.

—— A nephew of Robert Burns is Free Church minister, at Dundein, in New Zealand.

—— Postage on newspapers in Canada, has been reduced to half a cent, when pre-paid.

—— The Scotch are about to contribute largely to send a million of Bibles to China.

—— It costs half a million of dollars a year to keep St. Peter's church, at Rome, in repair.

—— George Lippard, the author, died at Philadelphia on Thursday morning, the 9th inst.

—— The cotton factory at Memphis, Tenn., was recently sold by the Sheriff for $35,000.—It originally cost over $100,000.

—— The contractor on the Mobile and Ohio Railroad, at Columbus, Ky., has stopped work on account of the high price of labor.

—— A ship is daily expected to arrive at Panama from China, with a cargo of Chinese laborers for the Panama Railroad.

—— A new Post Office called "South Lima," T. S. De Forest, Post Master, has been established in that town.

—— "Uncle Tom" has been introduced into Athens under the gentlemanly title of "Omparpas Thomas."

—— Cantenacci, who revealed the late plot at Rome, died recently, after an ineffectual attempt to destroy himself.

—— Wm. Pitt Fessenden, Whig, has been elected U. S. Senator for six years by the Legislature of Maine.

—— The Buffalo Republic says Lake Erie and Buffalo Creek have both got a pretty thorough freeze up at present.

—— Pumpkin pie is announced at one of the Paris restaurants as a "speciality" for Americans.

—— A telescope which is to cost $1,800 has been ordered for Amherst College. It is to be the gift of Rufus Bullock, of Royalston.

—— The Niagara river is frozen at Tonawanda to Grand Island shore, a circumstance which has not occurred for thirty years.

—— The city of Detroit expended $1,700 in celebrating the opening of the Great Western railway.

—— James Haley, an Irishman, 20 years of age, died in New York on Monday week, from the effects of wrestling. He fractured his spine.

—— The Senate of Maine has elected Mr. Crosby, whig, Governor of the State. The vote stood Crosby 16; Morrill, Dem. 15.

—— There have already appeared in France 437 almanacs for 1854, each one averaging 10,000 copies.

—— The lectures at the Copenhagen University will henceforth be delivered in the Danish, instead of, as hitherto, in the Latin tongue.

—— The Hindoo law says, "Strike not, even with a blossom, thy wife, though she be guilty of a thousand faults."

——The capital engaged in the Australian trade has been estimated, by competent persons, at £20,000,000.

—— Fanny Kemble Butler, it is stated, is to return to this country in the spring, to resume her residence at Lenox, Mass.

—— Twenty-eight hundred and sixty dozen Quails have been sent from Milwaukie to the New York market this winter.

—— A bill has passed the Legislature of Tenn. for the election by the people, of Judges and Attorney General.

—— It is estimated that the estate left by the late Thomas H. Perkins, of Boston, will amount to $1,600,000.

—— A French publication says Josephine's mantua-maker's bill for the first ten months of 1806, was the snug little sum of $35,000!

—— The House of Representatives of Georgia have passed a bill for removing the seat of government from Milledgeville to Macon. The Speaker gave the casting vote.

—— G. R. Lewis, Esq., of New London, has bequeathed to the Board of Missions of the Protestant Episcopal Church, the sum of $6,000.

—— A deputation from the Society of Friends has just left England for St. Petersburg, to endeavor to induce the Czar to come to terms with Turkey.

——Six hundred and ninety individuals have been appointed Justices of the Peace in the city of Boston. "Returning justice lifts aloft her scale!"

—— It is stated that arrangements have been made and vessels chartered for carrying no less than 182 emigrants to Liberia, from different points of the country during the current year.

—— An Indiana paper says that of the one hundred and ten newspapers published in the State, all except ten advocate the prohibitory liquor law.

—— The importation of grain and flour at Havre during the five months ending with Dec. 31, was the amount of 110,000,000 pounds—coming for the most part from the United States.

——The North Adams Sentinel says there were born in that village, on the 24th ult., twin sons to Peter Miller, senior, being his 20th and 21st children.

—— It is estimated, says the Buffalo Daily Courier, that there are now on the stocks and under way, in that city, vessels whose tonnage will exceed fifteen thousand tons.

—— Two hundred and sixty-four cars, containing 1,056 tons of produce, were despatched from Pittsburgh, on Monday, February 6, for Philadelphia.

—— One million two hundred and thirty thousand letters passed through the N. Y. Post Office on Saturday, Jan. 21. It is said to be the largest number known to have been received in one day.

—— The female authors of England are all apparently very busy just now, for new books are announced in preparation from the pens of Miss Milford, Mrs. Gore, Mrs. Trollope and Miss Pardue.

—— The Atlantic Insurance Company, of New York have given Captain McKay a check for eighty thousand dollars, on account of the Great Republic. It was the largest sum ever paid for a loss by the company.

—— A Jeremy Diddler in Philadelphia diddled a pawnbroker out of thirty dollars, by leaving six dozen champagne bottles, filled with water from the Delaware, and neatly packed in baskets, in pawn for that amount of the liquor.

Foreign Intelligence.

Arrival of the Steamer Pacific.

The steamer Pacific from Liverpool, Wednesday, 25th, arrived at New York, Feb. 9th.

The Africa arrived at Liverpool at ¼ before 6 on the evening of Monday, 23d ult.

The ship Ontario brings the rescued from the wreck of the San Francisco,—Capt. Watkins and other officers, 147 troops, and 19 women and children.

The splendid new iron emigrant ship Tayleur, from Liverpool, 19th ult., for Melbourne, struck and sank in Dublin Bay. Four hundred lives were lost.

Several other casualities have also occurred along the Irish coast.

The news may be briefly summed up.

No official reply from the Czar.

No abatement of actual hostilities, and preparations for an attack, but no further battles reported either on the Danube or in Asia.

The very latest on the morning of the Pacific's sailing says, on authority of the Times, that the Czar has not proceeded to extreme measures, on learning of the entry of the allies into the Black Sea.

The allied fleets were last seen steering for Batoum, with a fair wind. The Russian fleet is also at sea.

It is telegraphed from Vienna, that it has transpired that the Czar's final reply will be a contemptuous refusal of the Vienna note; also, referring Turkey to Gortschakoff for further particulars, and insisting positively, that he will not give up one jot of Menschikoff's first demand.

There has been considerable movements along the Danube, but no further battles.

The English people, seeing the imminence of war, appear to have made up their minds to the necessity, and quietly accept it.

Mr. Mason, Minister to France, has presented his credentials.

LATEST BY TELEGRAPH.

LONDON, Jan. 25.—The Time's Paris correspondent writes that the Emperor of Russia's reply, though not couched in very strong language, and demanding explanations, is of such a character as leaves little hope of a change in the Emperor's mind.

It is stated that the popular excitement at St. Petersburgh is indescribable, and the French government anticipates that an explosion of such a kind may take place, as shall force the Emperor to make a formal declaration of war before either of his plans are arranged. It is believed that 10,000 or 15,000 Russians have crossed the Danube.

There was a rumor that a despatch had been received from St. Petersburgh, announcing the resignation of Nesselrope, and its acceptance by the Emperor.

The clipper ship Red Jacket arrived in the Mersey on Wednesday, in 13 days from New York.

Trade in India dull.

LIVERPOOL, BREADSTUFFS.—A further advance of 1s on flour, 3d.a6d. on wheat, and 1s.a2s. on Indian corn was generally demanded, but the transactions at these rates were unimportant.

Richardson & Bro.'s report prime qualities of Baltimore and Philadelphia flour realized 43s6d. a15s. ex-ship and warehouse, but holders were not offering freely.

Robert Makin & Sons give prices current:—U. S. white wheat 12s10d.a13s1d.; mixed and red 12s.a12s6d.; western canal flour 43s6d.a44s.; Philadelphia and Baltimore 44a45s.; Ohio and New Orleans 44sa45s.; white U. S. Indian corn 49a52s.; yellow 50a51s.

LIVERPOOL PROVISIONS.—Jas. McHenry reports. Bacon continued in good demand, but a decline of 1s.a2s was yielded to clear parcels ex-ship.—Not much demand in beef and pork, buyers resisting high prices.

Cheese scarce and wanted. Lard continued steady at full rates.

Arrival of the Africa.

NEW YORK, Feb. 14.—The Africa arrived at this port this afternoon with foreign dates to the 28th ult. No news to change the aspect of European affairs since the sailing of the Pacific.

Breadstuffs are duller, and the provision market tending downward slightly from previous quotations.

CONSUMPTION OF WOOD BY LOCOMOTIVES.—The consumption of wood by the locomotives on the Michigan Central and Southern roads, between Chicago and Niles, and South Bend, is estimated at 30,000 cords within the past year. The Rock Island and some other Illinois roads are dependent on Michigan and Indiana for wood, and get it by running their wood trains over the Michigan roads. The present prices of wood in Chicago are:—Hickory, $6,50 to $7; beech and maple, $5,50 to $6; oak, $1,50 to $5. This is nearly as dear as it is in Albany, N. Y. Before the introduction of railroads, hickory could be purchased in Michigan for $1,50 per cord.

AN ARCTIC TEETOTALER.—Captain M'Clure, while making the north-west passage, had an interview at Point Warren with a tribe of Arctic Indians, whose chief gave as a reason why he went a great distance to trade with the Esquimaux, instead of trading with the ports on Mackenzie's river, that the white rum there had given the Indians *very bad water*, which killed many and made others foolish, and they would not have any such water.

FORMIDABLE DEFENCES.—Near New London, Ct., is a long rope-walk stretching across the harbor. In the war of 1812 a British Admiral cruised off New London. He could easily have entered and burned the town, and some time after was asked why he did not. He replied that he should have done it, had it not been for the formidable long fort whose guns entirely commanded the harbor. What alarmed him was the window holes of the old rope-walk.

☞ It is determined to commence a magnificent Roman Catholic Cathedral in New York, next spring, which shall be larger than any church edifice in this country. The building will be 350 feet in depth, by 105 in breadth, and will be surmounted by an immense dome, having a diameter of 104 feet. There will also be two lofty towers. The height of the nave will be 102 feet. The materials to be used are almost wholly stone and iron. The building will contain sixteen chapels and three organs, one of which will be of great size.

☞ A man having lately lost a package of money in Auburn, amounting to $2,500, had it returned to him by a laborer who found it. The owner actually gave the man seventeen cents for his trouble.

California News.

Arrival of the Daniel Webster.

The steamship Daniel Webster from San Juan Nicaragua, arrived at New Orleans, Feb. 6.

She brings dates from California to the 15th January, one hundred and twenty passengers, and $13,500 specie on freight.

The passage from San Francisco has occupied only twenty and a half days.

The San Francisco markets continued overstocked, and were heavy and prices depressed. Flour of good brands was selling at $11@$12; Lumber at $60, with a limited demand.

There had been no rain, which was much wanted, and very little gold was consequently coming in.

The steamship Sierra Nevada connected with the Daniel Webster, and brought down $1,000,000 in gold.

Arrival of the Star of the West.

The steamer Star of the West arrived at New York Feb. 9, from San Juan, with 800 passengers and $750,000 in gold.

She brings news from California to the afternoon of Jan. 16.

The Governor in his message states that the amount of the State debt is upwards of three million dollars.

Latest advices from the Sandwich Islands are to Dec. 24th.

Arrival of the George Law.

The steamer George Law arrived at New York, Feb. 10, from Aspinwall with 300 passengers and $800,000 in treasure on freight.—She connected at the Isthmus with the John L. Stephens, which sailed from San Francisco on the evening of the 16th with the mails and $1,000,000 in gold.

The ship "Jenny W. Paine" arrived at Panama on the 17th in 111 days from New York, with crew in a state of mutiny, 8 of which had been arrested and placed in irons.

The British steamer Lima arrived at Panama on the 17th with Valparaiso dates to Dec. 31st, and Callao to Jan. 12th. The market was dull and money tight. Flour $7,50 to $7 75 per bag of two quintals. No news from Bolivia.

From Peru we learn that Domingo Elias had been defeated, with 800 men, by the government troops near Yeca, and was now a fugitive.

The English ship Cambodia of 1,140 tons, from Callao for England with a cargo of guano, sunk on the night of Jan. 7th, 600 miles from Callao. The crew were saved.

Two severe shocks of earthquakes were felt at Lima, on the 12th of Jan.

The U. S. frigate St. Lawrence was at Callao.

Dates from Melbourne, Australia, are to Dec. 12th. Provisions were plenty except flour which was selling at $60 per bag. Gold at the mines was quoted at £3 15s. 3d at Melbourne, with an upward tendency.

The steamer Great Britain was to sail for Liverpool Dec. 3d. The clipper Fly Away from New York, Aug. 20th, arrived at Melbourne, Nov. 11th.

Marriages.

In Rush, on the 8th inst., by Rev. A. W. Valentine, A. D. WEBSTER, of West Henrietta, and CORNELIA JEFFORDS, of Rush.

Commercial.

BUSINESS AND FINANCE.

THE exportation of specie has become so small at present as to form an item of no account in money transactions.—One of the out-going steamers the past week, took no specie at all, and the other only a few thousand dollars.—American railway and other securities, however, are being purchased largely on foreign account, and some four hundred thousand dollars worth, the *Tribune* says, has thus been bought up within a few days. These transactions, although they tend to hold in check the outward movement of specie for the time, will accelerate it hereafter when dividend and redemption days come round.

Three California steamers have arrived since our last financial report; the Daniel Webster, at New Orleans, Feb. 6, having on board $13,000; the Star of the West, at New York, Feb. 9th, with $750,000, and the Geo. Law, at the same port, Feb. 10th, with $800,000: making in the aggregate of gold over one and a half million. These steamers connected on the Pacific side with the Panama steamer John L. Stephens, and the San Juan steamer Sierra Nevada, each of which had on board about a million, making the semi-monthly shipment from San Francisco of two millions, while the accompanying advices from California indicate a dullness of trade and a scarcity of gold dust consequent upon a continuance of dry weather.

The total coinage of the United States mint at Philadelphia, since its establishment in 1793, has been $322,928,866. The total coinage at all the United States mints, since their establishment, is $331,797,299.

It is rumored on the Paris Bourse, that the expenses of the war against Russia are to be met by a joint loan of £16,000,000 sterling to England and France, and Hamburg letters allude to reports that the Czar is about to issue paper money to the amount of 60,000,000 of roubles to meet the war expenditures.

The balance in the New York Sub-Treasury still increases, being now $5,671,748. The increase during the week is $300,000.

The state debt of Illinois, according to the Governor's Message, is $15,725,725 96; and that of Michigan $2,893,348 30.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Feb. 15, 1854.

OUR streets have, for the few days past, presented the dullest aspect of the season, in consequence of the bad weather, sleet and rain. Scarcely a man is seen in market with anything to sell, except now and then a sorry looking teamster with wood, or a dripping load of hay, which no one is willing to buy, at least by weight.

Little wheat is offered in market, and prices are unchanged, although inclining to a depression from former rates.—In relation to the prospect of breadstuffs abroad, the *London Shipping and Mercantile Gazette* remarks:—"Nothing has occurred to warrant a more favorable estimate being taken of the position of affairs with regard to the future than that entertained. The shortness of the last harvest in this country, in France, Belgium, Holland, the Rhine provinces, Switzerland, and last, though not least, in the Italian States, admits of no doubt; and with this fact before us, it would be vain to calculate on any permanent reduction in prices of food."

Corn has gone up five cents, and is now quoted at 75@80c. Other grains unchanged and little offered.

Meats are higher all around the board; pork being quoted at $6,75@7, and beef $5,50@6. Smoked hams 9c., Chickens 9c, and fowls 10c.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. MOORE, of Gerry, Chau. Co., N. Y., is duly authorized to act as Agent for the RURAL NEW-YORKER, and the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. B. LANDAS in the last named county.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THOSE who are forming clubs, (20 to 100 copies,) can send on the names and money of such persons as do not wish to wait, and complete their lists afterwards.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ IN making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ IN remitting for clubs, please send Bank Bills, or Drafts on New York (deducting the exchange,) instead of Checks or Certificates of Deposit on local banks.

☞ IN writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ THOSE wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ PERSONS who have forwarded $15 for a club of ten, can extend the number to TWENTY for $10, but all the subscribers must begin at one date.

☞ It is not necessary that all members of a club receive their papers at one post office. We send to as many offices as necessary to accommodate the subscribers.

☞ PERSONS entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

☞ EXTRA numbers of the RURAL will be forwarded to all disposed to aid in augmenting its circulation.

☞ ALL business letters, communications, &c., should be addressed to D. D. T. MOORE, Rochester, N. Y.

Advertisements.

ADVERTISEMENTS.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 16 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

PEOPLE'S PATENT OFFICE,
86 Nassau st., New York.

FOREIGN PATENTS—The undersigned continues to act as Solicitor and Agent for securing Patents in all countries where they are granted. He is represented in Europe by honorable and reliable men, of long tried experience, through whom he is enabled to secure Patents in England, Scotland, Wales, Ireland, France, Belgium, Germany, Austria, Russia, Prussia, Spain, Portugal, &c. His facilities for transacting foreign Patent business are unsurpassed. He can generally obtain certificates of Provisional Protection from the British Patent Office, within six weeks from the time the invention is first committed to his care. The cost of British and other foreign Patents, to Americans, has been greatly reduced.

The undersigned may be at all times consulted, free of charge, by letter, or personally at his office, in reference to Patents, Inventions, &c. All consultations and business strictly private. For further information, apply to or address ALFRED E. BEACH,
Solicitor of American and Foreign Patents,
115-tf 86 Nassau st., New York

ATKINS' SELF-RAKING REAPER.

FORTY of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including *two at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.
"Prairie Farmer" Warehouse, Chicago, Feb., 1854.

THE GENESEE EVANGELIST.

THE EVANGELIST, published at Rochester, and edited by Rev. R. W. Hill, was founded several years ago, and designed to meet a want unsupplied. It is a Dollar Weekly Religious Journal, now in successful operation. It is filled with the soundest and ablest articles of a dire ct kind, experimental, and practical character. It aims also to be a bold, but careful chronicler of the events of the day. Some of the best writers of the land stand pledged, as stated and regular contributors, and new ones are frequently being added.

ADVANTAGES OF THIS PAPER.—1. *Its cheapness.* It comes within the means of almost any one. Few are so poor that they cannot pay for *two cents* a week for so valuable a paper. Of its kind, it is one of the cheapest in the world. 2. *Its size.* It is convenient and readable; just comes also within the lowest rate of postage. Each number contains an amount of reading equal to an 18mo volume of 64 pages, or for the year, nearly *twelve* volumes of 300 pages each; 3. The articles are for the most part *brief, pointed and practical.*

SUCH A PAPER IS A GREAT RELIGIOUS HELP.—It makes a people intelligent. It carries the instructions of the pulpit into the family. It furnishes a valuable organ for pastors and ecclesiastical bodies. It tends to make a working people, and keeps them posted up in reference to the movements of the church and of the age. It produces also unity of sentiment and action. It helps in the prayer-meeting and the social circle. It moulds the minds of the young, fostering a relish for *religious reading*, and shuts out much light, trifling, and often pernicious matter.

RECOMMENDATIONS.—The following are a few testimonials from eminent individuals, clergymen and others:

"We cordially approve of the Genesee Evangelist, and recommend it as an available Newspaper, in every way well conducted and worthy of extensive patronage."—M. L. H. P. Thompson, D. D., A. T. Chester, D. D., John C. Lord, D. D., and Rev. H. W. Beacock, of Buffalo; J. H. Shaw, D. D., A. C. Hall, D. D., Rev. J. H. McIlvaine, and Rev. M. J. Hickok; Aristarchus Champion, Esq., Hon. A. Gardiner, Hon. Levi A. Ward, Frederick Starr, Esq., and others of Rochester.

"We have in the midst of us one of the cheapest religious papers in the world, and one of the best."—Rev. J. D. Richardson, Gen. Agt. of Am. Bible Society.

"I rejoice in the continued prosperity of the Genesee Evangelist, for I regard it as one of the best models for a family religious newspaper I know of."—Rev. Dr. Van Hensselaer.

"It is *such* a paper as we need, and a paper we *must have*. The price will commend it as well as its character. It will be snatched by the prayers of the brethren, with pen and with purse."—Rev. Wm. Hogarth.

"I am pleased with your management of the paper."—Rev. H. A. Nelson.

"I value very highly your paper as a religious journal."—Rev. J. Eells, Jr.

"I am delighted with the manner in which you are conducting your paper. We never had a paper of so much interest in this region. I am disappointed and delighted as it comes to me weekly, a constantly improving sheet. The Lord grant that it may be amply sustained."—W. C. Wisner, D. D.

TERMS:—One Dollar a year, strictly in advance.
Address Rev. H. W. HILL,
115-2t Rochester, N. Y.

DISSOLUTION.

THE Limited Co-partnership heretofore existing between the subscribers, under the firms of DERBY & MILLER, Auburn, and DERBY, ORTON & MULLIGAN, Buffalo, is this day dissolved. NORMAN C. MILLER, of Auburn, and EUGENE MULLIGAN, of Buffalo, each, and they alone, are authorized to sign the names of the late Firms in liquidation.

214-3t Dated at Auburn and Buffalo, Feb. 1st, 1854.

THE HORTICULTURIST,

AND JOURNAL OF RURAL ART AND RURAL TASTE.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred Arts, Rural Architecture and Landscape Gardening. It is edited by P. BARRY, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensible, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly Illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artist in the line.

TERMS.—Two Dollars Per Annum, in Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January. January 1, 1854

$50 TO $150 PER MONTH

Letters (post-paid) addressed to the undersigned, will be promptly answered. C. H. WITMER.
214-4t Suspension Bridge P. O., Niagara Co., N. Y.

THORP, SMITH, HANCHETT & Co.,

PROPRIETORS OF THE SYRACUSE NURSERIES, Cultivators of, and Dealers in, all kinds of Nursery Productions, offer for the Spring Sales a very large stock of *Apple, Pear, Cherry and Peach Trees, both Standards and Dwarfs*, as well as a good supply of Plum, Quince, Apricot and Nectarine Trees, and all the best and most popular sorts of the smaller Fruits; *Currants, Raspberries, Strawberries and Gooseberries.*

Their stock of *Raspberries* includes Fastolff, Franconia, Knevitt's Giant, Large Monthly, the Antwerps, and Dr. Brinckle's Seedlings; of *Currants* all the leading kinds; and of *Gooseberries*, 3,000 fine plants of the best Lancashire sorts.

Grapes,—Native, one, two, and three years old, in large quantities; *Foreign*—Forty best sorts.

Ornamental Trees and Shrubbery, in great variety.

Roses,—One of the best and rarest collections in the country; including, of course, Mr. Mathews' matchless Seedling, the *Augusta*,—of the most luxuriant growth and foliage, profusion of bloom, splendor of its flower, and of the most exquisite perfume. The price, as will be seen by our Catalogue, is very much reduced.

Dahlias, Phloxes, Bulbous Roots, Green-house and Bedding Plants, including all the novelties of the season,—*Hedge Plants, Rhubarb and Asparagus* in large quantities.

Evergreens of choice varieties, as well as many thousands of *Balsam, Norway, European, Silver and Scotch Firs, Austrian Pines, Chinese and American Arbor Vitæs*, &c., &c., all in fine condition.

☞ Among their stock of Fruit Trees, they have in large proportion, the *Virgalieu, Onondaga and Oswego Beurre*, both Dwarf and Standard. No more desirable kinds of early bearing, productiveness and great excellence, can be cultivated extensively for market. They have also several hundreds of *Extra Sized Fruit Trees* of the finest growth and form, cultivated and trained into bearing for themselves, which the necessity of changing their grounds to those much more extended requires them in part to remove. These trees consist of Cherry, Plum, Standard and Dwarf Pears. They have furnished the greater portion of the specimen fruits exhibited by the proprietors at the State Fairs for two years past, and are offered at from $1 to $3 each.

The products of their Nurseries having a reputation second to none in the country, those now favoring them with their orders may rely upon that reputation being sustained. They annex a few commendations selected from many of a like nature, both as to the quality of their trees, and that other essential, the excellency of their packing, to which they invite attention.

"The trees were all well packed, and are very fine—not one article but I am perfectly satisfied with."—From Leyden, Cook county, Illinois.

"The trees were well packed, and came to hand in fine order."—South Bend, Indiana.

"The trees, though long delayed on the way, arrived in good condition, and opened well. I must say they were evidently taken up and packed with much more than ordinary care."—Delaware, Ohio.

"And now about the trees. If you had *trimmed* them [a novel complaint,] they would have been the finest lot of trees I have ever seen on from your State. I never saw finer roots."—From Springfield, Ohio. [The trees here spoken of, let it be remembered, were sent out from the Syracuse Nurseries as their *second class* trees.]

☞ The trees, to appearance, [having been delayed on the way] were in good order, and better trees than I have ever seen west of the Lakes."—Roscoe, Ill.

☞ The proprietors have also been favored by a customer with the following certificate, made after an examination of a large lot of their trees:

"We, the undersigned, do hereby certify, that we have personally examined the lot of fruit trees which Mr. —— now has in the village of Marshall, and we do not hesitate to say, that they are the best lot of Fruit Trees, to all appearance, that has ever been offered for sale in this county. Dec 14, '53." [Signed,] Abner Pratt, Circuit Judge, Supreme Court; Erastus Hussey, Co. Clerk; H. A. Noyes, Judge of Probate; J. H. Montgomery, M. D.; H. Darwin Hughes; T. J. Randall; J. A. Van Horn; Jas. J. Way.

☞ *Catalogues furnished gratis to all post-paid applications, enclosing a letter stamp to pre-pay the same.*

Syracuse, N. Y., Feb., 1854. 213-3teow

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y. 211tf.

FARM FOR SALE,

SITUATED in the town of Conquest, 4 miles north west of Weedsport, and 3¼ from the Rochester and Syracuse direct railroad. Said farm contains 163 acres, 140 improved, and in a good state of cultivation, and well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit trees, and a wood lot on each end of the farms; 30 acres of wheat on the ground, and 80 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the rem under on bond and mortgage to suit the purchaser. Price, $55. For further particulars inquire of the subscriber on the premises.

Weedsport, Cayuga Co., N. Y., 213-tf. H. EAKER.

SCRIBNER'S READY RECKONER,

For *Ship Builders, Boat Builders, Lumber Merchants, Farmers and Mechanics.* Being a correct measurement of Scantling, Boards, Plank, Cubical Contents of Square and Round Timber, Saw logs, Wood, etc., comprised in a number of Tables; to which are added Tables of Wages by the month, Board or Rent, by the Week or Day, and Railroad Distances. Also Interest Tables, at seven per cent.

By J. M. Scribner,
Author of "Engineer's and Mechanic's Companion," Engineer's Pocket Table Book, etc., etc.

Scarcely is it possible to add to the recommendations of the above book, more than to give its title page. Every one who is engaged in buying, selling, measuring or inspecting Lumber of any kind, will at once appreciate a work of this kind. No pains or expense has been spared in revising and enlarging this edition, to make it in every respect convenient and accurate.

The Log Table was computed by drawing diagrams for each and every log, from 12 to 44 inches in diameter, and the width of each board taken, after taking off the wane edge. The sum total of each board constitutes the amount each log will give, and if there can be any dependence placed upon such strictly mathematical accuracy, no one will hesitate for a moment to abide the results here given, as the method adopted by the author can result in nothing else than strict honesty and mathematical accuracy, to the parties interested.

The best evidence of the usefulness and popularity of this book is the rapid and extensive sale of nearly one hundred thousand, since its publication. We do not hesitate to say that no book of its size and price contains more useful or correct tables.

In all new and lumber countries the book will be found very convenient, as it comprises much that is useful for the farmer, mechanic, and business man.

Orders solicited, and a liberal discount made to wholesale purchasers.

Price, 25 cts. at retail, 5 copies for one dollar, send postage paid, on receipt of the amount.

Address GEO. W. FISHER, Publisher.

Poetical.

[For the Rural New-Yorker.]

LINES TO A WINTER BROOK.

BY ZOA.

Flow on little streamlet, flow on thy short day,
The sun yet sheds on thee his last lingering ray,
But thy border is frozen, and frost-gemmed thy shore,
And at morning thou'll warble thy music no more;
The winds blow so chilling,
Thy waters are chilling.

In light and in gladness thou'rl flowing along,
And the pearls on thy border e'er list to thy song;
Methinks that the gems on thy bosom now shining,
Are fair as the wreath of an angel's entwining,
But beauty so rare,
Must tarnish to air.

But wherever thy footsteps are wandering about,
The gems and the jewels are still flashing out,
And bright stars and diamonds shine on thy brow,
And the winter's frost-flowers, that spangle thee now,
More joy to me bring
Than the blossoms of spring.

And thy waters are flowing full hurriedly by,
As the moments are fleeting, so, onward they fly;
And I would, as unconsciously I might, bot rove
Thro' the woodland, and meadow, and winter-gemmed grove;
But I may not stay, [grove;
To list to thy lay.

But when darkly thro' wearisome pathways I go,
Memory will list to thy murmuring flow,
And thy gems and thy jewels shall shine on my night,
And still o'er my darkest hours the light—
The light of thy gleaming
Shall ever be beaming.

Rural Sketch Book.

THE ARGUING HUSBAND,

And the Husband Who Denied his Wife Nothing: Or, A Secret Worth Knowing.

BY A. B. JOHNSON.

Two young women, who lived in the same neighborhood and had been intimate acquaintances from their infancy, became married to a couple of young tradesmen, who were thriving and industrious. The young men were clerks in the same dry goods shop in Broadway, when they became first acquainted with their future wives, and during a large portion of the courtship; hence no little intimacy was created between the young men, and they strongly sympathized with each other in their respective matrimonial projects, and both became well known to each other's intended.

One established himself in Philadelphia, and the other in New York, and as soon as they felt pecuniarily able, they married their respective favorites.

The families being thus separated, enjoyed but few opportunities of social intercourse with each other. Even when the requirements of business brought occasionally Mr. Jenkins from Philadelphia to New York, he was usually in too much haste to lose much time in chatting with Mr. Jackson, though sometimes he would be accompanied to New York by his wife, when the two ladies would delight themselves in mutual inquiries about acquaintances who had removed to distant regions. Nor were wanting topics of more pungent interest, such as the conduct of their respective husbands; and while Mrs. Jenkins rejoiced in a husband who never denied her anything, Mrs. Jackson had to confess, that though her husband provided well for the family, and was a very indulgent father, yet he would have his own way. Mrs. Jenkins entered into her friend's feelings with the warmth of an old acquaintance, and with the *esprit du corps* of a wife, and insisted that she would not live with a man who should treat her in such a manner.

The subject of this conversation almost engrossed the thoughts of Mrs. Jenkins, until when she returned to Philadelphia, she viewed her own house with the new impressions produced in her mind by the ambitious aspirations of her friend, and the house speedily lost nearly all its attractions. She and her husband had occupied it ever since their marriage, and as it was situated in the rear of the shop, it was necessarily small and subject to many inconveniences. She could neither pass in nor out, except through the shop, and this was peculiarly unpleasant to the female friends who occasionally visited her, to say nothing of the children, who were not permitted to play in the shop, and were perpetually romping in her small parlor. The residence had been suitable enough to the condition of the parties when they commenced house-keeping; and its manifold inconveniences had developed themselves so gradually, in the gradual increase of the family, that Mrs. Jenkins had been insensible to them till her attention was called that way by her last visit to New York. She was now surprised that she had lived contentedly in such a place so long, and was resolved that she would live there no longer, especially as she knew that her husband could as well afford to build a new house as Mr. Jackson. Thus impressed, she kept revolving the topic in her thoughts, till she acquired a sufficient confidence in the correctness of her conclusions, to feel the necessity of their speedy realization.—Thus fortified, the next step was to bring her husband to the same opinion with herself.

Mrs. Jenkins accordingly lost no time in developing her plans by throwing out various intimations of the uncomfortableness of the house and of the delights of a residence detached from shops, where visitors might be received at a private door, and where the children could have room to play in, without forever destroying the parlor furniture, and leaving no person in peace, or so much as a single room where a person can be retired for a few moments.

These demonstrations were not lost on Mr. Jenkins, who knew enough of human nature to understand their drift; hence he was not taken unawares when, in the fulness of time, his wife declared all her wants, and showed to him the deep hold which, unaccountably to him, the subject had taken on her feelings. We have already said that he never denied his wife anything about which he found she was pertinacious, nor did he in the present case. He confessed that the present residence was inconvenient. He had long felt it himself, and would love no time, unnecessarily, in performing all that his wife required, after he should extricate himself from debt, and get his business into a shape that would enable him to purchase a suitable building lot for such a house as his family ought to occupy.

Mrs. Jenkins was delighted, and lost no time in writing to her friend, Mrs. Jackson, her brilliant prospects, and as no account loses in the telling, the consummation of her wishes imbibed some rainbow tints from her imagination, and, like a full moon, seemed far nearer than it was in sober reality.

Mrs. Jackson read this epistle with less pleasure than she ought to have felt at the happiness of so old and good a friend, and her house from thenceforth became more insupportable than ever, till by pondering long on her discontent, it gradually became mingled with all her thoughts and actions, and exhibited itself prominently in all her intercourse with her husband. When he was affectionately disposed towards her, as he usually was when relieved at evening from the cares of his shop, she would sigh deeply, or shed tears and let him know otherwise that the want of a better house was a cruel obstruction to her happiness. When he was in an ill humor, as would sometimes happen from the perplexity of business, she would retort with complaints of the wretched house in which she was straightened and confined.

The project of his wife appeared to Mr. Jackson so manifestly improper, that he could not countenance it for a moment; but as he was a reasonable man himself, he hoped to convince her of the impropriety of her demands. He accordingly told her that he had risen, as she knew, from nothing, but though he had been prosperous, his business was still incumbered by a want of capital, which compelled him to make purchases on credit, instead of ranging the market and obtaining his supplies where they could be purchased most cheaply for money. Were he, by building, to abstract from his business any portion of his active capital, he would still further embarrass himself, while his creditors, seeing his imprudence, would begin to suspect his ability to pay, and refuse him their assistance.

In vain, however, poor Mr. Jackson argued with his wife, and combatted her reasons with countervailing proofs; the result only evinced the truth of the proverb, that "she who is convinced against her will, is of the same opinion still;" what she deemed the most potent of all that could be said on the subject, was the practical fact that Walter Jenkins, of Philadelphia, who commenced at the same time with Jackson, and was admittedly less successful in money-making, was still able to give his wife a new house and everything else; for he never denied his wife anything.

This was indeed a potent argument, and Jackson never knew how to combat it, except by saying that Jenkins was a fool; nor could poor Jackson invent any new reasons in opposition to his wife, and she professed herself tired of the old ones. He had but to commence his opposition, when she forthwith stopped him, and could anticipate all he had to say. As the last resort of a worsted disputant, he one day, unfortunately, became angry. He had so long smothered his feelings, that now when they obtained vent, the explosion was prodigious.

The poor woman was sorely afflicted at the unusual spectacle of his rage. She bore it, however, as only women can bear such afflictions, in meekness and silent sorrow, that appealed to his feelings more eloquently than words; till on reflection he became so much distressed at his own violence, that he agreed, as the only proper atonement in his power, to construct a house according to her wishes, let the consequences be what they might. He went at it in good earnest, and the construction absorbed all his active capital, while suitable furniture for it, which soon became as indispensable as the house, ran him into debt.—He struggled for two years with the embarrassment produced in his business by these distractions from his resources, and procured additional credit to supply their place; but when he most extended in this respect, a pecuniary crisis pervaded the country, and New York felt the full force of the existing pressure.—The banks could no longer yield their accustomed accommodations, and in the struggle of each institution to save itself, the ruin of private persons came to be disregarded. In turn, every man who was in debt had to urge payment from his own debtors, and in the general scramble which ensued, numerous merchants became bankrupt, till all confidence was lost, and every person was afraid of his neighbor. Nothing could have come less opportunely to Jackson than this commercial revulsion. His spirits also were no longer sustained by a consciousness that he was prospering. He had for some time been more solicitous to sustain his credit than to make profits, and under the existing distrust he soon saw that his ultimate ruin was inevitable; and all his efforts were directed to avert, as long as possible, the sure catastrophe of public discredit. To this end, he was daily compelled to sacrifice to usurers, and to purchase his supplies of merchandise at prices enhanced by the suspicions of keen sellers. Even his customers began to desert him, for his goods were known to have been purchased at a disadvantage, and were at least imagined to be dearer than the goods of other dealers. His friends became alarmed lest they should become entangled in his fall, and forsook him in a body, while his creditors began to assail him for payment or security.

In this bad emergency of his affairs, he often thought of his friend Jenkins, and would have applied to him for assistance, especially as Philadelphia was less afflicted than New York with the pecuniary pressure, but he knew that Jenkins never denied his wife anything, and especially that he had acceded to her wishes in the building of a house, and as like causes will produce like effects, he doubted not that Jenkins must be as badly situated as himself. But in this Mr. Jackson was mistaken. On the contrary, Jenkins had foreseen the approaching commercial storm, and had prudently furled his sails in season, and was prepared to meet the worst, come when it might.

He had recently heard of the adverse circumstances of his early friend, and while he was greatly grieved at his reverses, he resolved not to let his grief evaporate in silent sorrow, but to visit New York and ascertain personally if his friend's affairs could be relieved. He arrived too late for the assistance that he was kindly prepared to give: for Jackson had pursued of late the down-hill path so desperately and recklessly that he could not be extricated from his difficulties. Only one honest course remained, which was to squander no more property in vain efforts to procrastinate a fall that was inevitable, but to meet the crisis at once and assign all his remaining effects to good trustees, for the equal benefit of all his creditors. To this course Jenkins advised, with the assurance that if his friend could become relieved from his liabilities, he would assist him to establish himself anew, when with the experience thus dearly purchased he would doubtless regain in time his former standing.

Jackson complied with all the suggestions of his friend, but nothing could well exceed his astonishment at the pecuniary abilities of Jenkins—the man who never denied his wife anything; while he had yielded to only one request and was ruined. But the mystery was soon solved. Jenkins admitted that he never denied his wife anything. It was a way he had; reserving, however, to himself the execution of her projects at such a time only as should suit his convenience. The time had never yet come in the matter of the house, but they lived contentedly where they had always lived; his wife happy in the possession of a complying husband and the pleasant anticipations of future gratifications, and he satisfied himself in the possession of a hopeful wife, and in the full fruition of his present wishes. This revelation was not lost on Jackson, and when he ultimately obtained a release from his existing debts and commenced anew, under the auspices of his Philadelphia friend, he was never known to argue with his wife, and especially never to become angry; and in process of time, by patient industry, and resolute self-denial of all improvident expenditures, he became far richer than before, and his wife while chatting with her neighbors in a snug parlor in the rear of the shop, would often, like Mrs. Jenkins, self-complacently boast, that as for Mr. Jackson, she must say he was a man who never denied his wife anything.—*Knickerbocker.*

DEATH-BED OF WASHINGTON.

"Proceeding still further over a very bad road, we came suddenly in view of the Potomac; and Mount Vernon, with the mansion house and smooth green lawn, was before us. Having sent in our address, we received permission from the courteous branch of the family, who now holds the estate, to enter and survey the interior. We were struck with its extreme simplicity, the lowness of the walls and ceilings, and the bare floors, which were waxed, not, as with us, carpeted.

Passing through the great hall, ornamented with pictures of English hunting scenes, we ascended the oaken stair-case, with its carved and antique balustrade; we stood at the door—we pressed the handle—the room, and the bed where he died, were before us. Nothing in the lofty drama of his existence surpassed the grandeur of that final scene;—the cold which he had taken from exposure, in overseeing some part of his grounds, and which had resisted the earlier domestic remedies that were applied, advanced in the course of two short days into that frightful form of the disease of the throat *laryngitis*. It became necessary for him to take his bed. His valued friend, Dr. Craig, was instantly summoned, and assisted by the best medical skill of the surrounding country, exhausted all the means of his art, but without affording him relief. He patiently submitted, though in great distress, to the various remedies proposed, but it became evident from the deep gloom settling upon the countenances of the medical gentlemen, that the case was hopeless;—advancing insidiously, the disease had fastened itself with deadly certainty. Looking with perfect calmness upon the sobbing group around him, he said:—'Grieve not, my friends; it is as I anticipated from the first; the debt which we all owe, is now about to be paid,—I am resigned to the event.' Requesting Mrs. Washington to bring two wills from his escritoir, he directed one to be burnt, and placed the other in her hands, as his last testament, and then gave some final instructions to Mr. Lear, his secretary and relative, as to the adjustment of his business affairs. He soon after became greatly distracted; and as, in the paroxysms which became more frequent and violent, Mr. Lear, who was at his side, assisted him to turn, he, with kindness but with difficulty articulated, 'I fear I give you great trouble, sir—but—perhaps it is a duty which we all owe to one another,—I trust that you may receive the same attention when you require it.'

As the night waned, the fatal symptoms became more imminent—his breath more labored and suffocating, and his voice soon failed him. Perceiving his end approaching, he straightened himself to his full length, he folded his own hands in the necessary attitude upon his chest, —placing his finger upon the pulse of the left wrist, and thus calmly prepared, and watching his own dissolution, he awaited the summons of his Maker. The last faint hopes of his friends had disappeared; Mrs. Washington, stupefied with grief, sat at the foot of the bed, her eyes fixed steadfastly upon him; Dr. Craig, in deep gloom, stood with his face buried in his hands at the fire; his faithful black servant, Christopher, the tears, uncontrolled, trickling down his face, on one side, took the last look of his dying master; while Mr. Lear, in speechless grief, with folded hands, bent over his pillow on the other.

Nought broke the stillness of his last moments, but the suppressed sobs of the affectionate servants collected on the stair-case; the tick of the large clock in the hall, as it measured off with painful distinctness, the last fleeting moments of his existence, and the low moan of the winter wind, as it swept through the leafless, snow-covered trees. The laboring and worried spirit drew near and nearer to its goal; the blood languidly coursed slower and more slowly through its channels—the noble heart stopped—struggled—stopped—fluttered—the right hand slowly slid from the wrist, upon which its finger had been placed—it fell at the side—and the manly effigy of WASHINGTON was all that remained extended upon the death couch!"

Wit and Humor.

Married, in Pine Grove, Alabama, Mr. Jonas Pillow, to Miss Sarah Scripture, both of that place.

Some keep the Scriptures for a show,
Lettered and gilt on their bureau,
And some to dust and moth degrade it;
But Jonas took the wiser part,
He pressed the Scripture to his heart,
And even on his Pillow laid it!

Boarder.—"What large chickens these are!"

Landlady.—"Yes, chickens are larger now-a-days than they used to be; ten years ago we couldn't get them so large as these."

B. (innocently)—"No, I suppose not; they must have grown some in that time."

(Landlady looks as though she thought she had been misunderstood.)

"Wife," said the victim of a jealous rib, one day, "I intend to go to camp meeting, on Tuesday evening, to see the camp break up."

"I think you won't," replied she.

"I'll go if I see fit!"

"You'll see *fits* if you do go."

He did not go—probably on account of the rain.

Electrical Retort.—Our friend B—— was travelling lately in the cars; when a man came up and asked for his fare." Who are you?" said B——. "I? my name's *Wood*, and I'm the *Conductor*." "Oh," says B——, very quietly, "that can't be, for *Wood* is a non-conductor."

Goon.—"Father, what does a printer live on?"

"Why, child?"

"Because you said you hadn't paid him for three years, and still take the paper."

"Wife, spank that child."

"I believe the jury have been inoculated with stupidity," said a lawyer.

"That may be," said his opponent, "but the bar are of opinion that you had it the natural way."

A young man in Vernon, was broomsticked out of his boarding house for telling the landlady's daughter that she looked as if she had been in the arms of *Morpheus*.

"Sambo, what am your 'pinion ob rats?"

"Why, I tink de one dat hab de shortest tail will get in de hole fust."

FRUIT AND ORNAMENTAL TREES, &c.

The Subscribers have the pleasure of announcing an immense stock of Trees, &c., for the Spring trade, embracing
Standard Trees for Orchards,
Dwarf and Pyramidal Trees for Gardens,
Ornamental Trees for Streets, Park and Pleasure Grounds,
Rare and beautiful Lawn Trees,
New and rare Weeping Trees,
Evergreen Trees, embracing the rarest species of Pines, Firs, Spruces, Yews, Cedars, Junipers.
Hardy Flowering Shrubs,
Roses of all classes, and embracing the newest and best sorts,
Dahlias, the finest English prize sorts,
Chrysanthemums, including the finest of the new Pompone varieties.
Phloxes and Peonies, superb collections,
Bedding Plants, a complete assortment,
Hedge Plants, among them 50,000 Osage Orange.
Box Edging,
Rhubarb, Asparagus, &c., &c.

All orders, whether for large or small quantities, executed with the greatest care and in strict compliance with the wishes of the purchaser. Packing done in the most secure and skilful manner, so that parcels can be transmitted thousands of miles with safety.

Nurserymen and dealers in trees will be supplied on the most liberal terms.

The following Catalogues are sent gratis and prepaid to all who apply and enclose one postage stamp for each:
No. 1, Descriptive Catalogue of Fruits,
" 2, " " Ornamental Trees,
" 3, " " Dahlias, Green-house plants, &c.
" 4, Wholesale Catalogue.

THE PEOPLE'S JOURNAL.

An Illustrated Record of Agriculture, Mechanics, Science, and Useful Knowledge.—One Dollar a Year—50 Cents a Volume. Splendid Engravings!

Every Number contains 32 Large Pages of Lower-Press, Beautifully printed on fine paper, and profusely Illustrated with Engravings, forming, at the end of each year, two Splendid Volumes, comprising Four Hundred Pages, and Illustrated with about Five Hundred Elegant Engravings, the entire cost being only One Dollar.

The People's Journal was commenced in November, '53, and has already attained a large circulation. The November No. contained 40 engravings, the December No. 72 engravings, the January No. 41 engravings, and the February issue has 61 engravings, making in all 220 Illustrations, although only four numbers have been published. These relate to Science, Art, Mechanics, Agriculture, and Useful Knowledge, in accordance with the general plan of the work. No publication of the kind has ever been produced with such magnificence or at so cheap a price. It is admired and taken by every one who sees it.

Terms.—To Subscribers—One Dollar a Year, or Fifty Cents for Six Months. Subscriptions may be sent by mail in coin, post office stamps, or bills, at the risk of the publisher. The name of the Post Office, County, and State, where the paper is desired to be sent, should be plainly written. Address, postage-paid,

ALFRED R. BEACH,
No. 30 Nassau-street, New York City.
Editor of the People's Journal.

A liberal discount to Post-Masters and Agents. Single copies 12½ cents. Specimens sent on receipt of four postage stamps. 214-4t

FRUIT AND ORNAMENTAL TREES.

200,000 choice Apple Trees, from one to four years old, together with a good variety of other Fruit and Ornamental Trees, will be sold cheap the coming spring, at wholesale or retail. Persons wishing to purchase, will do well to call and examine our stock and price, before purchasing elsewhere.

Commercial Nurseries—sale ground a few rods west of the Syracuse House, on Genesee st., E. & O. S. FORD.
Syracuse, N. Y., Feb. 1, 1854. 213-2tp

CHERRY SEEDLINGS.—A large quantity of Black Mazzard Cherry Stocks for sale, 1 year old.
214-4t J. C. CAMPBELL, Rochester, N. Y.

Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS, NO. 9.

☞ Answer in two weeks.

Written for Moore's Rural New-Yorker.

GEOGRAPHICAL ENIGMA.—ACROSTICAL.

I am composed of 26 letters.
My 1, 21, 10, 18, 24, 15 is a county in Virginia.
My 2, 20, 20, 11, 12, 2 is a county in Mississippi.
My 3, 21, 1, 11, 18, 19, 21 is a town in N. York.
My 4, 10, 21, 15, 6, 9 is a town in Nor. Carolina.
My 5, 4, 11, 8, 14 is a county in Tennessee.
My 6, 10, 16, 3, 8, 7 is a county in Illinois.
My 7, 12, 13, 16, 20 is a county in Georgia.
My 8, 9, 6, 10, 24 is a river in Africa.
My 9, 11, 18, 10, 15 is a town in Scotland.
My 10, 16, 14 is a lake in Ireland.
My 11, 23, 19, 24, 23, 22 is a town in Europe.
My 12, 21, 6, 21, 23, is a county in Virginia.
My 13, 14, 10, 6, 16, 15 is a county in N. Jersey.
My 14, 22, 18, 16 is a county in Ohio.
My 15, 18, 12, 16, is a river in Africa.
My 16, 12, 13, 9 is a river in Prussia.
My 17, 18, 3, 24, 15 is a town in Europe.
My 18, 15, 17, 21, 12 is a river in Europe.
My 19, 21, 16, 23 is a town in France.
My 20, 11, 12, 13, 23, 20 is a county in Georgia.
My 21, 12, 2, 13, 11, 1, 21 is one of the U. States.
My 22, 24, 21, 23, 16 is a county in Tennessee.
My 23, 18, 21, 6, 2, 10, 11 is a county in N. York.
My 24, 22, 14, 6, 24, 23 is a Territory.
My 25, 18, 7, 6, 9 is a town in Belgium.
My 26, 16, 10, 13, 7, 15, 20 is a town in the Russian Empire.

My whole is the name of an officer in the American Revolution. E. W. T.

Bilsford, N. Y., 1854.

PROBLEM.

If a man six feet high weighs 180 pounds, what did Goliath of Gath, who was eleven and one-half feet high, weigh, allowing him to be of similar form? S. D. L.

Alexander, Jan. 28, 1854.

☞ Answer next week.

Answer to Illustrated Rebus No. 7.—*The American Express leaves Buffalo at 7½ o'clock.*

The first four correct answers to above were received from Eliza S. Barrell, Adelia F. Munn, J. S. Robbins, S. M. Hulin—and whose names are entered on our books for the Rural three months.

Answer to Miscellaneous Enigma in No. 6,—*Spirit Rappings.*

Answer to Mathematical Question in No. 6.—*They all cost him* $100. *The horse,* $70; *cow,* $25; *sheep,* $5.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals,* whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Progress and Improvement.

MAPLE SUGAR MAKING.

The business of converting maple sap into sugar, is not only profitable, but it has many associations that tend to make it a pleasing pastime. To the juveniles, at least, it is a merry-making time. The labor is at a season of the year when most kinds of farm work cannot be forwarded at so good advantage, and hence it may be made to fill up a vacancy as it were. By most palates the flavor of this kind of sugar is preferred to that from the cane. It certainly is as healthy, whilst the syrup is second only to honey. The quality, however, depends upon the method of its manufacture. It may be worthless, or it may be quite equal to the best of refined sugars—just as slovenly or neat habits prevail with those who superintend the business.

It is no small item in the agricultural productions of the United States. The census figures of 1850, put it down at 32,759,263 lbs. Now, if this was all manufactured properly, and so was of good quality, the value of this product would be above two and a half millions of dollars. At eight cents the pound, which is a fair valuation for good maple sugar, the amount would be $2,620,741. In this account no estimate is made of the syrup and molasses, which would swell the amount considerably. New York ranks the highest, producing 10,310,764 lbs. The next is Vermont, yielding 5,159,641 lbs. Ohio is third, giving 4,521,643 lbs. Indiana, Michigan, Illinois and Pennsylvania follow in order, ranging between two and three million pounds each. There are five States reported as producing no sugar—Rhode Island, Delaware, Florida, Arkansas and California. There is therefore the greatest need that its manufacture be conducted in the best manner, as a slight loss will, in the aggregate, make a great difference in the total value.

Much time and labor may be saved by judiciously locating the "works," and making the arrangements in the most economical manner. The sugar house, or boiling place, should be located in a central, but convenient part of the bush, and where descending ground can be had, arrangements may be readily made to discharge the gathered sap into the holder, and thence to the evaporator, without labor. The bush should be cleared of logs and brush. A sled is taken, on which is attached a hogshead with an opening large enough to readily receive a pail; at the bottom or one end have a plug or faucet. With this apparatus and a team, the sap is quickly gathered, and at the expense of but little toil. Then if the receiver is properly placed, the team and sled is driven on the the upper hill-side of it, the spout placed and faucet turned, when the hogshead soon empties itself.

The tapping should be considered, for in this there is also a best way. The gash with the axe and gouge is thought by many to injure the tree less than boring, though the latter is preferable for cleanliness, as it excludes the air and saves the necessity of re-hacking. A "spile" to fit the hole is driven tightly in, but it should be tight only at the outer edge, else the flow of sap may be retarded. A passage through the shaft permits the escape of the liquid. If the bucket is provided with a wire ear, as it should be, it is readily attached to the spile, close at the tree, and thus all danger of upsetting, and the catching of dirt avoided. Tin buckets are decidedly preferable, for lightness, durability and cleanliness. They are much more easily scoured and cleaned, whilst they will not take into their substance nor retain any sourness or bad odor, as will wooden vessels. Among woods, pine and cedar are to be preferred. When the season is passed, or as soon as sugar making is ended, the buckets should be gathered, thoroughly scalded and cleaned, then safely housed, and again well scalded when taken out for use in the spring. Troughs ought not to be tolerated, unless one is utterly unable to do otherwise. They are complete catch-alls for leaves, dirt and dead things, and, when used, the sugar cannot be made of first quality.

Good, well-seasoned wood is another requisite in the profitable manufacture of good sugar. It should be cut the year before, well prepared, and, if practicable, secured under cover.

Sheet iron pans, set in arches, are by the best judges conceded to be superior to kettles. As they present a larger surface to the heat, they evaporate faster and better; besides they are cheaper, lighter, and are more easily managed. They are made of any size, by riveting together sheets of Russia iron. The edges are turned up a few inches, and to which is frequently attached a wooden frame with handles, for the greater convenience of moving when necessary. The fire passing only under the bottom, there is no danger of burning the wood, nor does the sap burn to the sides as is too often the case where kettles are used, and by which the syrup is darkened in color and embittered in taste.—The receiver should be placed above the arch. Then a stream of the sap can be kept steadily flowing to the pan through a pipe, and so graduated as to exactly balance the evaporation. By this means the heat is kept uniform, and the evaporation goes on regularly and rapidly. If the sap can be conducted first to a warming pan, and thence to the evaporator, so much the better.

Care and neatness, scrupulously exercised from the tree to the evaporator, will insure a syrup of first quality. But care and neatness must not stop here. When enough has been evaporated for a batch of syrup, the boiling of it to a proper consistence should be done with caution. It should while yet hot be strained through flannel cloth, and then set to cool in tin pans. A fine sediment will be deposited.—The clear liquor should be carefully poured off, and again filtered through thick flannel cloth. It is then ready to be placed in brass or iron kettles, and to each four or five gallons of syrup should be added a pint of milk and four or five eggs well beaten. This is to bring the impurities yet held in solution, to the surface in the form of scum. It is now placed over the fire and gradually warmed, and the filth removed with a skimmer as fast as it gathers, after which it is boiled with a gentle fire till it will grain, which is ascertained by cooling some in a spoon, or by taking a little on a knife, when if it will string down in fine hairs it will answer. Another method, is to drop a little in a tumbler of cold water, and if it fall to the bottom and take the appearance of *soft wax*, it is ready to be placed in pans to cool. But before it is cold, it should be transferred to conical boxes—the largest part being uppermost—with a hole in the bottom for the escape of the molasses. On the surface of the sugar keep a wet but clean flannel cloth. This should be washed daily in cold water, to remove the coloring matter that may be absorbed. By this process, sugar of pure whiteness and of excellent quality may be obtained. Another method is, when it has somewhat cooled to stir it briskly. The more thoroughly and longer it is stirred, the finer will be the grain and the whiter the sugar. Still another way is to pour it while warm into a tub, and when several batches have accumulated, or as much as is desired, the plugs are removed and the molasses drained away. This, too, may be clarified by the same process as above, but in so large a quantity the process is hastened by draining water thro' the mass.

When it is desired to make the sugar into hard and solid cakes, the syrup requires more boiling. Tin pans, or other vessels, are then slightly greased, and the sugar poured in while warm, having been previously stirred to assist the grain in setting. The coloring matter can be extracted from the cakes by wet flannel as above.

The methods sketched in this article have heretofore secured the premium sugar at our fairs, and they will, if properly followed out, secure the product of the maple in the best possible condition. T. E. W.

THE OBJECT OF PLOWING.

The object of plowing is not fully understood and considered by the majority of those who perform the work: if it were, it would be done more faithfully and thoroughly. It is not alone to kill the weeds and grass, nor even to furnish a seed-bed of fresh-turned soil for planting or sowing—nor anything which looks merely to the inversion of the soil,—which constitutes good plowing. Large plows, turning a wide and shallow furrow, will show a large day's work—but the work is very imperfectly accomplished, when the true object of plowing is considered. The chief value of plowing is the preparation it gives the soil for producing vegetation—for giving to the plants sown or planted, the elements of growth and fruitfulness. It should thoroughly pulverize and "loosen the texture of the soil, and thus admit a free circulation of air and moisture, which, by chemical action, disintegrates or breaks down the stony or mineral portions of the same, so that they may be more readily dissolved and taken up by the roots."

In a soil thus plowed—thus prepared for yielding its support to vegetable life—plants can appropriate from far and near, the nutriment needed for their growth. It is dissolved and ready for their use—not hidden in unbroken clods or slumbering in an undisturbed subsoil—but awaits their action in a friable and penetrable state, where every hungry rootlet, sent out to gather nourishment for its parent plant, may find and appropriate it. It is truly wonderful how full of minute roots the soil of a corn-field becomes, and if that soil is fine and deep, the deeper and closer together will the fibres permeate and intersect it. This is true of all other crops, and while the leaves and fruit depend so intimately on the vigor and extent of the roots, these facts should always be taken into consideration among the objects of Plowing.

Fineness and depth of soil are requisite in order to receive the full benefit of the manures applied. It is not fertilizing food in its crude state which assists vegetation—it must first become intimately mixed with, or in fact, a part of the soil. Barn-yard manure especially, seems of little worth, while forming visible layers between the clods of a half plowed soil—it is often dry and coarse—and rather shunned than sought by the roots sent out to forage for suitable food. If a well prepared soil has any strength and virtue, it will yield it readily; and poor land in good tilth is often more productive than better soils less perfectly prepared. The influences of air and moisture, have freedom to work, and they are no laggards in gathering means to supply the wants of vegetation.

With these hints on the object of Plowing we might connect others on the process—the best means of accomplishing that object—but prefer to leave it for other pens. Will our practical farmers, who have thought and experimented upon the subject, tell us what plow, and what depth and width of furrow, taking also soil, season, team, and time into consideration, most thoroughly loosens, pulverizes, and inverts the soil? This information would be of much value to every farmer, and is especially needed in the present state of agricultural progress—for taking the country at large into account, Plowing is more imperfectly performed than any other part of farm husbandry.—R.

The action of frost on potatoes and other vegetables is not clearly understood. It disarranges the particles of matter and induces speedy fermentation. The nitrogenous matter acts on the starch and converts it into sugar, similarly to the action of malting. Hence the sweet taste of frozen potatoes.

THE EMPLOYER AND THE EMPLOYED.

NUMBER II.

The "Hired Man" has duties to fulfil, as well as his employer. The gist of the burden does not by any means lie upon one's shoulders.—Because John has engaged with Farmer A. for a specified period, it does not follow that his obligation binds him morally to do just a given amount of labor, performed without any thought as to what the ends of that labor are to be; performed in fact, just to "pass away the time," satisfy the letter of the bond, and so secure the few stipulated dollars. When John engages to labor for Farmer A, whether the thing is mentioned or not, he is in all honor bound to make the interests of Farmer A. his interests, to so serve and labor for him that his welfare and interests shall be promoted thereby. His reasonable services are engaged, stipulated for—and if John neglects them, or so performs his labor that but half the good shall arise from it that might otherwise, he is recreant to his trusts and has broken the spirit of his bond. He is not only unjust to his employer, but more unjust to himself. The wise man has said that a diligent man shall stand before kings. But he who is not diligent to his trusts, implied or otherwise, proves he lacks that great element of success which will raise him to high stations, or to greatness of renown. By no means would we argue that a man must drudge out his hours in mere toil, like an insensate machine. That is not it. No honorable employer will require it. He has no right to demand it. But he has a right to demand that your care and foresight shall be exercised in his behalf. He has a right to expect that you will be regular in your habits, punctual to your duties, humane to his creatures, urbane and gentlemanly in your deportment, and with a laudable ambition to improve and excel in your employment.

That you labor for another—thanks to the genius of our country,—is no badge of servility. The day-laborer is as much of a king as he from whom he receives his daily wages—may even be the greater gentleman. Beneath his patched vest may throb a heart, far greater in all the noble impulses of manhood. Every avenue to honor and profit is open to the humblest in the land. Many who now stand on pinnacles of greatness, have reached the altitudes of their fame from the depths of poverty and priration. These things are full of hope to the young and ardent, and should incite them to unremitting efforts to improve every spare moment to the best advantage, in laying that mental and moral ground-work upon which they can make themselves great in some noble occupation or work. By all means, then, serve your employers faithfully—look out sharp for their interests—not in petty acts, but in doing what you do in the best manner and in the most expeditious way. Improve every moment that you can claim from your labors, for the improvement of your mind; and in all that you do, strive to excel.

'Too often there is not a proper understanding in the beginning between the employer and employed. The matter is perhaps loosely talked over, a verbal agreement struck, and the parties go on. Too soon there is dissatisfaction, misunderstanding and altercation.—There should be order in this as in every thing else. A minute understanding should be had, which should be reduced to writing and signed by the parties. Such a course impresses the matter more forcibly, the obligations are felt more binding, and tend to strengthen the good desires of either in the direction of right doing. Since we commenced these articles, our eye has rested on a form of Agreement in the Vol. of the N. Y. S. Ag. Soc. Trans. for 1848, which seems to suggest so much that may be used to profit, that we quote it here for the benefit of whom may be disposed. Particularly would we commend the instructions and maxims attached as all worthy of especial consideration, not only by the laborers themselves but by the employers and those who do not hire.

Let them paste them in their day-book, or better perhaps, on the door-post, and read and act upon them daily until their observance, becomes a fixed habit. Doing so, we are sure that order and thrift would smile from many a gateway where now disorder and want are quite too rampant.

FORM OF AGREEMENT.

It is hereby agreed between A. B., of ——, and C. D., of ——, as follows, viz: For and in consideration of the sums of money hereinafter named, to be paid by the said A. B. to the said C. D.,—the said C. D., hereby promises and agrees, on his part, well and faithfully to labor for the said A. B., for and during the full term of —— from the date hereof, and to do and perform all and every such work and services as the said A. B., may at any time require during the period aforesaid, and to perform and do all such work with fidelity and with a view at all times to promote and maintain the comfort, interest, and welfare of the said A. B., and his family, and for the full protection of his property and effects.

And the said A. B. hereby promises and agrees to pay the said C. D., for the work, services and duties faithfully done and performed by him as aforesaid, the sum of —— dollars for the term above named, in sums and at times as follow ——; and the said A. B. agrees to employ the said C. D., for the said term of ——. And the said C. D. further agrees strictly to conform to the rules and regulations and maxims of the farm, as hereunto annexed and by him signed.

In witness whereof, we have hereunto affixed our hands and seals, this —day of ——, 185—

In presence of
E. F.
G. H.

A. B.
C. D.

It is expected that all persons employed on the farm of —— will carefully attend to the following system:

Regularity of hours.

Punctuality in cleaning and putting away implements.

Humanity to all the animals.

Neatness and cleanliness in personal appearance.

Decency in deportment and conversation.

Implicit obedience to the proprietor or his foreman.

Ambition to learn and excel in farming.

No liquor or strong drink of any kind allowed.

MAXIMS OF ORDER AND NEATNESS.

1 Perform every operation in the proper season.

2. Perform every operation in the best manner.

3. Complete every part of an operation as you proceed.

4. Finish one job before you begin another.

5. Secure your work and tools in an orderly manner.

6. Clean every tool when you leave off work.

7. Return every tool and implement to its place at night. C. D.

This form, &c., can be altered to suit circumstances, and many may find it of service as a guide. T. E. W.

DOUBTS FOR FARMERS.

It is questionable whether the practice of selling off the hay and grain from a farm without any return of manure in some shape, comes under the head of *good farming*. To keep up the fertility of the land, these articles should be consumed, as far as may be, upon it, and the refuse and manure be carefully saved and returned to the soil.

It is doubtful if a farmer can find any better investment for his money, above what is required for the support, education, &c., of his family than to expend it upon his farm, in the improvement of his stock, in planting trees,—in draining, improving and ornamenting the place he has chosen as the scene of his labors and the centre of his comforts.—R.

To Prevent Potatoes from Rotting.—In a recent conversation with John O. McVean, of Scottsville, N. Y., he informed us, that last fall at the time of harvesting the potatoes, he put two heaps in the cellar, dusting one of the heaps with *quick lime* as they were thrown in from the wagon. The potatoes in this heap kept well, while those in the other, not limed, nearly all rotted. We published a similar statement some weeks since, and have observed many experiments recorded, giving like results.

SCIENTIFIC KNOWLEDGE
ESSENTIAL TO SUCCESSFUL AGRICULTURE.

Every era has been considered by its denizens as an age of progression and improvement. Two centuries ago it was gravely questioned whether arts and science had not attained their acme, and all improvements reached their ne plus ultra. The daring speculations of philosophy alarmed the serious-minded, who contemplated nothing short of the final consummation of all things—the end of the world,—as the befitting award of such hearen-daring impiety. Yet these philosophers, so far from having penetrated into the innermost recesses of the Temple of Science, only stood upon its threshold. We of the present generation, whatever may be our opinions to the contrary, have merely crossed the threshold, and stand in the grand vestibule. Although we have caught a glimpse of the long prospective vista, yet its interior courts must be trod by men of future generations, who may probably regard our present achievements in science in the same light as we estimate the discoveries of the alchymist during the dark ages!

However dwarfish may be our attainments in real physical knowledge, it is gratifying to know that science and scientific investigations are not now, as in past ages, misdirected, but are holding on the even tenor of their way, for the attainment of great and permanent good. The votaries of science, instead of consuming the midnight oil for the discoveries of such chimeras as the philosopher's stone, now employ all their energies for the development of principles whereby the operations of trade, agriculture, and mechanics may be facilitated and cheapened, and practically illustrate the maxim that "knowledge is power."

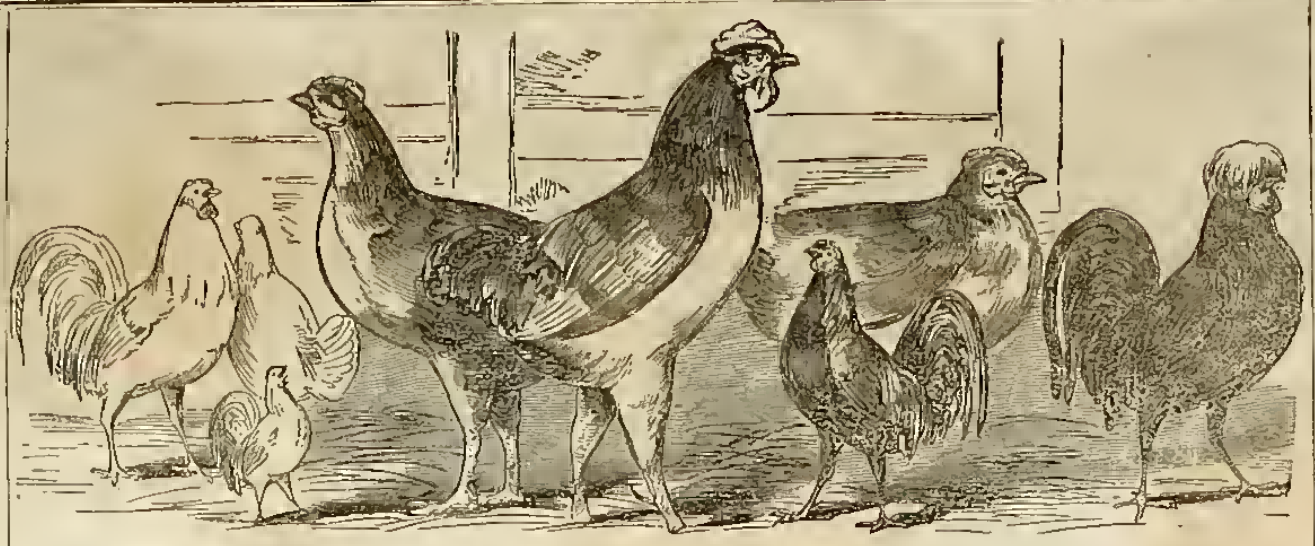
To no class of men are the discoveries of science more available than to the farmer; yet farmers, generally, have less availed themselves of scientific discoveries than any other class of men. Let not the truth offend. All other arts and sciences are far in advance of agriculture. This, however, ought not so to be, for "perfect agriculture," as it has been well remarked, by a popular author, "is the true foundation of all trade and industry—it is the foundation of the riches of States. But a rational system of agriculture cannot be formed without the application of scientific principles, for such a system must be based on an exact acquaintance with the means of nutrition of vegetables, and with the influences of soils and action of manures upon them." If the assertion of Home be true, that we cannot manufacture a pound of cotton without a knowledge of astronomy, it is no rashness to maintain that a farmer cannot intelligently cultivate an acre of land without some knowledge of chemistry, which teaches, as Liebig observes, "the mode of investigating the composition, and of studying the characters of the different substances from which plants derive their nourishment." It is not to be expected that farmers generally will be able to render an exact analysis of the constituents of their soils, but surely it is not expecting too much, that all agriculturists should be acquainted with first principles at least, and thereby secure themselves against much loss, both of labor and capital. Thus we have known farmers, at great expense, lime over their farms, when their lands had naturally an excess of that mineral! Thus we see that a knowledge of science is economy, and ignorance thereof, downright extravagance. Knowledge is security from risk, and ignorance too often the cause of ruin. Much of what is commonly called *bad luck*, is attributable to the mismanagement of ignorance, rather than to what Sancho Panza calls "the misadventures of fortune."

The advantages offered to the young by the establishment of Agricultural Colleges, and Model School Farms, ought to be embraced by all having in view farming as a profession. Much useful knowledge has been disseminated by means of Agricultural Lectures, and works on Agricultural Chemistry. The periodical press, also, is a powerful auxiliary in the cause of agriculture, wherein theory and practice are ably discussed, and the experiments and experiences of practical men related in language plain and easy to be understood. Amongst the numerous agricultural newspapers (many of them excellent) published throughout the Union, the one which the American farmers delight to honor, is the Rural New-Yorker.

N. D. R.

Report of the Ohio Board of Agriculture:—We have received from G. Sprague, Esq., the Seventh Annual Report of the Board of Agriculture of the State of Ohio. It is a handsome volume of 461 pages, filled with the proceedings of the Board during the year 1854, reports from the various County Agricultural Societies, lectures, report of a geological survey, and other matters of interest. On the whole, it does not come up to what we should expect from the great Agricultural State of Ohio. There are no portraits of animals, &c., no prize essays, and little that really adds to the agricultural knowledge of the country.

The report of the Secretary is an interesting and valuable paper.



Dorking. Bantam. Canton or China. Game. Cochin China. Poland.

State and National Poultry Shows.

Show of the N. Y. State Poultry Soc'y.

The first Exhibition of the N. Y. State Poultry Society commenced at Albany, Feb. 7, and continued four days. There were more than fifty exhibitors, and the number of fowls entered is estimated at from twelve to fifteen hundred. The different Asiatic varieties figured largely and were most attractive in the exhibition,— but all the breeds, from the Bantam to the Brahma, were well represented.

The other classes were well filled—Turkeys and Terrier Dogs, Geese and Guinea Fowls, American Eagles and all sorts of Pigeons, Prairie Hens and Peacocks, Ducks and Quails,—but our readers would *quail* if we should attempt to enumerate the whole.

David Taggart, of Northumberland, Pa., delivered an Address before the Society, which is spoken of as a humorous production. He spoke of the distinguishing characteristics and peculiarities of the different breeds of fowls; and asserted that the Cochin China, Brahma Pootra, &c., were all derived from the Shanghais, and only differed in unessential particulars, determined by breeding for a given purpose.

The names and residences of the most prominent exhibitors will be found in the following list of

PREMIUMS AWARDED.

Gallinaceous Fowls.—Best and largest variety of pure bred fowls, bred by the exhibitor, H. P. Newell, Rochester, a Silver Cup valued at $25 2d, J. W. Platt, Rhinebeck, 10

Best and largest variety of pure bred fowls owned by exhibitor, W. H. Southwick, New Baltimore, a Silver Cup valued at $25. 2d, D. S. Heffron, Utica. 10.

Asiatic Fowls.—Best pair of Asiatic Fowls, of whatever sub variety, J. P. Childs, Rhode Island, 10.

Shanghais —Best pair or trio, Red or Buff, John McCowan, Philadelphia, $5. 2d, A. A. Hudson, Syracuse, 3.

Best pair or trio of Black, J. W. Herring, Marcellus, $5. 2d, M. H. Smith, Skaneateles, 3.

Best pair or trio of White, A. A. Hudson, Syracuse, $5. 2d Geo. Anderson, Albany, 3.

Best pair or trio of Dominique, colored, D. P. Newell, Rochester, $5 2d, J. E. M. Van Alstyne, Greenbush, 3.

Cochin China.—Best pair or trio, W. H. Southwick, New Baltimore, $5. 2d, Geo. Anderson, Albany, 3.

Bramah Pootra.—Best pair or trio, H. P. Newell, Rochester, $5. 2d Wright, Gilmore & Co., Utica, 3.

Chittagong.—Best pair or trio, D. Craw, Conn., $5. 2d, C. Boncieue, Lansingburgh, 3.

White Calcutta —Second best pair or trio, D. S. Heffron, Utica, 3.

Black Java.—Best pair or trio, J. W. Platt, Rhinebeck, $5. 2d, W. H. Southwick, New Baltimore, 3.

Hong Kong.—Best pair or trio, T. B. Miner, Clinton, Oneida Co., $5. 2d, D. S. Heffron, Utica, 3.

Other Fowls.—*Black Spanish.*—Best pair or trio Jas. Kellen, Germantown, Pa., $5. 2d, J. P. Childs, R. I., 3. 3d, D. S. Heffron, Utica, 2.

Dorking.—Best trio of White, W. H. Southwick, New Baltimore, $1. 2d do. of Gray or Speckled, J. M. Sherwood, Auburn, 2.

Hamburghs.—Best trio of Spangled Hamburghs, D. St. George, York Mills, Oneida Co., 3.

Game.—Best pair or trio of Sumatra, T. B. Miner, Clinton, Oneida Co., $5. Trio of Earl Derby, J. W. Platt, Rhinebeck, 5. American Game, 2d best, E. E. Platt, Albany, 3. Earl Derby Cock, W. H. Southwick, New Baltimore, (discretionary) 1.

Polish.—Best Trio, White or Black, W. H. Southwick, New Baltimore, $3.

Best pair of Silver Spangled, E. E. Platt, $3. 2d, C. W. Godard, Albany, 2.

Bantams.—Best trio Gold Laced Seabright, J. P. Childs, R. I., $5. 2d, W. Walsh, Bethlehem, 3.

Best trio of Java, E. E. Platt, Albany, $3. 2d, African, D. S. Heffron, Utica, 2.

Geese — *Bremen.*—Best pair, W. H. Southwick, New Baltimore, $5. 2d, C. W. Goddard, Albany, 3.

African.—Best pair, C. W. Godard, Albany, $5. 2d, R. C. McCormick, 1.

Wild.—Best pair, E. M. Van Alstyne, Greenbush, $5.—2d, W. H. Southwick, New Baltimore, 3.

Pigeons.—Best and largest variety owned by exhibitor, C. Boncieue, Lansingburgh, $5. Best pair of any distinct variety, W. H. Southwick, New Baltimore, 2.

Rabbits.—*Lop-Eared.*—Second best pair, S. V. C. Van Rensselaer, Claverack, 2.

Rat Terrier Dogs —Best specimen, $5. 2d do., 3. Pair White Scotch Terrier, John Grieves, New York, $2 One Black and Tan Terrier, J. M. Lovett, Albany, $1.

Turkeys.—*Wild.*—Best pair, E. E. Platt, Albany, $3.

Domestic.—Best pair, Reynolds & Co., $5. 2d, J. W. Ludlow, Yonkers, 3.

Guinea Fowls.—Best pair, W. H. Southwick, New Baltimore, $3. 2d, E. E. Platt, 2.

Pea Fowls —Best pair, W. H. Southwick, New Baltimore, $3. 2d, C. W. Godard, Albany, 2.

Ducks.—*Muscovy.*—Best pair, J. W. Platt, Rhinebeck, $5. 2d, D. P. Newell, Rochester, 3.

Aylesbury —Best pair, W. H. Southwick, New Baltimore $5. 2d, R. C. McCormick, Jr., 1. 1, 3.

Top-Knot.—Best pair, H. S. Heffron, Utica, $5. 2d, D. P. Newell, Rochester, 3.

Several amendments were made to the By-Laws of the Society. The most important change is in the increase of the officers. The Managers were increased to twenty, and an addition of one to the Vice Presidents. The following are the chosen officers for the ensuing year:

President.—D. S. Heffron, of Utica.

Vice Presidents.—Francis Rotch, Butternuts; M. Vassar, Poughkeepsie; Lewis F. Allen, Black Rock.

Cor. Secretary—R. C. McCormick, Jr., Woodhaven, L. I.

Rec. Secretary and Treasurer.—H. U. Sherman, Utica.

Managers.—Sam. T. Tabor, Dutchess; Thos. W. Ludlow, Jr., Yonkers; Samuel Thorne, N. Y. City; C. W. Godard, Albany; A. P. Hammond, Westport, Essex Co.; W. H. Southwick, New Baltimore; Samuel S. Benan, Hampton, Wash Co.; Geo St. George, York Mills, Oneida Co; Thos Gould, Cayuga Co.; A. A. Hudson, Syracuse; R. H. Van Rensselaer, Otsego Co; F. W. Collins, Ontario Co; Isaac E. Haviland, L. I.; Abner Baker, Rochester; Wm. Walsh, Bethlehem, Albany Co.; John H. Cole, Columbia; D. W. C. Van Slyck, Wayne Co; J. Wyman Jones, Utica; N. S. Smith, Buffalo; Curtis Moses, Skaneateles.

National Poultry Society's Exhibition.

The first show of the National Poultry Society, was held at Barnum's Museum, New York, Feb. 13th to 18th inclusive, 1851. According to reports in the New York dailies, the affair will long be remembered in Hen-dom, and will induce no little crowing among certain amateur fanciers and breeders, in both city and country.—As we were not there to witness the prodigies exhibited in the various classes—including specimens of high, medium and low degree—and have not space for the somewhat elongated, if not exaggerated statements given in the city papers, we give only the principal results. These are included in the subjoined lengthy list of very liberal

PREMIUMS AWARDED.

Class I.

For the best and largest variety, Silver Cup, $50, to Richard C. McCormick, Jr., of Woodhaven, Queens Co., L. I. 2d, Silver Cup, $25, to J. W. Platt, Rhinebeck, N. Y. 3d, $15, to H. & C. S. Haines, of Elizabethtown, N. J. 4th, $10, to H. Johnson, of Paterson, N. J.

Asiatic Fowls.—Best pair of Asiatic Fowls of whatever sub variety, Silver Cup, $20, to John McGowan, Philadelphia, Pa.

Shanghais—For the best pair or trio of Red or Buff, $5, to J. Sherwood, Norwalk, Ct. 2d, 3, to Henderson Greene, Poughkeepsie, N. Y.

For the best pair or trio of Black do, $5, to Geo. P. Burnham, Boston. 2d, 3, to Richard C. McCormick, Jr., Woodhaven, Queens Co., L. I.

Best pair or trio of White do, $5, to R. C. McCormick, Jr., Woodhaven, L. I. 2d, 3, to J. W. Platt, Rhinebeck.

Best pair or trio of Mongolique do, $5, to R. C. McCormick, Jr., Woodhaven, L. I. 2d, 3, to Sherman Smith, Portchester, N. Y.

Best pair or trio of Cochin Chinas, $5, to Geo. P. Burnham, Boston, Mass. 2d, 3, to J. W. Platt, Rhinebeck.

Best pair or trio of Brahma Pootras, $5, to B. & C. J. Haines, Elizabethtown, N. J. 2d, 3, to Henry S. Freeman, Cumberland, R. I.; 3 to Bennett & Plaisted, Great Falls, N. H.; 3 to R. C. McCormick, Jr., Woodhaven, L. I.; 3 to W. L. Wilson, New Britain, Ct.; 3 to H. H. Haight, Dover Plains, N. Y.; 3 to Geo. Smith, Valley Falls, R. I.

Best pair or trio of Chittagongs, $5, to H. S. Ballou, Blackstone, Mass. 2d, 3 to G. B. Prindle, Norwich, Ct.

Best pair or trio of Javas, $5, to Hr. G. W. Lawrence, Catonsville, Md. 2d, 3, to J. W. Platt, Rhinebeck, N. Y.

Special premium of $3 to G. P. Burnham, Boston, Mass., for gray and bronze Shanghais, of great merit.

All Other Gallinaceous Fowls.—*Black Spanish.*—For the 2d best pair or trio $3, to B. & C. J. Haines, Elizabethtown, N. J. 3d do, 2, to Dr. H. H. Porter, Budwick, L. I.

Dorkings.—For the best pair or trio of White, $1, to R. C. McCormick, Jr., Woodhaven, L. I. 2d do, 2, to J. W. Platt, Rhinebeck, N. Y.

Best pair or trio of gray or speckled, $1, to R. C. McCormick, Jr., Woodhaven, L. I. 2d, 2, to Samuel Pale, Westchester Co.

Polands.—Best pair or trio of White, $3, to J. W. Platt, Rhinebeck, N. Y.

For 2d best pair or trio of Black, $2, to S. S. Burden, of Paramus N. J.

Best pair or trio of Silver, $3, to J. W. Platt, Rhinebeck, N. Y. 2d, 2, to S. S. Burden, Paramus, N. J.

Game—Best pair or trio of Earl of Derby Game, $5, to J. K. Twambly, Dover, N. H. 2d, 3 to J. W. Platt, Rhinebeck, N. Y.

Pile Games.—Best pair or trio, $5, to R. C. McCormick, Jr., Woodhaven, L. I.

Black Games.—Best pair or trio, $3, to George Brown, Meriden, Ct.

Ebon Sumatra Games.—Best pair or trio, $5, to J. K. Twambly, Dover, N. H. 2d, 3, to B. & C. S. Haines, Elizabethtown, N. J.

Mexican Games.—Best pair or trio, $5, to R. C. McCormick, Woodhaven, L. I.

Chinese Albin Games.—Best pair or trio, $5, to Bennett & Plaisted, Great Falls, N. H.

Bantams.—Best pair or trio Gold Laced, $5, to Bennett & Plaisted, Great Falls, N. H. 2d, 3, to B. & C. S. Haines, Elizabethtown, N. J.

Best pair or trio of Silver Laced, $5, to Bennett & Plaisted, Great Falls, N. H. 2d, 3, to Roswell L. Colt, Paterson, N. J.

Best pair or trio of African, $5, to B. & C. S. Haines, Elizabethtown, N. J. 2d, 2, to J. W. Platt, Rhinebeck.

Bolton Grays—For the 2d best pair or trio, $2, to J. W. Platt, Rhinebeck, N. Y.

Dominique Fowls.—For the 2d best pair or trio, $2, to Josiah Sage, Locust Hill, N. J.

Class II.—Turkeys.

For the best pair or trio of wild, $5, to Sherman Smith, of Portchester, N. Y.; second pair or trio, 3, to John Patton, of New York.

For the best pair or trio of domestic, $5, to R. H. Avery, of Brooklyn, L. I.; second, 3, to R. C. McCormick, Jr., of Woodhaven, L. I.

Honorable mention for choice dove colored Turkeys, exhibited by D. H. Haight, Dover Plains, N. Y.; black Turkeys, exhibited by S. H. Coombs, Mercer Co., N. J.; white Turkeys from J. W. Platt, Rhinebeck, N. Y.

Class III.—Guinea Fowls.

For the best pair or trio, $3, R. C. McCormick, Jr., Woodhaven, L. I.; second do., 2, A. Mallard, Bordentown, N. J.

Class IV.—Pea Fowls.

For the best pair or trio, $3, James Hyder, Gravesend, L. I.; 2d do., 2, to J. W. Platt, Rhinebeck, N. Y.

Honorable mention of Pea Fowls from H. C. McCormick, Jr., Woodhaven, L. I., and J. W. Cropsey, Gravesend, L. I.

Class V.—Ducks.

Aylesbury.—For the best pair or trio, $5, to R. C. McCormick, Jr., Woodhaven, L. I.; 2d do., 3, Sherman Smith, Portchester, N. Y.

Muscovy—Best pair or trio, $5, R. C. McCormick, Jr., Woodhaven, L. I.; 2d do., 3, H. & C. S. Haines, Elizabethtown, N. J.

Top-Knot—Best pair or trio, $5, to Wm. Simpson, West Farms, N. Y.; 2d do., 3, R. C. McCormick, Woodhaven L. I.

Cayuga Black—Best pair or trio, $5, R. C. McCormick, Jr., Woodhaven, L. I.; 2d do., 3, Sherman Smith, Portchester, N. Y.

Common Duck—Under this caption the Judges have given premium for best pair or trio, $3, to H. L. Colt, Paterson, N. J.; 2d do., 2, R. C. McCormick, Jr., Woodhaven, L. I.

Honorable mention of Chinese white Muscovies, exhibited by G. K. Elker, Stamford, Conn.

Class VI.—Geese.

Bremen—For the best pair or trio, $5, Sherman Smith, Portchester, N. Y.; 2d do., 3, G. K. Elker, Stamford, Ct.

Chinese—Best pair or trio, $5, R. L. Colt, Paterson, N. J.; 2d do., 3, R. L. Colt, Patterson, N. J.

African—Best pair or trio, $5, Sherman Smith, Portchester, N. Y.

Wild—Best pair or trio, $5, H. L. Colt, Paterson, N. J.; 2d do., 3, J. W. Platt, Rhinebeck, N. Y.

Honorable mention or discretionary premium to H. Johnson, Paterson, N. J., for his Hong Kong geese.

Class VI.—Swans.

For the best pair, $5, R. L. Colt, Paterson, N. J.; 2d do., 3, Isaac E. Haviland, Hempstead, L. I.

Class VIII.—Pigeons.

For the best and largest variety, $5, T. M. Rodman, West Farms, N. Y.; 2d do., 2, R. C. McCormick, Jr. Woodhaven, L. I.

Best pair of any distinct variety, $2, Wm. Brown, Brooklyn, N. Y., for pair of Carriers.

Class IX.—Rabbits.

For the best pair of Lop-Eared, $5, to Geo. P. Burnham, Boston, Mass.; 2d do., Bennett & Plaisted, Great Falls, N. H.

Class X.—Rat Terrier Dogs.

For the best specimen, $5 John Grieve, New York; 2d do., 3, Salem Dutcher, New York; 3d do., 2, Jir. St. John.

Class XI.—Deer.

For the best buck, $5, Wm. McQueen, Schenectady, N. Y.; 2d do., 3, Henry Faile, West Farms, N. Y.

The judges on Asiatic fowls append to their report the following remarks:

"While the judges have been governed by the nomenclature of the list, they by no means assent to it as a proper classification. Shanghai and Cochin China are convertible terms, and Brahma Pootra the popular name for a sub-variety of Shanghais of great size and beauty. White Calcuttas and Hong Kongs were not on exhibition. Believing them to be inferior specimens of white and black Shanghais, it is likely that we would not have awarded them premiums if found. In lieu thereof, we have assigned several additional second premiums for *Brahma Shanghais*; and also a special premium for two sub-varieties not named in the list. The show of Brahmas doubtless exceeds anything of the sort ever known, both as to numbers and quality. Cocks of twelve pounds and upward, hens of ten pounds, and pullets of nine pounds, were quite common, while one coop of four stags, ten months old, averaged nearly twelve pounds apiece. This extraordinary weight as to cocks and hens was also noticed among the other colors. Four years ago a very sensible gentleman wrote that a cock, of any breed, to weigh eight pounds was a good one, and must be in fine order at that. Now we have pullets, ten months old, exceeding that weight.—If this progression continues, it will not be long until Shanghais are sold in *steaks* and *roasts* and by the *quarter*, like prize beef in the market.

"For the sake of simplicity, we would recommend that all thorough-bred Asiatic fowls be classed under the name of Shanghai, to be further designated by their color; and inasmuch as these shows are intended not solely for the aggrandizement of breeders, but for the purpose of converting 'Henology' into a science, we would earnestly suggest that all ridiculous *aliases* be abandoned, and a simple, intelligible and truthful classification strictly observed."

Robert Wilkinson, Chairman.

The judges on Gallinaceous Fowls say that—

"They have attended to the duties assigned them, and find the best display of Gallinaceous Fowls ever exhibited in this country. They feel great pleasure in recommending a continual succession of similar Fairs by the National Poultry Society, with every confidence that great benefit will be conferred upon the community at large by thus encouraging and improving the breeds of Domestic Poultry in America."

John C. Jackson, Chairman.

The judges on Turkeys, Guineas, &c., say:

"With much pleasure we give our measure of praise and satisfaction for the choice and rare deposit of pure bred fowls exhibited by Col. R. L. Colt, of Patterson, N. J., and cordially suggest the award of a discretionary premium* for Mallard Ducks, Wild Black Ducks, Pin Tail Ducks, Java Ducks, Rouen Ducks, Crested Ducks, &c., &c.; also with much satisfaction we give mention to the choice and well-bred stock exhibited by Mr. R. C. McCormick, Jr., of Woodhaven, Long Island.

Chas. W. Bathgate, Chairman.

The managers state that the premium coops, although worthy in every respect of the flattering preferences exhibited by the able judges, are by no means the sole objects of interest in this great collection. There are many coops, besides, containing birds so closely approximating in excellence to those which have won the premiums that they are eminently worthy of admiration, while the general Show surpasses in curious and instructive attraction anything of the kind ever yet exhibited in America.

*A Silver Cup is awarded to Col. Colt in compliance with this suggestion.

Poultry.—At this season, we frequently hear our neighbors and others complaining that their fowls do not supply them with the desired quantity of eggs, as they are wont to do in other parts of the year; but we have no difficulty in this matter, for we came to the conclusion long ago, that we ought not to expect them to provide us with eggs, unless we gave them plenty of the right kind of food that they may eat and drink at their pleasure. By experiment we have found that hens fed with wheat and rice, and constantly supplied with fresh water, charcoal, lime, ashes, &c., will produce a larger amount of eggs than those fed on any other grain.

Lovers of eggs, and the good things made with them, feed your fowls as above, and you will complain of them no longer.—*Dollar Newspaper.*

Measurement of Hay in Bulk.—Multiply the length, breadth and height of the hay into each other, and if the hay is somewhat settled, ten solid yards will weigh a ton. Clover will take 11 to 12 yards to a ton.

Milk Clean.—The first drawn milk contains only 5, the second 8, and the fifth 17 per cent. of cream.

Agricultural Miscellany.

MICHIGAN STATE AGRICULTURAL SOCIETY.

We are indebted to S. M. Bartlett, Esq., for a copy of the Transactions of this society for 1852. It is a handsome volume of 528 pages, containing much valuable information, wood cuts of animals, addresses delivered before several county societies, prize essays, &c., &c., and is, on the whole, highly creditable to the Secretary, J. C. Holmes. The article on thorough draining, by Linus Cone, we have read with much pleasure. A Prize Essay on manures, by Charles Betts, is a valuable paper which deserves an extensive circulation.—Will Mr. B. pardon us for referring to one point in the manufacture of manure which he has inadvertently overlooked? He says:—"The value of yard manure depends upon two conditions:—1st, the manner in which it is made and preserved; 2nd, the state in which it is applied to the soil." These two conditions have much to do with the value of the manure, but the intrinsic value of the manure depends upon the food eaten by the animals making it. If they are fed oil-cake, peas or beans, it will be much more valuable than though they had Indian corn. If they have clover hay, it will be much richer than though they had timothy hay, or straw, &c., &c. It is a point on which few farmers have any distinct conceptions, and should not be overlooked in a prize essay on manures.

DEVONS vs. SHORT-HORNS.

The *London Farmers' Magazine* gives the following extract from the Journal of a gentleman who visited Mr. Coke, at his estate at Holkham in 1830:

"The postillions were first desired to stop near some beasts of the North Devon breed, grazing in the park; and Mr. C. mentioned several facts illustrative of the superiority of the Devons; amongst others that he called on a Mr. Handcock, a fashionable butcher in London, who supplied some of the first families, and asked him if he had ever killed any Devon beasts. He replied 'no, that they were not good enough for his trade; he would only use the best Scots.' Mr. C. persuaded him to try the Herons, and he so much approved of them that he bought all Mr. C. sent to market for a considerable time—more than one hundred beasts. He also mentioned a trial between the fattening of two Herons, against one short-horned ox of the old Yorkshire breed, the two costing the same as the one, and when killed the two weighed 140 stone of 14 lbs. (1,970 lbs.) while the short-horned ox weighed only 110 stone, (1540 lbs.) and it had eaten more food than the two Devons. Mr. C. considered the Devons as by far the best for plowing. His object was to produce the most food for man, of the best quality, and at the least expense. He said 'size had nothing to do with profit; it was not what an animal made, as much as what it cost making.'"

BEST MODE OF CASTRATION.

When is the best mode of castration? If you ask this question of five or six men, you will probably receive as many different answers. I have tried the actual cautery, the chain, the ligature, and scraping; and I prefer the last, it being simple, safe and speedy.

You have, doubtless, tried it, and perhaps most of your readers have performed the operation. However, at the risk of telling a twice told tale, I will endeavor to describe *the mode of scraping*. You begin as for castration in the ordinary way. Free the testicle, and grasp it with the left hand; *divide the seminal* part of the cord, and, with a rough-edged knife, *scrape* the *vascular* cord lengthways, until you scrape through it. Simple enough, and speedy, too, since for first cut to last scrape, takes rather less than twenty seconds. I have done it in sixteen, and safely, for I never knew a horse to bleed more than I wanted, and you have a simple wound without any foreign substance to deal with. The horses stand quiet for nearly three days, being merely rubbed down. On the third day, the coagulum is washed away, and the parts cleansed, and nothing more is required after, than to continue to keep them clean. Tetanus is not a frequent sequel to castration; as to the time most likely for an attack, I have always found it to come on just as the wound has healed, no matter in *what* part of the body it may be.—Those attacks arising from castration, generally manifest themselves from the fifteenth to the twentieth day; but I have seen them both earlier and later. As a rule, I do not castrate during the hot months, nor during the heavy rains. Wounds and ulcers generally take on an unhealthy action at those seasons, and particularly during rains. But I have operated during every month of the year.—*London Vet.*

Great Corn Crop.—The Agricultural Society of Champaigne County, Ohio, certifies that Hugh McDonald received the premium for the best acre of corn, an average one out of a field of 45 acres, which yielded one hundred and forty-five bushels and three pecks, by actual measurement of one row, carefully selected by the committee as an average one, and estimated from that for an acre. It is estimated that the whole field would have averaged 140 bushels per acre.

This actual admeasurement of one row, and estimating from that the acreage yield, is not a very accurate or commendable means of determining the yield of premium crops.

Dr. A. Watts and Alex. Waddle have gone to Europe to select stock for the Clark Co. (Ohio) importing company. Tuscarawas County is about to form a stock importing Co.

Inquiries and Answers.

PLANTING ORCHARDS—SHEEP, &c.—I am much pleased with your paper. It comes nearer my idea of a good family paper than anything we have in this part of the country. I have hung up your prospectus in my office, and think I will be able to send you some more subscribers—And now, as you are well acquainted with the soil and climate of Western New York, I want to make use of my privilege as a subscriber, by asking you a question in regard to New York agriculture, to which I hope you will give a little consideration and answer me at your convenience.

I have in Steuben county, on the line of the N. Y. & Erie Railroad, a tract of 1,400 acres of pine and oak land. As I get the pine and oak off, I am clearing up the land by burning the refuse timber on the land, sowing wheat on the ashes and seeding it down, and have thus far succeeded in getting 20 to 25 bushels of wheat to the acre. The tract is hill land, the hills *rising in terraces* to five or six hundred feet, but not so steep but that it may be plowed after the stumps are out. The slope of the hills is to the south and south-east; soil, six to eight inches deepred vegetable matter, with a deep subsoil of chocolate colored loam,—very few stone of *shell date*. Now, I have an idea of covering the face of one of those hills with an orchard of 3,000 to 4,000 *apple trees*, and, as you are an old experienced hand in such matters, I would like to have your opinion, as to how an orchard would succeed in such a new soil, planted among the old stumps, with such a heavy dressing of ashes. Also, (as I am clearing it with the intention of going largly into the raising of sheep,) if any plan could be found to prevent the sheep from barking the trees? Also, what is your favorite sheep, combining the qualities of wool and mutton? I am now raising the *Cotswold*, a very large, long-wooled sheep; the backs sometimes weighing 250 to 265 lbs. dressed, with fleeces of 7 to 10 lbs. But the price is so high that a large flock would be too expensive.—WM BUSH, *Wilmington, Del.*

We should think an apple orchard, if properly planted with good trees and well cultivated, would do exceedingly well on such a site. The ashes will be beneficial, rather than injurious. As the land, at present, cannot be plowed, we would prepare the soil by digging or trenching two feet deep, and about eight feet in diameter, each spot where you intend to plant the tree. If you could dig in a good dressing of rich composted manure, the increased growth of the trees would abundantly repay the extra cost and labor. But as, under the circumstances, this cannot be done, early in the spring we would prepare the soil as before directed, and sow it with peas, and, when in full bloom, dig them under. This to some extent, would supply the place of manure, and the trees might be planted in the fall.

You do not want a method to prevent sheep from barking the trees. The orchard should be fenced off from the other part of the field, and should on *no account be sown with grain or grass*. A fallow frequently cultivated, is best for all orchards. If you must sow anything, let it be peas or clover, and *plow or dig it under when in bloom*.

Cotswold sheep, probably, will fat quicker than any other breed; but the quality of the mutton is inferior to the South Down, or even to the Leicester. On a hilly farm, for mutton sheep, we should prefer the South Down to any other. A cross with a Leicester or South Down buck with the common Merino ewe, makes a good, profitable sheep for the butcher. Many of our farmers adopt this course.—If you wish *fine wool*, Spanish Merinoes would be best.

SWEET POTATOES AGAIN.—In answer to "I. W., of Wyoming," I would say:—Your hot bed should be made of stable manure and sand loam or pure sand. It may be covered with light canvas, instead of glass, and should be oiled in order to render it more transparent.—This mode is found to answer, I believe, equally as well as glass, and is much less expensive. In transplanting, the sprouts should be broken off from the potato; 1st, because one sprout is sufficient for a hill, and a single potato of average size will send out perhaps 20 at a time. 2nd, because they will produce a *second growth* of sprouts in time for transplanting, if the first setting is made as early as the 10th of May or thereabouts. They cannot probably, in your climate, be set later than the 1st of June, with a fair chance of maturing before frosts come. I cannot tell certainly where the seed can be procured at this season, but probably in the N. Y. market.—S. T. W., *Pultneyville*.

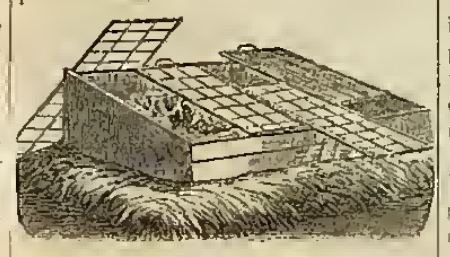
STUMP MACHINE.—In the RURAL of Feb. 11th, I noticed a description of a stump machine, which the writer said cost him $25. Will the writer, by private letter or through the RURAL, give his whereabouts, and whether he manufactures the article; and what would be the cost of one sufficiently strong for all practical purposes, (say as strong as the one figured in the RURAL,) delivered at the Railroad depot, Macedon, N. Y.—J. H. BARNUM, *Walworth, N. Y., Feb.*, 1854.

EARLY PEAS.—The moment the frost is out of the ground, and it can be worked to advantage, is the proper time to put in peas for an early crop.

Orchard and Garden.

HOT-BEDS,—THEIR USES, CONSTRUCTION, &c.

THE construction and management of Hot-beds is so simple and easy, that no farmer or owner of a garden need be without one; while their value, as a means of procuring a supply of early vegetables, is such as to render them very desirable. The summer seems so much lengthened when we may begin before the usual season to enjoy our radishes, lettuces, tomatoes, cucumbers, &c., and there can be no doubt that health is promoted by the temperate use of fresh vegetable food. But the love of such things is far more general than the enterprise and attention which provides them—in other words, thousands would gladly eat, who will never take the trouble to raise them. They look upon it, perhaps, as a matter of very trifling consequence, or as one in which the expense far exceeds the product. That this is a mistaken view, might easily be shown, but it would lead us too far from the subject of our present writing.



There are two modes of constructing the Hot-beds in common use,—in one it is placed upon, and in the other partially below the surface. The first of these is seen in the engraving, and scarcely needs description, as with a few details anybody can make a similar one, after looking at it. The frame is usually made of plank, and is ten or twelve feet long, and five or six feet wide. The front side should be a foot or eighteen inches wide, the other double its width, to form a proper slope for the roof. This is made of sash, of which there are, for the largest size, four, each three feet wide, and about seven feet long, made in the ordinary way, but without cross-bars, so that in glazing the panes may over-lap each other about a quarter of an inch, so as to carry off the rain. A strip of board, six inches wide, should be fastened across the middle of the frame just even with the top, for the sash to slide and rest upon. The planks forming the sides and ends may be simply nailed to a four inch post in each corner. Such a frame will last for years, and soon be regarded as an indispensable part of the apparatus of the vegetable garden.

To form the beds, select a dry situation conveniently placed, sheltered from the north and west winds, by fences or buildings, but open to the south and east, so that they may enjoy the genial influences of the sun. Allowing a space at least two feet larger each way than the frame, drive stakes to mark the corners, and then put on fresh manure from the horse stable, mixing it thoroughly and evenly, and treading it down gently, seeking to keep the pile level and of uniform quality. As much as three wagon loads of manure will be needed to keep up the heat, if the bed is made early in March—as it should be.

For Hot-beds, placed partially beneath the surface, the frames are constructed in the same manner, but they are placed over pits dug in a dry soil, some two feet deep, and filled with manure prepared as in the first instance. Less manure is required, and less heat can be raised and maintained, but they answer every purpose of an ordinary vegetable garden, where early plants for transplanting are particularly desirable. They also require less care in watering, and in regulating the heat, which is inclined to be too great where large quantities of manure are employed.

The mold should be laid on in two or three days—or as soon as the bed has settled, and has a lively and regular heat—the sashes having been put on with the frame, as soon as the substratum of the bed was properly prepared. It should be laid on six or eight inches deep, though for growing radishes and lettuce a foot is necessary. In two or three days the earth will become warm and ready for the seed. The mold should be well stirred to prevent the growth of young weeds which may be germinating, and the seed may then be sown in shallow drills, and covered with earth. While the weather and heat is such that they can be kept constantly covered, but little watering will be necessary, but care should be taken to keep up a proper degree of moisture in one way or another. The heat may be regulated by the admission of air, and shading from the midday sun as the season advances, and should it rise excessively at first, it may be necessary to open holes for its escape, by running down stakes into the steaming mass.

A smaller but very useful Hot-bed may be made by those who have old window sashes, which may be used for roofing them. The size of the frame must of course correspond to the sash with which they are to be covered.—R.

BUFFALO HORTICULTURAL SOCIETY.

THE Annual Meeting of this Society was quite spirited, evincing a desire, on the part of its members, to re-establish its former prosperity and usefulness. The following list comprises the officers elected for the ensuing year:

President—AMASA MASON.
Vice Presidents—Col. J. R. Smith, Myron Stilwell.
Treasurer—H. C. White.
Cor. Secretary—John B. Enton.
Rec. Secretary—Charles E. Clarke.
Committee on Fruits—L. F. Allen, Benj. Hodge, Lewis Eaton.
Committee on Flowers—Col. J. R. Smith, John B. Enton, A. J. Mathews.
Committee on Vegetables—Jason Sexton, Jacob Schrenk, Warren Granger.
Committee on Entomology—W. R. Cuppock, Wm. Lanering, Jr., J. D. G. Stenson.

The Society voted to hold meetings on the first and third Tuesdays of each month; also to have two exhibitions during the present year. The first of the semi-monthly meetings was held at the residence of the President, AMASA MASON, and very largely attended, though in advance of the regular time. It was resolved to raise a fund of two thousand dollars, or upwards, for the purpose of forming a permanent investment, the interest of which should be applied towards the expenses of a Central Hall, at which the meetings and exhibitions of the Society may in future be held. A committee for that purpose was formed, consisting of Col. HODGE, CHARLES E. CLARKE, Esq., LEWIS EATON, Esq.; and the President of the Society guaranteed to raise a second thousand dollars as soon as the first thousand should be subscribed.

The Society has a very fine library and many excellent members, with an abundance of material and horticultural taste to insure one of the best Societies in the State. Buffalo has many wealthy citizens, who take pride in ornamenting their grounds with choice trees and shrubs, as well as cultivating the finer varieties of fruits. H. C. W.

FRUITS FOR GENERAL CULTIVATION.

THE following varieties of fruits were recommended for general cultivation at the North Western Fruit Growers' Association:

APPLES.—Summer Rose, Early Harvest, Golden Sweet, Jersey Sweeting, Pound Sweet, (for stock and culinary purposes,) Herefordshire Pearmain, Pomme Grise, Roman Stem, American Golden Russet.

PEARS.—Bartlett, Flemish Beauty, (best,) White Doyenne, (best.)

PEACHES.—Crawford's Early, Early Barnard, Early York, Large White Cling, Crawford's Late, George Fourth.

The following were recommended for farther trial.

APPLES.—Early Joe, Duchess Oldenburg, Mother, Hubbardston Nonsuch, Peck's Pleasant, Spice Sweet.

PEARS.—Bloodgood, Dearborn's Seedling, Sheldon.

The following pears were spoken of as very good:—Louise Bonne de Jersey, Passe Colmar, Winter Nelis, good, but will not succeed in all localities.

A MARVELOUS TREE.

M. HUC, in his "Travels in Tartary and Thibet," found many wonders; among them, a singular tree called the Kounboum, or Tree of Ten Thousand Images, growing not far from one of the principal Buddhist temples in the latter country. The marvel of it is, that there are upon each of the leaves well-formed Thibetian characters, all of a green color, some darker, some lighter than the leaf itself. The characters are portions of the leaf itself, but are in different positions on the leaf, and are also found upon the bark of the trunk and branches. In removing a part of the old bark, the indistinct outlines of characters were seen on the new bark under it, but different from those removed. The tree is of great age and size, and the Lamas informed M. Huc, that it was the only one of the kind in existence, and that all efforts to propagate it by seeds and cuttings had failed. Our traveler made a most minute examination, and became convinced that there was no trickery in the case.—R.

THE HORTICULTURAL REVIEW.—The *Western Horticultural Review*, for some years a welcome visitor, was suspended for a few months on account of the illness of its able Editor Dr. J. A. WARDER. It now comes out as much improved in appearance and matter as we trust its editor is improved in health and vision. JAMES W. WARD, Esq., is editor of the botanical department, and from his well known attainments in this science, cannot fail to add materially to the interest and extended usefulness of the magazine.

Mr. MARSH, of Litchfield, Mass., has on his premises an apple tree which measures *fourteen feet* in circumference, and yielded twenty bushels of good fruit the past season. It had yielded, previously to 1845, about 100 bushels a year. It was carried to Litchfield from Hartford on the first settlement of the former town and has borne delicious fruit for 130 years.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending February 14, 1854.

A. H. Caryl, of Sandusky city, Ohio, for improvement in picking and cleaning flax.

Matthias W. Baldwin and David Clark, of Philadelphia, Pa., for improved arrangement of vertical tube feed water-heaters, in locomotive smoke stacks.

Lewis S. Chichester, of Brooklyn, N. Y., for improvement in machines for cleaning wool.

John Griffiths, of Philadelphia, Pa., for improvement in valve cocks.

F. C. Goffin, of New York, for improvement in fire and burglar proof safes.

Jonathan Knowles, of Trenton, N. J., for improvement in process of treating vegetable fibre. Patented in France, April 4, 1853.

Sam'l G. Lewis, of Delaware co., Pa., for improvement in making thick paper.

Thos. Cook, of New York, assignor to Stukie Lirsey, of same place, for improvement in fire-arms.

John Standish, of Cuyahoga Falls, Ohio, assignor to John Standish and Horace A. Miller, of same place, for improvement in machines for pegging boots and shoes.

Robert Preston, of North Pownal, Vt., for improvement in drying cloth.

Warren Robinson, of New Haven, Conn., for improvement in ships' ventilators.

Jacob Reese, of Sharon, Pa., for improvement in hanging the fore-plate to iron rolling machinery.

W. G. Sterling, of Bridgeport, Conn., for improvement in planing hoes.

Henry S. William, of Malta, Ohio, for improvements in apparatus for controlling the pressure of steam.

Jacob D. Woodruff, of Newark, N. J., and J. H. Butterworth, of Dover, N. J., for improvement in drop-bridges.

Arcalaus Wyckoff, of Wellsburgh, N. Y., for improvement in machines for making links of jack-chains.

Jno. Webster and Orson Spencer, of Cleveland, Ohio, assignors to Jno. Webster, of same place, for improvement in gas burners.

Geo. H. Ambler, of Trumbull, Conn., for improvement in saddle trees.

Frederick H. Bartholomew, of New York, for improvement in water-closets.

Jason Barton, of Middle Haddam, Conn., for improvement in horse-bells.

J. L. Burdick, of New York, for improvement in machinery for paging blank books.

John W. Newell, of New Paris, Ohio, for improvement in machines for stuffing horse-collars.

Horace Smith and Daniel B. Wesson, of Norwich, Conn., for improvement in fire-arms.

Allen Goodman and Lyman Wheeler, of Dana, Mass., for improved machine for scraping and toothing reeces.

Joel R. Bassett, of Cincinnati, Ohio, assignee to Caleb B. Williams, of same place, for improvement in ball valves for pumps.

SOAP STONE.

THERE is a fine quarry of this singular and useful material at Grafton, in the vicinity of Bellows Falls. The mill where it is prepared for use, and fitted for a finishing establishment in Boston, is at Cambridgeport, Vt., a small village near the line of Grafton. This quarry has long been known, as is seen from antiquated chimney pieces in the neighborhood, but was formerly worked upon a small scale, in part from the want of modern improvements in machinery, but chiefly from the expense of transportation to the distant market.

That obstacle is now removed by the railroad. The freestone, as it is here called, has the "unctious feel" of the mineralogist, and the engraver *soap* better describes the striking resemblance of touch to that article, although the ease with which the material is cut and fitted for use makes the word *free* a proper and significant appellation. The spectator at first is both amused and surprised to see huge blocks of granite-looking stone cut into slabs by a saw such as he has seen in use only for wood.

The teeth are not so sharp at the point, but with this exception, one might think the workmen had borrowed from a saw-mill the well known instrument for transforming logs into lumber. The soap stone contains no substance harder than itself, and it cuts under the common saw easier and faster than hard wood of the same dimensions. This I proved by experiment on a cubic piece, a part of which I carried away as a specimen of the quarry.

The slabs are cut into various forms by circular saws, which, from their rapid motion, seem not to perform a very hard service; and the facility of working the material is no inconsiderable item of its value. From the various uses to which the soap stone is adapted, it must soon find a greater demand. In the ordeal of heat, it seems to be cousin-germain to *asbestos*, for it endures fire without warp or crack, even to a red or white heat, losing only now and then thin scales on the inner surface. Hence it is lined and is used to answer the purpose of fire brick in the lining of stoves and of forges.

It is susceptible of a moderate polish, and is now fashioned into chimney pieces and ornamental work exposed to fire. Nay, more, it begins to take rank with household furniture, and is used for griddles, being found superior to iron, inasmuch as it needs not to be *greased* to give up the cakes, and does the work without the disagreeable odor arising from the same cooking upon iron. To what further and various uses the soap stone may be destined in this age of progress, I know not, but even this brief notice of so important a quarry in its incipient working, may not be without interest to the public.—*Cor. Jour. Commerce.*

PROOF THAT FLAME IS HOLLOW.—Pour some spirits of wine into a watch-glass and inflame it; place a straw across this flame, and it will only be ignited and charred at the outer edge; the middle of the straw will be uninjured, for there is no igniting matter in the centre of the flame; or introduce into the middle of the flame one end of a glass-tube, when the vapor will rise through it, and may be lighted at the other end of the tube.

SHOEMAKING.

SHOES.—Next to agriculture the shoemaking business is the most important and profitable pursuit in Massachusetts, and has the largest number of persons engaged in it. The Andover Advertiser says that the aggregate value of boots and shoes manufactured in this State is $37,000,000, or more than that of all the other States combined, and far exceeding that of any other manufacture in the Commonwealth. About one-third of the above amount is shipped to New York, and the remainder is sent to the South and West, to California, the West Indies, South America, Australia, the Sandwich Islands, England, and the European continent. Lynn is more extensively engaged in this business than any other town, making nearly five millions of pairs annually. Then come in succession, Danvers, Stoneham and Grafton. In the latter town a single manufacturer uses one hundred bushels of shoe pegs every year. The pegs used in this immense business are mostly made in New Hampshire; they are cut by machinery, and one firm manufactures nearly fifty bushels per day. Machinery is also now used to a considerable extent for sewing and stitching the leather.—*Massachusetts Ploughman.*

THE PENNSYLVANIA TUNNEL.—The tunnel through the Allegany Mountains, which has just been completed on the line of the Pennsylvania Central Railroad, is 3612 feet long, 2685 feet of which is arched, and 927 is cut through the solid rock where arching is unnecessary. The sides of the arch, to a height of eight feet, are built of cut stone, 22½ inches thick, resting on abutments of rock range work; the crown consists of five courses of hard burned brick, laid in hydraulic cement. The tunnel is 23 feet high, and 24 feet in the extreme width. Its greatest elevation above tide-water is 2161 feet. The height which is overcome by the track in a distance of twelve miles on the eastern side of the summit level, is 993 feet—or a grade of about 83 feet to a mile.

GREASE FOR CARRIAGE WHEELS.—This composition prevents friction to a great extent.—Its cost is not comparatively greater than the materials often employed for the purpose; it is not changed by heat, and hence does not liquefy and flow away from its proper place.

Black lead pulverized	30 parts by	weight.
Hog's lard	50 lbs.	do.
White soap	50 lbs.	do.
Quicksilver	5 lbs.	do.

Amalgamate well the lard and mercury by rubbing them together for a long time in a mortar; then gradually add the black lead, and lastly the soap, mixing the whole as perfectly as possible.

Domestic Economy.

BAKED APPLE DUMPLING.—Prepare a rich paste of sour cream and soda; roll them thin, cut them out and prepare the same as for boiling; place them upon tins and bake until the fruit is thoroughly done. To be eaten hot, with any sauce prepared.—L.

HINTS TO HOUSEWIVES.

BRITANNIA should be first rubbed gently with a woolen cloth and sweet oil; then washed in warm suds, and rubbed with soft leather and whiting. Thus treated, it will retain its beauty to the last.

New iron should be gradually heated at first; after it has become inured to the heat, it is not likely to crack.

It is a good plan to put new earthen-ware into cold water, and let it heat gradually until it boils—then cool it again. Brown earthenware particularly, may be toughened in this way. A handful of rye or wheat bran thrown in while it is boiling, will preserve the glazing so that it will not be destroyed by acid or salt.

Clean a brass kettle just before using it for cooking, with a little salt and vinegar.

The oftener carpets are shaken the longer they will wear; the dirt that collects under them grinds out the threads.

If you wish to preserve fine teeth, always clean them thoroughly after you have eaten your last meal at night.

Woolens should be washed in very hot suds, and not rinsed. Lukewarm water shrinks them.

Do not wrap knives and forks in woolens.—Wrap them in good strong paper. Steel is injured by lying in woolens.

Suet keeps good all the year round if chopped and packed down in a stone jar and covered with molasses.

Barley straw is best for beds; dry corn husks slit into shreds are better than straw.

When molasses is used in cooking, it is a prodigious improvement to boil and skim it before you use it. It takes out the unpleasant, raw taste, and makes it almost as good as sugar. When molasses is used much for cooking, it is well to prepare one or two gallons in this way at a time.

Never allow ashes to be taken up in wood, or put into wood. Always have your matches and lamp ready in case of sudden alarm.—Have important papers all together, where you can lay your hand on them at once in case of fire.

Use hard soap to wash your clothes, and soft to wash your floors. Soft soap is so slippery that it wastes a good deal in washing clothes.

It is easy to have a supply of horse-radish all winter. Have a quantity grated while the root is in perfection; put it in bottles; fill it with vinegar, and keep it corked tight.

TO RENEW A BLACK COLOR.—Black garments frequently lose their lustre, and become brown by use. Their original color may be restored by making an infusion of logwood, and applying the liquor with a sponge so as to saturate the rusty parts of the garment, when it may be dried and pressed off with a hot iron.

THE NEW AMERICAN STEAM-SHIP "GOLDEN AGE."

OCEAN STEAM NAVIGATION.—NO. II.

Three weeks ago we gave the readers of the Rural an engraved illustration of the American steam-ship "Savannah," the pioneer vessel in Ocean Steam Navigation. She was a miniature craft compared with the monster steamships of this latter half of the nineteenth century, but she was, in her day, a triumph of American skill and enterprise, and establishes our claim to the glory of first demonstrating a problem of measureless interest to the human race.

We give, in the present number, an engraving of one of our modern-built steamships—the "Golden Age," now upon her first voyage to Australia, the oriental land of gold. Although the cut is of precisely the same dimensions as the Savannah, our readers must bear in mind that the scale of measurement is very much reduced; the previous illustration representing a vessel of 380 tons burthen, while this represents a ship six times as large, and bearing a burden of more than two thousand tons.

She is a fair representative of the best modeled American steam-ships, although slightly differing from the Collins' and some other of our sea-going steamers. Like them she is destitute of a bowsprit, which makes her bows look naked and unfinished to the prejudiced eye of an old salt. This useless appendage is still retained on the English steamers, for no earthly reason except hostility to innovation. In addition to its uselessness, the bowsprit weighs down the bows, causing the vessel to plunge headlong into the waves, like a clumsy whale. The bows of the "Golden Age" are very long and sharp, cutting the water like a knife, and causing it to flow along her lines with scarcely a ripple, until it comes beneath the resistless stroke of her wave-compelling wheels. These propellers are placed very far back upon the hull, and, unlike the Collins' and the Cunard steamers, they are driven by the common above-deck, working-beam connection.

This manner of connecting the wheels to the engine, although the most simple and common in river boats, was for a long time repudiated in ocean steamers, on the mistaken supposition that it would too heavily burthen the upper decks, and render the vessel unsafe in a boisterous sea. It was at one time a great problem, how a locomotive could be made having sufficient bite upon the rails to draw a train; and cogs, saw-teeth and spikes were among the means proposed to get over the imagined difficulty, no one having the audacity to dream that the friction of a common weighted wheel would draw a train of cars half a mile in length. The experiment was finally tried, however, and the wiseacres were confounded. So in the steam-ship, the whole apparatus, necessarily complicated for that purpose, was placed as low down as possible in the hull, for the purpose of properly ballasting the ship, and the simple working beam was consequently left untried. Now, however, it is found most effective in the merchant steam marine, and is generally adopted where it is not necessary to protect the machinery from the effect of an enemy's guns. A steam-ship like the "Golden Age" is built to *run, and not to fight!* she is the hand-maiden of commerce, not of war.—She is a messenger of peace and good will, not of strife and blood,—and her errands are errands of mercy, and not those of vengeance or of retribution.

An abstract idea of a modern steam-ship, or even a view of her graceful form gliding over the smooth and placid waters of New York Bay, gives a very faint impression of her size and power. She must be seen in a storm, battling bravely with the wind and waves, walking unresistingly over the billows, which bow their foaming crests beneath her wheels, as the waving harvest bows before the passing breeze. Or, we must enter into some mathematical calculations of her dimensions, her inertia when at rest, and her momentum when in motion.—We must be told that the resistance to a moving body increases as the square of its velocity, and that a speed of twelve miles an hour, requires sixteen times the propelling power of three miles an hour. We must be taught that a vast hulk, 350 feet long, 70 feet wide, and drawing a depth of water of over 20 feet, and capable of sustaining, besides its own weight, a burthen of *twenty-five hundred tons*, is driven through the yielding waves at even a higher than the former rate of speed. We must reflect that every time she moves her length, she displaces as many tons of water as the united weight of herself and cargo; that to do this, she must revolve two wheels ten feet wide and forty feet in diameter, eighteen times in a minute against the immense resistance of the sea; that two piston strokes of two cylinders must be made for each revolution of the wheels, and that each stroke uses a cylinder full of steam under an average pressure of fifteen pounds to the square inch; that with cylinders of seven feet diameter and ten feet stroke, each cylinder full of steam is 385 cubic feet, under the above named pressure; and that the whole 72 strokes in one minute, use 27,720 cubic feet of steam; that this immense volume of steam is not only *generated* each minute, but it is also again *instantaneously condensed* and re-converted into water; and that to generate this steam, one hundred tons of coal are consumed each day!

Such illustrations as the above, give us some idea of the majesty and power of the steam-ship. It is the embodiment of an idea of a finite mind, as the revolving spheres are that of the Infinite; but compared with which, however, great as it is in itself, it is as nothing.

The Essayist.

CHARACTER.

BY THE REV. HENRY WARD BEECHER.

The Rev. H. W. Beecher usually lectures to some purpose. Witness the following report of a recent lecture by him, on Character:

I will draw a distinction between character and reputation, which are not synonymous. A man's character is the reality of himself; his reputation, the opinion others have formed about him; character resides in him, reputation in other people; that is the substance, this the shadow; they are sometimes alike, sometimes greater or less. If a man be able to achieve things beyond his time, his reputation will be different from his character. He who seeks reputation must not be beyond the times he lives in. It is important to men beginning life, to know which they want—character or reputation. To build a character is a work of time; as ships are built on one element and used on another, so character is formed in youth and home for after life. Reputation is easily got; it is generally charlatanism, empiricism, taking many forms—as that of the patriot, a tribe numerous as musquitoes, who, like them, lean and hungry, suck all the blood they can, but make none—who live on suction. In a man, as in a ship, the material must exist originally; a man naturally mean may be improved, but never will be a noble man. Reputation may be made *for* a man; character must be made *by* him, with labor and time, and it cannot be taken away. The antagonism between the two is not so great as the disproportion. Thus, a man, if wise, will be content to be considered wiser; he likes a shallow three times his size; like banks that issue three paper dollars for every one in specie they have; if worth a quarter he likes to be called worth half a million, until the assessor brings him to his senses. He will disclaim "popularity," but claim the same thing under the name of "influence;" but it is what God made a man, and he makes of himself, that determines his influence; the weights never ask a favor of the scales; a thousand pounds will weigh down five hundred by their natural force. So he speaks of "prudence." Prudence is coincident with rectitude; and there have been men against the grain of life all their days, who yet were most prudent men. He substitutes love of approbation for love of truth. Thousands lose their characters to save their reputations. I will consider three classes of men: those whom a single faculty rules; those who are controlled by groups of faculties; and those who have several characters at different times. I will consider two instances in the first class: men who are ruled by love of approbation and love of gain. Approbativeness is almost exclusively an American faculty; it originates in the necessity for popular approval; we are exceedingly vain, and growing vainer. Our public man is the most pliant in the world; you may hound him; so may your neighbor, and thousands after him, but he is dough still; his morals are not absolute, but vary with the company he is in; his religion is like a navigator's dress, changed for every latitude. Yet, the faculty has its uses; without it the attrition in the world would be harsh, but, where it rules, it causes weakness. It leads men different ways; some shun anything new; others fling bombs into the midst of stale proprieties, and, like comets, slap the sun in the face with their tails. These ultras are like the engine and the anchor—both are useful; but much as I respect anchors, I would prefer to be an engine. The faculty is shown in fashion, whose first question is, "What will people say?" and whose last, "What did people say?" Sometimes, I believe, there is a rain minister; (though I believe there is no honester class in the main;) it is hard to bear constant applause, and love, too; the toughest plank will crack under perpetual sunshine; but the minister's vanity is principally shown, in fearing to lose the esteem he has gained. Characters founded on this faculty can never be great; he that does not write or speak from enthusiasm for his subject produces nothing that will permanently control the mind. Love of applause is the fertile source of mediocrity; excellence springs from sympathy with God, man and truth.

The lecturer next considered the love of money as the controlling faculty. The miser, fearing poverty amid wealth, he esteemed as much a monomaniac as the ragged beggar who thinks herself a queen. Misers are but the wrecks of a larger class. The lover of money may have other and good traits; but economy is his conscience; he will boast of his Rubens, but more of having bought it at a tenth of its value from one who did not know it. If it be asked what character is the most profitable, the answer depends on what the question means. If it mean money, the lean man is the best character, who, like a weasel, can creep through anything, or like an oyster-scraper, can collect a great deal without enjoying anything.

The lecturer next considered men whom a group of faculties control. The man controlled by the animal faculties is respectable—so is a cellar, but it is always a cellar. Those whom the social qualities control, are the saints of the family, but not the men for public conflicts. The active men who have no time for enjoyment, are locomotives all the week, and, on Sundays, only lie by to be oiled. The esthetic class enjoy ethereal things; but an ethereal wife brings curses on many a dinner of bread and cheese. The intellectual class know nothing of a sentiment till they get an "idea" of it. Those who are controlled by the moral faculties, feel in moral deformity a violation of their own minds as much as of God's law.—Their contests of life are not so much from a hatred of evil as from a love of good. By elective affinity those classes run into schools and sects; and 'tis as vain to try to unite them as to bid the eye to taste, or to the tongue to see. The truth is, not that men group themselves, but that, when grouped, they will not behave themselves.

Under the third head the lecturer considered the difference between the man at home, where benevolence rules him, and in his store, where he is controlled by selfishness. The manufacturer, merchant and lawyer were warned that principle is the same in all places; and the manufacturer's frauds are the result of the buyer's dishonest passion for having more expensive things than he can afford—a low price can command only an inferior article. Commerce is a benevolent scheme, by which both buyer and seller should be profited. If the request in the Lord's Prayer were granted, it would bring fire from heaven on half the occupations in the world. If "*His will were done on earth*," how many bales of cotton would fly to slaves, and how much cutlery to starving operatives in Birmingham! If dollars had voices, what fearful words they would utter in the ears of their owners! The lawyer takes a fee to equivocate—that is, lie—place him on the bench and he refuses it as a bribe—though the work and the principle are just the same. But there is a parlor door and a kitchen door; certain things ought to be in the house, only they won't come in through the right door. Thus, it is wrong to bring lies to the door for truth. Take them to the other and all is right! The true christian is he to whom what is right in the sanctuary is right everywhere else.

The lecturer concluded by cautioning youth against supposing, from anything said, that character is useless. The dissecting room is not the place to see the beauty of the frame.—A character formed according to the scheme of love and benevolence, and God's Word will, more than any other, give peace of mind, and even material prosperity. But character takes time to form it. Who sows to-night to reap to-morrow, must sow mushrooms. The oak is a growth of ages. The lecturer was frequently applauded.

Retentive Memory.—The historian Fuller, in 1607, had a most retentive memory;—he could repeat 500 strange, unconnected words after twice hearing them; and a sermon verbatim, after reading it once. He undertook, after passing from Temple Bar to the farthest part of Cheapside and back again, to mention all the signs over the shops on both sides of the streets, repeated them backwards, performing the task with great exactness.

Sunday Reading.

[For the Rural New-Yorker.]

POEMA BREVIS.

BY J. C. MILLER.

When the autumn winds were sweeping
Through the leafless bowers,
Like pale mourners sadly weeping
O'er the faded flowers,
She who was our blest evangel,
Through long, weary years,
Passed to heaven, an earth-born angel,
Leaving us in tears!

Soft and silken were the tresses
Of her golden hair,
And a light, like that which blesses
Holy men in prayer,
Shone serenely, shone all brightly
In her azure eyes,
Like Aurora, nooding nightly
All the northern skies.

When the sun was slowly sinking
Down the rosy west,
She was thinking, sweetly thinking
Of the promised rest.
"Ere the purple skies of even
Pal their sable on,
Shall the awful light of heaven
On my vision dawn."

On her brow the shadows darkened,
And her eyes grew dim,
But she smiled, as one who hearkened
To a charmed hymn.
Then with pale hands folded meekly
On her sinless breast,
Passed the lovely one, and weakly,
To her dreamless rest!

Cleveland, O., 1851.

THE LAW OF LOVE.

It was not mere good nature, but the adoption of the peace principles, which made Wm. Ladd thus gentle-hearted. A story which he often told with peculiar relish, will illustrate this moulding of his character.

I had, said he, a fine field of grain growing upon an out farm at some distance from the homestead. Whenever I rode by, I saw neighbor Pulsifer's sheep in the lot, destroying my hopes of harvest. These sheep were of the gaunt, long-eared kind, active as spaniels; they could spring over the highest fence, and no partition wall could keep them out. I complained to neighbor Pulsifer about them, sent him frequent messages, but all without avail. Perhaps they would be kept out for a day or two, but the legs of the sheep were long, and my grain rather more tempting than the adjoining pasture. I rode by again, the sheep were still there—I became angry, and told my men to set the dogs on them, and if that would not do, I would pay them if they would shoot the sheep.

I rode away much agitated; for I was not so much of a peace man then as I am now, and I felt literally full of fight. All at once a light flashed upon me. I asked myself, would it not be well for you to try in your own conduct the peace principle you are preaching to others?—I thought it all over, and settled in my mind as to the best course to be pursued.

The next morning I rode over to see neighbor Pulsifer. I found him chopping wood at his door.

"Good morning, neighbor."

No answer.

"Good morning," I repeated.

He gave a kind of a grunt, like a hog, without looking up.

"I came," continued I, "to see you about the sheep."

At this he threw down the axe, and exclaimed in a most angry manner—

"Now, aren't you a pretty neighbor, to tell your men to kill my sheep? I heard of it—a rich man like you to shoot a poor man's sheep!"

"I was wrong, neighbor," said I; "but it will not do to let your sheep eat up all my grain; so I came to say that I would take your sheep to my pasture, and put them in with mine, and in the fall you may take them back; and if any one is missing, you may take your pick out of my whole flock."

Pulsifer looked confounded—he did not know how to take me. At last he stammered out:

"Now, Squire, are you in earnest?"

"Certainly, I am," I answered; "it is better for me to feed your sheep in my pasture on grass, than to feed them here on grain; and I see the fence can't keep them out."

After a moment's silence, Pulsifer exclaimed:

"The sheep shan't trouble you again; I will fetter them all; but I'll let you know that when any man talks of shooting, I can shoot, too; and when they are kind and neighborly, I can be kind, too."

The sheep never again trespassed on my lot. And, my friends, he would continue, addressing the audience, remember when you talk of injuring your neighbors, they talk of injuring you; and when nations threaten to fight, other nations will be ready, too. Love will beget love—a wish to be at peace. You can only overcome evil with good. There is no other way.—*Dem. Review.*

Clerical Tact.—A clergyman in this city recently announced that during the winter he should deliver a series of short sermons in the afternoon of each Sunday. The attendance has been largely increased thereby, and much interest is manifested in the religious services. The sermons have been practical expositions upon obscure passages of Scripture, and have never exceeded sixteen minutes in the delivery; and the whole exercises average from thirty to thirty-five minutes in length. A clergyman in Albany recently told his congregation that he should reserve the best *efforts* of his mind for rainy Sundays; and the worse the weather, the better should be the sermon. He kept his word, and the result was, his church was never so well filled as in wet weather.—*Boston Transcript.*

Men of the noblest dispositions think themselves happiest when others share their happiness with them.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

"OH FOR A HOME BESIDE THE HILLS."

BY NELL FARMAN.

"Oh for a home beside the hills,"
Where gladly leap the bounding rills—
Where sunlight dwells, 'mid fairy flowers
Which bloom, and bud 'mid green-wood bowers:
There I would look on green vales wide,
'Mid which, the gay wild waters hide,
And then, through sweet, wild roses roam,
To seek for paths to Ocean's home.
There I could dwell from care away,
And ne'er 'mid proud halls wish to stay—
Where far from tones of lordly glee,
My heart at rest would ever be.
Oh, I'd be free from weary care,—
No veil of mockery would I wear—
My lips should never wear a smile,
While hearts are breaking all the while.
Were I away from careless eyes,
Which only gold and beauty prize,
My heart might be as wild and free
As the waves of the chainless sea:
My heart is sick of false, cold life,
'Tis lined of aching, tears and strife,
And dreams fore'er, of home I see—
Bird-song—the carol of the lea;
Oh for a home beside the hills,
Where ever glide the laughing rills:
A home that's bright with birds and flowers—
'Tis there I'd live life's happy hours.

Ellington, Feb. 15, 1854.

DESULTORY PARAGRAPHS.

VII.*

Little Charities.—Little opportunities of doing good are neglected by many who are waiting to perform great acts of charity and beneficence. But few have both the *will* and the *means* for deeds of high benevolence, hence none should forget that the cup of cold water was commended and written in Heaven, while the rich man's alms, though heralded abroad by the sounding trumpet, had its empty and short-lived tones as their only blazon.

VIII.

Suspect Not.—Suspicion, that serpent in life's Eden! how often does his low mocking hiss frighten us from our happiness! Often does the "frank, believing youth" become the disappointed, carping man, because this "fiend of Doubt" has made his heart a den from whence he breathes blight and mildew on every budding joy.

"O, in this mocking world, too soon,
The doubting fiend o'ertakes our youth;
Better be cheated to the last,
Than lose the blessed hope of truth.

Better trust all and be deceived,
And weep that trust and that deceiving,
Than doubt one heart that if believed,
Had blessed one heart with true believing."

IX.

Unconscious Influence.—It may be questioned which is the wiser, but not the happier—he who strives against every form of wrong, seeking *directly* to destroy error and root out ignorance; or he who quietly, by the force of examples of beauty, unconsciously soothes and harmonizes the perturbed spirits and unhallowed passions of those around him, into unison with his own higher and purer nature.

X.

Death of the Old.—Death garners the aged in the grave "like a shock of corn fully ripe." And when the good are called away, can we weep that their labors are over, that they have gone to their reward in Heaven? Here it was toil and woe and strife—there it is rest and joy and peace. Here it was storm and darkness—there it is unclouded day. Here it was sickness and sighing—there it is untroubled and unbounded felicity. But how few arrive at "three-score years and ten!" From the morning dawn of our existence, we walk blindfolded in a pathway hedged in with graves, into one of which, sooner or later, we shall stumble.—Blindly, too, we grope among life's pains and pleasures,—when following any but the heavenly guide, when seeking any but the heavenly inheritance. May we seek—not riches, not happiness, not long life; but to do our duty manfully in the years allotted us, resting assured that this *end* will best compass all other ends worth seeking.

XI.

The Flattery of Appreciation.—The sympathizing spirit which appreciates whatever of good we possess—telling us so by its actions or even words—uses that delicate varnish of flattery which cannot soil the most fastidious self-respect; and a very different article in its effects and appearance from the coarse whitewash some people are ever scattering about them.

XII.

Perverseness.—A spirit of perverseness sometimes seizes us, making us act contrary to our own better feelings—making us do little disagreeable things just *because we should not do them.* This furnishes the only satisfactory solution of one-half the quarrels between the best of friends. It rather grates upon our self-love to feel that they possess, however worthily, so much power over us; so we attempt in some such way to show off our independence.

SUSPENSION BRIDGE AT NIAGARA FALLS.

Eds. Rural:—Probably but a small proportion of the many readers of your interesting paper, have ever seen, or have any correct idea of the great international Suspension Bridge, now in course of construction. With the endeavor to add something to the useful and reliable matter of your deservedly popular journal, I will, with your permission, make the effort to give it a description.

A bridge of such novelty of construction—such magnificent proportions—such immense strength—would be an object of great curiosity in any locality, or across any river. But taking into view, that it is international in its character—that it affords a great thoroughfare of inter-communication between two Governments—that it spans the Niagara with its many curiosities and historical reminiscences, unsurpassed by any other river on this Continent—just below, and in full view of its great waterfall—and over a chasm of fearful depth, at the bottom of which rushes its vast flood with the speed of a rail car—all taken together, must make it one of the wonders of the world.

Bridges suspended over gulfs and rivers, where supports from underneath were impracticable, have long been made, but the successful construction of bridges suspended on cables made of small iron wire, and of strength sufficient, not only to sustain their own immense weight, but also the weight of a train of cars drawn by the largest class locomotive, are of recent origin. Cables for this purpose, made of small wire, have very peculiar and important advantages—their strength may be calculated to a mathematical certainty. To make this understood by every reader, let me illustrate. If we take one hundred threads of silk, of a given and uniform length, and we test the strength of each separately, by suspending a five pound weight to it, we know that the one hundred, when laid straight and evenly together (not twisted,) and firmly wound from end to end, in their united strength will sustain five hundred pounds. With just as much certainty does the engineer, constructing this bridge, know the strength of each cable and the weight it will sustain; therefore, by calculating the weight of the cables, and all the other materials of the bridge; the weight of a loaded train of cars, with locomotive moving it with a given velocity; then adding a large amount to make it beyond all peradventure, the requisite number of wire is put into the cables to make it beyond a possibility of failure. But, now it becomes apparent to every one, that however certain may be the strength of the cables, all is of no avail for security, unless the *fastening* or *anchorage* of the cables is made equally certain. This point is not as easily obtained; demonstration is impracticable, the *trial* of its strength is equally so, and therefore the skill and ingenuity of construction and human judgment must be relied upon. That it may be relied upon *fully*, labor and material are used with most lavish expense—for failing here, all fails. It matters not for the safety of the noble ship, with a "*lee-shore*" *in sight*, however strong may be her *cables*, if she drags her anchor. But she *may* be dashed in pieces on the rocky shore, and some of her hardy crew be saved. Not so with this bridge. "Dragging *her* anchors" when with a train freighted with a thousand human beings, not one could escape death! As well might they fall into the crater of a burning volcano! Such a catastrophe cannot be contemplated but with horror. All other railroad disasters—terrible indeed as some of them have been—would sink into comparative nothingness.

Then how great is the responsibility resting on the men constructing this work! But science, skill, money and material have not been wanting—all human judgment pronounces it *safe!* Though probably thousands of the timorous have declared that "they would never cross it on the cars," yet, after years of trial, it will be passed with as much unconcern as any ordinary bridge. Hoping that I have not failed entirely to interest, and lest I be wearisome, I will reserve the subject of *anchorage* for another time, when I will endeavor to illustrate the subject with some diagrams—and, at another time I may describe the manner of laying the wire into the immense cables, and the machinery used in the operation, and should my description be read with half the interest that is manifest by those that stand and look upon the operation, I shall not have failed in my object.

This, as you will perceive, is but an introduction to my subject. Before I get through I hope to give you a drawing of this stupendous work, together with some facts and figures in detail of dimensions, &c. Bellevue.

Suspension Bridge, Feb., 1854.

No man or woman is fully educated if not accustomed to manual labor. Whatever accomplishments they possess, whatever their mental training, a deduction must be made for that important branch.

Let a man be treated as a brute, and he will become more brutish than a brute; but as a rational being, and he will show that he is so.

BIRDS' NESTS.

The structure of the nests of birds affords, perhaps, one of the most agreeable lessons in Natural History.

Among the most curious nests of our English birds may be named that of the wren, the long-tailed titmouse, the thrush, the goldfinch, the chaffinch, the magpie, and the house-sparrow; to these may be added the swallow's, the martin's, the wood pigeon's and the woodpecker's. Of the nests of rooks, it may be sufficient to observe, that they are found to the number of six, or even more, in a cluster.—Crow's nests are always solitary; they are similar in structure to those of the rook.

Among the nests of foreign birds, that of the tailor bird deserves especial mention; the bird itself is a diminutive one, being a little more than three inches long; it is an inhabitant of India. The nest is sometimes constructed of two leaves, one of them dead; the latter is fixed to the living one as it hangs upon the tree, by sewing both together in the manner of a pouch or purse; it is open at the top, and the cavity is filled with fine down; and, being suspended from the branch, the birds are secure from the depredations of snakes and monkeys, to which they might otherwise fall a prey. In Mr. Latham's collection is a specimen of the tailor bird's nest, composed of a single large leaf, of a fibrous, rough texture, about six inches long independent of the stalk, five inches and a half in breadth, and ending in a point. The sides of the leaf are drawn together so as to meet within three-quarters of an inch; within is the nest, about four inches deep and two broad, opening at the top; the bottom of the leaf is drawn upwards, to assist in the support of it. The interior is composed of white down, with here and there a feather and a small portion of white down intermixed.

Another nest of this bird has also been described as composed of several leaves, like those of some kind of hazel sewed together; the inner nest is formed of dry bents, fibres, and hairs, suspended from a tree. It is, therefore, probable that this bird, as well as some others, varies the structure of its nest as occasion and the materials may require. These singular works are performed by the bird using his bill instead of a needle, and vegetable fibres for a thread.

JEFFREYS, THE BLOODY JUDGE.

It was enough for any man or woman to be accused by an enemy, before Jeffreys, to be found guilty of high treason. One man, who pleaded not guilty, he ordered to be taken out of court upon the instant, and hanged; and this so terrified the prisoners in general, that they mostly pleaded at once. At Dorchester alone, in the course of a few days, Jeffreys hanged 80 people, besides whipping, transporting, imprisoning, and selling as slaves, great numbers.—He executed in all 250 or 300. These executions took place, among the neighbors and friends of the sentenced, in 36 towns and villages. Their bodies were mangled, steeped in cauldrons of boiling pitch and tar, and hung up by the road sides, in the streets, over the very churches.

The hangman has ever since been called Jack Ketch, because a man of that name went hanging and hanging, all day long in the train of Jeffreys. You will hear much of the horrors of the great French Revolution. Many and terrible they were, there is no doubt; but I know of nothing worse, done by the maddened people of France in that awful time, than was done by the highest judge in England, with the express approval of the King of England, in the Bloody Assize.—*Household Words.*

GUM ARABIC.

In Morocco, about the middle of November, that is, after a rainy season, which begins in July, a gummy juice exudes spontaneously from the trunk and principal branches of the acacia tree. In about fifteen days, it thickens in the furrow, down which it runs, either in vermicular (or worm) shape, or commonly assuming the form of oval and round tears, about the size of a pigeon's egg, of different colors, as they belong to the white or red gum tree.—About the middle of December, the Moors encamp on the border of the forest, and the harvest lasts six weeks.

The gum is packed in very large sacks of leather, and brought on the backs of bullocks and camels to certain ports, where it is sold to the French and English merchants. It is highly nutritious. During the whole time of harvest, of the journey, and of the fair, the Moors of the desert live almost entirely upon it, and experience proves that six ounces of gum are sufficient for the support of a man twenty-four hours.

THE RULE OF THREE.

There are exceptions to every rule but the rule of three; that is never changed. As your expenditure is to your income, so will the amount of your debts be to your cash on hand, and consequent ability to pay them. If you allow your vanity to lead you into extravagance, you must rely on something else to take you out of it: either a rich relation or the sheriff's writ. Your furniture may be less showy than that of your neighbor, but never mind. Better are cane-bottomed chairs and mahogany tables that are paid for, than spring cushions and marble mantles on a note of six months.—Your coat may be less fashionable than your neighbor's, and while he is driven by a liveried coachman, you may be riding shank's horses; but remember there is a time for balancing the books, and every purse has a bottom. So economize, and always remember the rule of three.

We are too apt to attribute success in business to good fortune, instead of great perseverance. This is a great evil, and should be eschewed, as it leads many to suppose that Dame Fortune will do that for them which they are unwilling to do for themselves.

For the Ladies.

MAIDENHOOD.

BY HENRY W. LONGFELLOW.

Maiden! with meek brown eyes
In whose orb a shadow lies,
Like the dusk in the evening skies!

Thou whose locks outshine the sun,
Golden tresses wreathed in one,
As the braided streamlets run!

Standing with reluctant feet,
Where the brook and river meet,
Womanhood and childhood fleet!

Gazing, with a timid glance,
On the brooklet's swift advance,
On the river's broad expanse!

Deep and still, the gliding stream
Beautiful in thee must seem,
As the river of a dream.

Then why pause with indecision,
When bright angels in thy vision
Beckon thee to fields Elysian?

Seest thou shadows floating by,
As the dove, with startled eye,
Sees the falcon's shadow fly?

Hear'st thou voices on the shore,
That our ears perceive no more,
Deafened by the cataract's roar?

O, thou child of many prayers!
Life hath quicksands—Life hath snares!
Care and age come unawares!

Like the swell of some sweet tune,
Morning rising into noon,
May glides onward into June.

Childhood is the bough where slumbered
Birds and blossoms many-numbered;
Age, the bough, with snows encumbered.

Gather, then, each flower that grows,
When the young heart overflows
To embalm that land of snows.

Bear a lily in thy hand;
Gates of brass cannot withstand
One touch of that magic wand.

Bear through sorrow, wrong and ruth,
In thy heart the dews of Youth,
On thy lips the smile of Truth.

O, that dew, like balm shall steal
Into wounds that cannot heal,
Even as sleep our eyes doth seal!

And that smile, like sunshine dart
Into many a smileless heart,
For a smile of God thou art.

CHILDREN AND SERVANTS.

A WORD FOR MOTHERS.

"Come along, Ally, come along. It's not this way I'll be stopping for you, so come along!" said Mary Mearty, to the little delicate child she was leading by the hand.

The child thus accosted, slackened its pace for a moment to look into her face pitifully, then hurried on. Soon the little feet faltered again, and again the sharp voice said,

"Come along, I say."

At the same time little Ally's arm was pulled harshly, and she was almost dragging her along the street. It was late in the morning, and the sun's rays were beating upon them furiously. With the parasol she held, Mary shaded herself; but the child had no protection.

"Hush, Ally, hush!" and the little arm received another pull, and the mouth a blow; for the child had commenced crying.

Pretty little Ally's face was now bathed in tears, and the blue eyes looked to Mary's so pleadingly.

"Please, Mary, take Ally; Ally tired," sobbed the little pleader.

But Mary's heart was not touched; and with another hearty pull she hurried her along.—The child crept harder than ever, and the little feet almost refused to move. Still Mary lifted her not, but dragged her along.

"And sure, it's a troublesome child you are!" said Mary, as she half lifted, and half threw the child up the steps, as she reached home. "I'll not take you out again, that I won't, and I'll beat you now, if you don't hush!" and a slight blow tested the truth of what she uttered.

Frightened, the child hushed crying aloud, but its sobs were heard long after it had been laid down to sleep, in its little bed, where it usually took its morning nap. Mary was soon below stairs, where a friend waited to talk with her. She was over her pet with the child, and when its mother returned, had hardly ceased speaking of the pleasant walk she and little Ally had just taken.

"I wonder, James, what makes Ally moan and start so in her sleep, this morning?" I am truly troubled about her, 'tis so unusual."

"Oh, don't be frightened, Alice; I dare say nothing is the matter. Come now, lunch is ready. Ally will soon waken as well as ever, I dare say;" and so saying, they left the sleeping child.

But all that day Ally seemed not well; and ere her usual time for retiring came, she was fast asleep in her mother's arms. Now, more than ever alarmed, the mother called a physician. He pronounced the child ill, very ill, with some disease of the brain. The usual questions were put, "Had the child been exposed to the hot sun?" "Had she been over excited, or troubled, or hurt in any way?"

"No, indeed; no such harm had come to her child," answered the mother, unhesitatingly; and "No, no! surely not!" answered Mary.

Once the mother asked, looking anxiously and earnestly at Mary, if they had not been out late that morning in their walk, or if Ally had not been hurried home?

"And sure, Mrs., do you think I would allow harm to your child? Do I not love her as I would my own flesh and blood? And do you think I would not take care of her?"

The mother was silenced. Surely, Mary would not deceive her. But all night long the little sufferer had no rest. Two days she lingered thus, then the pure spirit winged its way to Heaven. Deep grief was in that household. Their only, their cherished one had gone from them. Henceforth she was theirs only in another world.

Mary kept well her secret. The parents never knew the wrong she had done them—never knew but for her the child might still have slept upon their hearts.

Mothers, look well to this matter. Leave not your children too much, even to the best of servants. They are not *their* children—they cannot feel for them, or have patience with them as we have: and does not even ours sometimes fail us? Must we then expect more for hire? I trow not. Then look well to your children. Suffer them to be most in your sight—for else you know not what evil may come upon them.

WIVES, SAVE YOUR HUSBANDS.

The following should be read by every woman in the country, married or unmarried—yes, it should be committed to memory and repeated three times a day, for it contains more truth than many volumes that have been written on the subject:

"How often we hear a man say, I am going to California, Australia, or some where else.—You ask him the reason of his going away, and the answer is, in nine cases out of ten, I am not happy at home. I have been unfortunate in business, and I have made up my mind to try my luck in California. The world seems to go against me. While fortune favored me, there were those whom I thought to be my friends, but when the scale turned, they also turned the cold shoulders against me. My wife, she that should have been the first to have stood by me and encourage me, was the first to point the finger of scorn and say, 'It was your own fault: why has this or that one been fortunate? If you had attended to your business as they have, you would not be where you are now.'—These and other like insinuations, often drive a man to other society, other pleasures, in consequence of being unhappy at home. He may have that he loves; he cannot enjoy life with them as he would; he may love them as dearly as ever; yet home is made unpleasant in consequence of that cold indifference of the wife.—Now I would say to all such wives, sisters, and in fact all females, deal gently with him that is in trouble; remember that he is very easily excited. A little word, carelessly thrown out, may inflict a wound time never can heal. Then be cautious; a man is but human—therefore he is liable to err. If you see him going wrong, ever meet him with a smile, and with the kiss of affection; show that you love him by repeated acts of kindness; let your friendship be unbounded; try to beguile his unhappy hours in pleasant conversation. By so doing, you may save yourself and children from an unhappy future.

When a man is in trouble, it is but a little word that may ruin him; it is but a little word that may save him."—*Merchant's Ledger.*

A MOTHER'S SOLILOQUY.

'Tis mine. Bound to me by a tie that death cannot sever. That little heart shall never thrill with pleasure, or throb with pain without a quick response from mine. I am the centre of its little world, its very life depends on my faithful care. It is my sweet duty to deck these dimpled limbs, to poise that tiny trembling foot: yet stay! My duty ends not here? A soul looks forth from those blue eyes! An undying spirit that shall plume its wing for a ceaseless flight, by my erring hand.

The hot blood of anger may not poison the fount whence it draws its life, or the hasty word escape my lip, in that pure presence. Wayward, passionate, impulsive; how shall I approach it, but with a hush upon my spirit and a silent prayer.

Oh, careless sentinel slumber not at thy post of its trusting innocence!

Oh, reckless "sower of the seed," let not "the tares spring up!"

Oh, unskillful helmsman; how shall thou pilot that little bark o'er life's tempestuous sea, safely to the eternal shore!

"'Tis ours?"

"A Father bends proudly over that little cradle!" A father's love! how strong! how true! But oh, not so tender as hers, whose heart that babe hath lain beneath!

Fit me for the holy trust, oh Good Shepherd, or fold it early to thy loving bosom.—*Fanny Fern.*

MOTHER.

Round the idea of one's mother the mind of a man clings with fond affection. It is the first deep thought stamped upon our infant hearts when soft and capable of receiving the most profound impressions, and all the after feelings of the world are more or less light in that comparison. I do not know that even in our old age we do not look back to that feeling as the sweetest we have through life. Our passions and our wilfulness may lead us far from the object of our filial love; we learn even to pain her heart, to oppose her wishes, to violate her commands; we may become wild, headstrong, and angry at her counsels, or opposition; but when death has stilled her monitory voice, and nothing but calm memory remains to recapitulate her virtues and good deeds, affection, like a flower beaten to the ground by a past storm, raises up her head and smiles among her tears. Round that idea, as we have said, the mind clings with fond affection; and even when the earlier period of our loss forces memory to be silent, fancy takes the place of remembrance, and twines the image of our dead parent with a garland of graces, and beauties, and virtues we doubt not that she possessed.—*James.*

We ought not to isolate ourselves, for we cannot remain in a state of isolation. Social intercourse makes us the more able to bear with ourselves and with others.

Though reading and conversation may furnish us with many ideas of men and things, yet it is our own meditations that must form our judgment.

RURAL NEW-YORKER

ROCHESTER, FEBRUARY 25, 1854.

"All Right," at Last.

For some weeks we have been so overwhelmed with orders, that it has been impossible to get our books properly posted, and enter all the names received from week to week,—hence we could not send all the copies, at each office where a club was formed, and additions constantly arriving, in one package. By mailing from subscription books, day books, and directly from letters, we hoped to avoid any just cause of complaint—yet such were the lectures received for not sending "all the papers in one package," that we have labored day and night to obviate the difficulty. We assure all interested that no efforts have been spared on our part—for, in addition to the labors of several competent clerks, we have ourselves written on the books several nights until past the short hours. Our books are now so nearly posted, that we think none of our agents or subscribers will have reason to complain hereafter.

Had we adopted the course pursued by the *N. Y. Tribune*, and other popular journals, (i. e. not mailed *any* papers to subscribers until their names had been entered in proper order on our subscription books,) thousands of subscribers would not have obtained the paper under two or three weeks after their names were received.—But we did much better—answered every order promptly, and mailed regularly every subsequent week—and therefore hold that some well-meaning friends have talked very plain English without just cause. However, *we* offer no complaint in the premises. On the contrary—now that we are fairly "out of the woods," and have become used to being crowded—we hope our friends will continue their favors, and *see if they can head us again!* All disposed to give us a trial, and help the RURAL along, are respectfully invited to peruse the following paragraph, and govern themselves as therein intimated:

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

Interesting Foreign News.

By the latest advices received by the Baltic, it appears, as we have all along intimated, that a general war in Europe is inevitable. England and France are making open and active preparation, the former government having chartered several of the Cunard steamers, for the transportation of troops. Nearly every government of Europe has declared itself on the side of the Western Powers, and Russia therefore stands alone, a fierce and powerful giant, in her own strength.

The details of the war movements so far as they have transpired, are contained under our "Foreign Intelligence" head, to which the reader is referred. The entangling alliances existing among European governments, and the juxtaposition of their territories, will probably involve nearly every nation on the continent; and in that event we may expect to witness a contest such as has not occurred in modern times.

America in this quarrel must stand aloof, a monument of glorious and peaceful progress amid the general conflagration; and any public man or legislator who counsels otherwise deserves and ought to be branded as an enemy to his country. Let the government be firm and prudent, and the people vigilant and watchful of their rulers, and our country will escape the calamities that impend like clouds and darkness over all the other civilized nations of the earth!

The Special Election.

The special election on the canal amendment to the Constitution resulted as all anticipated in an overwhelming majority in its favor. Indeed, so manifestly politic is the amendment, that no man could vote against it with any kind of wisdom or propriety.

We subjoin the vote in some of the principal places as an indication of the whole.

	For	Against.
New York city	10,141	2,316
Albany	3,767	416
Troy	1,100 maj.	
Schenectady	926 "	
Utica	1,275	30
Syracuse	2,923	62
Rochester	7,266	5
Buffalo	12,300	3
Lockport	2,275	1
Brooklyn	5,293	256
Oswego	2,500 maj.	
	49,766	3,149

The small towns and villages vote proportionately to the above, and the majority in the State for the amendment will probably not fall short of 150,000; the vote being in fact, like the handle of a jug, all on one side.

GENESEE EVANGELIST.—This excellent Religious Newspaper—edited and published by the Rev. R. W. HILL, of this city—is deservedly increasing in circulation, as well as reputation.—For terms, &c., see prospectus in this paper.

Congressional Proceedings.

Feb. 13.—SENATE.—Mr. Everett presented a petition from 1,600 citizens of Worcester county, Mass., against the passage of the Nebraska bill; as also a memorial from the Society of Friends in Massachusetts on the same subject.

Other petitions of a like nature were presented by Messrs. Seward, Clayton, Foot, Sumner, Chase, and Bradbury.

HOUSE.—A motion was made to suspend the rules so as to reconsider the vote whereby the Deficiency Appropriation bill had been rejected. This motion did not prevail, so the bill was lost.

The Speaker laid before the House a communication from the Secretary of the Interior, in reply to a resolution, from which it appears the amount, in round numbers, donated by Congress for schools, is nearly 59,000,000 acres of land; universities, over 4,000,000; seats of government, over 57,000; salaries 422,000; internal improvements 4,669,000; roads 251,000; canals and rivers, nearly 6,000,000; railroads, over 8,000,000; swamp lands, nearly 36,000; deaf and dumb 45,000; individuals and companies, 280,000; military services 26,000,000. Aggregate, 134,704,392 acres.

Feb. 14.—SENATE.—The Senate was crowded at an early hour by persons anxious to hear the Texas Senator, Mr. Houston, speak on the Nebraska bill. Some business of small moment was transacted, and then the debate on the Nebraska bill was resumed by Mr. Houston.

HOUSE.—The House, after some unimportant business, went into committee of the whole on the homestead bill.

Feb. 15.—SENATE.—George N. Saunders' confirmation as Consul to London, was rejected yesterday, 29 to 10. John L. O'Sullivan's nomination as Charge to Portugal, was confirmed 26 to 17.

Feb. 16.—SENATE.—The chair presented a letter from the publishers of the Sentinel, offering to take the contract for reporting the Senate proceedings and debates, in place of the proprietors of the Union, who have given up the contract.

Mr. Hamlin presented a report, made by Mr. A. Vattamere, on an international standard of weights and measures. Referred to library com.

Mr. Chase presented a petition of 1,200 citizens of Hamilton co., Ohio, against the repeal of the Missouri Compromise; also, similar memorials from other parts of Ohio.

The bill to lay off Council Bluffs, Iowa, was passed. The bill making Brunswick, Ga., a port of entry, was passed.

Mr. Sumner presented petitions from Illinois and Massachusetts, against the repeal of the Missouri Compromise.

HOUSE.—Mr. Hendricks moved a reconsideration of the vote by which a bill for the relief of pensioners, under the act of February 3, 1853, was referred to the committee of the whole.

Feb. 17.—SENATE.—Mr. Seward spoke at length and with great force against the Nebraska bill. Mr. Pettit got the floor, and said he would speak on Monday. Mr. Sumner said he would speak on Tuesday. The bill was postponed, and the Senate adjourned to Monday.

HOUSE.—The House went into committee on the Homestead bill, when Mr. Stephens, of Ga., spoke in favor of the Nebraska bill, in reply mainly, to Mr. Meacham. Adj. to Monday.

LEGISLATURE.—Of the members composing the two houses of the New York Legislature, there were born in the State of New York, 109; Vermont 11; Pennsylvania 3; New Jersey 1; New Hampshire 1; Connecticut 8; Massachusetts 7; Indiana 1; Ireland 4; Wales 1.

Professions.—Lawyers 23; Farmers 57; Merchants 18; Physicians 5; Mechanics 2; Manufacturers 3; Carriage maker 1; Carpenter 1; Shoemaker 1; Lumbermen 2; Brewer 1; Baker 1; Saddler 1; *Gentlemen* 2; Millers 2; Forwarders 2; Printers 2; Editors 2; Contractor 1; Conductor 1; Grocer 1; Hatter 1; Blacksmith 1; Speculator 1.

Condition.—117 are married, 24 single, and 2 are widowers.

In Massachusetts, of the 350 members who compose the Legislature, 109 are farmers, 46 lawyers, 46 merchants, 23 manufacturers, 16 builders, 11 master marines, 10 machinists and mechanics, 9 physicians, 8 boot and shoe manufacturers, 6 clergymen, 5 cashiers, 5 tanners, 4 shipwrights. Among the whole number but 3 are *gentlemen!* Besides the above, many other pursuits are represented by one, two, or three members each. Of the whole number, 284 are natives of Massachusetts, 22 of New Hampshire, 18 of Connecticut, 7 of Rhode Island, 7 of Maine, and 3 of Vermont. Two were born in England, 1 in Scotland, and 1 in Canada.

THE DIVINE RIGHT OF KINGS.—The lying old proverb of the common law, that "the king can do no wrong," seems to be repudiated by the English people; for as VICTORIA and Prince ALBERT were on their way to open Parliament, on the 31st ult., the former was loudly cheered, but the latter, in consequence of his suspected Russian sympathies, was hissed by the sturdy English yeomanry.

The Queen, in her speech, tells about "my people, my army, and my navy," but she does not allude to the people hissing *my husband!*

THE DOCUMENTARY HISTORY OF THE STATE OF NEW YORK. Arranged under the direction of the Hon. CHRISTOPHER MORGAN, Secretary of State. By E. B. O'CALLAGHAN, M. D. Published by the State.

We are indebted to Hon. HENRY S. RANDALL, late Sec'y of State, for the four fine quarto volumes published under the above title. The work is already so well known, that it is unnecessary to speak of its character and contents.—The volumes are beautifully and profusely illustrated with plates, maps, &c., while the letter press is superior to that of the generality of works issued under the patronage of the State. We wish they were within the reach and means of every New-Yorker.

Our Albany Correspondence.

Albany, Feb. 20, 1854.

THE burden of my song must be the echo of what has been chanted during the week, namely—*the wrongs of woman.* As mentioned in my last, the Women's Rights Convention assembled on Tuesday afternoon. The weather was very unfavorable, and continued so during the whole session. The first meeting was devoted mainly to the organization, which was as follows:—Mrs. ELIZABETH CADY STANTON, President; Rev. S. J. MAY, ERNESTINE L. ROSE, HON. WM. HAY, LYDIA A. JENKINS, LUCRETIA MOTT, WM. H. TOPP, MARY F. LOVE, and PHOEBE EASTEN, Vice Presidents; SUSAN B. ANTHONY, SARAH PELLETT, GILES B. STEBBINS, Secretaries; with a Business and a Finance Committee.

Rev. ANTOINETTE BROWN, read the Resolutions which embody the points claimed by the advocates of this movement. The following is a synopsis of the principles embodied in them:

The first denies the right of males to govern females without consent.

The second declares women to be human beings and to constitute one half of the people, and that men are arrogant usurpers in shutting women out from the right of her share of power.

The third avers that the family is the most sacred place on earth, and that as such cannot be abandoned by man more than by woman.

The fourth asserts that the sphere of woman is not confined to the home circle; that while they should not desert fathers, husbands, brothers and sons, they are bound to extend their influence as widely as possible; those nations prospering most who conform the nearest to this principle.

The fifth advocates the theory that men are *legally* two, having equal rights.

The sixth declares that in accordance with the spirit of the law, giving wives the right of property acquired before marriage, and demands that woman should have an equal share of the joint earnings of the family.

The seventh claims the same right for woman to acquire property as is allowed to man.

The eighth advocates woman suffrage.

The ninth a right to be represented.

The tenth makes woman equally entitled to all the civil rights and duties with man.

The eleventh declares further the necessity of the elective franchise for woman.

The twelfth will have women sit on juries.

The thirteenth pledges the support by the great mass of people of the doctrines inculcated.

And the fourteenth swears to continue their efforts till success shall be attained.

The evening session was devoted to the reading of an address to the Legislature setting forth the wishes of the convention. This is a lengthy document prepared by Mrs. STANTON, of Seneca Falls, and is of acknowledged ability. As it is published in pamphlet form for general distribution, it is unnecessary to sketch it.

Speeches were made during the next day and evening by several prominent members of the convention, and were many of them quite able. They establish beyond a doubt that the laws in regard to property and marriage need some revision, but they fail to convince people here that any benefit would accrue from women's voting or office holding. Never were women more respected nor more earnestly and attentively listened to than at this convention. Their audiences, many of which were very large, included some of our most influential citizens. But the men found little favor. Rev. Mr. Channing was actually hissed down, when attempting to speak.

On Friday evening a meeting was appointed to allow the members of the Legislature an opportunity to hear their claims. Special invitations were sent to them, and a goodly number availed themselves of the opportunity of attending. Mrs. Rose delivered the lecture, which was a recapitulation of what had transpired on previous days.

THE LEGISLATURE.

Thursday was the day appointed for the members to be in their seats, but as might have been foreseen, they failed to get here in time.—Hence no quorum. On Friday, a bare majority was drummed up, and the absentees talked over. Some requested leave of absence for two days; some five, and some a week. Some were sick, and some had sick wives at home. The House voted *not* to excuse any unless sickness prevented their return.

The Senate had under consideration, the resolutions to amend the constitution for the prevention of bribery at elections, but have not yet passed them.

On Saturday a fair attendance was secured in both Houses. The Assembly took up the contested seat from New York, and awarded it to Mr. McGuire, thus ousting Mr. Clark. In the Senate a bill has been introduced, favoring a bridge at Albany, but there is hardly energy enough in this old Dutch city to carry it thro'. The Trojans have always out-generaled them, and probably will again. Nevertheless a bridge *is* demanded for the public good.

THE WOMEN IN THE LEGISLATURE.

An interesting scene occurred this morning. The address adopted by the Women's Rights Convention was laid upon the desks of the members of both houses, and a long list of petitions presented, praying for the "just and equal rights" of women. The avowed object of the convention was to secure the appointment of committees in the Legislature to investigate the claims of woman to her share of property and power. In the Assembly, Mr. D. D. Wood, of Onondaga, made the presentation, (there were 5,931 signatures to this petition) and moved its reference to a select committee of seven. Only one member, (Mr. Bennett, of Essex,) raised his voice against it. This called out spirited speeches from Messrs. Wood, Peters and Benedict, who seemed to think that the petitioners should have a fair hearing; and they were also willing to admit that some legislation was required with regard to property and the like. The motion finally prevailed by a strong vote, and the following committee announced:—Messrs. Angle, Thorne, Richards, Boardman, Gleason, Munro and Sharpe.

The petition presented in the Senate, asked for the right of suffrage to women. It was signed by 1,161. Mr. Richards made the presentation and moved a select committee, and the motion was carried. On the motion of Mr. Danforth, the following Senators were appointed as such committee:—Messrs. Yost, Field, and Robertson—*all old bachelors.*

OTHER LEGISLATION.

Nothing else worthy of note has occurred in legislative circles. The discussion of the Maine Law has not yet been resumed, nor has any canal project been broached. A few days from now, lively times may be expected. The petitions for erecting the office of Superintendent of Common Schools come in brightly, as they should. "OWE".

News Paragraphs.

☞ The Cologne Gazette of the 9th of Jan. says:—"The Emperor of Austria has just made a present to the Emperor of Russia of a tent.—It is made of double white sail cloth, of a conical form, with red bands round the edges, and surmounted by an eagle in massive gold. It is composed of two compartments, which may be separated at will, and each of which is provided with a carpet. The furniture is simple but solid, and all covered with morocco leather. There are bags in Russia leather for packing every part during removal."

☞ An estimate has been made of the cost of an electric telegraph cable from Galway to New York, and it is said the experiment may be made for £125,000. It is said subscription lists for the purpose are being filled up with encouraging celerity. A still more extraordinary project is that of Mr. W. S. Lindsay, the eminent shipowner, who contemplates the practicability of reaching Victoria River, in Australia, from London in 22 days.

☞ The New York Times says that Foster Beswurth, late Post-master at Troy, was arrested on Monday of last week, in that city, by Marshal Matt, charged with embezzlement of United States moneys, while in office, to the amount of more than $3,000. It appears that he made no returns to the Department for a portion of the last quarter he held office, and he is represented to be several thousand dollars behind on accounts rendered.

☞ The engineer of the steamer Georgia, for Aspinwall, which put into Norfolk harbor in distress, states that in a gale on the morning of the 9th, she was struck by a heavy sea, which stove in her bows down to the main deck, carrying away the forecastle and making her leak very fast. She has been temporarily repaired at Norfolk, and will proceed to New York for a more thorough overhauling.

☞ The Court of Appeals of this State have recently decided that where the use or keeping of Camphene was prohibited in the policy of insurance, the fact of its being kept or used annulled the policy, and if its use or storage on the premises should be discontinued, the policy would still be void; and further, if a fire occurred from other causes, by which the premises were destroyed, the insured could not recover.

☞ The manufacture of iron in the world is divided thus by the London Chronicle:—In Great Britain, 2,380,000 tons; United States, 400,000; France, 348,000; Russia, 189,000; Austria, 160,800; Sweden, 132,500; Prussia, 112,000, making a total of 3,723,300 tons of iron manufactured annually.

☞ The Tuscarora Indians near Buffalo own 6,000 acres of land in common. They now ask for the passage of a law to enable the chiefs and headmen to prevent waste of the timber by members of the tribe who cut and sell it to white men for private speculation.

☞ The importation of bonded goods at Boston, in Canadian account, has increased from $24,000 in 1848, to $1,000,000 in 1853, and the amount of Canadian produce re-warehoused in Boston has increased from $52,871 in 1849, to $604,034 in 1853.

☞ The Chattanooga (Tenn.) Advertiser says, a few days since, about 90,000 pounds of dried fruit, peaches and apples, were received at part per steamer Jefferson, a part of which were shipped to Nashville, and the remainder to Baltimore.

☞ In Haverhill, Mass., there are nearly 5,000,000 pair of shoes manufactured annually, and the sales some days amount to from $70,000 to $80,000. Between 800 and 900 cases were recently received at the station house in a single day, for exportation.

☞ Two children lately came near dying in Worcester, from inhaling the gas of a common coal stove. When discovered, one, a little girl, had fallen upon the floor, and the boy was unable to speak.

☞ A married man by the name of Beech, was cowhided in Washington on Thursday evening of last week by two sisters, one of whom he had insulted the evening previous. He was terribly cut about the face.

☞ On the 2nd inst. in Charleston, S. C., a gang of 58 negroes accustomed to the culture of Cotton, was sold at Auction in families, for the round sum of $34,854, which is an average of a little over $600.

☞ Gustave Wagner, lately in the employ of a railroad company in Pennsylvania as engineer and draughtsman, has started for Constantinople at the request of Kossuth. He was an officer in the Hungarian army.

☞ On the 1st of January, 1854, the British navy included 202 steam vessels of all classes; whilst the nominal steam machinery in those ships represented more than that of 55,300 horse power.

☞ The Mississippi Legislature has, by a strong vote, just reiterated the Repudiation of its Bonds, and this vote is in defiance of a decision of its own Courts, pronouncing the bonds legal contracts.

☞ The Baltimore tax levy, for 1854, is $1,87½ on the $100 of assessable property. This, with the State tax of 15 cents on the $100, will make the whole tax for Baltimore city, (within the limits of direct taxation,) $2,02 on the $100.

☞ The Legislature of the State of Maryland, has re-elected Pearce (whig) U. S. Senator for six years from the 4th of March, 1856. All the temperance delegates from Baltimore, both whigs and democrats, voted for Pearce.

☞ Small pox is the most prevalent disease in New York at this time. The total deaths last week were 476, of which 57, or more than one-ninth of the whole, were of small pox. Of consumption there were 55 deaths.

☞ Mrs. Lucy Audubon has presented to Congress, through Mr. Everett, a petition, asking for the purchase of the original drawings of the work of her late husband on the birds of America.

☞ It is understood, says a Washington correspondent, the orders came out by the Arabia for the immediate return home of all, or nearly all, the British ships-of-war on this coast, in the West Indies and the Pacific.

☞ In the Senate of Mississippi, on the 20th of January, Mr. Johnson introduced a bill "to regulate the Legislature of Mississippi." The bill proposed to make "lobby members" a co-ordinate branch of the Legislature.

☞ Female gamblers are becoming quite numerous in N. Y. city. In some of the halls of that city, the sexes are indiscriminately associated.

News Brevities.

—— The Parisians spend more than $2,500,000 a year upon their dramatic entertainments.

—— The saloon ship Ericsson went down the Bay of New York Feb. 17th on a trial trip.

—— A General Railroad bill has passed the Legislature of Illinois.

—— Louis Napoleon has decreed the coinage of five and ten franc pieces in gold.

—— There is a man in Orkney, aged nearly 90, who is about to be married for the ninth time.

—— The nomination of George Saunders, as Consul to London, was rejected. He received only six votes.

—— The nomination of John L. O'Sullivan, as Charge to Portugal, has been confirmed by a vote of twenty-four to sixteen.

—— Lent begins this year on the first of March; Good Friday will be the 14th of April; Easter Sunday the 16th.

—— The Onondaga Standard says, the advocates of Anti-Slavery contemplate holding a Convention in this city soon.

—— Mr. Ramsus, chief steward of steamship Arabia, has crossed the Atlantic Ocean 225 times already in the employ of the same line.

—— It is estimated that 9,000 pianos are made every year in the United States, giving employment to 1,00 hands, and costing over $3,000,000.

—— The Senate of Rhode Island have refused to pass an act repealing the act abolishing capital punishment.

—— The New York Times suggests the name of William H. Seward as a candidate for Governor of this State next fall.

—— The Attorney General of Wisconsin has given it as his opinion that murder is a bailable offence in that State.

—— Judge Hunter of Alabama, has bought the celebrated race horse "Highlander;" the price paid was $1,000.

—— The Advertiser foots up 110 canal boats built in this city during the past year, valued at over a quarter of a million dollars.

—— The cholera is prevailing among the emigrants and negroes in the vicinity of Houston, Texas.

—— Five slaves are to be hung at Lancaster, S. C., on the third Friday of March, for the murder of Alexander Craig.

—— P. O. Richmond's bolting factory at Lowell was destroyed by fire Feb. 16. Loss $40,000.

—— E. M. Gould has recovered a verdict of $10,000 from Messrs. Gardiner, Luger & Co., of New Orleans, for false imprisonment.

—— The Alabama Legislature has rejected the bill to construct various railroads in the State.

—— The French papers mention a remarkable optical invention made by a deaf and dumb man, by which engravings are shown in relief.

—— Anna Maria Jones, a novelist of some repute in her day, has just died in London, in the most abject poverty.

—— Gen. Henderson of Texas, has subscribed four millions of dollars to the stock of the Pacific railroad.

—— A vessel cleared at New York, last week, for Constantinople, with 975 bbls. rum among her cargo. The Tribune calls this material aid for Turkey.

—— The English Emigration Commissioners have made preparations to send 3,000 women from the Shetland Islands to Van Dieman's Land.

—— Sir C. Wilkins states, that while he was resident at Benares, he saw a fakir, the hair of whose head reached the enormous length of twelve feet.

—— The San Francisco's shipwrecked troops which arrived in the America, after being newly uniformed, were sent to quarters in Newport, R. I.

—— The hair tails of the Chinese frequently reach the ground, and their moustaches have been cultivated to the length of eight or nine inches.

—— The local editor of the Buffalo Express has just been through the mill of a libel suit where the claim embraced four or more figures, but the jury razed it to $25.

—— There are in Canada thirty-five thousand fugitive slaves, who are represented as in a flourishing condition just now, owing to the high price paid for labor.

—— Capt. A. S. Henry, long a resident of Lynchburg, Va., died in Charlotte county, on the 5th inst. He was a son of the illustrious Patrick Henry.

—— Three Polish Generals have been received into the Turkish service, and have taken Turkish titles. They have adopted these titles without abjuring the Christian faith.

—— Messrs. Rufus Willis and Jacob Thorp, of North Haven, Ct., killed *ninety-eight* muskrats on the Quinnipiac River one day last week. They killed six at a shot several times.

—— The police magistrate in Manchester, N. H., has commenced proceedings against a clergyman of that city for slander, alleged to have been uttered in a discourse upon temperance.

—— Some boys at Tahula, Miss., on the 24th ult., tied some crackers to a dog's tail, and the dog ran into a cotton shed, setting fire to the cotton, and causing a loss of $200,000.

—— The steamer Amazonia, bound for Memphis, struck a rock Feb. 16th, and the boat sank within five minutes. Two passengers were drowned.

—— The Pennsylvania Canal Commissioners have given notice that the water will be let into the main line of improvements on the 1st of March, if the weather permits.

—— The report of the Mass. school for idiots shows that it has trained fifty-three defective children during the year, and that it has now forty-four within the dwelling.

—— The Admiralty are putting the British Navy into working order. There has not been so much stir about the British Dock-Yards for a quarter of a century.

—— Farmer's Cotton Factory at McMinnville, Warren Co., Tenn., was destroyed by fire on the 5th inst. The total loss is about $100,000, on which there was no insurance.

—— The Senate of Georgia has passed a bill to punish the keeping of faro, or other gambling tables and establishments, with imprisonment in the penitentiary from one to five years.

—— The N. Y. Express says frauds have recently been discovered in the weight of flour.—In some instances a barrel fell short full twenty pounds of its proper complement, which is 196 pounds.

Foreign Intelligence.

Arrival of the Canada and the America.

The Cunard steam-ship America, from Liverpool, Jan. 31, arrived at Boston Feb. 11th; and the Canada, from Liverpool, Feb. 4th, arrived at Halifax on the 17th.

The Collins steam-ship Baltic, from New York on the 21st ult., arrived at Liverpool the 2d inst.

The political news from Europe is ominous of a general war.

The French Minister of Finance had published his financial statement for 1853. It is of a very favorable character, and the funds rose on its announcement.

Austria had renewed her demands for the extradition of foreigners in the service of Turkey.

There is no doubt that the reply of the French and English Governments to the last Russian note is of a firm and decided character.

The news from St. Petersburg was still indecisive. There was a report, which required confirmation, that a great battle had been fought at Kalafat on the 25th of January—the Turks victorious.

Fresh insurrections have taken place among the Wallachian population, notwithstanding the Russian General had shot several peasants, taken with arms, fighting for the Turks.

An unfavorable reply had been given in writing to the Czar's recent inquiry respecting the movements of the French and English fleets, and the departure of the Russian Embassadors from London and Paris was hourly expected.

It was currently reported that orders had already been sent to St. Petersburg for the withdrawal of the French and English Embassadors from that city.

The latest report from Vienna is to the effect that Austria and Prussia will co-operate with France and England.

The screw steamer Andes, which sailed from Liverpool on the 18th ult. for New York, had put back.

The Russian Minister is reported to have withdrawn himself from Paris, and the Minister was to leave London on the 5th inst.

England is sending a detachment of small steamers to take soundings of the entrance to the Baltic for the fleets.

A Constantinople letter says the allied fleets had returned and anchored in Beicos Bay, causing much astonishment. It is elsewhere mentioned that this was merely a portion of the fleet to escort stores to Varna.

Commodore Quesada has been appointed Naval Commander at Havana.

Great Britain.—Parliament was opened on the 31st ult. The crowd was much greater than usual on the route to the House, and the Queen was greatly cheered, but *Prince Albert was occasionally hissed.*

The Turkish Minister and several Turks in the crowd were cordially cheered.

The House was unusually full of splendid costumes, but no members of the American delegation were present, the master of the ceremonies having sent notice that all the diplomatic corps must appear in full costume.

A debate ensued on the subject of the policy of the Government, during the progress of the Eastern difficulties. Various members of the Government defended their course, but the debate elicited nothing, except that all now awaited a reply from St. Petersburg.

The British army is to be immediately increased by 11,000 regulars, and the navy by 13,000.

The Queen's proclamation is expected to be issued to enrol for the navy; and it is said to be in contemplation to appoint a special Minister at War, charged with the practical details of the army and navy ordnance.

The Eastern War.—The answer from England and France to the Russian inquiries respecting the entry of the fleets, was delivered on the 1st of Feb, to the Ministers in London and Paris. The terms of the reply did not transpire, but it was considered that the Czar's instructions left no alternative to his Ministers but to leave Paris and London, although this might not be for some days.

Orders are understood to have been sent to the British and French Embassadors at St. Petersburg to demand their passports.

Count Orloff's mission to Vienna is said to be to ask permission for a Russian force to pass through Hungary. It is further reported that if Orloff fails, the Czar will himself visit Berlin and Vienna to use his influence with those Courts.

From Asia we have nothing of importance except that Gen. Guyon was to cross the frontiers to attack Alexandrianople.

Col. Dein who had been sent by the French Government to report on the condition of the Turkish army on the Danube, pronounces it fit to keep the Russians in check for a long time, though deficient in cavalry.

The Russian Vice Commander at Sebastopol, has been cashiered for not preventing the English frigate Retribution from entering that port.

Dispatches received by the Turkish Government from the Embassador of the Sublime Porte in Persia, announce that he had succeeded in defeating the intrigues of the Russian Envoy, and in inducing the Shah to renew his alliance with Turkey. The Persian Minister at Constantinople had received instructions from his Government, which supports this statement, and which he has communicated to Reshid Pasha.

France.—At a Council held at the Tuileries, on the 30th of January, the question of sending an extraordinary land force to Turkey, was fully discussed. It is proposed to send 80,000 men in four bodies, under command of Gens. Canrobut, Macmahon, Pelissier and Bousquet. England will only send a small force, but will pay half of the expenses.

Prussia.—The Prussian Government has not yet spoken, but the Crown Prince is reported to have declared strongly in the Council of State, the necessity of siding with the Western Powers.

Sweden.—The temper of the people shows increasing hostility to Russia, and the Chambers are goaded with enthusiasm. All extra supplies required to put the country in a state of defense are granted.

Spain.—Great discontent exists. Revolutionary handbills are everywhere circulating, and the popular feeling, at present, is in favor of the King of Portugal or anybody but a Queen.

Switzerland.—Some political disquietude is working in the Canton of Zurich, and military precautions have been taken.

Italy.—French influence has much increased in Naples.

Great uneasiness exists throughout Northern Italy, and an outbreak is far from probable.

A Pontifical decree extends to April next, permission to import breadstuffs into the Roman States; and also gives forced currency to Roman Treasury Bonds.

China.—Details of China news are received to Dec. 12th. The rebels were within about sixty miles of Pekin, the capital, which is stated to be well garrisoned, with stores of rice sufficient for three years' consumption. Trade was still carried on under the provisional regulations of the Consuls of Great Britain and America.

The exports of silks and teas, from all the ports of China, are now considerably greater than at the same period last year.

Austria.—Count Buol has drawn out a declaration of neutrality, with a strong leaning toward the views of the Western Powers, and has given this to Count Orloff as a final answer. Orloff's mission has therefore failed.

The Czar's proposals were to form a defensive league with all the German powers, and if the Western Powers attacked any one there of Russia would make common cause with them, and would not conclude any peace without consulting their interests.

The German powers through Austria, definitely refuse.

The Western Powers are immediately to demand the evacuation of the Principalities, and will compel it forthwith.

The Russian Minister in London has paid a final formal visit to the Foreign Department.

It is reported at the latest moment that Austria and Prussia declared for the Western powers.

Arrival of the Baltic.

The Baltic arrived at New York Feb. 20th, with dates to the 8th inst.

The Europa arrived out the 5th.

The Czar's last proposals are rejected, and negotiations broken off.

The Russian Ministers have left London and Paris. Instructions have been sent to English and French Ministers to withdraw from St. Petersburg.

France and England are making open preparations for war. Several of Cunard's steamers are taken up by government to carry troops to Constantinople. Six thousand men go from England. Operatives will be taken up from the different stations. 10,000 will soon be collected to form part of the first exhibition.

A Vienna correspondent telegraphs that Orloff leaves for St. Petersburg on Wednesday.

Intelligence from the seat of war indicates that important operations are at hand there; but the news of the most vital consequence is the open preparations of war made by England and France.

The debate in the English Parliament on the 6th gives a view of the present position of affairs.

Among other significant orders recently given by the French Government, is one for 3,000,000 cannon balls.

The Russian fleet is understood to be concentrated at Kalfa.

The infant Princess of Asturia, only surviving child of the Queen of Spain, is dangerously ill. Her death would at once open the succession to the Duchess of Montpensier.

Orders are given to the French Atlantic squadron to proceed to London, supposed to take troops on board. The command-in-chief of the English fleets is not yet given, but the names of Admirals Seymour as chief, with Sir Charles Napier and Lord Dundonald under him, are mentioned.

Omar Pacha has effected a most important movement—having crossed the Danube with 50,000 men, and divided the Russian army, the right wing of which is at Kragova, the left at Jalatz, and the centre at Bucharest.

Omar crossed in person at Oltenitza, and at last accounts was only two days distant from Bucharest, where the Russian force is weak.

Liverpool Markets.—Breadstuffs slightly declined.

From Richardson & Brother's circular—Liverpool, Feb. 8th.—Holders of wheat had to submit to a decline of 2d.@3d. for 70 lbs, and altogether the market was in an irregular state—and the same may be said of the flour trade, as to the extent of business done, and prices were 6d.@1s. per bbl. under those of our last.

Baltimore and Philadelphia were favorable at 42s.6d. from the warehouse, and 42s. from ship.

Indian corn dull of sale at a decline of 1s. per 480 lbs.

Improved feeling, advised by the last mail, has not been sustained.

Flour and wheat have declined 3s. per barrel, and 1s. per 70 lbs. from the highest point. Indian corn has receded 2s. to 3s.

☞ The time occupied in taking and completing the Census of 1850 was three years and five months. In 1840 it was published in one year after it was commenced. In 1830 in two years after it was taken. The expenses of taking the Census in 1790 were $44,377. In 1800, $66,109. In 1810, $178,444. In 1820, $208,-525. In 1830, $378,545. In 1840, $833,370.—In 1850, $1,318,027. The latter sum includes only the expenses incurred previous to the recent orders by Congress of several hundred thousand copies of an abstract of the Census, which must increase the cost of the whole work to over a million and a half of dollars.

☞ In a suit against the Trustees under the will of Stephen Girard, for loss on investments made by them in the stock of the old bank of the United States under its State charter, the Court decided that they had no right to invest in anything but real estate and government securities, except by direction of the Courts.

Commercial.

BUSINESS AND FINANCE

There is nothing especially interesting in the financial world this week. Business is as active as usual at this season of the year, and the crisis in foreign affairs does not seem to have any depressing effects in the monied circles of this country. The slow progress which the war question has made, gave ample opportunity for the adjustment of financial matters heretofore, and any disturbing influences which might exist, have expended their forces in anticipation of the events themselves.

The Franklin for Havre on the 15th, took out $152,150 in specie, which is the principal item of money exportation; but that of produce is active and largely increased over the same period of last year, amounting for the week to $1,-650,510. Six California steamers have arrived or are due.

The balance in the New York Sub-Treasury is still increasing, standing at over five and a half millions.

Stocks are still being purchased on foreign account, which explains, in connection with the active exportation of breadstuffs, the decline in outward specie movements.

The Rochester Bank, hitherto a private Bank, owned by Freeman Clarke, Esq., has organized as a corporation under the general law, and is about to go into operation under the auspices of an efficient board of directors, who are the principal stockholders under the new regime. The present capital of the bank is $100,000, which it is said will be considerably increased. Banking has been lately wonderfully profitable in this city, and it is difficult to see how such enormous dividends can be made out of a legitimate bank business.

Market Intelligence, &c.

Rural New-Yorker Office, Rochester, Feb. 22, 1854.

The latest intelligence from abroad has had a somewhat depressing influence upon the markets and partially unsettled the price of breadstuffs, neither buyers nor sellers being disposed to operate until further developments. Wheat may be quoted, in the absence of sales at $2,—and flour at $9,50@9,62½, which is three cents a bushel on the grain, and a shilling a barrel on flour lower than last week.

Corn has been advancing steadily for several weeks past, and is now quoted at seven shillings. Other grains unchanged.

In regard to the prospects of the foreign demand for breadstuffs, the *London Shipping and Merchants Gazette*, remarks:—"The Grain trade has been kept in an unsettled state, owing to the continued uncertainty as to the termination of affairs in the East. War with Russia will no doubt have a material effect on prices, inasmuch as it will deprive us of the supplies which we might otherwise fairly reckon on receiving from that country. The last wheat harvest gave a better return in Russia than elsewhere, more especially in the South, from whence the Black Sea ports obtained the greater portion of the wheat they export.—The probability of shipments from that quarter being stopped, cannot therefore fail to have its influence."

The American farmer need have no fear that he will not receive immensely remunerative prices for all he has for sale and all he can raise the coming season.

Pork a little stiffer, being quoted at fully $7.

Potatoes 69@75c. per bushel. Other things nearly at former rates.

Rochester Wholesale Prices.

Flour and Grain.		**Fruits and Roots.**

NEW YORK MARKET—Feb. 21.

Flour and Meal—There is more firmness for Western and State flour, but the inclemency of the weather and high freights acked check demand for export. The inquiry is merely for city trade, and is confined principally to the better grades. Canadian dull and nominal $4,37. Sales of Western Canal 1,750 bbls—$8,44@8,50 for common to straight State; $8,62@8,87 for mixed to fancy Michigan and common to good Ohio.

Rye flour in fair demand. Sup. scarce and better. Sales 150 bbls. at $7.

Corn meal quiet. Sales 100 bbls. Jersey at $4.25.

Grain—Nothing doing in wheat, buyers and sellers being apart in their views. Quotations would be no criterion of market.

Rye—In fair demand for export, and distilleries better. Sales 6000 bu. at $1,25.

Oats—Plenty and dull, 52@55c for State and Western; 56@58c for Jersey.

Corn—Quiet and not plenty, especially white. This is held higher. Sales 75,000 bu. 62@63c for mixed Southern and Western; 63@64c for Southern yellow and round do; 64½@65½c for Southern white.

Provisions—Only a limited demand for pork. Prices steady. $15,62@15,75 for mess; $13,50@13,50 for prime. Prime mess scarce $15,87@16. Beef firm, particularly good shipping qualities. Sales at $11,50 for country mess; $14 for repacked Chicago; $6@7,75 for country and city prime. Dressed hogs wanted at $7,25@8.

Lard—In fair demand and firm at 10@10½c.

Butter—Heavy and plenty. Sales at 12@16 for Ohio and 16@20 for State.

Cheese—Steady and quiet at 10@12.

ALBANY MARKET—Feb. 20.

The demand for flour is not active, and prices are somewhat easier, but nothing has been done since the receipt of the steamer's news to establish quotations. Buckwheat flour is selling in the street at $2,81@2,87 per cwt.

Grain—Nothing has transpired in Wheat within the past four days, and quotations would be entirely nominal and unreliable. In Barley Mall we learn of sales to the extent of 10,000 bushels, including about 5,000 bu. here and to arrive by the cars soon, at $1,08½, and 5,000 bu. to arrive by Canal at $1,12½. In the street Rye is selling at $1,08@1,09. Corn 59@61c. for yellow. Oats 50@51c Barley 85@95c.

Hogs—The market for dressed hogs is very firm, with a limited supply. Sales at $7,50@8 for fair to good lots.

NEW YORK CATTLE MARKET—Feb. 13.

At Washington Drove Yard—Offered to-day, 1,792 Beef Cattle; offered during the week 1,339.

Owing to the rain storm, business to-day not so active as usual. Left over about 150.

Prices, well supported, the range being from 6@10c per lb., and 11c. for extra.

Cows and Calves sold at from $30 to $55.

Veal Calves at from 4@5c. per lb.

Sheep $3 to 11@14 Hogs at 5¾c.

At Browning's—(Lower Bull's Head)—At market, 75 Cows and Calves, and 2,200 Sheep and Lambs. Prices—Cows and Calves sold at from $25 to 45@50. Left over 15. Sheep at from $3, 5, 6,50@8—Lambs brought $2,50 to $5. About 200 unsold.

At Chamberlain's—(Hudson River Bull's Head.)—At market, 275 Beeves, 30 Cows and Calves, 20 Veal Calves, and 3,000 Sheep and Lambs. Market steady.

Beeves sold at from $7,50 to $10, as in quality.

Cows and Calves from $25 to 45@65.

Veal Calves at 5c to 7c.

Sheep and Lambs sold from $2,75 to $1,50@7,50.

At O'Brien's—(No. 9 Sixth street)—On sale, 150 Beeves, and 23 Cows and Calves. Sales of the former at $7@9, and the latter from $20@60 ₰ head.

ALBANY CATTLE MARKET—Feb. 20.

At W. Woolford's Bull's Head, Washington street.—Beef Cattle—500 at market. Prices—Extra $7,50@8; first quality $7; 2d do, $6,50; 3d, $5,50@6.

Cows and Calves—20 in market. Prices range from $25 to 30@40.

Sheep and Lambs—900 in market. Prices at from $3,-50@6.

Swine—None in market.

☞ Persons entitled to cash premiums, will please retain the same in remitting for clubs—thus making sure of the premium, saving us the trouble of re-mailing.

☞ Extra numbers of the Rural will be forwarded to all disposed to aid in augmenting its circulation.

Publisher's Notices.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. Moore, of Gerry, Chau. Co., N. Y., is duly authorized to act as Agent for the Rural New-Yorker, and the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. R. Landan in the last named county.

☞ Agents.—Any person so disposed can act as agent for the Rural New-Yorker,—and all who remit according to terms will be entitled to premiums, &c.

☞ The Rural is published strictly upon the cash system—send no longer than paid for—and all orders should be in accordance with terms.

☞ Our lowest club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the Rural, the Wool Grower and Stock Register can be added at 38 cts. a copy, which is the lowest club price.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ Persons who have forwarded $15 for a club of ten, can extend the number to twenty for $10, but all the subscribers must begin at one date.

☞ Additions to clubs may be made at any time, at the price per copy paid for the original club.

THE RURAL FOR 1854.

Rare Inducements to Agents and Others.

As heretofore announced, the Fifth Volume of the Rural New-Yorker, for 1854, will be materially improved, the Proprietor having determined that it shall in all respects excel either of its predecessors, and all contemporary journals. He also offers greater inducements than ever before to each and all disposed to act as agents or form clubs. The attention of all interested is respectfully invited to the following list of very liberal

PREMIUMS FOR SUBSCRIBERS!

1. SEVENTY-FIVE DOLLARS, in Cash, to the person sending us the greatest number of yearly subscribers (six month subscriptions to be counted proportionally) to the Rural New-Yorker—remitting payment according to our club terms—previous to the 15th of April, 1854.

2. FIFTY DOLLARS, in Cash, to the person sending us the second largest number, as above.

3. THIRTY DOLLARS, in Cash, to the person sending us the next (third) greatest number.

4. TWENTY DOLLARS, in Cash, to the person sending us the next (fourth) greatest number.

5. FIFTEEN DOLLARS, in Plate or Books, to the person sending the next (fifth) greatest number.

6. TWELVE DOLLARS, in Plate or Books, to the person sending the next (sixth) greatest number.

7. TEN DOLLARS, in Plate or Books, to the person sending the next (seventh) greatest number.

SPECIFIC PREMIUMS.

In order to reach and reward every one who may lend a portion of influence in support of the Rural New-Yorker, we offer to those who do not compete for either of the preceding prizes, the following liberal gratuities:

1. FIVE DOLLARS, in Cash, or a copy of Webster's Unabridged Dictionary, (or $8 in Agr'l Books,) to each person sending payment for FIFTY or more yearly copies (six month subscriptions proportionally,) according to our terms, previous to the 15th of April, 1854.

2d. FIVE DOLLARS, in Books, or four extra copies of the Rural, to every person remitting payment for FORTY or more subscribers, as above.

3d. THREE DOLLARS, in Books, or a handsomely bound volume of the Rural for 1853, to every person remitting for THIRTY subscribers.

4th. To every one remitting for TWENTY copies, ($25,) we will give an extra copy of the Rural, and four (the present and three past) volumes of The Wool Grower and Stock Register—or,

5th. To every one remitting for TEN copies ($15,) an extra copy of the Rural and three volumes (past or present) of the Wool Grower—or, instead of vols. W. G., $1 in Books.

6th. To every one remitting for six copies ($10,) an extra copy of the Rural, either volume of the Wool Grower, and a bound Vol. of Genesee Farmer for 1848 or '49.

7th. To every one remitting for THREE copies ($5,) either volume of the Wool Grower, and a bound volume of Genesee Farmer for 1848 or '49.

8th. To every person remitting for ONE copy ($2,) we will give a copy of either volume Wool Grower or the Farmer for 1848 or '49 as preferred.

All competitors for premiums are expected to adhere strictly to the following

TERMS IN ADVANCE:

Two Dollars a Year. Three Copies, one year $5 Six Copies for $10—Ten Copies for $15—Twenty Copies for $25, and any additional number at the same rate. Names of subscribers written on the papers if desired, however large the club. Club papers sent to different offices if desired.

☞ Specimen numbers, &c., furnished free to all disposed to compete for Premiums, or who desire to extend the circulation of the New-Yorker. Subscription money properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

Advertisements.

Advertisements.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who read advertisements without payment will understand from the above why they are not inserted.

OLD ROCHESTER NURSERY.

Samuel Moulson, at the Old Rochester Nursery, office No. 3d Front street, Rochester, N. Y., is prepared to furnish inventories to post paid applicants, of the present extensive stock of Nursery Items, consisting in part of 10,-000 very fine Northern Spy Apple Trees, from 7 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

90,000 Dwarf and Standard Pear.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot.
20,000 Osage Orange of different ages.
Over 100,000 Hardy Evergreens—

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such novelties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established repute, or the Agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful execution of their orders. The ornamental items are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur to recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual to imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 216-6t

SALE OF THOROUGH-BRED CATTLE.

The subscriber will sell at public auction on his farm at Rush, Monroe county, N. Y., on Thursday, March 9, 1854, his entire stock, consisting of one very superior Durham bull, one imported Durham cow and calf, one yearling Durham bull and four Durham bull calves, six Durham cows, three yearling heifers and three calves, all thorough-bred; together with forty thorough-bred Leicester sheep, some of which were imported.

At the same time and place, the entire stock, implements, and household furniture will be sold, as the subscriber has made arrangements to leave his farm. D. McHARDY.

West Rush, Monroe Co., N. Y. 216-2t*

CORN SHELLERS.

We have now on hand the most approved kinds of Corn Shellers—among them Burrall's celebrated Sheller and Separator—all warranted to work well or to be returned. Prices from $7 to $13. J. RAPALJE & CO.,

At Genesee Seed Store and Agricultural Warehouse, 65 Buffalo street, Rochester, N. Y. 216-2t

OSAGE ORANGE SEED.

Just received from Texas and warranted good. Price, $20 per bushel, same rate per peck, with a deduction to dealers. Directions for culture, &c., sent to all customers. Packages can be sent by express at moderate cost to all places on the line of Railroads.

Five years' experience has proven that this best of all hedge plants will endure the climate as far north as Western New York, and it is rapidly finding favor wherever it has become known. H. H. BATEHAM,

Columbus, O., Feb., 1854. 216-3t

People's Patent Office, 86 Nassau st., New York.

REJECTED APPLICATIONS, &c.—The undersigned

respectfully gives notice that he is at all times prepared to pay special attention to the prosecution of rejected applications for Patents; also to contested and interfering cases. In some instances he will undertake to prosecute rejected cases, receiving no compensation unless the Patent is granted.

Patent business of every description, whether before the United States Commissioner, or the Circuit and United States Supreme Courts, promptly attended to.

The undersigned being represented at the seat of government by William P. Elliott, Esq., formerly of the American Patent Office, possesses rare facilities for immediate references to the patented models, drawings, records, specimens, and other official matters. Examinations for particular inventions at the Patent Office, made on moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state that all the needful steps necessary to secure a Patent, can be arranged by letter just as well as if the party were present, and the expense of a journey be thus saved. All consultations strictly confidential. The whole expense of Patents in the United States, is small.

ALFRED E. BEACH, Solicitor of American and Foreign Patents, 116-1t 86 Nassau st., New York.

Station; is convenient to Market, Mills, Churches, Schools, &c. There is about 300 acres of improved land under a high state of cultivation, and 110 acres of fine Timbered land. Is very productive for Wheat, Corn or Grass; well fenced and watered. On the premises are a valuable Brick Dwelling, and Out-Houses. Carriage and House-Barns 30 by 100 feet. Two Grain Barns, 30 by 50 feet; one water-power Threshing Barn and Machine 35 by 80 feet; one large Saw-Mill with valuable Water-Power; one Granary, 30 by 30 feet; a Wood House; 12 Hay Barns, 16 by 18 feet; a Blacksmith's Shop and Dwelling; a Cider Mill and Corn House; a large quantity and great variety of Fruit—800 bearing grafted Apple trees, and a large variety of the smaller fruits. A large portion of the purchase money may remain a number of years. This farm is now offered at $45 per acre.—$5000 worth of Stock, Farming Utensils, &c., for sale with it if desired. For further particulars, inquire of the subscriber on the premises, or address— JOHN SPICER.

Dundee, Yates Co., N. Y. 216-1t*

ATKINS' SELF-RAKING REAPER.

Forty of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including *two at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will also build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WILLIAMS.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854. 215-13t-m3t

FARM FOR SALE,

Situated in the town of Conquest, 4 miles north west of Weedsport, and 3½ from the Rochester and Syracuse direct railroad. Said farm contains 163 acres, 140 improved, and is a good state of cultivation, and well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses, two barns, two orchards of a good variety of fruit trees, and a wood lot on each end of the farm; 30 acres of wheat on the ground, and 40 is seeded to clover and timothy. Half the purchase money to be paid when possession is given, the remainder on bond and mortgage to suit the purchaser. Price, $55. For further particulars inquire of the subscriber on the premises.

Weedsport, Cayuga Co., N. Y., 213-tf. B. EAKER.

THE HORTICULTURIST,

And Journal of Rural Art and Rural Taste.—The Horticulturist is a Monthly Journal, devoted to Horticulture and its kindred arts, Rural Architecture and Landscape Gardening. It is edited by P. Barry, late Horticultural Editor of the Genesee Farmer, and author of that popular work, "The Fruit Garden." To those who cultivate Fruit and Flowers, this work is indispensable, as it contains full directions for cultivation, as well as every thing new on the subject, either in this country or in Europe.

The Horticulturist is beautifully printed on the best paper, with costly illustrations on wood and stone. It contains 48 pages, without advertisements, and each number has a full page engraving, on stone, of some rare fruit or flower, drawn from nature, by the best living artists in the line.

Terms.—Two Dollars Per Annum, In Advance. A discount of twenty-five per cent. allowed to agents. Postmasters and others are invited to act as agents, to whom specimen numbers will be sent, free of postage, on application to JAS. VICK, Jr., Publisher, Rochester, N. Y.

P. S.—A new volume commences on the first of January, January 1, 1854

$50 TO $150 PER MONTH

Hiram C. White. (1950t.) Amara Mason.

Poetical.

THE CONQUEROR'S GRAVE.

BY WILLIAM CULLEN BRYANT.

Within this lowly grave a conqueror lies,
And yet the monument proclaims it not,
Nor round the sleeper's name hath chisel wrought
The emblem of a fame that never dies,
Ivy and amaranth, in a graceful sheaf,
Twined with the laurel's fair, imperial leaf.
A simple name alone,
To the great world unknown,
Is graven here, and wild flowers, rising round,
Mark meadow-sweet and violets of the ground,
Lean lovingly against the humble stone.

Here, in the quiet earth, they laid apart
No man of iron mould and bloody hands,
Who sought to wreck upon the cowering lands
The passions that consumed his restless heart;
But one of tender spirit and delicate frame.
Gentlest, in mien and mind,
Of gentle womankind,
Timidly shrinking from the breath of blame;
One in whose eyes the smile of kindness made
Its haunt, like flowers by sunny brooks in May,
Yet at the thought of others' pain, a shade
Of sweeter sadness chased the smile away.

Nor dream that when the hand which moulders here
Was raised in menace, realms were chilled with fear,
And armies mustered at the sign, as when
Clouds rise on clouds before the rainy East—
Great captains leading bands of veteran men
And fiery youths to be the vulture's feast—
Nor thus were waged the mighty wars that gave
The victory to her who fills this grave;
Alone her task was wrought,
Alone the battle fought;
Through that long strife her constant hope was stayed
On God alone, nor looked for other aid.

She met the hosts of Sorrow with a look
That altered not beneath the frowns they wore,
And soon the lowering brood were tamed, and took
Meekly to her gentle rule, and frowned no more.
Her soft hand put aside th' assaults of wrath,
And calmly broke in twain
The fiery shafts of pain,
And rent the nets of passion from her path.
By that victorious hand despair was slain,
With love she vanquished hate, and overcame
Evil with good, in her Great Master's name.

Nor glory is not of this shadowy state,
Glory that with the fleeting season dies;
But when she entered at the sapphire gate,
What joy was radiant in celestial eyes!
How heaven's bright depths with sounding welcomes rung,
And flowers of heaven by shining hands were flung,
And He who, long before,
Pain, scorn and sorrow bore,
The mighty Sufferer, with aspect sweet,
Smiled on the timid stranger from his seat;
He who returning, glorious, from the grave,
Dragged Death, in chains, a crouching slave.

See, as I linger here, the sun grows low;
Cool airs are murmuring that the night is near.
Oh, gentle sleeper, from thy grave I go
Consoled though sad, in hope and yet in fear.
Brief is the time, I know,
The warfare scarce begun;
Yet, all may win the triumphs thou hast won.
Still flows the fount whose waters strengthened thee,
The victor names are yet too few to fill
Heaven's mighty roll; the glorious armory
That ministered to thee, is open still.

Rural Sketch Book.

[Written for Moore's Rural New-Yorker.]

THE TWO NEIGHBORS.

BY DIANTHA DIMICK.

Edwin Green and James Long were near neighbors; that is to say, with farms adjoining, and dwellings some quarter of a mile apart.—No two men could be more diametrically opposite in character than these neighbors.—Edwin Green was a punctual, energetic, go-ahead man. He commenced life poor; if a man possessing his energy and ability, and a wife like Jenny Green, could be called poor: and at that time, James Long, then a young man and newly married, inherited a large farm, under good cultivation; but, whilst Edwin Green was steadily advancing to competence, independence, and wealth, his neighbor was equally rapidly descending the scale to poverty.

James Long, or, as he was familiarly called, "Long Jim," was what is termed "a good fellow;" never known to be out of temper in his life, though it was generally conceded that he had some sore trials in his "domestic felicity," yet he lacked one of the constituent principles of manhood, that is energy. "I will do it to-morrow," he always said, but to-morrow never came, it was always to-day.

He could not imagine why it was that his crops were poor, or complete failures whilst neighbor Green's were good and abundant.—He more than half persuaded himself that there was a supernatural blight, or curse, resting upon everything connected with him and his interest; and an equally unaccountable good fortune attending his neighbor. "Why is it," he would say, "that my finest cattle always get cast, or grow sickly? and my sheep get distempered? and the frost or drouth blight my corn? Now just look there; over that fence, is as fine a piece of wheat as ever stood,—plump and ripe! That is neighbor Green's. Now, there's nothing but a rail fence between his wheat and mine, but look! there's that sickly blight! Now, I say, I can see no reason for it! I believe, my friend, that I'm a doomed man!"

"Why don't you prepare your fields in the fall, so as to get your spring crops in, in season?" said neighbor Green to him one day.

"Well, really, I believe I must try—but you see, I had so much to do last fall. This year, Mr. Green, I intend to plow up that old meadow—twenty acres there, neighbor!" I think that will be a tolerable field for a small farmer!"

Thus his life passed, in scheming for the future, all of which he failed to execute, so that every year, "Long Jim" was in still more straitened circumstances, and his time future, proverbial.

He loved his drops, too; and now and then, got a drop too much, which did not improve his out-door management, or in-door felicity.—Poor Jim! between his head and liabilities, he was in a sad case.

Much of the reason for the distinctive situations of the neighbors might possibly have been traced to the personages presiding over the respective domicils.

Jenny Green was an intelligent woman, thorough in her management of domestic affairs, and withal a kind heart. It was not the least of neighbor Green's comforts, that he had a well ordered household, and a smile of welcome, that made him forget his toil whenever he entered it.

Polly Long was considered a beauty in her day, that is, before she was so unfortunate as to be Mrs. Long. But alack-a-day! who would dream that that face had ever been pretty! or, that most detestable of all utterances—the tones of a habitually fretful, passionate woman—had ever been graduated to the soft response of love! But, as I said before, she was considered a beauty in her day, and though not naturally of a tigerish disposition, had become so, by cultivating an undisciplined irritability.

No one could enter her household without drawing a long breath of relief, when safely out again under the broad blue canopy. A blow here, a blow there, a scream, a brawl, no order, no place for anything, but where it happened to be located, which place it occupied until displaced by something else.

All this had its appropriate effect on Mr. Long, driving him to the "social bar-room" for peace and quiet, to the still sadder neglect of home duties.

"There! Long's cattle are in my corn again!" said Mr. Green. "Wife, what shall I do with him? It is too bad! He's not touched that line fence these ten years, and not a new rail has been put on it, but what I've put on it myself! He's promised me every week these three months, that he'd fix it up to-morrow!—It is too bad! It is almost beyond endurance!"

But neighbor Long was "taking it easy" "up town," calmly philosophizing over his pipe and glass of punch.

"Here are your geese!" said neighbor Green, a little petulantly, "I have drove them home for the fortieth time within as many days, and I inform you now for the last time that I can't pasture them on my wheat any longer! You must shut them up, or kill them—do something with them, Mr. Long, to keep them out of my fields!"

"Well, yes, Mr. Green, yes, I will! I meant to have taken care of them yesterday—I will to-morrow, Mr. Green, they shan't trouble you any longer! I would kill them, they are such a bother, but Polly will raise such a fuss about the goslings and feathers!"

"And your cattle, Mr. Long, I found them in my corn to-day, and it was not the first time either. You haven't fixed that fence yet!"

"Well, no—no, I haven't!" at the same time digging into the log of wood on which he was chopping, as though hoping it might help him out of the difficulty. Alas! it was the wrong horn of the dilemma, for the chips flew so vehemently, that one struck the wee bit of a thing on all fours, just inside the door. "I'll thank you to strike the chips into your own face!" screamed Polly, snatching up the child. "Hush, darling! hush, darling! naughty papa to strike it with a chip—there! take that, and out of my way!" giving Jim, Jr., a smart blow, that sent him screaming out of the door.

"Father! mamma struck me—she did!" at the same time screaming and rolling upon the ground, as though he thought his last hour had come, which, with the crying child within, and sharp tones of the mother, filled the scene.

Mr. Green walked hurriedly away, musing sadly on the domestic scene he had just witnessed. He opened the gate and walked up the path through the flower garden, towards his own pretty cottage. A little form glided out from the porch, and ran towards him, exclaiming, "Father! father, see here! what a pretty thing I got to-day, for being at the head of my class—ain't it pretty, father?"

"Yes, darling;" stooping to kiss her, "but where is Harry?"

"O, he's gone after the cows—and sis has gone with him. They're gone down into that pretty wood—may'nt I go to-morrow night, father?"

Mr. Green walked into the sitting-room, where his wife was singing in a suppressed voice, to a sweet child of two summers. He looked around the room—'twas neat, orderly, tasteful. Then glanced fondly—more fondly at his smiling wife and happy children, from the painful contrast in his neighbor's dwelling.

That night, among other blessings, he thanked God for, were, a kind companion and a well ordered household.

BEAUTIFUL ALLEGORY.

There was once a king who had a very beautiful garden, and with grounds arranged with taste to please the eye, to afford refreshing shade, retired walks, commanding views; and besides, all the delightful fruits that could be produced.

There was one superb old oak, so high and grand that it could be seen for miles around.

There were roses and lilies, and flowering shrubs of every kind; in short, nothing was wanting to make it a perfect spot. One day the king's head gardener came in and exclaimed, "O king, pray come and see what is the matter with your garden; everything is wilting, and drooping, and dying." While he spoke, the other gardeners came rushing up, and all had the same sad story to tell. So the king went out, and there, to be sure, he found it all as they had said.

He went up first to his grand old oak tree, his pride and admiration, and said, "Why, oak, what is the matter with you, that you are withering and dying away?" "O," said the oak, "I don't think I am of any use, I am so large and cumbersome; I bear no fruit or flowers, and I take up so much room; and besides, my branches spread so wide and thick that it is all dark and shady under them, and no flowers or fruit can grow there. Now if I were a rose-bush, it would be worth while, for I should bear sweet flowers; or if I were a peach, or a pear tree, or even like the grape-vine, I could give you fruit."

Then the king went on to his favorite rose-bush, and said, "Well, rose-bush, what's the matter with you; why are you so drooping?" "Why," said the rose-bush, "I'm of no use; I have no fruit, I hear nothing but some flowers. If I were an oak, like the grand one in the middle of the grounds, I should be of some use; for then I should be seen for miles around, and should do honor to your garden. But as it is, I might just as well die."

The king next came to a grape-vine no longer clinging to the trellis and the trees, but trailing sadly on the ground. He stopped and said, "Grape-vine, what's the matter with you? why are you lying so dolefully on the ground?" "Ah," said the vine, "you see what a poor, weak creature I am; I can't even hold up my own weight, but must cling to a tree or a post, and what can I do? I neither give shade like the oak, nor bear flowers like the shrubs. I can't even so much as make a border for a walk like the box. I always must depend on something else, and surely I am of no use."

On went the king quite in despair to see all his place going to destruction; but he suddenly spied a little heart's ease, low down by the ground with its face turned up to him, looking as bright and smiling as possible.

He stopped and said, "You dear little heart's ease, what makes you look so bright and blooming, when everything around you is wilting away?" "Why, said the heart's ease, I thought you wanted me here; if you had wanted an oak you would have planted an acorn; if you had wanted roses you would have set out a rose-bush; if you had wanted grapes you would have put in a grape-vine. But I knew what you wanted of me was to be a heart's ease; and so I thought I would try and be the very best little heart's ease that ever I can."

Children, can you see the moral? God didn't plant a grown-up, learned, rich, great man in the place where he puts you; if he had, he could have made one. He wants each of you to be a good child while you are a child; but he wants you to be a good child, and the "very best little heart's ease that ever you can." Will you try?—*Child's Paper.*

THE CIRCASSIAN CAVALRY.

The following is a description by a Prussian officer, of the Circassian cavalry, who are about to take a part in the coming conflict. He says:—"The Circassian cavalier wears a pointed steel helmet with a long horse tail pendant from it. A net of steel work hangs down from the lower part of the helmet, which protects the front and nape of the neck, and is looped together under the chin, underneath a short, red vest, cut in the Polish fashion. He is clad in a species of coat of mail, consisting of small, bright rings of steel interwoven. His arms, from the wrist to the elbow, and legs, from the foot of the shin bone to the knee, are guarded by thin plates of steel. He also wears close pantaloons and laced boots. Two long Turkish pistols, as well as a poniard, are stuck into his girdle. He has a leather strap, with a noose like a Mexican lasso, hanging by his side, which he throws with great dexterity over the head of his enemy. A Turkish sabre and a long Turkish musket are slung behind his back, and two cartridge-holders across his breast. The skill with which the Circassians use their weapons is really beyond belief. I have repeatedly seen them fire at a piece of card on the ground, at full speed, without ever missing. They will pick up a piece of money from the ground while executing a charge, by bending themselves round below the horse's belly, and after seizing the piece, suddenly throw themselves back into the saddle. They form the choicest body of cavalry in the Turkish service, and I have watched them when charging, attack their opponents with a sabre in each hand, managing their reins with their mouth; they will spring out of their saddles, take aim, and fire from behind their horses, then jump into their saddles again, wheel round and reload their guns as they retreat in full career.—They are perfect madmen in the attack, and few troops could withstand the utter recklessness of danger they evince."

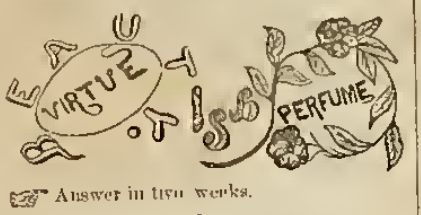
Fortitude is one of the noblest virtues appertaining to the human character, and stamps upon most who possess it an unfading lustre which does honor to the name of man. He who labors under the lash of adversity, and bears up against his misfortunes with pious resignation, must be pleasing to the *Supreme Being.*

The Golden Age of Life.—Youth is the season for active exertions; and all those who emigrate to the diggings ought to be miners.

Youth's Corner.

"Although the sun, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS, NO. 10.



☞ Answer in two weeks.

Written for Moore's Rural New-Yorker.

AN ACROSTIC GEOGRAPHICAL ENIGMA.

FORMED ENTIRELY OF COUNTIES.

I am composed of 20 letters.
My 1, 8, 9, 19, 2, 11, 17, 8 is a county in N. York.
My 2, 9, 11, 16, 4 is a county in Georgia.
My 3, 19, 2, 15, 7 is a county in Michigan.
My 4, 15, 2, 2, 6, 9, is a county in Pennsylvania.
My 5, 16, 13, 20, 11, 7 is a county in N. Jersey.
My 6, 13, 17, 19, 9 is a county in Illinois.
My 7, 3, 12, 20, 15, 16 is a county in Virginia.
My 8, 1, 5, 3 is a county in North Carolina.
My 9, 15, 1, 20 is a county in Ohio.
My 10, 8, 20, 5 is a county in North Carolina.
My 11, 9, 19, 7, 17, 3 is a county in Vermont.
My 12, 3, 6 is a county in Illinois.
My 13, 8, 12, 18, 19, 1 is a county in Alabama.
My 14, 8, 13, 6 is a county in Florida.
My 15, 17, 12, 3 is a county in Illinois.
My 16, 4, 20, 15, 7 is a county in Georgia.
My 17, 9, 19, 7, 2 is a county in Kentucky.
My 18, 8, 16, 9, 3, 7, 20 is a county in South Carolina.
My 19, 2, 2, 8, 12, 19 is a county in Mississippi.
My 20, 5, 3, 10, 8, 7, 13, 15, 19, 5 is a county in Va.

My whole is the name of an American statesman, who has lately made himself quite conspicuous.

Wit and Humor.

Every one has admired Parthenia's definition of Love, to Ingomar:

"What love is, if thou would'st be taught,
Thy heart must teach alone—
Two souls with but a single thought,
Two hearts that beat as one."

Some profane cynic having no fear of Cupid before his eyes, perpetrates the following villainous parody:

"Love is a nightmare with one foot;
Two children with one bun;
Two lumps with a single root;
Two cabbage-heads in one."

A cabin-boy on board a ship, the captain of which was a religious man, was called up to be whipped for some misdemeanor. Little Jack went crying and trembling, and said to the captain, "Please, sir, will you wait till I say my prayers?" "Yes," was the stern reply. "Well, then," replied Jack, looking up and smiling triumphantly, "I'll say them when I get ashore!"

"I remember," says Lord Eldon, "Mr. Justice Gould trying a case at York, and when he had proceeded for about two hours, he observed, 'here are only eleven jurymen in the box; where is the twelfth?' 'Please you, my Lord,' said one of the eleven, 'he is gone away about some other business, but *but he has left his verdict with me.*'"

A barber of Dundee, after witnessing the lord chief-justice's clerk pass sentence of death very impressively upon a criminal, happening to have a fine of 1s. 6d. to impose on an offender, thus solemnly addressed him:—"You must therefore either go to jail or pay the money, and the Lord have mercy on your soul!"

"Don't stand there loafing," said a professor at Union to three students, standing where they shouldn't.

"We're not loafing," said Nat, "there are only three of us, and it takes *heaven to make a loaf.*"

A day or two since, a man introduced himself into the editorial sanctum of the Manchester, N. H. Messenger, supposing it to be a banking house. He discovered his mistake when he undertook to get his check cashed.

"Father," said an ambitious shaver, about the size of a pepper-box, "I can do without shoes, but I am suffering for a bosom pin."

What is the difference between the schoolmaster and the engine driver? One trains the mind, and the other minds the train.

THE GENESEE EVANGELIST.

The Evangelist, published at Rochester, and edited by Rev. R. W. Hill, was founded several years ago, and designed to meet a want unsupplied. It is a Dollar Weekly Religious Journal, now in successful operation. It is filled with the soundest and ablest articles of a doctrinal, experimental, and practical character. It aims also to be a brief, but careful chronicler of the events of the day. Some of the best writers of the land stand pledged, as stated and regular contributors, and new ones are frequently being added.

Advantages of this Paper.—1. *Its cheapness.* It comes within the means of almost any one. Few are so poor that they cannot lay by the cents a week for so valuable a paper. Of its kind, it is one of the cheapest in the world. 2. *Its size.* It is convenient and readable; just comes also within the lowest rate of postage. Each number contains an amount of reading equal to an 18mo volume of 64 pages, or for the year, nearly *twelve* volumes of 300 pages each! 3. The articles are for the most part *brief, pointed and practical.*

Seen a Paper is a Great Religious Help.—It makes a people intelligent. It carries the instructions of the pulpit into the family. It furnishes a valuable organ for pastors and ecclesiastical bodies. It tends to make a working people, and keeps them posted up in reference to the movements of the church and of the age. It produces also unity of sentiment and action. It helps in the prayer-meeting and the social circle. It moulds the minds of the young, fostering a relish for *religious reading*, and shuts out much light, trifling, and often pernicious matter.

Recommendations.—The following are a few testimonials from eminent individuals, clergymen and others:

"We cordially approve of the Genesee Evangelist, and recommend it as an admirable Newspaper, in every way well conducted and worthy of extensive patronage."—M. L. R. Thompson, D. D., A. T. Chester, D. D., John C. Lord, D. D., and Rev. G. W. Hearsock, of Buffalo; J. B. Shaw, D. D., J. G. Hall, D. D., Rev. J. H. Mellvaine, and Rev. M. J. Hickok; Aristarchus Champion, Esq., Hon. A. Gardiner, Hon. Levi A. Ward, Frederick Starr, Esq., and others of Rochester.

"We have in the midst of us one of the cheapest religious papers in the world, and one of the best."—Rev. J. B. Richardson, Gen. Ag't. of Am. Bible Society.

"I rejoice in the continued prosperity of the Genesee Evangelist, for I regard it as one of the best models for a family religious newspaper I know of."—Rev. Dr. Van Rensselaer.

"It is *such* a paper as we need, and a paper we want *here.* The price will commend it as well as its character. It will be sustained by the prayers of the brethren, with pen and with purse."—Rev. Wm. Ingarth.

"I am pleased with your management of the paper."—Rev. H. J. Nelson.

"I value very highly your paper as a religious journal."—Rev. J. Eells, Jr.

"I am delighted with the manner in which you are conducting your paper. We never had a paper of so much interest to this region. I am disappointed and delighted as it comes to me weekly, a constantly improving sheet. The Lord grant that it may be amply sustained."—W. C. Wisner, D. D.

Terms:—One Dollar a year, strictly in advance.
Address Rev. R. W. Hill,
115-2t Rochester, N. Y.

THE PEOPLE'S JOURNAL.

An Illustrated Record of Agriculture, Mechanics, Science, and Useful Knowledge.—One Dollar a Year—50 Cents a Volume. Splendid Engravings!

Every Number contains 32 Large Pages of Letter-Press, Beautifully printed on fine paper, and profusely illustrated with Engravings, forming, at the end of each year, two Splendid Volumes, comprising Four Hundred Pages, and Illustrated with about Five Hundred Elegant Engravings, the entire cost being only One Dollar.

The People's Journal was commenced in November, '53, and has already attained a large circulation. The November No. contained 40 engravings, the December No. 72 engravings, the January No. 47 engravings, and the February issue has 61 engravings, making in all 220 illustrations, although only four numbers have been published. These relate to Science, Art, Mechanics, Agriculture, and Useful Knowledge, in accordance with the general plan of the work. No publication of the kind has ever been produced with such magnificence or at so cheap a price. It is admired and taken by every one who sees it.

Terms.—To Subscribers—One Dollar a Year, or Fifty Cents for Six Months. Subscriptions may be sent by mail in coin, post office stamps, or bills, at the risk of the publisher. The name of the Post Office, County, and State, where the paper is desired to be sent, should be plainly written. Address, postage-paid,

ALFRED E. BEACH,
No. 86 Nassau-street, New York City.
Editor of the People's Journal.

A liberal discount to Post-Masters and Agents. Single copies 12½ cents. Specimens sent on receipt of four postage stamps. 214-4t

DISSOLUTION.

The Limited Co-partnership heretofore existing between the subscribers, under the firms of Denny & Miller, Auburn, and Derby, Orton & Mulligan, Buffalo, is this day dissolved. Norman C. Miller, and Eugene Mulligan, of Buffalo, each, and they alone, are authorized to sign the names of the late Firms in liquidation.

JAMES C. DERBY,
ELLIOT G. STORKE, NORMAN C. MILLER,
EDWARD MUNSON, WILLIAM ORTON,
CHARLES F. COFFIN, EUGENE MULLIGAN,
Special Partners. *General Partners.*

Dated at Auburn and Buffalo, Feb. 1, 1854.

CO-PARTNERSHIP.

Norman C. Miller, William Orton, Eugene Mulligan, Elliot G. Storke, Edward Munson, and Charles F. Coffin, being purchasers of the *entire lot of Publications, Stereotype Plates, Copyrights, Type, Presses, Stock, &c.*, of the late firms, will, with increased facilities continue the business as Publishers, Importers, and General Booksellers, at Auburn and Buffalo, under the firm of

MILLER, ORTON & MULLIGAN,
214-3t Dated at Auburn and Buffalo, Feb. 1st, 1854.

KETCHUM'S MOWING MACHINE.

This machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,
Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca street, Buffalo, N. Y 214t.

CHERRY SEEDLINGS.—A large quantity of Black Mazzard Cherry Stocks for sale, 1 year old.
214-4t J. C. CAMPBELL, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

. The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

The Wool Grower and Stock Register is the only American journal devoted to the Wool and Stock Growing Interests. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at Only Fifty Cents a Year—5 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER.

VOLUME V. NO. 9.} ROCHESTER, N. Y.—SATURDAY, MARCH 4, 1854. {WHOLE NO. 217.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:

EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

CLEARING AND IMPROVING MARSHES.

In a recent article with this heading, we gave brief accounts of some experiments in reclaiming marsh lands; we now add notices of other plans which have been attended with success, and, also, some concluding remarks. The subject has received considerable attention in New England; and the premiums offered by the different Agricultural Societies, have brought out a mass of information in the statements of competitors and reports of committees. We shall avail ourselves of some of these, without further reference to the *who, when,* or *where,* as the facts alone are of importance to our readers.

One marsh or bog meadow, very wet, and growing only small brush and wild grass,—the soil a fine black mud, of a crumbly nature, varying from fifteen inches to fifteen feet in depth—was reclaimed as follows:—The owner first dug a ditch through the lowest part of the meadow, and then another near the head, land emptying into the main ditch. This carried off the water so that he could plow in the fall, which he did, as convenient, until the ground became frozen. He then carted on sand, gravel, or loam, and spread it over the whole surface to the depth of two and one-half inches. In the spring, when the frost was partially out of the ground (say to the depth of four inches, and enough left to bear up his team,) he harrowed it until the mud and gravel were well mixed together. The land remained thus until July, when it was sown to oats, and seeded with red-top and herds-grass, or timothy,—the seed being harrowed or raked in, as the state of the soil admitted. The amount of seed sown per acre, was three pecks of oats, one peck of herds-grass, and two of red-top. The oats ripened and were harvested in September, and the land was manured between that time and spring with twelve loads of compost. The whole cost of plowing, graveling, and sowing, was about $20, and the first crop of hay, three tons to the acre,—a most encouraging result.

Another farmer had a meadow of six acres, with a bottom too soft to admit of driving on a team. Adjoining it was a large sand-bank, which gave an ample supply of material for commencing the work. Sand was carried on with wheel-barrows until the surface became sufficiently firm to drive on with a team—and the whole surface was covered from four to six inches in depth. A covering of compost manure was then spread over it. In the spring it was sown with herds-grass and red-top.—The whole expense of reclaiming was about $25 per acre, and the third crop alone was worth $30 per acre.

This method, as will be seen, is very successful in bringing bogs into a productive and profitable state; but they cannot always be kept so without further additions of upland soil. If the bog is still quite wet, in a few years the coarse wild grasses will work up through the covering and "run out" the cultivated grasses. And we have found this to be the case where the upper turf to the depth of from four to eight inches had been burned in a dry season, leaving a heavy coat of ashes upon the surface, and so preparing the land that it yielded, for several years, very heavy crops of oats, barley and hay. There is something in the nature of the muck or peat, which renders its exposure to the sun and air necessary, before it will produce the tame grasses to perfection—before it loses this tendency to run them out. It needs plowing up every five or six years, so that the muck may be further aerated and decomposed—its sourness driven off in the process—and if then re-seeded and re-manured, will become as productive as before.

We have no doubt that the plan of mixing soils before referred to, is of permanent benefit—but the land should be so drained that no stagnant water will come within three or four feet of the surface. Then the hog will soon settle so as to become sufficiently firm for frequent plowing, and the wild grasses may be thoroughly subdued by the cultivating of potatoes or turnips, or by sowing most kinds of spring crops. We have known bogs of this nature to settle surprisingly after draining, and in the course of ten or fifteen years to become nearly as firm as up-land. We have also known them, by the filling up of their ditches and general neglect, to become so "run out" and sour as to produce nothing but a scanty crop of sorrel, where at first an immense growth of grass had been given.—R.

TARES OR VETCHES.

For soiling purposes, in suitable climate and soil, the tare or vetch is superior to any other plant. LOUDON says:—"This plant maintains more stock than any other plant whatsoever." VON THAER says:—"Tares, if cut green, draw no nourishment from the soil whatever; while made into hay, they afford a fodder preferred by cattle to pea straw, and more nutritious than hay or *any other herbage.*" The heavy land farmers of Great Britain cultivate the vetch for soiling purposes, to an extent hardly credible in this country. It is a legume, belonging to the same botanical order as beans, peas and clover; and like them exhausts the soil so little of those elements most needed to grow large crops of wheat, as to give rise to the opinion of THAER that it "draws no nourishment from the soil." Though this is, of course, not strictly true, yet it is certain that, like peas and clover, it is the best crop to grow as a preparation for wheat.

There are two varieties commonly cultivated,—the small English vetch, and the German vetch, which is much larger. The latter is frequently cultivated in this country by Germans, but we have never seen the English vetch, tho' Scotch and English farmers inform us they have tried to grow it here without success.—How far the German vetch is adapted to this climate we do not know, and should be glad to hear from any one who has had experience with them. Certain we are of one thing—that if they can be successfully grown here, they will afford a very superior green food for soiling horses, and thus supply a want which, as land becomes more valuable, the farmer feels every year more urgent. And, what is still more important on a wheat farm, they draw nearly all their nourishment from the atmosphere, and when fed to animals, greatly augment the quantity and quality of the manure heap.

They do best on a rich, well-tilled, loamy soil. Three bushels of seed per acre, sown broadcast early in the spring, is what we should recommend. White lupins are also leguminous, and closely resemble in many points, the vetch. They are grown extensively in Italy for soiling purposes, and also for plowing in as a green manure. We think it is probable they may succeed better in this climate than the vetch, and be equally valuable. Any of our readers who have cultivated them or the vetch, will do us a favor by giving their views in the RURAL NEW-YORKER.

A WRITER in the London *Gardener's Chronicle* says:—A mixture of nitrate of soda with gypsum and wood ashes threw up such a green dense mat of clover, two to three feet deep, as I have rarely seen; while the other fields on the same estate, were pale, thin, and sickly looking, probably not half the crop.

AYRSHIRE BULL "DUNDEE II."

AYRSHIRE CATTLE.

The best writers agree that the modern Ayrshires were produced by the union of the blood of the Holstein or Teeswater Short-horns, and the Alderneys, with the ancient stock of the County of Ayr, in Scotland. They are, therefore, a made-up breed. For milk and beef combined they have no superior. MAYNE, in his recent work *How to Choose a Good Cow,* says that the average annual produce of milk per cow in a dairy of 30 cows, was 632 gallons, and the average produce of butter was one pound from every 9½ quarts, or about 274 lbs. per annum. This dairy received somewhat extra feed. The average of six ordinary dairies gave 1 lb. of butter to each 2½ gallons of milk. Six dairies gave an average of a little over 1 lb. of cheese to each gallon of milk. "From this it appears that the milk of the Ayrshire breed of cows is not only abundant in quantity, but also rich in those substances which constitute excellence of quality; and when to these qualities are added the small amount of food consumed, the result is so favorable to this breed, that few thoroughly acquainted with the subject will refuse to rank the Ayrshire cow amongst the most valuable for general dairy purposes in the United Kingdom. The "Kerry" and "West Highlander" may be superior in point of hardiness and endurance, and better adapted to mountainous districts, and the Yorkshire or Metropolitan cow may yield a larger quantity of milk and beef by the consumption of an enormous amount of food, but for all medium soils and climates throughout Great Britain, there is no breed equal to the Ayrshire for profit, where the produce is to be converted into cheese, butter or veal."

SANFORD HOWARD, our best American authority, says:—"In fact, whether the Ayrshires are judged by their actual produce, or by the external points which by experience and observation are acknowledged to denote dairy qualities, it must be admitted that they take a high rank. From a fair consideration of their merits, it is believed that their adoption for the dairy, would secure the following advantages over the stock commonly kept for that purpose in this country. 1. A greater quantity of milk, butter and cheese, for the food consumed. 2. Greater uniformity in the general character of the stock, from its inherent or hereditary, qualities. 3. Better symmetry and constitution, and greater tendency to gain flesh when not giving milk."

We have had much experience with the Ayrshires, and can testify to their superior milking properties. In fact, for milk and beef combined, we should prefer them to any other breed. They have not been so extensively imported into this country as the Devons and Durhams, but where they have been tried they give great satisfaction. Our engraving gives an excellent likeness of a fine specimen of this breed, belonging to E. P. PRENTICE, Esq., of Albany, N. Y. He took the first prize as a one year old, at the New York State Fair, at Rochester, in 1851.

POTATOES.

In a letter not long since received from Mr. H. B. MACLATHLIN, Kingston, Mass., remarking upon his potato crop, he adds:

"The potato crop I find a valuable one to raise in this locality. My whole crop, the product of five acres, now readily commands one dollar a bushel.

My plan to avoid the "rot" has been to break up old sandy pasture land, and plant with no other manuring than a handful of a compound, made of about four parts plaster, four parts charcoal, and one part salt, thrown into the hill at time of planting, or subsequently on the hills. I do not get a large yield, but I have sound tubers.

In experimenting with potatoes, I have found none to excel the new variety called the Wild Mexican, for table use. It does not yield as largely as some other kinds, but its smooth and almost transparent skin, united with its remarkably pure white, mealy texture when baked or boiled, will always render it a favorite, if it withstands well the "rot." For stock I have tried two mammoth seedlings, and give the preference to BURBANK'S as the most productive." T. E. W.

A POOR MAN'S WOOD-HOUSE.

It is time to be thinking and acting for the year's supply of wood. No good farmer will long continue the practice of getting his wood from day to day. In the busy time of seeding, hoeing and harvesting, these daily calls of supplying the kitchen with fuel are vexatious, and occasion much loss. The winter time, when one has more leisure, is the time to have the fuel in readiness. It then gets seasoned against the hour of need. The fire is quickly built, and the required heat obtained with less outlay—the cooking done in the best and most expeditious manner, so that there is a saving made in every point of view. The wood should be well prepared, and put, while yet green, under cover to season. No incipient decay is then induced by exposure to the weather, which, especially with the sap wood, will often injure it full twenty-five per cent. in one year's exposure. It should therefore be sheltered from the weather. Where one has no house for it, a temporary shelter of boards and slabs will be of great benefit, and more than repay the trouble.

But where it is not convenient to have anything of this sort, the following method, which we find in an exchange, will be the next best method, and, for want of a better, entitle it to the distinction of the "Poor Man's Wood-House." "As you split your wood, lay in a pile, if practicable, where you can work on both sides of it. Set up your wood on the ends to begin with, and continue to build your pile much as a coal pit is formed, with the wood all slanting up or down, so that it will form a cone. A little care and practice will enable any one to make such a pile, with almost no additional time or trouble. Such a pile sheds rain like a roof, while the largest heap needed for an ordinary family will thoroughly season in a little while. Only a few inches of the ends resting on the ground will be damp. When wanted for use, begin on one side and work towards the centre, and rarely will you find yourself without a ready supply of dry wood, even after a snow or rain storm." Those who cannot do better should try it.—But a good wood-house is the best of all, and no farmer should be without one long.

T. E. W.

RURAL TOPOGRAPHY,

FROM THE RAILROAD CAR, — BY S. W.

From Waterloo to Geneva, along the north side of the outlet of Seneca Lake, the surface is gently undulating soil sandy loam with occasional sections of clay; all cleared except in the rear of the farms; sylvia tall beech, elm, and other soft timber, with some scattering oaks and pines. But nearly all the large trees have been cut off and appropriated; the limestone ledge which comes to the surface on the south side of the outlet is here many feet below, while the surface is sparsely supplied with small boulders of the Onondaga group; farming and farm buildings not above the medium. From the beautiful and well endowed village of Geneva to Vienna, is a garden of a country—the soil embraces all the varieties of a fertile calcareous loam, alternating from clayey to sandy and gravelly. About Oak's Corners, where sand predominates, nature was lavish in her organic deposits, as the long worn soil continues to bring large crops of wheat and Indian corn, after forty years' tillage, with a very moderate application of other manures than plaster and clover. Vienna is a beautiful, healthy rural village; the small, well painted houses, in the midst of trees, gardens and flowering shrubs, give an earnest of that appropriate good taste which copies not the stately architecture of the ambitious town. Here along the banks of Flint Creek, the outcrop of limestone is marked by numerous projecting nodules of hornstone. From Vienna to Clifton (sulphur springs,) and thence to Shortsville and Canandaigua, is fine rolling wheat-bearing land; the timber of the forest is beech, maple, elm, poplar, bass wood interspersed with oak, hickory, &c.; the soil a well ameliorated clay loam, with limestone pebbles. The farm-houses, barns, &c., are substantial rather than tasty, but a better day is coming for rural architecture; although DOWNING is dead, the good he has done lives after

him. Canandaigua is the *beau ideal* of a rural town; here are princely mansions set in the midst of trees and ornamented grounds, with beautiful gardens in the rear, as though taste and comfort found a refuge here, after being much buffeted by the obtruding brick and mortar of our great and growing cities. So perfect is the *Rhus in Urbe* here that the most unpretending domicil can boast of its dooryard, shrubbery and shade trees; even the poor Irish look cleanly and quiet, as though civilized and blessed by the power of example. From Canandaigua to Rochester through Victor, the country is sufficiently rolling, and interspersed with creeks, to give that natural drainage to the land so necessary for cereal crops; the soil is the same rich loam before noticed, the farm buildings substantial, good rail fences and medium farming; but here, as elsewhere in the Empire State, tile draining and its benefits appear to be almost unknown. Before reaching Rochester the soil is a scrub oak or pine plain, a light warm soil, capable of producing well under judicious culture.

Rochester is one of those large, busy towns, which DeWitt Clinton said possess in themselves a self-augmenting power; here are broad, well paved streets, spacious, elegant shops and stores, fine houses, large modern hotels, and public buildings, work-shops without stint, and the best and largest flouring mills in the world. Like all those great cities which grow up more by the increase of their manufacturing industry, than by transient trade and commerce, Rochester always exhibits the appearance of business and thrift, even in the dullest season of the year.

The country west of Rochester to Batavia is less undulating, but otherwise it presents much the same appearance as before. There is the same absence of large boulders, or rock in situ, the same green fields, and plowed grounds, and Virginia fence, the same tall elms scattered over the rich pasture lands, the same large barns, apple orchards and small painted houses, with picketed door-yards not over-ornamented with shrubs and flowers, the shade trees always few and far between, the tall dark brown woods in the distance denoting the original fertility of the soil. From the rail-road we have only a distant view of that fine, airy old village, Batavia. The next forty miles to Buffalo is over a flat champaign country needing much ditching and draining. At the manufacturing village of Lancaster, ten miles from Buffalo, we come to a dead level, composed of heavy clays, or wet, sandy loams, without boulders: the sylvia is tall, soft deciduous trees interspersed with the evergreen hemlock, denoting a cold, wet soil, which draining alone can ameliorate; now producing tolerable crops of hay, but only here and there a small patch of oats or corn. The suburbs of Buffalo carry the marks of a poor, but industrious German population; their little gardens are as well cultivated as they can be in so cold and wet a soil, under circumstances where manure is expensive and draining impossible.

(To be concluded in another number.)

NATIONAL POULTRY SHOW.

Mr. Editor:—Allow me to offer a few thoughts, in relation to the suggestions made by the judges on Asiatic fowls at the late National Show, in regard to the names given to these fowls by those who have hitherto bred them. The Society in publishing their list of premiums, recognized the extended list of names by which the breeds of Oriental fowls are known in this country. Their object was correct and commendable; although they, by no means, approved of the nomenclature.—Their design was, to induce the presentation of every available variety. This object has been accomplished. Their advice now is, to reduce and simplify this nomenclature, by expunging therefrom many ridiculous names, which have answered the purposes of breeders of a certain class, by enhancing prices; making a distinction where there is no difference.

The Society have assumed, that Shanghais and Cochins are convertible terms. They propose therefore, that all pure Asiatic fowls should be embraced under the general name of Shanghais; their varieties to be designated by their different colors. Now I cannot fully agree with them here. I dispute the fact of their being convertible terms. My authority is the testimony of gentlemen now residing in China. Those breeds are recognized in China as two distinct breeds or varieties. They are not designated as Cochins and Shanghais, but as feathered legged birds, and clean limbed birds. I prefer therefore, decidedly, the suggestion and practice of Mr. Burnham, of Boston, who applies the general name of Shanghais to Asiatic birds with *feathered limbs*; and Cochins to birds with *clean limbs*. This will divide them into two classes. The sub-varieties can then be easily and correctly designated by their color. Thus, the black, white, buff, fawn, and grey Shanghais, will be instantly recognized by their descriptions, as *feathered legged* Asiatic birds of these respective colors. So of the Cochins;—buff, white, black Cochins will be known to designate Chinese birds of these colors, having *clean limbs*.—This will dispel the humbuggery of ridiculous names, as Hong Kong, Hoang Ho, Canton, Ning Po, and the like. If the grey Shanghai is the real Brahma, that happens to have a larger share of black interspersed over the body, than the white Brahma, let it be understood that they are identical.

The Society recommend to call the Brahmas known as the largest kind of Asiatic fowls having white bodies and black tails, Brahma Shanghais. Now it is universally known what is meant by Brahmas; of course I see no benefit in altering this simple designation. The Society make no mention of the white Chittagong. Whether they considered them as merged in the Brahmas, or have ignored the variety altogether, I know not. They are of the largest breed of Asiatic birds;—white bodies, with black tails and clouded neck feathers;—(as correct and precise a description of the Brahmas as can be given,)—were imported about five years since, doubtless in the ship in which the unknown sailor brought his single pair, (if such ever was a fact,) and from them, great numbers have been bred and scattered in all directions, within the past four years. To pretend therefore, that there was never but one pair of large Asiatic birds imported with white bodies, black tails, and clouded neck feathers, and this pair by an unknown sailor in an unknown ship, is an assumption too ridiculous for sensible men to make.—It will answer for a short time to enable a few breeders to humbug extra prices out of the community. But it must soon run its course.

Shanghais, Cochins and Brahmas, designating their varieties by their colors, will be as concise, as comprehensive and intelligible a description of Oriental fowls, as can be made.—And it is urgently recommended to honorable breeders to conform to this classification.

Since we are on the subject of uniformity and correctness in the description of fowls, I beg to suggest a word in relation to the spelling and pronouncing the name of Shanghai.—A dogmatical man, who may have written, or rather compiled, his book, or an ignorant, careless, heedless man, may spell and pronounce it incorrectly. But intelligent and educated men, both in China and in Europe, spell and pronounce it "Shanghai," and decide this to be the correct mode. Dixie Knox.

SAWDUST AS A MANURE.

The value of sawdust as a manure, when rightly applied, is not generally understood.—Applied alone, in an undecomposed state, it may not be beneficial; but mixed with other manures, it is undoubtedly of great value. It possesses the power of absorbing the gases and vapors, given off by manure during the process of fermentation. It is superior to almost any thing else, to place in horse stables; as it absorbs the ammonia which is given off very abundantly and which is one of the most powerful fertilizers known. Why, then, should agriculturists be ignorant of the fact, that they can make a substitute for guano, with comparatively trifling cost?

But this is not all. Sawdust is very valuable as a means of saving the liquid manure which, without some precaution, is lost. By placing it in stables, the liquid, and most valuable part of the manure is taken up by it, and thus saved. M. T.

Poland, N. Y., Feb. 10th, 1854.

White Mexican and Black Scotch Potatoes.—I have been for several years endeavoring to find out what was the best potatoes for me to raise, and have tried a variety of kinds. I have given the preference thus far to the White Mexican, which I have raised for the past two years. They are good to yield, and mealy, with a fine flavor. If any one has a kind that they can recommend, as superior to them, and will communicate the same through the Rural, I shall feel obliged to him. I am told however, by a Scotchman who lived with me, that they have a kind in Scotland with black skins, and white inside, which he considers superior in all respects to any he has ever seen here. If any of your readers have any of this kind, please let us hear from them and oblige those concerned.—W. Hodges, *Brighton, Feb. 10th*, 1854.

What some Farmers Want.—The farmers in the towns of Le Roy, Caledonia, Wheatland, Riga, and most of the neighboring towns, want several hundred able bodied men (women too) from Scotland, who are practical farmers, good ploughmen, who know how to manage, and take care of horses—in short, acquainted with all kinds of farm work in a wheat growing region, where they will find many of their own countrymen, well organized society, good wages, good fare and prompt pay. Or, young men from the Eastern States, could find employment as above, by applying to the principal farmers in the above towns.

The above is designed in particular for the counties of Lanark, Lowdon, Renfrew, Ayr, &c., &c., in Scotland—and all New England Yankees who love work, good fare, good wages and prompt pay. Legion.

Old Colony Sweet Corn.—I tried the "Old Colony sweet corn" last summer, and think it is superior to the common sweet corn, except in one respect; and that is, it is two varieties impregnated with each other—and is therefore liable to degenerate. If it can be kept pure, I think it will prove an excellent variety. It is richer and sweeter than any other kind of corn I have yet tried. It also remains in a fit state for table use an unusual length of time. The kernels are very long, cob small in proportion to the size of the ear, which often contains 18 and 20 rows. I saved a small quantity of seed, and will forward 25 kernels to any of the readers of the Rural, who are desirous of testing its merits, and will enclose a stamp (as compensation for the trouble) to W. H. Skidmore, *Hawleyville, Fairfield Co., Conn.*

How to Salt Stock in winter.—Every farmer is aware that it is necessary to exercise care in giving their stock salt in winter. I have had a short experience, and have hit upon a plan which I think is a good one. As soon as it is cold enough to freeze in the fall, have a trough, one or more for each yard; make them from 4 to 6 feet long, and set them upon short legs. Collect all the refuse brine and dirty suds of the cellar and kitchen, dissolve it, and turn it into your troughs and let it freeze solid. Then place it in the yard for consumption.—Try it.—A Farmer, *Le Roy, Feb.*, 1854.

Wire Worms.—Three years ago, having a field of wheat and corn entirely destroyed by wire worms, I sowed it two years in succession with buck-wheat, plowing as early in the spring as possible and again at the time of seeding. Last season I planted part to corn and sowed the remainder with wheat, and *both crops were uninjured.* Whether the voracious gents, becoming disgusted with buck-wheat diet, left for richer diggings, or whether they were killed, I cannot say. But the land is free now. A. B.

DAY vs. GOLD.

It has ever been our opinion that the ultimate prosperity of California, or any other State, must be influenced more by its adaptation to agricultural pursuits, than by any or all the gold mines that have been, or may be found therein. There can be no sort of doubt but that the greatest source of wealth which California possesses, is found in the rich valleys, table lands and mountain slopes so graphically described by Fremont, and now so ably noticed by Mr. Kelly. When these resources are developed, as they will be very soon, the gold diggings and quartz rock will sink into comparative insignificance. Look at it. It is said that the yield of gold from the California mines for the current year will reach the enormous sum of fifty-five or sixty millions of dollars! an enormous sum, truly; and yet we venture to say that the value of the *hay crop* alone, of New York, will fully equal it. Six counties of that State produced, in 1850, 800,000 tons of hay, which at $7 per ton, is $5,600,000. This they do year after year, with a gradual increase, and yet how few are seen rushing to the meadows of Oneida, Jefferson, Chenango, Delaware, Chautauque, or St. Lawrence.

The wheat and corn fields of Ohio produce annually, more gold than the mines of California. Yet there is no noise made about it; and, instead of thousands rushing *to* them, in the hope of growing suddenly rich, thousands have been fleeing *from* them, in search of gold—gold—gold.

We hazard nothing in saying, that had the emigrants to California, since the discovery of gold there, gone instead to the rich lands of our Western States, they could have produced double the amount of all the gold slug from the mines of that El Dorado. The capital necessary to place a man in working condition in the California mines would have settled him comfortably on an eighty acre lot in Iowa, in a good cabin, with a team, farming utensils, provisions, &c., and insured him, instead of a *chance* for a little gold, the certainty of an independent position for life, without the sacrifice of home, friends, health, morals, and indeed all that men should esteem valuable in life.

Thank heaven, the "gold mania" is in its decadence, and the time is near when it will be seen and known that every ounce of gold dust, slug from the California mines costs twice its value.—*Ohio Farmer.*

Effect of Deep Plowing.—A correspondent of the *New England Farmer* says:—"A striking instance of the benefits resulting from continued deep plowing, was brought to our notice on viewing the cultivated ground of A. M. Whipple, Esq., on the banks of the Connecticut river, near Lowell. This was naturally a light and sandy soil. His men were engaged in gathering in the crop of hay from an extensive field, which yielded more than two tons to the acre. The inquiry arose, by what means was the crop made so abundant, on land so shallow? His answer was, *deep plowing mainly.* That for eight or ten years past, he usually plowed *twelve inches* deep. That he put on his grounds but a light dressing of stable manure—made no compost whatever—but relied almost entirely on the improvement of the soil, by turning the furrows deep. His crops were quite equal to those we have been accustomed to see on strong land, highly manured." * * "Similar benefits were apparent in the growing crops of corn and oats, in the adjoining lots."

Poland has prohibited the exportation of rye, barley, oats, flour, grits and potatoes, from the first of January to the thirteenth of Aug, 1854.

Agricultural Miscellany.

ANALYSIS OF INDIAN CORN.

The *New England Farmer* in an elaborate and flattering notice of the Transactions of the New York State Agricultural Society says:

But that which most strongly arrested our attention, is the analysis, by Dr. J. H. Salisbury, of several common vegetables, as the beet, carrot, melon, &c. We trust the Dr. will continue the good work which he has commenced, and give us analyses not only of the various roots, but of the grains, and especially of that most important of all plants in American husbandry, the *Indian corn*, not only of the grain, but of the whole plant. We have never seen a satisfactory analysis of this plant, made upon our own soil.

If the *Farmer* will turn to the Transactions of the N. Y. State Agricultural Society, for 1848, he will find a highly interesting and valuable paper on Indian corn, containing a great number of analyses of the grain, stalks, cobs, &c., "made upon our own soil" by Dr. J. H. Salisbury, the very gentleman the *Farmer* trusts will make a satisfactory analysis of this plant.

The Book of Nature.—An elementary introduction to the sciences of Physics, Astronomy, Chemistry, Mineralogy, Geology, Zoology, Botany, and Physiology by Fredrich Schoedler, Ph. D. Printed and illustrated with newly 700 engravings. From the number of the sciences discussed, the work cannot be very profound and elaborate, yet from a pretty careful perusal, we think it will be found the most correct and interesting treatise on the the various sciences we yet possess. It is a work for the general student, and well calculated to create a love for science, which will lead to the study of larger and more definite treatises. It is written in a popular style and clothes scientific truths in poetical language, rendering it the most interesting Scientific work we have ever read. We commend it to the attention of all who wish to be better acquainted with the wonderful wisdom unfolded to our examination in the great book of Nature. It is published by Blanchard & Lea, Philadelphia.

United States Ag. Society.—At the Annual Meeting of the United States Agricultural Society, held at Washington on the 22nd to 24th inst., the following officers were elected for the ensuing year:

President—M. P. Wilder, Boston.

Cor. and Rec. Sec'y—W. S. King, Boston.

Treasurer—William Sheldon.

Executive Committee—C. B. Calvert, I. A. King, J. D. Weston, A. L. Elbia, A. Watts, B. P. Bowie, and John Jones. Thirty-two Vice Presidents were also elected.

We will give a report of the proceedings next week.

The Virginia State Agricultural Society offer premiums for agricultural experiments to the amount of $1,925, and for essays or other written communications of useful agricultural information, the sum of $1,790. This is a noble example, worthy of the "Old Dominion," and one which we hope other State Societies will imitate.

There is one objection to offering premiums for experiments which should not be forgotten. If the experimenter aims solely or principally at merely getting the premiums, there will be danger of striving to obtain striking and profitable results, rather than of carefully and scientifically investigating the laws which regulate vegetable growth.

Experiments.—Have any experiments been made with pearlash as a fertilizer? It is certainly cheap; or with aqua ammonia as a fertilizer, compared with guano, &c. &c?—As the ammonia water of the shops is of strength enough to make, with ten drops in a tumbler of water, water quite as strong as one could well drink, I should suppose that 12½ cents worth would make a hogshead of water stronger than it would do to apply to vegetation; and perhaps it might, $1 for $1, be worth as much, or more, than water in which guano has been dissolved.

Numerous experiments have been made with pearlash, enough to enable us to judge correctly of its true value as an artificial fertilizer. We have sown it, in varying quantities, on wheat, turnips, clover, peas and beans, and never saw any benefit derived from the application, except a slight one on beans.

We have known ammonia used in the way suggested with good results, but with no greater effect than the *same quantity of ammonia* produced in sulphate or muriate of ammonia or guano while ammonia in the latter form is *much cheaper* than in the former.

A patent has been taken out in England for the manufacture of Guano from sea-weed. A good manure may be made from it; but that one so concentrated and valuable as Peruvian Guano can be obtained from it, is impossible.

It is said that iodine enables the potato and vine to resist the disease so destructive to them for the past few years. If this be so, sea-weed or kelp, well rotted, would be the best manure to use for potatoes or grapes.

Inquiries and Answers.

Red Clover—Again.—I observe by the last Rural, that you are backing up, by book authorities, your assertion, "that the red Clover is *biennial*, or dies at the end of two years from sowing. This averment is entirely at variance with my views and with my experience. It may, nevertheless, under certain circumstances be true, for I am aware that there are several vegetables, which, if cut at the period of flowering, will send out fresh leaves and become perennial, and it is barely possible that this is the case with Clover in meadows, where it is known annually.

Clover mowed on the first week in July, again blossoms and produces seed, and it is from the second mowing that all the seed of commerce is procured, and I have known it to flower three times in one season when used for soiling.

I am not going, Mr. Editor, to quarrel with you on the subject, but I shall, *Deo volente*, next spring, examine the Clover sets in a field I have, that went to seed last fall, and were not cut or pastured, and if I find them sending out fresh foliage I shall conclude you are wrong, and shall not be nearly mouthed in telling you so.—H. V.

Our correspondent asked for our "authorities" on this point, and we thought he referred to *book* authorities, and answered accordingly. We have no more confidence in books than has our correspondent. We have discovered in them too many discrepancies with actual experience, to place implicit confidence in the assertion of any writer, however eminent. If our correspondent will carefully investigate the matter for a few years, he will be able to satisfy himself and ourselves. As observed facts now stand, we are compelled to conclude red clover a biennial, but we shall be happy to stand corrected by our correspondent, if his investigations show us to be wrong, even though he be not "nearly mouthed" in communicating his observations. In our first article we did not use the word *biennial*, in its strict botanical meaning, but rather as indicating that the red clover plant died out after yielding two crops of hay or grass in two successive years. We did not mean to be understood as saying that if clover were sown this spring with barley or wheat, in the fall of 1855 it would perish after yielding one crop of clover, or being grazed for one season, but rather that it would die out in the fall of 1856, or in two years and a half from the time of seeding. The difference between our correspondent and ourselves is, we think red clover is a biennial or triennial, while he thinks it is a perennial.

Superphosphate of Lime.—Will you be so kind as to inform me through the Rural, why the much talked of superphosphate of lime is so much better than ground bones?—H. Dean, *Tyrone, N. Y.*, 1854.

The inorganic part of bones consists principally of *phosphate* of lime, a salt which is insoluble in pure water, and therefore not available to plants. By the action of the air and the acids of the soil, it becomes slowly soluble in rain water. The finer the bones are ground the sooner do they become soluble and available as food for plants. In the manufacture of superphosphate of lime, this insoluble phosphate of lime is converted into a superphosphate of lime, a salt containing less lime, and *which is readily soluble in water.* For plants, which are greatly benefited by an application of readily available phosphate of lime, such as the turnip, superphosphate is the best manure we can use, and the expensive process of converting bones into superphosphate, can be economically and profitably employed. But for wheat, which is benefited more by the organic matter of the bones than by their phosphate of lime, it will not pay to convert them into superphosphate.

Oil Cake.—Is oil cake good to fatten cattle and horses? Can it be had in Rochester?—and at what price?—J. Sibley, *Ransomville, N. Y.*

For cattle and sheep we know of nothing more fattening than oil-cake, and nothing except flesh, blood, &c., which when fed to animals yields such rich manure. It is owing to this last fact that we recommend the use of oil-cake as food for stock. We would not use it largely for horses. A small quantity, say one pound per day, may be given with advantage. It can be had in Rochester, at wholesale, for $25 per ton.

Carrying Eggs by Railroad.—Can you or some of your correspondents inform me whether eggs will hatch after being carried a considerable distance by express?—C., *Almond.*

Eggs are frequently sent by express without the least injury to their vitality. Great care is necessary when packing them. When packed in bran, and *tightly pressed* in a box, we should have no fears for their safety. Wheat chaff or finely cut straw is also frequently used for packing.

Cultivator.—I am desirous to build me a Hinge Steel-tooth Cultivator to cultivate in grain on fall plowing. Will you or some of your correspondents inform me how it should be built; how large should the timbers be, how many teeth and how far set apart.—Robert Hamden, *Three Mile Bay, Jefferson Co., N. Y.*

Orchard and Garden.

PROF. KIRTLAND ON THE PEAR.

The experience and observation of fifty years, directed to a practical subject, can scarcely fail to arrive at conclusions worthy attentive consideration; and such we deem those of Prof. J. P. Kirtland, of Cuyhoga Co, O., on the cultivation of the pear. He has recently given a summary of his views on the subject,—we cannot say in what publication, as we have only met them uncredited in an exchange,—and we give the substance thereof in the paragraphs which follow.

Pear-trees of great age are found in some parts of the country—notable instances are those on Detroit river, planted near two hundred years ago, and still productive and healthy—while recent plantations—made within the last thirty years—have ill-happened. This suggests, first, the query:

"Why was the first stock of Pear-trees, reared in Connecticut, Ohio and Michigan, thus thrifty and healthy? Two causes operated mainly in producing such an effect; 1st. The trees were raised from the seed; and 2nd. The superficial virgin soil was rich in vegetable matters, the accumulations of thousands of years."

As to the second cause, after stating that analysis shows a large percentage of phosphate of lime and potash in the pear-tree, Mr. K. adds:

"Vegetables require their food as much as animals. If it be afforded in too restricted quantities, they both will be stinted in their growth, and predisposed to disease. Each must also have food of appropriate qualities. An absence of any one of the elements shown to exist in the ash of the Pear will render the tree unhealthy, and probably soon occasion its death.

In almost every virgin soil the necessary food for the pear exists sufficient to ensure a rapid and healthy growth of one generation of trees. Cultivation of other crops, as well as the demands of the pear tree itself, soon takes up most of those elements existing in the superficial soils, especially the phosphate of lime."

The second query is the opposite and explanation of the first—"Why have more recent attempts at rearing this tree been less successful than the first? Two causes are assigned, as follows:

"1st. Suckers have been too commonly substituted for seeds in propagating this species of fruit; since the earliest generation of trees was produced in those several States, *Seedlings* are generally healthy—*Suckers* never for any length of time. The circumstance of their springing from the roots is an evidence of pre-existing disease. That disease is sure to be inherited by every sucker. Their growth may be rapid for a time, but is akin to the malignant developments which sometimes occur in the animal frame, and is sure to end in premature disease and death."

2nd. The exhaustion or deficiency of the necessary inorganic elements in the soil has a more extensive influence. In ordinary soils the pear tree cannot be reared successfully, any more than it can "imbibe a solution of phosphates and potash from a soil made up exclusively of insoluble flint and clay." The Professor adds;

"In localities where these requisite elements are furnished but in too limited amount, this tree will exert its efforts mainly in producing blossoms or fruit buds in excess, which of course will prove abortive the season ensuing, from a want of food, and a very little new wood will be formed.

On the other hand, if most of those elements abound, but the main one—the phosphate of lime—be absent, or in a restricted amount, the tree will often make a vigorous effort at forming new wood, the leaves will be luxuriantly developed early in the season, and the shoots will rapidly enlongate with a spongy texture, till the period arrives for making a draft on the soil to furnish the necessary amount of phosphates, in order to mature the young and tender growths. This draft usually occurs in the hot and sultry weather of June or July, and is not duly honored. The result is, the delicate tissues immediately die, a rapid chemical change occurs in them, and it is said the tree died of the *"fire blight!"*

The "fire blight" is the *blight of innutrition* and specifically distinct from the *frozen sap blight*, the *canker blight*, often occurring in the *insect blight*, which also attacks apple, quince, and mountain ash trees, occasionally.

A third query, still occurs: "Why, in certain localities, has the pear tree continued healthy, and endured to such extreme age?"

To this it is replied, that some localities abound in the necessary food. The tertiary formations in New Jersey, and the trap dykes in Connecticut, are rich in one or both of these elements, and without doubt, the clays of the Detroit river banks, contain more than the usual amount of phosphates. And, it is suggested, that,

"In some instances this tree is sustained for a long period of time by the accidental supply of food. The dead carcass of some large animal may have been deposited near its location, a pile of bones, leached ashes, decaying vegetable matter, the refuse of a slaughter house, or night soil. Perhaps flocks of ducks, geese, hens or turkeys make their roosts on or under its boughs for days and months in succession.—From these and similar sources phosphate of lime may be furnished.

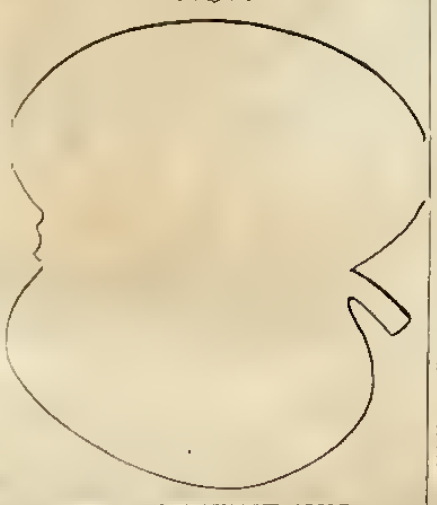
Other collateral influences have favored these bi-centurians in certain localities. The pear tree requires a rather moist and tenacious soil; not, however, wet and saturated with stagnant water. If placed on a loamy or clayey soil, abounding in the requisite inorganic elements, with pure water percolating beneath at a depth at which it can merely be reached by the extreme roots, this tree will be as hardy, strong growing and durable as the oak. Climate also exerts an influence on its health and prolificness."

These favorable localities for the pear, should not be neglected. It is a most profitable fruit, and the demand for it becoming more and more extensive. But where it may not be raised thus, almost spontaneously, the growing of pears is equally pleasant and desirable, and may by judicious cultivation be made nearly as certain and profitable. On this, some remarks are made, and we copy the most important.

"The deficiencies which occur in most soils may be, to some extent, artificially supplied.—Animal bones, urine, the sweepings of the poultry house and yard and gumm, are the principal sources from whence the supplies must be furnished. My own trees have been greatly improved, both in their vigor and productiveness, by burying about their roots large quantities of unground bones: time and weather break them down as rapidly as the trees call for supplies. The surface of the ground has been dressed with ashes and refuse lime. *Under this course of treatment I never had a Pear tree attacked with any species of blight.* This may have been accidental.

In conclusion, I would say that, in common localities, no one should set out one pear tree more than he can annually cultivate with care, and can constantly supply, in some form, with the requisite food. A starved fruit tree is of no more profit than a starved animal."

We think the experienced in pear growing will agree with us, in commending these views as worthy of considerate attention.—E.



THE SWITCH WILLOW APPLE.

We give above an outline of this apple, taken from a number of the *Michigan Farmer*. The variety does not seem to be generally known, though perhaps it is somewhat cultivated in parts of Ohio under the name of "Willow" or "Willow Twig." From what information we can gain of it, it is a very desirable variety for long keeping—especially so for the West, promising to be for that region what the Spy is for Western New York, the Baldwin for New England, or the Newtown Pippin for some other localities.

Those who raise apples for market purposes need to secure the best keepers, as from these the greatest profits can be realized, whether in home or foreign markets. If any one have fears of glutting the market with the more early or transient sorts, there can be none whatever with such as the Spy, Russet, Baldwin, and probably the Switch Willow. This latter is already raised in some parts sufficient for market purposes, and wherever it is known in the Southern markets, it takes the preference, and commands quick sales at the highest prices.

The apples from which the above outline was taken, were from the orchard of Judge H. G. Wells, of Schoolcraft, Michigan, who received the tree from near Steubenville, Ohio, labeled "Switch Willow." The bark of both body and limbs is said to resemble in color the Weeping Willow. It is an abundant bearer, and keeps till June perfectly fresh. Indeed, it will keep much longer with a little care. In a note from Judge Wells—covering some of the scions—under date of Feb. 1, 1853, he adds:—"I am entirely satisfied that it possesses superior qualities as a 'keeper,' as I was shown, within ten days past, an apple, (of the crop of 1852, which I gave to a friend last April,) in a very fair state of preservation."

We quote the description from the *Michigan Farmer*:—"Uniform in size, rather below medium; shape, roundish and a little flattened; skin rather bright, though not quite smooth to the touch, being dotted with specks, which on the shady side of the fruit are of a dark brown; color, bright greenish yellow, and on the sunny side of a dull crimson, faintly streaked; stalk, rather long, slender and tapering, deeply inserted and curved to one side; (it is not given correctly in the outline;) calyx not shallow, in a basin slightly furrowed on the sides; flesh, greenish and yellowish, crisp, moderately juicy, rather firm, with a pleasant and mild flavor."

T. S. W.

SPECIAL MANURE FOR GRAPES.

It has been demonstrated that grape vines, after being manured with potash, produce grapes sweeter and softer in the pulp than from vines not specially manured. The wine from the former was bright, clear and mellow, like old wine.—*N. E. Farmer.*

It is well known that the ashes of the vine contain a high percentage of potash, and hence it is supposed that potash must be a specific manure for the vine. Turnips and potatoes also contain a large quantity of potash, and therefore potash is also recommended as a specific manure for them. On turnips, however, potash, as we well know, has little or no beneficial effect, whilst phosphoric acid, of which the plants contain but very little, greatly increases their growth. On potatoes, too, as a general thing, potash does not increase the crop. From these facts we are inclined to think that phosphate of lime, or bones, is more likely to be beneficial to the vine than potash. What effect potash has on the quality of the grapes, we do not know; it may possibly improve it as stated in the above extract, and therefore it might be advantageously used.—Those who have had experience in the culture of the vine, would oblige us by giving their views on this subject through the pages of the Rural.

CULTURE OF FRUIT.

At a late Farmingham (Mass.) Agricultural Meeting, Mr. A. S. Lewis said the subject of fruit growing is quite important, situated as we are. He thought the business might be made as profitable as any branch of farming. The Baldwin and the Porter apples are natives. He would give preference to such fruits. He would not attempt to introduce a great variety of apples—eight or ten kinds of the best are preferable to a wider range. In addition to the above, he would name the Hubbardston Nonsuch, R. I. Greening, Danvers Sweeting, and Roxbury Russet. For early he would recommend the Williams apple and the Early Bough.

The pears which he would recommend are the Bartlett, the Seekel, the Glout Morceau, Vicar of Winkfield, Flemish Beauty, Winter pears should stay on the tree as long as possible, then be kept in a cold place till they are wanted for the table—then they may be kept warmer for a very few days, and they will be rich. Apples and pears, he thought, should be so kept as to exclude the air. In regard to a location for peach trees he preferred a northern exposure, as the buds would not come forth so early to be exposed to the frosts of spring. He had apricots in his garden at Roxbury that were kept back in the spring by buildings standing south of them. He had such fine fruit on them that it was sold for three dollars per dozen.

Plums do not generally succeed here. He is trying the plan of letting the poultry in his yard take charge of the Curculio, and other great admirers of this fruit. Strawberries are grown as easily as carrots, and he would rather manage a bed of them than the beds of roots that are now grown in abundance. He would cover strawberries with leaves in winter. Every farmer should have a plenty of them.—Currants may be grown everywhere. They are wholesome, and they make excellent wine without the addition of ardent spirit.

SOMETHING NEW—VEGETABLE PEARS.—The *Galveston News*, Texas, notices the production of an article of food, which he calls vegetables, grown in that State. They were raised on the plantation of a Mr. Compton, and are about the size and shape of very large pears. We understand they are a tropical production, being brought from Havana. The pear is planted in the ground, and produces a vine of most luxuriant growth, running a great distance, and requires some support to keep it from the ground. It is said to make an excellent arbor. The fruit grows pendant from the vines like gourds, and is nearly white. This vegetable is boiled whole, and then sliced and eaten with butter, the taste resembling that of green peas. It is said to be very prolific, two or three vines yielding enough to supply a common family. Whether it will succeed well in Texas, which is about the 30th degree of latitude, is yet a matter of experiment. Indeed we cannot hear that it has ever been raised by any one in Texas except Mr. Compton.

FLOWERING SHRUBS.—All the hardy kinds of flowering shrubs may be set out as soon as the frost is out of the ground. And as every farmer's yard and garden should have its shrubs and flowers, we indulge the hope, that every lady-house-wife, where they may not be, will insist upon her right to have them among the surroundings of the homestead, and in the garden; one might as well live on the desert, as to occupy a country dwelling, where there are neither shade trees, shrubs nor flowers, and where there is no garden to tell that taste and refinement—the great land-marks of civilization—are the presiding geniuses of his home. Show us a man who delights in such adornments—show us one who enjoys such things, and we will show you a good man, a loving husband, an affectionate father, and a kind neighbor.

RASPBERRIES AND GRAPE VINES should be pruned and tied up this month. At the time of doing this, give the ground a dressing of a compost composed of well rotted stable manure, or guano, bone dust, ashes and plaster.—This should be lightly dug in.

PLANT a tree; train a vine; foster a shrub; deposit a flower-seed and nurture its blossom; paint the fence; "slick up" the yard; fix the sidewalk; in short, give heed to the little things that constitute the grand aggregate of public beauty.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending February 21, 1853.

Frederick T. Andrews, of Georgetown, D. C., for improved method of operating saws.

Jason Barton, of Middle Haddam, Conn., for improvement in the mode of attaching horse bells to straps.

Jeremy W. Bliss, of Hartford, Conn., for improvement in window sash pulleys.

E. G. Connelly, of Indianapolis, Ind., for improved carved sash bolt.

Jno. T. Foster, of Jersey City, N. Y., for improvement in stone-picking machines.

Wm. Perry, of New York, for improvement in car locks.

John B. Holmes, of Boston, Mass., for improvement in derricks.

Daniel J. Stearns, of Pittsfield, Mass., for improvement in stretching and drying cloth.

Jos. M. Schuyler and Wm. Zern, of Pottsville, Pa., assignees to Daniel L. Easterly, of same place, for improvement in weaving wire screens.

Samuel F. Holbrook, of Boston, Mass., for improvement in contrivances for protecting passengers in railroad cars.

Amos P. Hughes, of Philadelphia, Pa., for improved tool for dovetailing.

Richard Montgomery, of New York, for improvement in corrugating metal plates.

Martin Newman, 2d., and N. C. Whitcomb, of Lanesborough, Pa., and G. C. Cook, of Hartford, Conn., for improvement in whiffletree hooks.

Elnathan Sampson, of Claremont, N. H., for improvement in attaching hubs to axles.

Jno. B. Smith, of Smanee, N. H., for improved machine for slitting clothes pins.

James Foster, Jr., of Cincinnati, Ohio, for improvement in seal presses.

Jno. Gledhill, of New York, for improvement in treating hair for weaving.

Chas. F. Packard, of Greenwich, Conn., for improved machine for cutting lath.

Smith Thompson, of Newburyport, Mass., for improvement in spooling yarn from the cop.

Jno. Zink, of Greensville, Va., for improvement in thrashers and separators of grain.

Rufus Porter, of Washington, D. C., assignor to George Stephenson, of Northfield, Ind., for improvement in machinery for making cordage.

Solomon Smith, of Acton, Mass., assignor to himself and Wm. Schualer, of same place, for improvement in parti-coloring machines.

Hiram Tucker, of Cambridgeport, Mass., assignor to himself and Jos. Storey, of Boston, Mass., for improvement in applying collars to stone. Patented in England, Sept. 14, 1852.

PARAFFINE, OR BOG TALLOW.

CHEMISTRY is a marvellous worker, and among its recent triumphs, is that which converts those dark and dreary places, the bogs of Ireland, into shining lights for the illumination of the homes of wealth and beauty. It is the glory of the chemist that here and elsewhere, he has made his knowledge eminently practical and applicable to the most useful purposes.—In the kaleidoscopic combinations and variations of his art, he finds substances of every-day value as well as those which may be called the toys of science. It is eminently so here. "Candles of the most exquisite transparency," says *Chambers' Journal*, "rivalling the best wax lights in brilliancy of combustion, have been produced from the bogs of Ireland; and so successful has the experiment answered, that works on a very large scale have just commenced operations."

These bogs—well known as the fuel-mines of Ireland—occupy a large extent of land, some three million English acres in all, but vary widely in size and exterior appearance. Some are soft and spongy, others firm and hard, but all contain *peat*, of the average thickness of 25 feet—no where less than 12 and exceeding 42. This substance varies materially in its appearance and properties, in proportion to the depth at which it lies, the upper portion containing, still visible, though much decomposed, vegetable fibres, while below the peat is much more compact and darker in color, assuming when dry, the appearance of pitch or bituminous coal, having a conchoidal fracture in every direction, with a black shining lustre, and capable of receiving a high polish.

It was long ago ascertained that by proper chemical combination, peat might be made to yield sulphate of ammonia, acetate of lime, naptha, paraffine, and oil; and that paraffine was an admirable substance for making candles. In GRAY'S Chemistry, it is spoken of as a compound of carbon and hydrogen, obtained by distillation of the petroleum of Rangoon, and also by that of tar, derived from beech wood. It is a fatty substance without taste or odor, and burns with a pure white flame. It derives its name from *parum affinis*, on account of its inertness as a chemical agent, resisting the action of acids and alkalies. It is readily dissolved in oil of turpentine or naptha, and according to GUY LUSSAC, is a binary compound of carbon and hydrogen. Its specific gravity is 0.870.

Of the value of this substance there can be no doubt; the great question was, could it be extracted from the peat at a remunerative cost? This has been answered by the success of the "Irish Peat Works," a manufactory in the county of Kildare, erected at an expense, for machinery and fixtures, of nearly £10,000.

"The first thing that strikes the eye," says a visitor, "is four huge furnaces side by side, similar in form to those used for smelting iron-ore, but considerably larger, each furnace being capable of consuming no less than twenty-five tons of peat in eighteen hours. When filled the top of the furnace is closed, and a fierce, hot blast being driven through the mass of turf, the smoke escapes through a pipe near the top, which terminates in a condenser. The magnitude of this apparatus may be estimated by the fact that it will contain eight million feet of gas." Here the smoke is condensed and precipitated in the form of tar, identical with the "beech-tar" of the chemists. The gaseous portion is conducted by pipes to another locality.

One hundred tons of peat will yield as much tar as will produce 350 lbs. of paraffine and 300 gallons of oil. Sulphuric acid is the principal agent employed in extracting this substance: the tar being boiled for half an hour with 3 per cent. of this acid, it becomes decomposed, and all its impurities fall to the bottom of the vessel. Oil and paraffine now remain, which after undergoing the process of distillation, separate. The paraffine then appears in crystalline flakes, but of so dark a color, and emitting such an unpleasant odor, as to be quite unfit for use. It is bleached and deodorized by subjecting it to the action of chloro chromic acid; and finally after another process of distillation, and passing through powerful hydraulic presses and steam, it comes out clear and perfect paraffine. It is pressed into large blocks, and when moulded into candles, burns with a white, steady light, very brilliantly.

And this "bog-tallow," as we have ventured to popularize the name, is not the only valuable product,—for independently of the oils, from which is generated gas, used as fuel for steam engines and other purposes, several valuable agricultural and commercial products are obtained. The writer in *Chambers' Journal* is quite enthusiastic as to the success and profit of the undertaking, and "hopes soon to see the fitful Will-o-the-Wisp, which haunts Irish bogs, spirited by the chemists potent wand into the substantial reality of brilliant candles."—E.

DRY CELLARS.

NOTHING is more important for a dwelling house than a dry cellar. When cellars are damp, the air in the upper part of the house cannot be pure, and the aroma of everything in the cellar must pervade the superincumbent atmosphere. Provisions will not keep well in damp cellars, and indeed the whole economy of housewifery is materially interfered with in such cases.

Various means may be applied as remedies for damp cellars in springy or wet soils. First, with a new cellar, the stone or brick walls should be laid in a mixture of hydraulic cement and sand, instead of common mortar, at least as high up as the surface of the ground; above this, common lime and sand mortar will do equally well—the outside, and not the inside of the wall, should also receive a coating of the mortar made of the hydraulic cement and sand. The floor of the cellar should be made of small or broken stones, where flag-stones cannot be obtained, and grouted with a mixture of one part by measure of hydraulic cement, to two of sand, and so fluid as to fill up all the spaces between the stones, covering them a half inch or more. The centre or middle of the floor may be a few inches lower than the sides, and here may be sunken, surrounded by the cement, a small cistern, to receive the drainage when washing the floor. This arch-like shape to the cellar floor will give it great strength, and enable it to withstand pressure of water from below. When flag-stones can be procured, they should be laid in cement made as above stated, and of two inches or more in depth.

Domestic Economy.

JOHNNY-CAKE WITHOUT MILK.

MANY persons think they must have sour milk to make their Johnny-cake. At this season of the year when with many milk is scarcely to be obtained, it may be of service to know how a *good* Johnny-cake can be made without. Myself and family prefer it made in this manner to milk. When I have yeast for bread, (either hop yeast or salt rising, I think good,) I scald what meal I can conveniently in a common sized milk pan, and when luke-warm stir in several spoonfuls of the yeast, and set it in a warm place to rise. When light, I stir it away in a cool place, and it will keep perfectly good for several days. To prepare it for baking, I take out what I wish for a common square baking tin, (my family being small,) add to it four or five tablespoonsfuls of flour, use about the same amount of saleratus as if wet with sour milk, add an egg well beaten, a little salt, and a bit of lard, about the size of an egg melted, the whole stirred well together, but not stiff, and bake with a quick heat, but not to burn. The result will be as good, if not better, Johnny-cake than can be made with milk.

E. H. W.

BOILED PLUM PUDDING.—The raisins first dried a little in the oven. Then put a layer on the bottom of the mould, well buttered.—Dip some slices of sponge cake into a rich butter, to soften it; then lay it on the raisins; then again raisins, then cake, as before. Proceed thus until the mould is full. Boil one hour.

SULTANA POMATUM.—If made of balsam of Mecca, oil of almonds, and spermaceti, it clears and preserves the complexion and eradicates pimples.

Educational.

(For the Rural New-Yorker.)

APPORTIONMENT OF SCHOOL MONEYS.

Mr. Editor:—With your permission, I would be glad to occupy a small portion of your paper, in presenting to the public a few items in respect to the apportionment of School moneys in this State. We feel the present law to be unjust, and that every one who will look at the thing as it is, will deem it so too. Let us examine the method of distribution for a moment. The State Superintendent is required "to apportion and divide one-third of the sum raised by general tax and one-third of all other moneys appropriated to the support of common schools, equally among the districts of the State, and the remaining two-thirds apportion to the several counties and towns according to the population."

It is evident from this, that those counties that are divided into the greatest number of districts receive the greatest benefit from the school fund, while those that have united their districts, in order to sustain better schools, must suffer materially. A few facts to this point.

According to the Superintendent's report of 1853, Livingston Co. has a population of 40,875; Delaware Co., 39,825. The tax raised upon Livingston Co., for the support of common schools, was $11,947,88; Delaware Co., $6,242,19. The whole amount of school money's apportioned to Livingston Co., was $15,316,19; to Delaware Co., $18,943,62. The apportionment per scholar in Livingston Co, would amount to $0,98; in Delaware Co., $1,19—a difference of $0,21 per scholar. The difference of the number of districts in these counties causes this inequality. Livingston Co. has 183 districts; Delaware Co., 313—a difference of 130!

Livingston Co. raised by rate-bill for teachers' wages, $6,925,51; Delaware Co., $4,449,61. A greater inequality than this exists between other counties, but this is enough to exhibit the injustice of the thing.

This method of apportionment was intended to assist weak districts to compete with the larger ones in the support of good schools; but the intention is grossly abused. We are acquainted with districts that support a cheap school, just long enough to draw their money, which entirely supports their school, and in one or two instances have been informed they had money left. This happens in rural districts, where the inhabitants are wealthy farmers—own large farms, and have no indigent persons to exempt; while village schools, where they generally aim to support good schools, and where the poorer classes are always found, receive but little benefit from the public moneys, and besides are taxed to pay the schooling of those unable so to do.

Such a method we consider unjust in the extreme. It has injured our schools very materially, and will continue to do so, unless there is an alteration made. We deem it the duty of Town Superintendents and Patrons of schools to make an effort that will arouse our Legislature to action upon the subject, and, if possible, remedy the evil. Y.

Hemlock Lake, N. Y.

STATE IDIOT ASYLUM.

The trustees of this institution met lately at the Executive Chamber, to prepare their Annual Report to the Legislature. The success of this philanthropic enterprise is an astonishing development in the philosophy of mind.—Those unfortunate persons heretofore considered brutes in intellect—and only human because of the form of man—are now shown to have minds capable of instruction. It is proved in all cases there exists the germ of intellect, and that it can be cultivated and developed to a higher or less extent, according to the peculiarity of the case. In every instance, personal deportment and habits are modified and improved, and in very many cases, minds so far developed and educated, as to render the unfortunate individual comparatively happy and useful. There are now in the Asylum forty State and ten pay pupils; and constant applications for admissions of others, who have to be refused from the lack of accommodations. The Legislature of last year made an appropriation of $20,000 for the purchase of a site, and the erection of a building; we learn, however, that the Trustees, upon more mature consideration, being convinced that such sum is inadequate to the requirements of the enterprise, have avoided any expense in building, and have only acted on the appropriation so far as to secure a desirable site.

We trust the present Legislature will appreciate this prudent line of conduct on the part of the trustees, and place at their disposal such means as may be required to afford the proper accommodations for this new and important charity, which now excites a deep sympathy in the community. We look for the appearance of the Annual Report with much interest, and doubt not it will command the serious attention of our Legislature.

During the past year Gov. Marcy and Bishop Kip have resigned their trusteeship. The Board now consists of Hon. John C. Spencer, James H. Titus, Franklin Townsend, Rev. Dr. Pohlman and Dr. Frederick F. Backus, together with the Governor, Lieut. Governor, Secretary of State and Comptroller, who are ex-officio trustees.—*Albany Atlas, 24th.*

BAYARD TAYLOR.

Bayard Taylor is a man of whom every American can be justly proud. Earnest, energetic, persevering, filled with every kindly emotion and generous impulse, he is the embodiment of Young America in its genuine and noble development. The reader of this article, in order to get a true idea of Bayard Taylor as he would appear to-day, must add several shades of brown to the countenance represented above; for the scorching sun of Africa has bronzed his cheeks and brow, and exposure to the wind and weather of long sea voyages and oriental climes, has contributed very much to change his bright complexion to an almost Creole hue. An elegant and graceful moustache must also be appended to the lip; and with these additions the portrait will be a very good likeness of the individual whose brief memoir we are sketching, as he appeared before the Rochester Athenæum as its lecturer last week.

Bayard Taylor was born at Philadelphia, on the 11th of January, 1825, and is now consequently twenty-nine years old. Few men of his years have seen and endured so much; have labored, and struggled, and suffered so greatly, and we may add, triumphed so gloriously. He commenced his career as a printer on a country newspaper, early in life, and labored as a compositor at the case for some years. But his active intellect could not be chained to the mere mechanical duties of his trade—his fingers were frequently employed to mould into tangible shape the workings of his own brain. In his case, as in that of many other of our literati, his earlier productions were in the field of poetry, and he became favorably known to the public through the columns of the *New Mirror* and *Graham's Magazine*. In 1844 he published his first volume, entitled "Zimenia, and Other Poems."

An irresistible thirst to travel was early felt by the young poet, and at this period of his life he boldly entered upon the fulfillment of his desires. With only *one hundred and fifty* dollars in his pocket, he left his native shores to make the tour of Europe. Previous to starting, however, he had made arrangements with Mr. Chandler of the *U. S. Gazette* to write twelve letters for his paper, at fifty dollars each; and also with Mr. Patterson to write an equal number for the *Saturday Evening Post*. With these slender resources he made the tour of Europe *on foot;* being absent for that purpose during a period of two years, and traveling through Germany, Switzerland, Italy, and France, a distance of three thousand miles.

On his return home he published a volume of his travels, entitled "Views Afoot." He also wrote another volume of poems during his tour, called "Rhymes of Travel," which was likewise published on his return. He at this time became one of the editors of the *New York Tribune*, and as a correspondent for that paper traveled extensively in California in 1848, and on his return home in the spring of 1850, he published a volume entitled "Eldorado — or Adventures in the Path of Empire." This book was very successful both in this country and in England, and was also translated into the German language, and extensively circulated on the continent.

We now come to the darkest period of our traveler's life—dark and sad to him, and desolating to his noble heart — but one that raises him high in the estimation of all good men, and contributes not a little to the lustre of his young fame. He had been for several years engaged to an amiable young lady, but from various obstacles in his way, such as every young man without pecuniary means must meet with and overcome, the consummation of their matrimonial engagement had been deferred from time to time; and now, on his return from California, it became too evident that the girl of his heart would ere long be removed from him by death. Consumption had fastened itself upon her, and she was slowly but surely fading day by day. In order that he might possess the right to watch over her last hours with the eye of true and devoted affection, he made the dying girl his wife; and then with the gentle hand that can only accompany the feeling and noble heart, he left her side only at the dark portal, through which no one living is permitted to pass; but he left her only to gentle slumbers in the bosom of her God.—Then, with feelings of desolation, he turned away to wrestle once more with the stern realities of life.

In 1851 he started on a tour to Africa, and visited the Pyramids in the valley of the Nile. From thence he returned to Europe, and proceeded to the East Indies, where he joined himself to the United States Naval Expedition to Japan. We may look for an interesting volume from his pen upon the subject of these Oriental travels; but in the meantime he is reaping a rich harvest both of public favor and pecuniary aid, by lecturing before literary societies in all the principal cities in the Union on the interesting subject of Japan. He speaks from his own experience and observation in those regions, and does not entertain his hearers with subtle theories and speculations, such as are too frequently indulged in by our public lecturers.

The following is a brief synopsis of the lecture as reported by the *Rochester Union*, which was delivered by him before the Athenæum in this city on the evening of Feb. 17th:

He commenced by a brief notice of the Chinese and other eastern nations, and the information we had of them, and then proceeded to the main subject—viz., Japan—as seen from the American fleet in the Bay of Yeddo. He described the Japanese as the reverse of the Chinese in almost every particular. They are a finely-formed and well-developed race, intelligent, shrewd, and remarkably inquisitive.—The masses seemed desirous of cultivating an acquaintance with foreigners, but were restrained by their system of government, which the lecturer described to be maintained by a grand system of espionage, similar to that so long practised by the Jesuits, and by the Incas of Peru.

The Japanese, though refusing all intercourse with the rest of mankind, excepting the Dutch under certain restrictions, were well posted in the affairs of the world. It was one of the conditions by which the Dutch were permitted intercourse, that they should keep the government informed on all important matters transpiring. The intelligence so received is disseminated throughout the empire. The lecturer said inquiries were put touching the late Mexican war, and it was asked if Mexico existed after the defeat of its armies by the Americans at Buena Vista and Monterey? They questioned us to the roads that passed through mountains without crossing their summits, and also as to the Pacific Railroad, of which project they had a very correct idea.

Those who came on board the ships manifested the greatest curiosity, except when watched by the spies of government, at which time they would assume and maintain an air of the utmost indifference. When opportunity presented, they would examine the arms and munitions and the equipments of the vessels.—Some of them were discovered sketching the steamers. Their curiosity when unrestrained was unbounded, and their questions innumerable. As an illustration of Japanese inquisitiveness, a story was told of a Russian captain, who was two years a prisoner in Japan, during which time he was questioned so unceasingly, that he begged for death, to put an end to the torture inflicted by Japanese curiosity.

The Japanese have a taste for music, and were animated and delighted by the airs from the Susquehanna's band, while the same music among the Chinese seemed to be wholly lost.

Mr. Taylor illustrated the nature of the government of Japan, by citing facts to show the power of the government to keep the people in subjection through fear. They manifested the greatest dread of the government officials, and obeyed their orders with a cringing servility, that showed the power the head possessed, and the terrible consequences of disobedience to its mandates. Thirteen Japanese sailors who were shipwrecked, were picked up by an American ship, and taken to San Francisco; and by order of the U. S. Government, sent to China, to be put on board the Japan squadron. Among these was one who so familiarized himself with the manners and customs of the crew, that he adopted the American dress. He was nicknamed "Sam Patch." As the fleet approached the shores of his native land, he became greatly excited through fear. He was sure that the government knew all about him, and even knew his name. He therefore changed it, and desired to be called "Tom Patch." This incident shows the nature of Japanese power, and betrays the secret of its despotism. Espionage—a grand system of spies and informers, exists through which even the meanest subject is kept in constant fear.

Spies were constantly over the conduct of the squadron, and not a move was made that was not instantly reported at head quarters.—The lecturer gave an intresting account of the visit of the ships to the Islands of Loo Choo, and its exploration by a party of eight, of which he was one. Loo Choo is subject to Japan, though so far distant that the people represent to foreigners that it is a dependency of China. A Japanese garrison was discovered, erected on the Island, by the Americans.

Loo Choo is 60 miles long, and from 5 to 15 miles wide. The country is dotted with neat villages, shady groves, and elegant gardens. The exploring party went over half the Island, but were followed by spies, and their approach to a village was the signal for the desertion of all the inhabitants. The common people seemed curious and even anxious to see the strangers, but fear of government spies prevented them from exercising their propensities.—No violence was offered, and when the exploring party refused to obey the orders sent from rulers of the Island to desist from going into the interior, no attempt was made to enforce the command, but a Mandarin constantly accompanied the party, and so well skilled was he in deceit that he pretended that he was sent to protect the party. The streets of the capital of the Island were almost totally deserted, as the party of eight Yankees, bearing a small boat flag on the end of a musket, marched in.

Com. Perry took a stand, said the lecturer, against espionage. He ordered off all the spies, and threatened to open his batteries upon their boats if they did not keep away from the ships. The Japanese authorities denied that spies were employed by them. Mr. T. said that in this they were like the Jesuits. Their system of power, their terrible, crushing despotism, was based upon the Jesuitical doctrine of distrust *in man*; and, said he, "what a glowing contrast does our own system of general confidence *in man* exhibit." The lecturer said Peru, under the rule of the Incas, closely resembled Japan in many respects. The Emperors and Incas claimed to rule by divine power—dishes from which they took their meals were never used but once, and then were destroyed.

Some Cortez or Pizarro may get a foothold on Japan, and overturn the throne. Give but room upon the soil of Japan for an Anglo Saxon to stand, and the days of Japanese despotism are numbered. The lecturer thought it did not become him to speak of the probabilities of the success of the American expedition in the accomplishment of the object sought, viz: commercial intercourse, but he thought it would prove an entering wedge, which would prove serviceable in opening the way for another movement in that direction.

He said the physical force of Japan had been overrated. Their arms were old English muskets, with match locks; they had no shore batteries that could not be destroyed in a few hours, and a few broadsides from a war steamer would annihilate their whole fleet of war junks. He explained how an inconsiderable fleet could destroy their commerce, and cut off their main source of supplies from the northern Islands of the Empire. He said the 350 Americans who landed from Commodore Perry's ships would have been a match for 8,000 of their best soldiers. Two hundred and fifty years of profound peace had left them poorly prepared for war.

The lecturer described Com. Perry's method of treating with the Japanese Government as altogether different from all who had previously visited the kingdom. He assumed a high position; refused to submit to any petty exactions; would not see or treat with any but an equal. He was envoy of the American Government, and would receive none short of an envoy of the Emperor, and he must come well authenticated. He described the landing of the Commodore on the 14th of July last with 350 men, that being the first foreign force that had landed upon the shores of Japan in 250 years. The lecturer alluded to the appearance of the American officers, soldiers and sailors as they stood around the staff supporting the stars and stripes, in the conscious majesty of their might, in presence of tens of thousands of armed men, whose rulers had heretofore refused all intercourse with the world, and maintained an isolated supremacy.

OUR FAVORITE POISON.

We extract the following remarks on "the favorite poison of America," from a work written by the late A. J. Downing:

In the signs of *physical health*, and in all that constitutes the outward aspect of the men and women of the United States, our people compare most unfavorably with those on the other side of the Atlantic. So completely is this the fact, that though we are unconscious of it at home, the first thing that strikes an American returning from abroad, is the pale and sickly countenances of his friends and acquaintances—the men look so pale, and the women so delicate. The national poison which causes all this, is not tobacco, nor patent medicines, nor coffee; it is nothing less than the vitiated air of close *stoves*, and the unventilated apartments which accompany them; in the continual atmosphere of close stores, breathed in our homes, in our rail cars, in our steamboat cabins, in our lecture rooms, concerts, and private assemblies all over the country.

Pale countrymen and countrywomen, rouse yourselves. Consider that God has given you an atmosphere of pure, salubrious air, forty-five miles high, and—ventilate your houses.

He who would acquire fame, must not show himself afraid of censure. The dread of censure is the death of genius.

Sunday Reading.

WASTED!

"*He hath wasted his goods.*"—Luke xv., 1.

Wasted!
Precious pearl of time,
Moments rich as diadems!
One by one they came unnoted;
One by one afar they floated!
One by one! till myriads sped
Far away to join the dead,
Till that lost life, shattered, broken,
Won no heav'n-born light nor token—
Drifted to the fearful shore,
Helpless, hopeless evermore!

Wasted!
Gifts of doubtless mind
By the Hand Eternal given;
They had mounted to the skies,
Heed and reverent sacrifice
To the Majesty of heaven;
But that spirit-lyre, rent string
To sweet harmonies unspoken,
Shiver'd, and its deep chords broken,
Murmureth but to songs unsung;
Of rich melodies richly flung;
Of fame's gorgeous altar fire;
One brief moment in its brightness
Flashing, swiftly to expire;
Its high purposes all blasted,
Talents hidden, treasure wasted!
Consecrate at Mammon's shrine,
Owning not the Hand Divine.

Wasted!
Fonts of deepest love,
Gifts of mercy from above,
Lavish'd on a woman's breast,
Striving for an earthly rest;
On a human idol pouring,
Treasures from affection's deep;
At a human shrine adoring,
Waking but to writhe and weep;
Starting from its dream of rapture
At the touch of mortal sure:
On its shiver'd idols gazing,
In the frenzy of despair,
Heart sore stricken! Love Eternal
Woos thee from a heavenly throne;
He, the world's Redeemer, asks thee
Now to trust the unchanging One!

Wasted—youth's rich golden hours!
Wasted—loftiest, mightiest powers!
Wasted—manhood's glorious prime,
Hopes, and aims, and thoughts sublime!

Weep'st thou? Ere life's setting sun,
Ere Time's fleeting sands be run,
Rouse thee from ignoble rest,
Toil to win the land more blest.
Swiftly are thy moments flying!
Up! ere hope be drooping, dying!
Ere high purposes all blasted
Speak thy life forever wasted.

(For the Rural New-Yorker.)

REFLECTIONS.—IMMORTALITY.

As the rich hues of light traverse the horizon, and fade away, a holy influence spreads o'er our spirit, and all is calm and pure. At such an hour, we seem not to be of earth; the baser passions of humanity cease their craving, and we wonder that the soul ever sought their gratification. 'Twere well if the departure of the oriental orb should ever find us solitary—that the mystic spell attendant on its exit might not be dissipated by the voice of thoughtlessness and merriment. We imagine the stars were never made to shine on mirth, but on reflection; and the twilight hour should ever find the spirit calm, and free from all associations of the world.

"Ye orbs which gem the hour of night,
Which shine in passive splendor there,"

tell us, oh tell us, what it is to cast off mortality, and become immortal! Is it to leave the clay with which earth clothes us, to become a part of the spirit of God—to be merged in the great Creative Power of the Universe? Is it to leave the body, with all its wants, and its passions, and its evils, and to soar away upon the mists of chaos, and mount whithersoever our aspirations would ascend? Is it to depart, and know nought of earth—to forget its cares and pains, its happiness and woes—and enter upon a new existence, unbarkened by a shadow of the Past? Is it to leave all of our sad reflections—the sympathies of sorrow'—to commence a new being, with no creatures like ourselves to love—no object of adoration but the Great I Am? Is it to leave a world of selfishness, to become the friend of all? And, oh! is it to forget those we have cherished here, and whom we hope to meet in heaven?

'Tis said, there are no tears in the good Spirit Land! It seems to me, the richest boon that Heaven has granted us, is tears. Oh! 'tis soothing—it relieves the wounded spirit to have them trickle down the cheek; they make us holy—it therefore seems that if heaven have no tears, there cannot be happiness. It were well to have the tears of penitence and sorrow wiped away by an immortal hand, as it is said they will be there; but to have the tears of affection—and there is no *true* affection without tears—to have *them* wiped away; it must be our Heavenly Father has reserved for us, as the Book of Inspiration tells us, some greater good than yet was ever known on earth, or of which we weak mortals ever have conceived.

But, there *is* an immortality, and we know it is a blissful one; speculation on the theme is pleasing, and results in good, tho' mysteries crowd upon us as we on its consideration are intent. And we are grateful that this one thing is certain,—annihilation does not yawn before us,—though our bodies die, and mingle with the dust, our spirits take the wings of immortality, whatever that may be.—L.

Miscellaneous.

[Written for the Rural New-Yorker.]

I'M A HAPPY, THOUGHTLESS CHILD.

When the shadows come and go,
Ever restless, never still;
When bright flowers, to and fro,
Dock beside the murm'ring rill—
Then my heart is glad and wild,
I'm a happy, thoughtless child.

When the sunbeams warm and bright,
Fall upon the sparkling dew;
When it glitters in its light,
A world of diamonds to my view—
Then my heart is glad and wild,
I'm a happy, thoughtless child.

When the stars shine calm and clear,
Hailing earth in silvery light;
When the zephyr steals so near,
Shrouding me with wings as bright—
Then my heart leaps not so wild,
I am not a thoughtless child.

When the night comes stealing on,
With its still and solemn pace;
When the weary grieving one
Rests in calm in sleep's embrace—
Then my heart beats not so wild,
I'm not a happy, thoughtless child.

ORNAMENTS.

"STRANGE!" "Mysterious!" "Inexplicable!" Such have been my mental ejaculations, when my attention has been arrested by the ornaments (?) worn by some. I confess my obtuseness—that I lack the discernment and keen sensibility which one class of people appear to possess.

For this reason, I wish to be enlightened, and I have no doubt there are others, (unwilling to expose their ignorance,) desiring similar knowledge. Is it a mark of intellectuality, of refinement, of superior enlightenment, to wear a pendant of unmentionable size, length and color, *pendent* from one's ears? Did not God give us ears enough? Can the lines of beauty—fashioned by a Divine Artist, made proportionate, after a Divine Model—be made more symmetrical?——But—to come to the point—*do they prevent the headache?* Young men and maidens! You who are *ornamented (?)—do your heads ache?* If not, then publish it to the world. Let all be benefited by this panacea!—away with patent medicines! come me the beautiful (?) and useful! let *"old maids"* add to their charms, and *"old bachelors"* to their dignity! and *cure the headache!*

I confess it is an enigma which I cannot unravel, to meet a lady, (or woman, if you please,) whose conversation makes her appear accomplished, possessed of good sense and noble spirit, yet with a pair of these baubles suspended from her ears! When I am otherwise *attracted*, the sight of these is *repulsive:* for I would have no woman's modesty teach her that my attention and politeness were lavished upon a few dollars' worth of gold, worn as an ornament, rather than on account of her own personal attractions—a cultivated mind, pure spirit, warm heart, &c.

Now, what can be the object? If it is a mark which defines the position of the wearer in society, then we must class some of those whose attainments would rank them with the most intelligent, with those who are crusted over with ignorance! Then the savage, he who disfigures his God-given nature most, must rank first—on par with our belles!

I have never seen an intelligent, or even a *common sense man*, with his ears *lengthened* in this way. But such as do adopt the improvement (?) are considered by all as representatives of the higher order of—*fools.*

Is there an intelligent young lady who, (whether she be "ornamented" or not,) would not pity and spurn the poor fellow, who could plead the "ornamental" part of "his honor," as the most attractive? Then, for Heaven's sake, ladies, do you suppose men so stupid as to *admire* in *you*, what makes *fools of them?*

I admire taste in dress, and ornaments when necessary; but I respectfully submit to the good judgment and refined taste of each reader of the RURAL, if these ear pendants are ornaments!—if they are not supremely ridiculous!

CHARLIE CHESTNUT.

THE DUTIES OF LIFE.—Some writer enumerates the following, among other duties of life: "Every man ought to pay his debts—if he can. Every man ought to help his neighbor—if he can. Every man and woman ought to get married—if they can. Every man should do his work to suit his customers—if he can. Every man should please his wife—if he can.—Every wife should please her husband—if she can. Every wife should sometimes hold her tongue—if she can. Every lawyer should sometimes tell the truth—if he can. Every one should take a newspaper, and *pay for it*—if he can.

A RIDER of wood burns because it has the matter for burning within it. A man comes to be famous because he has the matter for fame within him. To seek for, or hunt after fame, is a vain endeavor. By clever management, and various artificial means, a man may indeed succeed in creating for himself a sort of name. But if he lacks real inward value, all his management comes to naught, and will scarcely outlive the day.

[Written for Moore's Rural New-Yorker.]

PRIDE OF BIRTH.

"My grandfather was a Revolutionary officer, and a man of property and high standing in society; and my father has been a member of the Legislature," says a supercilious fop, as he cracks his shirt collar a quarter of an inch or so above the ordinary cut, and throws back his head so as to form an acute angle with his back.

"And pray sir, what are *you?* Have you done anything to continue the honors aforesaid, in the descending family line? Was your expulsion from the academy on account of rowdyism, are your profanity, intemperance, and idleness, the legitimate fruits of your ancestors' exultation? Was the money you inherited acquired by your pains-taking progenitors, for the purpose of being squandered by you in riotous living?"

It is a noticable fact, that the lower and lower a man sinks through vice, from his earlier estate, the more anxious he appears to bolster up his position by the prestige of exalted birth and ancestry; and it is quite equally as true, "and pity 'tis, 'tis true," that the higher families climb up the ladder of wealth and distinction, the more anxious are they to hide their antecedents from the eye of the world. The fashionable Miss SHINK, who parades a thousand dollar shawl and diamonds to match, up and down Broadway, would blush like fire to hear mentioned the honest shoemaker, her grandsire, who years ago worked at an honorable trade to gain the means of that fortune, which, in real estate rising on the hands of his son after the old man was in his grave, has made the SHINK family rich and aristocratic.—But the wheel is rolling, round and the young SHINK's of the next generation will be landed on the same spot where old SHINK the grandfather began; with this difference however, that without fortune like him, they will in addition (if negative quantities can be called addition,) be also without credit, without character, without health, without virtue, and without friends.

LIVE WITHIN YOUR MEANS.

WE don't like stinginess. We don't like "economy," when it comes down to rags and starvation. We have no sympathy with the notion that the poor man should hitch himself in a post and stand still, while the rest of the world moves forward. It is no man's duty to deny himself every amusement, every luxury, every recreation, every comfort, that he may get rich. It is no man's duty to make an iceberg of himself—to shut his eyes and ears to the sufferings of his fellows—and to deny himself the enjoyment that results from generous actions—merely that he may hoard wealth for his heirs to quarrel about.

But there is yet an economy, which is every man's duty, and which is especially commendable in the man who struggles with poverty—an economy which is consistent with happiness, and which must be practised, if the poor man would secure independence.

It is almost every man's privilege, and it becomes his duty, to live within his means; not up to, but within them. Wealth does not make the man, we admit, and should never be taken into the account in our judgment of men. But competence should always be secured when it can be; and it almost always can be, by the practise of economy and self-denial to only a tolerable extent. It should be secured, not so much for others to look upon, or to raise us in the estimation of others, as to secure the consciousness of independence, and the constant satisfaction which is derived from its acquirement and possession.

We would like to impress this single fact upon the mind of every laboring man who may peruse this short article—that it is possible for him to rise above poverty; and that the path to independence, though beset with toils and self-sacrifices, is much pleasanter to the traveler, than any he can enter upon. The man who feels that he is earning something more than he is spending, will walk the streets with a much lighter heart, and enter his home with a much more cheerful countenance, than he who spends as he goes, or falls gradually behind his necessities in acquiring the means of meeting them. Next to the slavery of intemperance, there is no slavery on earth more galling than that of poverty and indebtedness. The man who is everybody's debtor, is everybody's slave, and in a much worse condition than he who serves a single master.

For the sake of the present, then, as well as for the sake of the future, we would most earnestly urge upon every working man, to *live within his means.* Let him lay by something every day—if but a penny, be it a penny—it is better than nothing; infinitely better than running in debt a penny a day, or a penny a week. If he can earn one dollar, let him try, fairly and faithfully, the experiment of living on ninety cents. He will like it.

"People will laugh." Let them laugh.—"They will call me stingy." Better call you stingy, than say you do not pay your debts.—"They will wonder why I do not have better furniture, live in a finer house, and attend concerts and the play-house." Let them wonder, for a while; it won't hurt them, and it certainly won't you. By and by, you can have a fine house, and fine furniture of your own, and they will wonder again, and come bowing and cooing around you, like so many pleased fools. Try the experiment. Live within your means.

WOULD you be exempt from uneasiness? do nothing you know or suspect to be wrong; and if you wish to enjoy the purest pleasures, do everything in your power, that you are convinced is right.

NEBRASKA.

THE information on Nebraska is meagre at the most. Altogether the fullest and most accurate account that has met my eye, is that to be found in the large volume of Col. Fremont, containing reports of his expeditions to California and Oregon in 1842-3-4. The volume contains in addition to Fremont's narrative, reports on the botany of the country, by those having charge of these departments: also, astronomical observations, &c. "Horn's Overland Guide" to California is a thin book, and its information is confined to the routes pursued by emigrants. Owen's Geological Survey gives information on the Geology of Nebraska, and Schoolcraft's large work on the Indians gives quite full statistics on the Indian tribes of the Territory.

Nebraska is so named from one of its largest rivers, the Nebraska, or Platte. According to the returns of the last census, it contains 136,700 square miles, or territory as large as New England, New York, and South Carolina. It should be stated, however, taking the Southern line at 37°, as Mr Douglas proposes, the Territory as thus organized will be much larger than the portion that has usually been designated as Nebraska, embracing a large portion of Indian territory, and most of the Indian tribes, except the Choctaws, the Creeks, the Chickasaws, the Seminoles, and a portion of the Cherokees.

Nebraska, as proposed to be organized, will be a vast region, having the various climates that are enjoyed in Missouri, Iowa and Minnesota, that lie on it eastern border; only the climate, like the face of the country, is more Asiatic. The eastern portion of it is chiefly prairie and rich alluvial. The middle is more sandy and barren, containing the great American Desert; and the western is mountainous, the highest mountains being covered with almost perpetual snow.

The inhabitants of Nebraska may be 75,000, mostly Indians. The whites are military men, Indian agents, and missionaries. Within a week, paragraphs have appeared in the papers, announcing that a newspaper is about to be published at old Fort Kearney, called the Nebraska Democrat, and that a Post Office is to be established some forty miles from it, for the accommodation of emigrants—two important elements to begin the work of civilizing the territory.

Nebraska is and must ever be mainly an agricultural region. It is far from the oceans, and has no great lakes. The Platte river, though from one to three miles wide, is only navigable for steamboats forty miles.

From what even the Indians have accomplished in agriculture, the country seems to hold out great hopes to the farmer. The Indians there are mostly supported by agriculture, and according to returns before me, four tribes of Christian Indians on the Northern and Southern banks of the Kansas, cultivate four thousand acres. From these they raised, in a late year, 80,000 bushels of corn, 2000 bushels of wheat, and 12,000 of oats, 4000 hogs, and 200,000 melons of different kinds. They kept 660 working oxen, and a large number of horses.—The annual value of their products is put down at $31,000. The number of these Indians is placed at 1702.

The territory is not well wooded. Poplar, elm, birch, willow, pines, white oak, maple and other trees, are found here in moderate numbers. The cotton wood tree much abounds on the rivers. Wild animals, such as buffaloes, deer, elk, antelopes, abound in this country.

The territory is capable of supporting a large population. The people are impatient to have an organized Territory, that they may make State after State of it. No wonder that the question, if that is indeed the question, whether these shall be free or slave States, should greatly excite the various sections of our land.—*Cor. N. Y. Eve. Post.*

THERE is an Eastern tale of a magician who discovered by his incantations that the Philosopher's stone lay on the bank of a certain river, but was unable to determine its locality more definitely. He therefore proceeded along the bank with a piece of iron, to which he applied successively all the pebbles he found. As one after another they produced no change in the metal, he flung them into the stream. At last he hit upon the object of his search, and the iron became gold in his hand. But alas! he had become so accustomed to the "touch and go" movement, that the real stone was involuntarily thrown into the river after the others, and lost to him forever. I think this story well allegorizes the fate of the coquette. She has tried and discarded so many hearts, that at length she throws away the right one, from pure force of habit.

MONKEY SKIN GLOVES.—Of the many animals who contribute to a dandy's dress, (in the materials of which the several portions are made,) we find that he is indebted to the *monkey* for the politest portion, the "French *kid* glove." The manufacture of this article depends now on the monkey skins brought from South America, which are as much more pliable than the old material as the monkey is more agile than the kid. As it is impolite to offer an ungloved hand to a lady, it appears, therefore, that she is more honored with the touch of a monkey's skin than a man's. We see by the paper that there is one hunter who kills three thousand monkeys a year, selling their skins to the French dealers for from twenty to forty cts. each.—*Home Journal.*

PASSION.—Nothing doth so fool a man as extreme passion. This doth make them fools which otherwise are not, and show them to be fools which are so.

INDIVIDUAL greatness (the foundation of national greatness) is the result of fiery trial, continual struggle, unceasing self-sacrifice, unremitting discipline.

To find out an error is easy; to discover the truth is difficult. Error is on the surface, but truth dwells at the bottom of the well.

For the Ladies.

THIS LITTLE TRESS OF HAIR.

This little tress of hair, oh! who can tell
The wild emotions that my bosom swell,
When to my throbbing breast, with painful joy,
I clasp this relic of my darling boy.

Long, long my absent one has sweetly slept
In his low couch. The rose and violet
Have many summers bloomed above his head,
And the lone weeping-willow long has shed
Its slightly tears; so like a mother's grief
Who weeps in solitude, and shuns relief.
The bright calm moon its holy light has shed
Full oft upon his grave; the breeze with fairy tread
Sweet music oft hath made, as tho' 'twere joy
To lull the slumbers of my baby boy.

This little lock of hair! It opes the tomb,
And calls my loved one forth. Again the bloom
Is on his cheek—I hear his laugh,
His pattering footsteps and his questions grave;
I see the bright blue eye, the radiant face,
The silken hair, and feel his warm embrace.
He lives! I clasp again my precious boy:
Again his smile I see, and all his childish joy,
But cruel memory breaks the enchanting spell,
So pale and cold he lies. The tolling bell,
The pall, the hearse, the slow and measured tread,
The last long lingering look into his lowly bed,
The pang my bleeding, stricken heart oppressed,
When the cold clod fell on his gentle breast,
Withering my inmost soul, and with dread weight,
Flashing the fearful whole that I am desolate.
Peace, peace, my soul, my throbbing heart be still,
And calmly sink into thy Maker's will,
Drink, drink the cup, and bitter though it be,
Thy Saviour holds it, He will strengthen thee.

This little lock of hair! It seems to say—
Mother, look up, and in eternal day,
See thy sweet bud of promise blooming there,
Thy cherished one. A crown of glory fair
Adorns his brow, and in his lily hand
A golden harp. See! with the cherub band
He bows before the throne. Hark, how he sings
Raptured hosannas to the King of Kings;
And now his harp notes swell so sweet and clear,
"Mourn not, dear mother, strive to meet me here."

Bright little tress of hair! I'll treasure thee,
For oft thy silent voice shall comfort me,
Rest on my heart, till my dear boy I see,
When mortals shall be clothed with immortality.

[*Plymouth Advertiser.*

[For the Rural New-Yorker.]

LETTER FROM A FARMER'S WIFE:

ABOUT WIVES WITH SEPARATE INTERESTS FROM THEIR HUSBANDS.

MY DEAR RURAL:—I have often been puzzled to understand why some of the really intelligent ladies of my acquaintance should seem to have an interest separate from that of their husbands. One would think to hear them talk, that they almost hated their "liege lords," and studied constantly to overreach them, or to get money so as to gratify their love of display. I will explain what I mean by giving instances.

Not many weeks ago, I heard a lady boasting to an acquaintance how she *managed* to get some silver spoons. She said: "Lawyer B. and his wife were here to dinner, and I had been teasing MIX to get some spoons before they came, but he said, 'we could not afford it,' and so on, just as men always do. But I was determined to have the spoons, so when M. handed the soup, I observed: 'I am sorry we have no silver spoons to offer you, but Mr. MIX thinks we cannot afford it.' M. turned red and looked very angry, but did not say a word till they were gone,—then, throwing twenty dollars upon the table, he said—'Here is all the money I have got, JANE, but take it and get some spoons, and tell Mr. NORTON that I will hand him the rest soon. I would rather work night and day to earn the money, than have this scene repeated.' I felt almost sorry I had spoken so. I know it was 'most too bad, but I have got the spoons now, and I don't care." Since then, I heard her remark, "I want a new set of chairs for my parlor; those we have look old-fashioned, and I shall give MIX no rest till he gets them." I could not help thinking what a happy fireside Mr. M. must have to come home to after his weary day's toil; and yet, Mrs. M. would be shocked sho'd any one tell her she was wanting in a proper regard for her husband.

A farmer's pretty little wife said to me recently, "All the money I get for eggs and butter, and chickens, is mine, and I do not take it to buy groceries with, either, as Mrs. MAXON does. I think that belongs to the men."

But this does not sound quite so absurd as Mrs. FEW's talk. It so happened that she had before her marriage, considerable property of her own, which was used in purchasing land, so therefore she calls it all hers. She says—when Mr. FEW is present too—"O dear! it is hard times. I don't know what I shall do, but I am going to have some of these horses and cows sold, for I do not intend to buy hay this winter." Turning to her husband, she adds, "I tell you what, Mr. FEW, I am going to have a well dug next summer, and it is a good day to draw stone, so you may as well go to work at it and get them on the spot." Mr. FEW walks quietly out of the house with his head hanging down, as if he wished his wife did not know so much.

I know more than one man, who, report says, will not buy or sell even a sheep or a pig without his wife's consent. Now I should be ashamed to have people think my husband did not know enough to manage his own business, or that I could not find profitable employment without being troubled with all the minutiæ of my husband's farming concerns.

Equally vulgar, and still more distressing to witness, is a scene like the following. Mr. PERKINS is putting on his overcoat,—Mrs. PERKINS, bustling about the house, observes the movement, and asks in a loud tone,

"Where are you going?"

"To the village," answers Mr. P. surlily.

"Well, I want you to get some tea, and four yards of the brown and white gingham, I saw at Mr. PRATT's store."

"Yes, I presume you do; I never went to a store, and you knew it, but you wanted something. It is nothing but get, *get*, GET, and I am tired of it."

"There, Mr. PERKINS, now that sounds pretty. Yesterday I was at Mr. SNOW's, when he was getting ready to go away, and he stepped up to his wife and said, 'Is there anything you wish me to get to-day, EMILY?' Now, I sho'd think the world was coming to an end, if you should ask me such a question."

"No danger of my asking you. You never give me a chance," added Mr. P., hastily banging the door after him, for fear hearing a reply. For myself I felt as if I would like to creep out of some back-door. They had undoubtedly forgotten my presence.

But it is time my gossiping was brought to a close. Should any of my neighbors recognize their own peculiarities, they will please pardon the liberty, and endeavor to profit by the picture.

A. N. E.

LIKE THE ANGELS.

"WHY! you would have me like the angels," exclaimed a young girl with whom a friend had been talking.

Truly we would have woman like the angels. And why not? Is it any harm to be like an angel? We read that they are very beautiful—full of love, truth, purity, compassionate, sinless. Are these forbidding traits? Angels slander not each other. They have no circles in their glorious home where characters are picked to pieces. Angels never wreath the face with smiles when envy is gnawing the very heart-strings in twain. Angels never rejoice over the downfall of another. Angels lure not with the eye, and then coldly cast off with the lip. Angels suffer not passion to paint the brow dark with discontent and hatred.

Would you not wish, eventually, to become angel? Or does this thought never enter with the multitude that cross the mind's threshold? Why not prepare, then, for this high destination? Why not discipline the sublime tho'ts, and beautiful in good deeds? Cultivate your affections, be pure in thought, gentle in spirit. Banish forever deception, evil speaking, inordinate love of pleasures! Why not become, as near as may be, angels on earth? Ah! young ladies, believe us when we tell you there is no harm in striving to be like the angels.

LITTLE THORNS.—The sweetest, the most clinging affection is often shaken by the slightest breath of unkindness, as the delicate tendrils of the vine were agitated by the faintest air that blows in summer. An unkind word from one beloved, often draws the blood from many a heart which would defy the battle axe of hatred, or the keenest edge of vindictive satire. Nay, the shade, the gloom of the face, familiar and dear, awakens grief and pain.—These are the little thorns which, though men of rougher form make their way through them without feeling much, extremely incommode persons of a more refined turn, in their journey through life, and make their traveling irksome and unpleasant.

Variety.--Grave and Gay.

A GOOD TEST.—The pursuit in which we cannot ask God's protection must be criminal; the pleasure for which we dare not thank him cannot be innocent.

THE CHRISTIAN.—Though a great man may, by a rare possibility, be an infidel, yet an intellect of the highest order must build upon Christianity.

A VISITOR at Niagara Falls was asked, if he knew what the little steamer that goes under the falls was made of? "Of wood and iron, I suppose," was the reply.

"No sir," said the interrogator, very coolly, "she is the 'Maid of Mist!'"

AN Australian, from the number of murders committed in that auriferous region, thinks Melbourne is the place Shakspeare speaks of when he says, "that *bourne* from which no traveler returns."

A LAWYER on his death-bed, willed his whole property to the lunatic asylum, saying that he desired it to go to the same class of persons he took it from.

MISS SUSAN NIPPER says that the Russians have an awful responsibility resting on them for killing Turks, for every Turk who is killed leaves a dozen wives.

IT is common to speak of those whom a flirt has jilted as her victims. This is a grave error; her real victim is the man whom she accepts.

TEMPERANCE, indeed, is a bridle of gold; and he who uses it rightly, is more like a god than a man.—*Burton.*

GOD.—Faith beholds God; devotion clears to him; love enjoys him; obedience serves him.

THE way to obtain a good reputation is to be what you appear to be.

MOORE'S RURAL NEW-YORKER

ROCHESTER, MARCH 4, 1854.

Agents and Friends will please remember that we are publishing a large extra edition, and can therefore furnish back numbers of this volume to all new subscribers. Those disposed, and we hope they number hundreds and thousands, can yet form new clubs or make additions (singly, or in fives, tens, twenties, or upwards,) to those already started. We are prepared, this year, for the "long pull, strong pull, and pull all together," which the friends of the RURAL are giving, and shall honor all orders for the complete volume until our edition is exhausted. But as we are receiving hundreds of new subscribers daily, those who wish back numbers should not delay. We send from the beginning of the volume, unless otherwise directed.

The Nebraska Bill.

THE bill to organize the territories of Kansas and Nebraska, which has been under debate for two or three weeks past in the U. S. Senate, rouses a spirit of opposition and indignation throughout all the Northern States. The principal objectionable feature in the bill, is the clause repealing the Missouri Compromise; which compromise prohibits the introduction of slaves into all territory north of thirty-six and a half degrees of latitude. There are other outrages besides the one above named; as for instance, it renders void the solemn treaties entered into with the various Indian tribes which have been removed from the older States to the territory west of the Mississippi river. These treaties guarantee to them their new homes forever, on condition of their removing from their old homes in Georgia, Mississippi, &c. The Indians have fulfilled their part of the contract in good faith, and now the Nebraska bill proposes a violation of that faith on the part of the United States.

Mass meetings of the people, without distinction of party, are being held throughout all the Northern States, and all the papers except those under the influence of government patronage, take strong ground against the bill. The South say they do not ask the repeal of the Compromise, but *will not refuse a boon offered them by the North!* If they would vote a postponement of the bill until an election at the North could be held on an issue involving the repeal of the Missouri Compromise, or if they would leave it to a *majority of Northern Congressmen now at Washington*, even with the whole weight of government influence on the side of the South, such a plea might answer; but when nearly the entire vote of the last named section of the Union is thrown into the scale in order to insure the repeal, the falsity of the plea is at once apparent.

A majority of Senators are in favor of its passage, to make up which majority the entire senatorial vote of the South, with the exception of Texas, goes in for the bill; and in the House the like result is also quite probable; and thus by a kind of *coup de etat* the North is to be deprived of her portion of a contract, which, at the time it was made thirty years ago, all parties considered, was very much against her interests. The territory which the South got at the time the compromise was passed has all been made into slave States; and that given to the North is yet unsettled. The compromise and its repeal is clearly illustrated as follows:—A boy traded a whistle with another boy for a cake, and after eating up the cake with great gusto, took back the whistle.

Foreign News.

THE Europa does not bring any definite news on the war question, but confirms the accounts of active preparation on all sides to meet belligerent contingencies. Probably no collisions will take place between the allies and the Russian forces until spring, even in case matters are to be settled by the arbitrament of the sword; for the reason that their armies cannot be brought into the field against each other, until that time. It is possible, however, that a naval battle may be fought upon the Black Sea, in which case, undoubtedly, diplomacy cannot longer delay the war. There is a rumor, as will be seen by the foreign files, that friendly arbitration is to be tried again, but with what prospect of success, or how to be tried, is not stated. Foreign markets for breadstuffs had declined, and as a consequence a subsidence follows also on this side of the Atlantic.

THE ADVERTISEMENTS in this number are worthy of particular notice, and as we do not wish to publish them as long as requested, we trust none will be overlooked. Among others worthy of attention, are, the cards of J. C. DERBY, and FOWLERS & WELLS, Publishers — statement of affairs of Tempest Insurance Co., (a popular and prosperous company, by the way) — announcement of Alfred Academy, an excellent institution — Mr. LANGWORTHY'S Pure Wine for medicinal purposes, and Mexican Potatoes—the new Lever Straw Cutter — Land Plaster for sale — Farms offered, &c., &c. Always read the advertisements in the RURAL, for they are generally new and interesting.

THE SPRING ELECTIONS, soon to "come off" in many sections of this and other States, will afford those disposed favorable opportunities to extend the circulation of the RURAL. Many friends have heretofore improved such occasions, and thereby materially increased our circulation in their respective localities. If each who can consistently do so will take a number of the RURAL to the election, and, after voting for "good men and true," show the paper and receive subscriptions, community may be benefitted,—while the favor will be duly appreciated in this direction.

Congressional Proceedings.

Feb. 20,—SENATE—Numerous petitions against the Nebraska bill were presented from New York, Pennsylvania, Massachusetts, New Jersey, Vermont and Illinois.

Mr. Johnson introduced a bill to establish three Indian territories west of Arkansas.

HOUSE.—In the House Mr. Latham from the Committee on public lands, reported the Senate bill for the extension of the preemption privilege in California, making some brief remarks in its favor. The bill was passed.

Feb. 21.—SENATE.—Mr. Gwin reported a bill authorizing the construction of steam frigates.

Mr. Foot made a speech in favor of the Bill granting land to the States for the benefit of the indigent insane.

The Nebraska Bill was then taken up and Mr. Sumner spoke.

HOUSE.—The House went into Committee on the Homestead Bill.

Mr. Allen, of Illinois spoke in favor of the Nebraska Bill.

Both Houses adjourned over until Thursday.

Feb. 23.—SENATE.—Gen. Cass spoke briefly in reference to securing to American citizens residing abroad the full enjoyment of those religious privileges they enjoy at home.

The Nebraska Bill was afterwards taken up and advocated by Mr. Toombs of Georgia. Mr. Hunter obtained the floor and the bill was postponed.

The Bill for the construction of six steam frigates was then passed.

HOUSE.—In the House some discussion took place in regard to the disposition to be made of the Senate bill, granting 2,500,000 acres of land to Wisconsin for R. R. purposes, at the close of which debate, no quorum was present, and the House adjourned.

Feb. 24.—SENATE.—Several petitions and remonstrances against the Nebraska Bill were presented, including the resolutions of the Massachusetts Legislature, and the remonstrance of Harriet Beecher Stowe, and 1,000 women of Andover, Mass.

The Nebraska bill was then taken up, and Mr. Hunter addressed the Senate.

HOUSE.—In the House the Com. on Elections made a report declaring Jose Manuel Gallegos entitled to the contested Seat of Delegate from New Mexico. Report was adopted.

The death of Mr. Armstrong, the Printer to the House, was announced, and the House adjourned to Monday.

One of those Letters.

SOME weeks ago we remarked, in a brief paragraph, that we proposed, ere long, to publish extracts from the numerous letters we were receiving—adding that, aside from money and names, "they abound in wit, humor, facts and sentiments worthy more attention than we can now bestow." A large number of the epistles then on hand, and many of those since received, speak in the highest terms of the RURAL—stimulating us in our arduous and untiring labors.—Yet we have not found time to re-peruse, or space to publish, even if it were allowable, these references to the paper and other matters. Here, however, is a letter, (just "turned up" while looking for another,) so brief, pointed and comprehensive, that we take the liberty of giving it publication:

SHELBY, Jan. 31, 1854.

FRIEND MOORE—*Dr. Sir:* I herewith send you the name and address of a new subscriber to your valuable paper, and also the "ready."

The RURAL *has been some hundreds of dollars advantage to me the past year*, as I was induced from your remarks to hold my wheat until now.

With my best wishes for the success of the RURAL, I subscribe myself,

Yours, WM. MANNING.

We think Mr. M., *and numerous others who have written us in a similar manner*, can well afford to lend a portion of influence (as they are doing,) to extend the circulation of the RURAL. And if all who approve and value our paper, will manifest their interest in its success by giving a little attention in the same direction, the area of its circulation and influence will be commensurately augmented.

Special Election.

THE *Albany Evening Journal* publishes the official canvass of fifty-four counties in the State on the Canal question, which foot up as follows: For the amendment 171,117; against 55,018; majority in favor of the canals 116,099. Of these counties, Erie gives the largest majority, which is over 17,000; Monroe next, over 13,000; and these are the only two counties which carry their majority into the ten thousand place of figures. Twenty-one counties give majorities between 2,000 and 17,000 for the amendment.

Delaware, Franklin, Greene, Orange, Otsego, Putnam, Queens, Schoharie, Steuben, St. Lawrence, Tioga, and Sullivan counties give majorities varying from one hundred to over two thousand against the amendment. Delaware and St. Lawrence, the only two counties where majorities are over 2,000 against the canals, are remote from them, the interest of the latter being identified with the Ogdensburgh, and the former with the Erie Railroad.

DECAPITATION EXTRAORDINARY.—The Buffalo city government, in consequence of the prevalence of hydrophobia among the canine races of that city, has offered a bounty for dog scalps.—The *Republic* says, the other day a German made his appearance at the office of the Chief of Police, with a cart containing *eighty dogs' heads!*—It is not stated whether or not the guillotine was used in this wholesale decapitation.

Our Albany Correspondence.

Albany, Feb. 27, 1854.

OUR staid city having disgorged itself of all surplusage, is rapidly collapsing into its proper dimensions. It may be desirable to give the readers of the RURAL, a slight idea of "ordinary legislation," or rather, a brief allusion to the "local items" that engross the greater proportion of the time and talents of the "assembled wisdom."

RELIEF BILLS.

Scarcely a day passes without the notice or passage of some bill to extend relief to some person or persons from the "public crib." Mr. TIMOTHY TINKER has completed a piece of work for the State, and he finds (at least he so represents) that it has cost him much more than he bargained for. He hands his claim to his immediate representative to be laid before the Legislature. Perhaps it is all figured out in black and white, and backed up by strong affidavits as to its accuracy and merit. This is introduced possibly in the form of a petition, praying for relief, which is referred to the committee on claims. *Now* the claimant or his attorney must play "lobby." The members of the committee must be "approached" very softly, and honeyed (perhaps silvered) words whispered in their ears. In due course of time, they become "convinced," and bring in a report and a bill. This is read once—twice if not objected to, and referred to the committee of the whole. (The committee of the whole comprises the whole Senate, and when thus engaged, one of the members occupies the chair instead of the regular presiding officer.) Well, this bill comes up in its regular turn among the "general orders." A cautious member wants to know what all this means? What is the ground for paying out this money? The chairman of the committee, or some other interested person rises and states that it is a meritorious claim — it's all right — we're given the matter a careful consideration, heard the testimony, and you can rely upon it, it is all right.

This is enough for most. Occasionally there is one who wishes to make capital on the score of economy. He still holds back and perhaps makes a speech on retrenchment and economy, which passes here for "Buncombe." This over, the bill is agreed to and finally passed. Going to the other house, a similar process is gone through with, and the bill is concurred in and sent to the Governor for his signature. It may be remarked that such bills are passed less from their real merit, than from the influence that can be brought to bear upon the members. Just claims are often lost for the want of skill in their management. Let no one think he can get a vote in his favor without securing some skillful "lobby agent" to aid him.

EXTENSION OF THE TIME TO COLLECT TAXES.

Another "item" somewhat notorious is to extend the time to collect taxes. The collector of the town of Procrastination, county of Sloth, has failed to perform his duty in the time the law requires. Of course something must be done. So the India Rubber Legislature stretches out the time to allow him to speculate on the money he has in hand, and take *his* time to collect the rest.

OTHER ITEMS.

There are many other laws passed that are not worthy of a place in a newspaper of general circulation, only as they benefit particular places. Some towns grow to be so large and populous, and so wicked withal, that they cannot get along with four Justices of the Peace. Some villages want a new Charter. Some County lines need straitening. Some Plankroads or Turnpikes want to throw up their roads. Some bank or bachelor wants a new name. And so on to the end of the chapter. All these must apply to the Legislature, and *such* are the topics that, in a State as large as ours, occupy the greater portion of the time in our Legislative bodies.

MORE GENERAL SUBJECTS.

The law to increase the amount of stationery from $20 to $30 for each member has passed both houses. This gives them knives and sandboxes, novels and *fool's*-cap sufficient to last some of them the remainder of their natural lives.—Let us cipher a little. There are 128 Assemblymen; 32 Senators; and some 20 Subordinates; making 180 at $30 a head—$5,400. Farmers, put that in your pipes and smoke it. Your Normal School costs only $10,000 a year; and your Academies get only some $40,000. But your Legislature consume $5,400 for Stationery. For this you are taxed, while for the schools mentioned, there is a fund belonging to the State. The bill to raise the salary of the Canal Auditor to $2,500 has passed both houses, but the clause making him elective by the people was stricken out.

THE TEMPERANCE BILL.

The Senate have been considering this bill for the past three days. Mr. DICKINSON proposed an amendment, intended to influence those who let tenements for groggeries. It provides that a conviction for the sale of liquors contrary to the law, causes a forfeit use of the lease, by which it was held; and if a landlord should allow a tenant to hold over after such conviction, any future judgment of the same kind would act as a lien, on the property itself. A good idea—Senator BROOKS, of New York, made quite a long speech against the bill. He thinks it cannot be carried out—that it is unconstitutional, &c., the usual apologies for arguments against such a bill. Senator DICKINSON replied to him at length, and used him up completely. To-day, an amendment was proposed to prevent the destruction of the liquor seized. But it was lost. The committee of the whole struck out the clause which allows compensation to the complainant and witnesses. "OWE".

News Paragraphs.

☞ The New York Courier des Etats Unis has an article respecting object of the visit of certain Russian officers to this country. It is broadly affirmed that these agents, who arrived here ostensibly to superintend the construction of some screw propellers for the service of the Emperor, are in reality engaged in making preparations for the armament of Russian privateers in the ports of the United States.

☞ The colossal statue of Jefferson, the model of which Hiram Powers is the author, was cast on the 25th ult., at Munich. It is thirteen feet high, has taken ten tons of metal, and is one of the five statues which will surround the equestrian one of Washington, at Richmond, which is 22 feet in height. Mr. Powers was present at the casting.

☞ The Pennsylvania Railroad Tunnel thro' the Alleghany Mountains was opened for passengers on Wednesday the 15th ult. This Tunnel is 3,612 feet long and excavated through a great variety of rock, the grade ascending through it at the rate of 58 feet to the mile, and the rock lying almost horizontally in the strata, of from 3 to 6 feet.

☞ A drove of more than sixteen hundred turkeys passed through Salem, N. C., on the 3d inst. They were en route for Charleston, from Smith Co., Va. The drove traveled about seven miles per day, and eat up seven bushels of corn in the same space of time. The corn is strewed along the road, and the turkeys in that way coaxed along.

☞ Not many years ago the whole commercial marine of the United States, was dependent upon Russia for sail duck. About twenty-five years since, the manufacture of sail cloth was commenced at Patterson, N. J., and such has been the increase of this branch of industry, that the Russian article has been nearly driven from the market.

☞ The speaker of the Canadian House of Assembly was arrested in Italy during a recent tour in Europe, the police having on their black list a person of the name of Macdonald, and it seems they arrested the first of the clan they could lay their hands upon. It cost him about £3, in some shape, before he could get released.

☞ A rencontre took place in Washington, Feb. 22, between Senator Clemons, of Georgia, and Mr. Harris, of Mississippi, originating in Clemens refusing to acknowledge an introduction to Mr. Harris. Angry words ensued when Clemens knocked Harris down and a duel is anticipated.

☞ A young lady in New York who belongs to upper-tendom, recently obtained possession of jewelry and diamonds of the value of $1,500, by falsely representing herself to be the daughter of George Law. She was afterwards detected, and restored the property to avoid exposure.

☞ The Albany Transcript says:—The city authorities of Erie have it in contemplation to adopt an ordinance, forbidding the citizens of other States from crossing the Pennsylvania bridge in vehicles that are not ironed with Pennsylvania iron.

☞ The Buffalo papers state that the steamer Ocean will sail on Lake Michigan the coming season. The Michigan Central Line on Lake Erie, will consist of the splendid new steamers Plymouth Rock, and Western World, and the old steamer May Flower.

☞ The State of Tennessee has adopted a very liberal system of internal improvement policy. The "Omnibus Bill," just passed, extends State aid to the amount of $10,000 per mile, to the most important railroad routes through its borders.

☞ The Ogdensburgh Sentinel says three prisoners escaped from St. Lawrence Co. Jail at Clinton, last week, making 16 that have escaped in 14 months. Two forgers, whose doings were noticed a short time ago, were among the number who escaped.

☞ The Boston Post enumerates six newspapers, besides itself, in that State, which advocate the Nebraska bill. The Commonwealth replies that two of them are edited by postmasters, and two of them by custom house officers.

☞ Messrs. Leander Richardson of Barre, and Chauncy Seofield of Elmore, visited the northern part of Vermont in October last, to hunt foxes. They set their traps, and for their first week's work, caught twenty foxes.

☞ The Methodist church at Chester Factories, near Springfield, Mass., was blown up on the 22d by means of a keg of powder. It is alleged to have been the work of enemies of the Canada League, who held meetings in the church.

☞ Libel suits are pending against the Cincinnati press, in which damages are claimed to the amount of $360,000, divided as follows:—Commercial $200,000, Gazette and Atlas $140,000, Times $15,000, Sun $5,000.

☞ Jacob Miller has sold his farm in Brighton, near the county workhouse, comprising 100 acres, for $20,000 which is $200 per acre. The farm is about two miles from the business part of this city.

☞ A young man in Louisville, recently responded to an advertisement in the Democrat of that city, of a young lady in want of a husband—the conditions were satisfactory and the parties were married.

☞ Glass bottles were first made in England, about 1558. The art of making glass bottles and drinking glasses were known to the Romans 79, A. D.; they have been found in the ruins of Pompeii.

☞ A good locomotive engine costs from nine to eleven thousand dollars, and it would take nine men a whole year to build one well, with all the mechanic power of the best machine shops to aid them.

☞ According to an estimate in the St. Louis Advocate, the total length of the Mississippi river and its numerous tributaries amounts to 51,000 miles, of which 20,000 miles are navigable waters.

☞ The Detroit Tribune states that nearly eighteen thousand pounds of game from the Western prairies passed over the Central and Great Western Railway on the 20th ult., for the Eastern markets.

☞ The French papers state that a zinc ship, recently built at Nantes, has made a trial trip and proved an excellent sea-boat. She is quite strong, and the metal did not affect her compass.

☞ In Chicago, The increase of population last year, was 67 per cent. Over two thousand dwelling houses were erected, and yet the supply is not equal to the demand.

News Brevities.

—— General Cass has not been sick for forty years. So much for temperate habits.

—— Thirty negroes have applied to the Missouri Colonization Society for passage to Liberia

—— A delegation of Stockbridge Indians from Wisconsin are now in Washington.

—— The La Belle Iron Works, at Wheeling, are again in full operation.

—— No less than eleven vessels are fitting out in different parts of Cuba for the slave trade.

—— The Indiana State Fair for 1854 is to be held at Madison.

—— House rents are higher in Chicago than in New York city.

—— It was proposed, in Mexico, that the effigy of Santa Ana be placed on the national coin.

—— A tournament came off at Tallahasse, Florida, on the 22d inst.

—— The public debt of Great Britain is estimated to be $4,550,000,000.

—— A mad dog was killed in Lockport, on Thursday, week.

—— A door and window tax has been established in Mexico.

—— There are 200 persons employed about the West End gaming houses in London.

—— Switzerland, like the United States, has at present a large surplus of revenue in its treasury.

—— It is said that the government has already expended the respectable sum of $200,000 in prosecuting Dr. Gardiner for his alleged fraud.

—— By certain telegraph arrangements now in progress, vessels sighting Cape Clear will be telegraphed to London within an hour.

—— Prof. Morse, last week Saturday, applied at the Patent Office for the renewal of his telegraph invention from the 20th of June next.

—— The Utica Telegraph estimates that there are between 15,000 and 20,000 Welsh residents in Oneida county.

—— A bill to punish the adulteration of liquors has passed through the Committee of the Whole of the Ohio Senate.

—— The Mexican Government has ordered two war steamers, of a thousand tons each, to be built in London.

—— The unusual event of the baptism of a young Esquimaux was recently witnessed at Canterbury, England.

—— The continued difficulty among the laborers at La Salle, Ill., has led to the employment of a military detachment.

—— Beautiful marble and susceptible of a high polish, and said to be equal to any of the imported marbles, has been discovered in Ill.

—— The people of Canandaigua are getting up a company to build a steamboat to run on Canandaigua Lake.

—— A lad fell from the top of a five story mill at Holyoke, Mass., a few days since and was killed.

—— The number of hogs packed at the principal points in Ohio, Kentucky and Tennessee this season amounts to 1,265,555.

—— France, it is thought from present indications, will, in a few years, raise in Africa cotton enough to supply all its own manufactories.

—— The cargo of coffee in the schooner Mary Ann, wrecked at the mouth of the Chesapeake, cost $50,000, and was sold at auction for fifty dollars.

—— The Governor of New Jersey refuses to deliver up a fugitive from justice on a requisition from the Governor of New York, because the offender is a relative.

—— Seventeen hundred barrels of flour, and twenty-eight thousand five hundred pounds of butter for exportation, arrived at Portland recently by railroad from Montreal.

—— A large locomotive manufactory is about being established at Detroit. It is located near the depot of Central road, and the river, so that engines can be transported to any part.

—— The rigorous manner in which Santa Ana has been dealing with the highway robbers, has already cleared the country of them completely.

—— A negro was found dead and buried in the snow in 8th Avenue, New York city, Tuesday morning of last week. A case of intemperance.

—— Shad have already made their appearance in the Delaware river, and several were caught a few days ago a few miles below Wilmington.

—— Since the opening of the Great Western C. W. Railroad, seven locomotives have been destroyed on the line. Their aggregate value is stated at $105,000.

—— Billy Bowlegs, the Indian Chief, is reported to have refused an interview with the delegation appointed to visit the Seminole Indians in Florida.

—— The new bell at New Haven, says the Journal of that city, was distinctly heard on Thursday morning at Wallingford, twelve miles distant.

—— There are now resident in the village of St. Johnsbury, Vermont, a husband and wife, who for sixty years have lived together in the bonds of matrimony.

—— When John Mitchell made his escape from Melbourne, the British authorities offered fifty cents reward for his re-arrest. They value the man at all he is worth.

—— The Albany Journal states that during Dr. Oneken's recent visit to that city, over $3,000 were subscribed to the fund to erect Baptist Church edifices in Germany.

—— Twenty-two new locomotives recently arrived at Chicago for the various railroads which centre there. They were the engines detained so long by the gauge break at Erie.

—— Active preparations are making for the resumption of navigation on the Hudson, and all the North River Foundries have a fleet of Steamers, of all sizes, moored adjacent for repairs.

—— A Mobile paper states that the Legislature has passed a resolution in opposition to Douglas's Nebraska bill. In the Lower House the vote was 88 to 75.

—— There is a rumor current that Mr. Buchanan will return home soon, disgusted with his treatment by the English officials, in the matter of his refusal to appear in Court costume.

—— The ladies of South Carolina have formed a "Calhoun Monument Association" for the purpose of raising money to erect a monument to the memory of that statesman.

—— In the State of New York there are 154 fire and marine insurance offices, and 15 life insurance companies. The record does not state how many of them are rotten to the core.

Foreign Intelligence.

Arrival of the Europa.

The Europa arrived at New York, Feb. 25.—No decided change in the Eastern question, but there is another talk of arbitration.

Despatches from St. Petersburg were received in Paris to Feb. 1st. The excitement there was very great, and the war party were enthusiastic.

Three battalions of the Guards, with six regiments of the line are under orders to embark from London, on the 19th, for the Mediterranean. The whole number of troops to be despatched is 10,000, but as many more will be held in readiness. Twenty ships of the largest tonnage will be required to convey troops and supplies. The Government had taken the Oriental Co.'s steamers Himalaya, Ruon, and Manila.

The Cunard company deny that their steamers are chartered by Government for conveying troops to Turkey.

No reply has yet been received from the Czar to the ultimatum of France and England.—Count Orloff left Vienna on the 8th, direct for Petersburg, his mission having failed.

The ramifications of a Greek conspiracy have been discovered to exist widely through Turkey, and crushed.

On the Danube, there had been rather a severe encounter at Giurgevo, without any decisive results, and another attack on Kalafat was daily looked for. Omar Pacha had recovered from his sickness. The army on the Danube is in good health and spirits.

The allied fleets were immediately to re-enter the Black Sea, and it is reported that the Ambassadors were much dissatisfied with their return to the Bosphorus.

The Emperor of Russia is sick, and had not been seen for several days, and it is rumored that a change is to be made in the Russian Ministry.

England and France continue arming on a large scale.

The ship W. H. Davis, from Liverpool to New Orleans, was totally lost Jan. 27th, on the Island of Barra, west of Scotland. All hands but the steward lost.

France is making extensive arrangements with the Bank and Credit Mobilier to meet the events of the coming war.

Dates from China to Dec. 27th are received. Ningpo and Amoy quiet. The insurgents had burnt a large part of Shanghae, and had also captured Tiensing, eighty miles from Pekin.

The death of the Emperor of Japan and the seizure of New Caledonia by the French, are both confirmed.

Latest from Liverpool.—A democratic conspiracy was discovered at Madrid, on the 6th, and 14 persons arrested.

Gen. Jose Concha is proclaimed a rebel in Spain, and has escaped to France.

Count Buol notified the Turkish Ambassador that the concentration of troops on the frontier was intended only as a precautionary measure against Turkey. This notice was accompanied by friendly expressions.

The British Government has advertised for seven or eight coppered ships of seven or eight hundred tons, to be engaged for four months in conveying cavalry.

Accounts from the Danube announce positively another Turkish success between Galatz and Abrail. Klapta and others have embraced Islamism.

Liverpool Breadstuffs.—The dullness before noted in breadstuffs continued to prevail, the demand being confined to immediate wants.

Wheat must be called on the week 3d per 70 lbs. lower. Flour 1s@1s6d lower. Indian corn in limited request, 2s lower on the week. A few sales Indian meal at 23s to-day, (10th.)—Rather more doing in all articles, and prices firm at the decline.

Richardson, Bros. & Co. quote American fine white wheat 12s8d@13s. and 12s4d@12s6d. For secondary Canadian 11s10d@12s1d. Western No. 1 flour 41s@11s6d—ex-ship 6d less. Ohio, Baltimore and Philadelphia 12s@12s6d.

Provisions.—Gardner & Co. quote beef steady, quiet demand, full prices. Pork generally firm. Bacon, new, sells readily as landed. In old, a speculative demand has advanced prices 1s@2s. Lard, on the spot, sold readily at 57s@58s.

Cheese scarce; full rates for fine.

Tallow advanced; firm; 64s@65s6d.

Winter in the Lake Superior Region.—A correspondent of the Detroit Inquirer, writing from Portage Lake, has the following meteorological statistics of that region:

The winter, I am informed by those long in the country, has been unusually mild up to the 1st of January, with much less snow than usual. January, however, has made up in part the deficiency, so that there is no reasonable cause to complain for the want of cold weather or plenty of snow, the latter being on an average four feet deep, and the former quite as severe as any one wishes to encounter. On or about these days, say from the 21st to the 28th. Beginning with the 21st, the daily mean temperature for eight successive days was 6 to 8° below zero, the coldest day during the month was the 24th—the mean temperature being 17° 33 below zero; the warmest, 31st—the mean being 36°. The lowest degree observed was on the morning of the 28th—30° below zero; the highest on the 31st—at noon, 41°; the mean temperature for the whole month was 11°.

Importance of Railroad Communication.—Flour was landed here this week from Michigan, which was ferried across at Detroit to the Canadian shore on 13th February, and then by the Great Western Canadian Railroad to Niagara Falls, where it was carried over the Suspension Bridge, and thence by railroad to Canandaigua, and by branch road to the Erie Railroad, and by that conveyance to New York, where it arrived on the 20th February. This, we are informed, is the first lot that has reached this city. —*Cour. & Enq., Feb.* 21.

Important Legal Decision.—Judge Mitchell of the Supreme Court, has rendered a decision that on the sale of real estate by auction, there must be a written agreement to sell and purchase, in order to hold the parties, the same as at private sale, and that unless the auctioneer in his book stating the terms, &c., discloses the name of the owner of the lots, and that he, the auctioneer, acts as his agent, the owner of the land is not obliged to perfect the sale.

Dewey, in the Arcade, has received for sale, *Blackwood's Magazine*, and the *North British Review*, for February. Both periodicals, besides other things, contain interesting and able articles on Turkey.

California News.

Arrival of the Northern Light.

The Northern Light, with California dates to the 1st inst., reached New York, Feb. 23d, having left San Juan on the evening of the 15th, and brings San Francisco dates to the evening of the 1st, making the time through in 21 days, 19 hours. This is the quickest trip on record.

The Northern Light connected with the steamer Cortez, which reports passing the Bro. Jonathan going into San Francisco on the 1st, and the Sierra Nevada on the 7th off Cape St. Lucas, bound up.

The mail steamer Columbia left San Francisco for Panama on the 1st.

The Northern Light brings 400 passengers, and $806,000 on freight.

The steamer Golden Gate was stranded at the entrance of the harbor of San Diego, on the 18th inst.

She had previously broken her shaft when 10 days out from Panama.

Her passengers and mails all saved. Four hundred took passage on board the Southerner and Goliah.

The latter arrived up on the 22d. 500 remained at San Diego.

Advices at San Francisco from the Walker expedition, state that the bark Caroline was captured in the Gulf by the Mexican Cutter Guerregorus.

Markets at San Francisco during the fortnight had been stagnant and prices lower than for months previously, while a large number of arrivals had materially increased the stocks.

At latest reports Haxala flour was selling at $12 from outside hands, with more in the market. Sales for the fortnight 3,000 bbls., ranging from $8 to $9 clear. Pork $17. Choice hams 11½c.; do. butter 23½c per lb.

The Golden Gate was got off on the morning of the 25th, less injured than was expected.—She was lying at San Diego, awaiting the arrival of steam pumps.

New Orleans, Feb. 28.—The steamer United States from Aspinwall Feb. 22d, arrived below to day. The Empire City reached Aspinwall on the 22d, and would leave the same afternoon for New York, with 200 passengers and $600,000 in gold.

Mammoth Iron Steamship.—The British screw steamer Himalaya, recently built in England for the Peninsular and Oriental Steam Navigation Company, is said to be the largest vessel in the world. She registers 3,550 tons, and is equal to over 5,000 tons burthen. Her length is 372 feet 9 inches—47 feet longer than the Boston clipper ship Great Republic. Her tonnage, however, is something under the latter. The war steamer Duke of Wellington, of 131 guns, exceeds her in tonnage by 209 tons, but the Himalaya is 92 feet longer. The engines of the Himalaya are of 700 horse power. She can carry 1,200 tons of coal, has stowage for 1,000 tons of measurement goods, and can accommodate 200 first and second class passengers.

The American Minister.—In the House of Commons on the 10th, Lord John Russell stated in answer to Mr. Roebuck, "that the cards sent by the Chamberlain for the admission of the American Minister to the opening of Parliament by the Queen, were the same as those sent to other diplomatic representatives; and *he did not think* any difficulty was likely to arise out of the question as to the dress in which the American Minister was to appear on state occasions!"

☞ The first newspaper establishment in North America was the Boston News Letter, commenced April 24, 1701. It was a half sheet of paper, 12 inches by 8, two columns on a page. B. Green was the printer.

Publisher's Notices.

BOOKS FOR PREMIUMS.

Below we give the titles, and prices, of a portion of the works furnished to agents and others entitled to Premiums in Books, for procuring subscribers to the Rural. Those who prefer works not mentioned in this list, can have them in payment of Premiums at the lowest cash prices:

Johnston's Ag. Chemistry, $1,25; Boussingault's Rural Economy, $1,25; Downing's Fruits and Fruit Trees of America, $1,50; Amer. Fruit Culturist, by Thomas, $1,25; Dictionary of Gardening, by Johnson, $1,25; Farmer's Dictionary, by Gardner, $1,75; Farmer's Every-Day Book, by Blake, $2,50; The Complete Farmer and Gardner, by Breesedon, $1,25; Rural Architecture, by Allen, $1,24; Ladies' Companion to the Flower Garden, by Mrs. Loudon, $1,25; American Flower Garden, by Buist, $1,25; American Farm Book, $1; The Kitchen Garden, by Buist, 75c; Continental Agriculture, by Colman, $1; Scientific Agriculture, by Rodgers, $1; American Ladies' System of Cookery, by Mrs. Crowen, $1,25.

Youatt on the Horse, by Randall, $1,50; Youatt and Martin on Cattle, by Stevens, $1,25; Randall's Sheep Husbandry, $1,25; Morrell's American Shepherd, $1; Canfield on Sheep, $1; Youatt on Sheep, 75c.; The Pig, by Youatt, 75c.; Clater and Youatt's Cattle Doctor, by Skinner, 50c.; American Veterinarian, by Cole, 50c.; The Dairyman's Manual, $1; Brown's Poultry Book, $1; Bennett's do., $1; Bee-Keeper's Manual, $1; Townly on Bees, 38c.

The above works are all well bound, in muslin or leather, and mostly of late editions and finely illustrated.

The following workscare bound in paper, pamphlet style, and furnished at 25 cents each:—Elements of Agriculture; Dana's Essay on Manures; Every Lady her own Flower Gardener; The American Kitchen Gardener; Amer. Bird Fancier; Amer. Rose Culturist; Pests of the Farm; The Horse; The Cow; The Hog; Domestic Fowls and Ornamental Poultry; The Hive and the Honey Bee.

We shall pre-pay the postage on books sent as premiums. Though this is more than was promised, we presume none of our friends will object!

Commercial.

BUSINESS AND FINANCE.

The San Juan steamer Northern Light arrived at N. Y., Feb. 23, with $806,000 on freight. The Atlas left the same day for Liverpool, having on board $65,000; and the Hermann, for Bremen, sailed from the same port on the 25th, taking out $262,570, which three transactions make up the principal outgoing and incoming specie movements. The balance in the New York Sub-Treasury is now over $7,000,000, and still increasing. The imports for the week at New York, the *Tribune* says, are about $3,000,000.

Messrs. Duncan, Sherman & Co., of New York, received heavy orders by the late steamers for the purchase of American stocks. This shows that foreign capitalists lack confidence in the stability of things in Europe.

The Superintendent of the Banking Department has given notice that the circulating notes of the Pelchin Bank of Buffalo, must be presented at his office for redemption within two years from the 20th inst., after which time the surplus securities deposited with the Department, will be given up to the Bank.

Chas. Minot, Esq., Superintendent of the Erie Railroad, has resigned his position, the resignation to take effect in a few weeks.

In the stock market there is no especial activity, but a fair amount of business is transacted. New York Central 1,12; Erie 81½; Michigan Central 104; Hudson River 70, and other stocks in proportion.

Market Intelligence, &c.

Rural New-Yorker Office, }
Rochester, March 1, 1854. }

The market for breadstuffs has still further declined since our last report and prices are unsettled, with a heavy and *bearish* tendency. Flour is now quoted at $9@9,50, and Wheat at $1,88@1,91. Corn, which went up to 85c, has fallen back to 81@83c; other grains unchanged.

The meat market not essentially different from previous quotations except that pork is a little higher, selling now at $7,25.

Dairy products, fuel, hay and sundries, same as before, with a tendency to a taller supply of butter and eggs, which may be expected with the opening of spring.

NEW YORK MARKET—Feb. 28.

Ashes—Market steady but quiet, for pots $6; pearls $6,75.

Flour—Our market is again easier for Western and State flour, but the quotations are somewhat irregular; this being the last day of February when contracts mature, an effort has been made to depress prices. The shipping inquiry is fair, with a further decline in freights. Canadian inactive and nominal, $8@8,12. Sale of western canal 4,500 bbls—$8,12 for common to straight State; $8,00@8,25 for common to good Ohio; $8,00@8,31 for mixed to fancy Michigan and Indiana.

Rye Flour—Lower. Sales 150 bbls. fine $5,87.

Corn Meal—Lower. Sales 150 bbls. Jersey $4.

Grain—Fair demand for wheat at the decline. Sales 2,000 bu. prime white Genesee $2, part to arrive; 2,500 bu. red Long Island $1,83; 100 bu. ordinary red Southern $1,70.

Rye—Without change. Sales 1,500 bu. at the depot at $1,17@1 17½.

Hats—Plenty and dull, 31@35c. for State and Western.

Corn—Easier and not very active. Sales 17,000 bu. 86@88c for Jersey yellow; 88@9 for mixed southern and western; 89@90 for southern yellow; 90@93 for southern white.

Provisions—Limited supply of pork in the market; prices are firmer; $15,37 mess; $13,25@31 prime.

Beef in moderate supply and firm, with fair shipping inquiry; $9@11,50 country mess; $14 re-packed Chicago; $6@8 country prime.

Lard steady, 10@10¾.

Butter and cheese steady.

ALBANY MARKET—Feb. 27.

There is but little doing in Flour, and the demand is of a retail character at former prices. Buckwheat Flour is selling in the street at $4,00@3,12 ¥ cwt.

The market is again easier for Grain. Sales Rye, $1,00½. Corn 80c. Barley 95@$1,01. Oats 46@50c.

The demand for dressed hogs is limited, and with a good supply at the Depot, the market is heavy. Sales at $7@7,00 for fair to good lots.

NEW YORK CATTLE MARKET—Feb. 20.

At Washington Drove Yard—Offered to-day, 2,070 Beef Cattle; offered during the week 2,252.

Prices—Beeves ranged from 8¾@10½c per lb.

Cows and Calves sold at from $40 to $60.

Veal Calves at from 4@7c. per lb.

Sheep—From $3 to $10.

Swine—From 5¾c. to 6c. 150 cattle left over.

At Chamberlain's—(Hudson River Bull's Head.)—At market, 300 Beeves, 50 Cows and Calves, 20 Veal Calves, and 2,800 Sheep and Lambs.

Prices—Beeves from $8,00 to $10.

Cows and Calves—From $25 to 40@60.

Veal Calves—From 5c to 7c.

Sheep—From $3@5 to $8.

At O'Brien's—(No. 9 Sixth street)—Offered 100 Beeves, and 63 Cows and Calves.

Prices—Beeves from $7,50 to $9,50.

Cows and Calves—From $30 to $60.

At Browning's—(Lower Bull's Head)—Offered 70 Cows and Calves, and 5,000 Sheep and Lambs.

Prices—Cows and Calves from $25 to $50.

Sheep—From $3@6,50 to $7. Lambs—From $2,50 to $6. Extras $6 to $8.

ALBANY CATTLE MARKET—Feb. 27.

At W. Woolford's Bull's Head, Washington street.—Beef Cattle—800 at market. Prices—Extra $5; first quality 7,-50; 2d do, $6,50; 3d, $6.

Cows and Calves—15 in market. Prices range from $25 to 30@45.

Sheep and Lambs—1,050 in market. Prices at from $3,-50@6.

Swine—400 in market. Prices—Stores, $4,25; fat hogs, $5@5,50.

Remarks—The market this week has been well filled with Cattle. Mostly all sold for Brighton and N. York markets—about 250 Brighton and the balance New York.

CAMBRIDGE CATTLE MARKET.—Feb. 22.

At market 600 Cattle—about 575 Beeves, and 25 Stores; consisting of Working Oxen, Cows and Calves, yearlings, two and three years old.

Prices—Market Beef.—Extra $8,25 ¥ cwt; first quality $7,75; 2d, $7@7,25; 3d do, $6,50; ordinary $5,75@6.

Hides—$6,25@6,50 ¥ cwt. Tallow, $8,50@9.

Pelts $1,37@1,50. Calf skins 11½@12c ¥ lb.

Veal Calves—$4, 5, 6@7.

Barreling Cattle—$5,75, $6@6,50.

Stores—Working Oxen—$85, 94, 105, 118, 125, 132, 141, 158@216.

Cows and Calves—$25, 29, 30, 31, 33, 40, 45, 50, 56@65.

Yearlings—None.

Two years old—$25, 28, 30, 32, 35, 38@42.

Three years old—$26, 33, 41, 45, 48, 50, 56, 64@72.

Sheep and Lambs—2,203 at market.

Prices—Extra $6, 7, 8, 9@12.

By lot—$3, 3,50, 4, 4,50, 5,75.

Swine—None.

BRIGHTON CATTLE MARKET—Feb. 23.

At market 650 Beef Cattle, 20 pairs Working Oxen, 35 Cows and Calves, 1,850 Sheep, and 180 Swine.

Prices—Beef Cattle—The supply short and higher prices were obtained. We quote Extra $8@8,50; first quality $7,-50@8; 2d, $7@7,50; 3d do, $5,50; third $5,00@6,75.

Working Oxen—No sales, probably on account of the severe weather.

Cows and Calves—Sales $25 28, 31, 35, 37, 42@48.

Sheep—Sales $3,50, 4,50, 5,25, 7, 8@9,50.

Swine—No sales in lots to peddle. A few were retailed at 5½@6½c.

A HOME FOR ALL:

Or, the Gravel Wall and Octagon Mode of Building—Now, cheap, convenient, superior and adapted to rich and poor, showing its superiority over brick, stone and frame houses; the cost, capacity, beauty, compactness and utility of octagon houses; the author's residence, barns and outbuildings, board and plank walls, the working-man's dwelling, &c., with engraved illustrations. By O. S. Fowler.—Price, prepaid by mail, 87 cents. Please address FOWLER & WELLS, Publishers, No. 131 Nassau st., New York.

"The author of this work, a prominent advocate of the doctrine of progress, has here applied his principles to the improvement of house-building. He has occupied much time and thought for several years past in planning the best mode of building the home of his future life. He has succeeded in devising a method, which will bring a comfortable dwelling within the reach of the poorer classes, while it admits any degree of luxury, which may be demanded by the taste and convenience of the proprietor,—Except in one particular—and this greatly improved by himself—Mr. Fowler claims this mode as his own invention. The two main features of the plan are the octagonal form and gravel wall." * * * * *

After the selection of his material, Mr. Fowler proceeds to illustrate the advantages of the octagon form, and to give minute and explicit directions for the practical realization of his ideas. His statements, which are marked by a certain pithy quaintness of expression, are accompanied by figures and specifications, showing the economical benefits that result from his plan. The volume contains numerous suggestions in regard to several important points of domestic arrangement, agricultural economics, and the practical philosophy of life in general. Hence his work is of a very readable character, and will form a welcome addition to the rural library.—*New York Tribune.* 217-2t

Advertisements.

Advertisements.—Brief and appropriate advertisements will be inserted in this paper at $1,50 pr. square, (ten lines, or 100 words,) or 15 cents a line—*to be paid in advance.*

Those who send advertisements without payment will understand from the above *why* they are not inserted.

FOR SALE,

An excellent Farm of some eighty-three acres, situated in the town of Gorham, Ontario Co., N. Y., one and a half miles east of Reed's Corners, and three miles from the Railroad. Said farm has large commodious buildings, good fruits, and about 25 acres of wood land, containing much valuable timber. Apply to the subscriber, on the premises.

Mrs. NATHAN WITTER.

Gorham, Ontario Co., N. Y., Feb. 21, 1854. 217-11*

LAND PLASTER

At Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.

217-4m. JIREH ROWLEY.

PURE WINE.—MEXICAN POTATO.

Pure juice of the Grape is offered by the subscriber, for medicinal and restorative purposes. City physicians may depend on its purity, and recommend it in their practice, with entire safety. Price, $1 per bottle.

Also, the Mexican Potato for sale, at $4 per barrel. The Mexican potato is becoming too well known to spend money on a long advertisement. Its excellence and delicate flavor, together with its productiveness, will meet your highest expectation, being a beautiful white color, and kidney shape. Address or apply to

H. N. LANGWORTHY,

19 South Washington st., Rochester, N. Y.

Feb., 1854. 217-3t

ALFRED ACADEMY,

A First Class Male and Female Seminary.—Its location on the New York and Erie Railroad, two miles from the Alfred Depot, is romantic, retired and healthy. The course of instruction is divided into ten departments, with an experienced Professor at the head of each. The edifice containing the chapel, recitation, society and library rooms, is one of the largest and finest school structures in Western New York. The supervision of the students is parental, and well adapted for securing their highest intellectual and moral discipline. The next term commences Wednesday, March 29th. Expenses moderate. For circulars, apply to

217-3t W. C. KENYON, A. M.

Alfred Centre, Allegany Co., N. Y., Feb. 20, 1854.

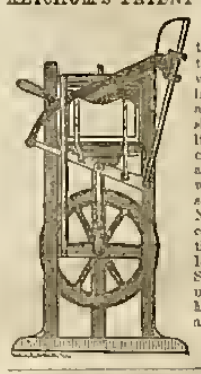
FARM FOR SALE.

A Farm containing 100 acres, six miles north of Seneca Falls. There is on said farm a frame house and barn, a large orchard, good fruit of all kinds, a nice gravelly brook running through it conveniently—10 acres of woods—all good dry land. Price, $10 per acre. For further particulars, inquire of the subscriber on the premises.

WILLIAM C. GRIGGS.

Tyre, Seneca Co., N. Y., Feb., 1854. 217-1t*

KETCHUM'S PATENT LEVER STRAW CUTTER



The accompanying cut is a front view of H. Ketchum's Patent Lever Power Cutting Box, which is sold to be the best now in use, for cutting hay, straw and stalks. This machine is so simple that any farmer can keep it in order, and it will be sold cheaper than any other that is adapted to doing the same work with as little power. Any person residing in Monroe, Erie, Niagara, Orleans, or Genesee county, wishing to purchase cutting boxes, are invited to call at Rapalje & Co.'s Implement and Seed Store, 65 Buffalo st., or at my shop, east Selye Building, Mill street, where I manufacture and sell at wholesale and retail.

THOS. HARDING.

Rochester, Feb., '54. 217-3t*

BOOK AGENTS, ATTENTION!

Profitable Employment! $1,000 to $2,000 a year. More than 200 varieties of Popular Books for the People.—New Wholesale Book Establishment, No. 8 Park Place, New York.

The undersigned, for many years in the Book Business at Auburn, and late of the firm of Derby & Miller, has established himself as above, and, in addition to his own, will supply a full supply of the Publications of Phillips, Sampson & Co., Miller, Orton & Mulligan (late Derby & Miller,) and Alden, Beardsley & Co., constantly on hand and for sale at their lowest prices.

Our assortment of Agents' Books is the largest in the United States, embracing the most Popular Books in History, Biography, Poetry, Religion, Temperance, Narratives, Travels, Adventures, Agriculture, Popular Miscellany, Books for the Young, &c. They are all of a good and moral character, and are disposed of throughout the country mainly by Agents, Colporteurs and Ministers. They are well printed, on good paper and fair type, and bound generally in neat muslin, gilt backs, and most of them beautifully illustrated with engravings.

We have a great many Agents actively at work, who clear for themselves from $3 to $8 dollars per day. Those most successful, take sample copies of the books, and when they ascertain how many are wanted, order the Books direct from us, and deliver them at the time agreed upon.—Still some Agents prefer to order quantities at the start, and sell them from house to house, as they go. There is hardly a family that cannot be induced to buy one or more of the kinds, and we have been informed of instances where a single family has ☞ Subscribed for the whole list of Books, yielding the agent a very handsome profit.

There is no employment more pleasant or profitable than that of selling Books in the way proposed.

☞ To all those desirous of aiding in the noble work of disseminating a Pure and Wholesome Literature throughout our land, we offer a *rare chance to make money*, and to do good.

Catalogues of our Publications, containing full particulars, furnished on application (post-paid) to

J. C. DERBY, Publisher and Bookseller,

217-1t 8 Park Place, (Second Floor,) New York.

People's Patent Office, }
86 Nassau st., New York. }

CAVEATS.—Inventors and others desiring to apply for Caveats, are informed that all the necessary drawings and papers are prepared by the undersigned with the utmost dispatch and on the most moderate terms. All other patent business promptly attended to.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter.

ALFRED E. BEACH,

Solicitor of Patents,

217-1t 86 Nassau st., New York.

A VALUABLE FARM FOR SALE.

The Subscriber offers for sale his Farm, consisting of 50 acres, on which is a good Dwelling House, Barn, Sheds, and other necessary out buildings. An abundance of all kinds of fruit, and under good improvement. Situated in the Town of Poultney, Steuben Co., N. Y., eighty rods from the west bank of Crooked Lake, and 2¾ miles from the Village of Branchport. A part of the purchase money will be required down, the balance on time to suit the purchaser.

For further information inquire of S. HOOTT, Branchport, or the subscriber on the premises.

DAVID W. MILLER.

Poultney, Feb. 1st, 1854. 214-1f

SALE OF THOROUGH-BRED CATTLE.

The subscriber will sell at public auction on his farm at Hush, Monroe county, N. Y., on Thursday, March 9, 1854, his entire stock, consisting of one very superior Durham bull, one imported Durham cow and calf, one yearling Durham bull and four Durham bull calves, six Durham cows, three yearling heifers and three calves, all thorough-bred; together with forty thorough-bred Leicester sheep, some of which were imported.

At the same time and place, the entire stock, implements, and household furniture will be sold, as the subscriber has made arrangements to leave his farm. D. McLARTHY.

West Rush, Monroe Co., N. Y. 216-2t*

OSAGE ORANGE SEED.

Just received from Texas and warranted good. Price, $20 per bushel, same rate per peck, with a reduction to dealers. Directions for culture, &c., sent to all customers. Packages can be sent by express at moderate cost to all places on the line of Railroads.

Five years' experience has proven that this best of all hedge-plants will endure the climate as far north as Western New York, and it is rapidly finding favor where ever it has become known. M. B. BATEHAM.

Columbus, O., Feb., 1854. 216-3t

ATKINS' SELF-RAKING REAPER.

Forty of these machines were used the last harvest in grass or grain or both, with almost uniformly good success, in nine different States and Canada.

Twenty-Six Premiums, including two *at the Crystal Palace*, (silver and bronze medals,) were awarded it at the autumn exhibitions. I am building only 300, which are being rapidly ordered. Mr. Joseph Hall, Rochester, N. Y., will *also* build a few. ☞ Early orders necessary to insure a Reaper.

Price at Chicago $175—$75 cash with order, note for $50, payable when Reaper works successfully, and another for $50, payable 1st December next, with interest. Or $160 cash in advance. *Warranted to be a good Self-Raking Reaper.*

☞ Agents properly recommended wanted throughout the country. Experienced agents preferred. It is important this year to have the machines widely scattered.

Descriptive circulars with cuts, and giving impartially the difficulties as well as successes of the Reaper, mailed to post-paid applications. J. S. WRIGHT.

"Prairie Farmer" Warehouse, Chicago, Feb., 1854.

Proprietors of the Syracuse Nurseries, Cultivators of, and Dealers in, all kinds of Nursery Productions, offer for the Spring Sales a very large stock of *Apple, Pear, Cherry and Peach Trees, both Standards and Dwarfs*, as well as a good supply of Plum, Quince, Apricot and Nectarine Trees, and all the best and most popular sorts of the smaller Fruits; *Currants, Raspberries, Strawberries and Gooseberries.*

Their stock of *Raspberries* includes Fastolff, Franconia, Knewit's Giant, Large Monthly, the Antwerps, and Dr. Brinckle's Seedlings; of *Currants* all the leading kinds; and of *Gooseberries*, 3,000 fine plants of the best Lancashire sorts.

Grapes,—Native, one, two, and three years old, in large quantities; *foreign*—Forty best sorts.

Ornamental Trees and Shrubbery, in great variety.

Roses,—One of the best and rarest collections in the country; including, of course, Mr. Mathews' matchless Seedling, the *Augusta*,—of the most luxuriant growth and foliage, profusion of bloom, splendor of its flower, and of the most exquisite perfume. The price, as will be seen by our Catalogue, is very much reduced.

Dahlias, Phloxes, Bulbous Roots, Green-house and Bedding Plants, including all the novelties of the season.—*Hedge Plants, Rhubarb and Asparagus* in large quantities.

Evergreens of choice varieties, as well as many thousands of *Balsam, Norway, European, Silver and Scotch Firs, Austrian Pines, Chinese and American Arbor Vitæ*, &c., &c., all in fine condition.

☞ Among their stock of Pear Trees, they have in large proportion, the *Virgalieu, Onondaga and Oswego Beurre*, both Dwarf and Standard. No more desirable kinds of early bearing, productiveness and great excellence, can be cultivated extensively for market. They have also several hundreds of *Extra Sized Fruit Trees* of the finest growth and form, cultivated and trained into bearing for themselves, which the necessity at changing their grounds to those much more extended requires them in part to remove. These trees consist of Cherry, Plum, Standard and Dwarf Pears. They have furnished the greater portion of the specimen fruits exhibited by the proprietors at the State Fairs for two years past, and are offered at from $1 to $3 each.

The products of their Nurseries having a reputation second to none in the country, those now favoring them with their orders may rely upon that reputation being sustained. They annex a few commendations selected from many of a like nature, both as to the quality of their trees, and that other essential, the excellency of their packing, to which they invite attention.

"The trees were all well packed, and are very fine—not one article but I am perfectly satisfied with."—From Leyden, Cook county, Illinois.

"The trees were well packed, and came to hand in fine order."—South Bend, Indiana.

"The trees, though long delayed on the way, arrived in good condition, and opened well. I must say they were evidently taken up and packed with much more than ordinary care."—Delaware, Ohio.

"And now about the trees. If you had *trimmed* them [a novel complaint,] they would have been the finest lot of trees I have ever seen from your State. I never saw finer roots."—From Spafurfield, Ohio [The trees here spoken of, let it be remembered, were sent out from the Syracuse Nurseries as their *second class trees.*]

☞ "The trees, to appearance, [having been delayed on the way] were in good order, and better trees than I have ever seen west of the Lakes."—Roscoe, Ill.

☞ The proprietors have also been favored by a customer with the following certificate, made after an examination of a large lot of their trees:

"We, the undersigned, do hereby certify, that we have personally examined the lot of fruit trees which Mr. —— now has in the village of Marshall, and we do not hesitate to say, that they are the best lot of Fruit Trees, to all appearance, that has ever been offered for sale to this county. Dec. 14, '53." [Signed,] Abner Pratt, Circuit Judge, Supreme Court; Erastus Hussey, Co. Clerk; H. A. Noyes, Judge of Probate; J. H. Montgomery, M. D.; H. Darwin Hughes; T. A. Randall; J. A. Van Horn; Jas. A. Way.

☞ *Catalogues furnished gratis to all post-paid applications, enclosing a letter stamp to pre-pay the same.*

Poetical.

[Written for Moore's Rural New-Yorker.]

A RETROSPECTIVE SONG.

BY WM. E. C. KNOWLES.

You remember the time when we strayed by the brook,
With a smile in each eye, and a love in each look;
When the roses were gathered, and placed on your brow,
And you blushingly heard when was spoken love's vow:
You remember it, love, and the moss-covered seat,
Where your heart beat afresh at the sound of my feet.

You remember the time when we stood, side by side,
At the altar, and pledged that our lives should abide
In each heart, as we journeyed through trial and strife,
And as long as the term of each natural life:
You remember it, love, and the joy it conferred,
While a sigh, as of pleasure, was all that was heard.

You remember when trial and strife came at last,
And the tear-drops of grief blurred the leaves of the past,
How we strengthened the love in our natures enshrined,
And smiled at the sorrow that lingered behind:
You remember it, wife, and the happiness too,
Though a feeling of pleasure was all that we knew!

And the shadows of age, and the footsteps of years,
Now have furrowed our cheeks with a channel for tears,
But the current that filled it, and flows even yet,
Is the tear-drops of sadness, and not of regret:
And the rain-bow of hope, like a ladder of faith,
Reaches down from an high o'er the valley of death.

Rural Sketch Book.

[Written for the Rural New-Yorker.]

A CELEBRATION IN 1779.

MR. MOORE:—As everything relating to the times, places and scenes connected with the early history of our country is interesting to every American reader, I have sent you some extracts from a letter which I find in an old paper, bearing date March 29th, 1779. In a short preface it is stated that the letter was written by a "foreigner," (a Frenchman no doubt,) to a gentlemen in this city, (Philadelphia.) It will be seen that the "foreigner" was American in heart, if not by birth, as was the case with hundreds who were engaged in the war of the Revolution. I do not recollect to have seen the subject of this letter alluded to in any of the histories of those times which I have read. It brings up in lively colors the simplicity of manners that pervaded the highest circles, three-quarters of a century ago. It describes a celebration of "the alliance with France, by gentlemen of the army;" likewise the impressions made on the writer's mind by the females who participated in the festivities, and affords a lesson to our modern ladies. I think that those more conversant with the privations endured by the soldiers of that period than the writer seems to have been, would scarcely agree with him in his idea that "the private soldier is happy." It is evident that he only saw the army in its most favorable aspect, regarding it with an enthusiasm peculiar to his countrymen. M. W. H.

NEAR MIDDLEBROOK CAMP, Feb. 22d, 1779.

I have often thought, my dear sir, that there is in the most elevated mind, a tendency to return to that condition of life from which human nature has been raised with so much art, and labor, and difficulty. Perhaps there is a *certain point* in our progress from *barbarism*, where men scarcely experience the anxieties arising from restless desire, perpetual pursuit, and disappointed expectation. In my excursions through the different cantonment of the army, this sentiment has derived the force of a maxim. Here I find a change of circumstances, circumscribing the evils of life, and giving a superior character to *husbandmen, merchants, manufacturers, and mechanics.*—Under a strict military discipline the private soldier is happy; his wants are supplied by the clothier and the commissary; his winter habitation near some clear brook, on the skirt of a wood, warm and commodious, the work of his own hand. The officers in general, lodge in huts of the same kind.

But do not the principles of republicanism operate in bringing us back to nature, and that portion of happiness to which we were originally appointed? It is these causes that have upheld what has been the constant effort of tyranny to abolish. I have nowhere seen the influence of these principles more emphatically marked, than among the gentlemen of the army. My old acquaintances are no longer the persons I have reveled with some years ago at Tunbridge, at Bath, and such places of gay resort. Their manners are changed, but they are better men. Would you believe it?—the luxurious and voluptuary treated me in the simple style of a man who had retired from the forms of the world; and yet with more hospitality than is to be purchased at the table of a prince. I was received into a hut situated on the head of a hill, by the once ceremonious B——, with the plain address of that primitive Quaker, the founder of your State. That genius of dress and gaiety, now Lieut. ——, showed me his wardrobe; it consisted of three shirts, as many stocks, three pairs of stockings, two linen handkerchiefs, a summer pair of overalls, a white waistcoat and breeches; and "this," said he, "with a few trifles, and the regimentals on my back, is sufficient for an *American soldier*;" adding with some emphasis, as he closed the *valise* which contained them, "I wish that my associates were as well provided."

* * * * * * *

In such company do you think it possible not to have lengthened my hour much beyond the time I had limited? But I had other reasons; I wished to pay a compliment, as well as to be a witness, to the military celebration of an alliance dear to every lover of liberty. It was under the direction of Gen. KNOX and the principal officers of the corps of artillery, from whom I received a polite note to dinner and an exhibition of fire-works in the evening.

Thursday, the 18th. I rode from my lodging, near that celebrated spot where Gen. DICKINSON, in 1777, took from the enemy a large number of wagons, horses, &c., with but a handful of raw militia, to a place about eight or nine miles distant, called Pluckemin, where the artillery have their winter quarters. The huts of this corps are situated on a rising ground, at a small distance from the road, and unfold themselves in a very pretty manner as you approach. A range of field-pieces, mortars, howitzers and heavy cannon make the front line of a parallelogram; the other sides are composed of huts for the officers and privates; there is also, an academy, where lectures are read on tactics and gunnery, and work-huts for those employed in the laboratory, all very judiciously arranged. This military village is superior, in some respects, to what I have seen. Its regularity, its appearance, and the ground on which it stands, throw over it a look of enchantment, although it is no more than the work of a few weeks.

I am told, the great philosopher and warrior of Prussia thinks it no dishonor to copy Gen. WASHINGTON in the mode of quartering his troops.

* * * * * * *

His Excellency, the Commander-in-Chief, arrived from his head-quarters about 3 o'clock in the afternoon. Mrs. WASHINGTON was in a carriage, accompanied by that steady friend to the rights of mankind, Mr. LAURENS, the late President of Congress. I had also the pleasure of seeing Mr. DUER, late a member of that honorable body, from the State of New York. I was introduced to Mrs. WASHINGTON, Mrs. GREEN, Mrs. KNOX, and a circle of *brilliants*, the least of which seemed more valuable than that stone of immense price which the King of Portugal received from his Brazilian possession.

About 4 o'clock the occasion was announced by a discharge of thirteen rounds of cannon. We then repaired to the academy to dinner.—The company was composed of the most respectable gentlemen and ladies for a considerable circuit round the camp, and as many of the officers of the army as could possibly attend. The style of the dinner was of that happy kind, between the extremes of parade and unmeaning profusion, and a too great sparingness and simplicity of dishes. Its luxury could not have displeased a republican. The toasts were descriptive of the day; while the joy and complacency of the company could have given umbrage to none except *our* enemies, the British.

Just as night came on, we were called upon to the exhibition of fire-works. These were under the direction of Col. STEUBEN. The eye was agreeably struck with the frontispiece of a temple, about one hundred feet in length.—It was divided into thirteen arches, each arch embellished with an illuminated painting, allegorical of the progress of your empire, or the wise policy of your alliance; the centre arch was ornamented with a pediment, and proportionably larger than the others, the whole supported by a colonnade of the Corinthian order.

In all public rejoicings, I make it a point to mix with the multitude; if they are not pleased, the demonstration may be considered as wrong. In the present instance, I was charmed to find that every man's heart went along with the occasion.

When the fire-works were finished, the company returned to the academy; the same room that served to dine in, served to dance in: the tables were removed, and left a range for about thirty couples, to fool it to no indifferent measure. As it was a festival given by men who had not *enriched themselves* by the war, the lights were cheap and of their own manufacture; the seats were the work of their own artisans; and for *knights of different orders*, there were hardy soldiers, happy in the thought of having some hand in bringing round what they were celebrating.

The ball was opened by his Excellency, the General. When this man unbends from his station, and its weighty functions, he is even then like a philosopher who mixes with the amusements of the world, that he may teach it what is right, or turn its trifles into instruction. As it was too late in the day at sixty, for me to follow the windings of the labile, I contented myself with the conversation of some one or other of the ladies during the interval of dancing. I was particularly amused with the lively sallies of Miss *****.

* * * * * * *

I do not recollect that I have ever been more pleased on any occasion, or in so large a company. There could not have been less than sixty ladies. There were no eyes to encounter, that shot forward in rays of *studied superiority*; nor any of those conscious interchanges, too often the result of great experience and knowledge. Through the whole, there was a remarkable style of looks and behavior, undebauched by British manners or British entertainments. Their charms were of that kind which gives a proper determination to the spirits, and permanency to the affections. More than once I fancied myself in a circle of Samnites, where beauty and fidelity were made subservient to the interest of the State, and reserved for such citizens as had distinguished themselves in battle.

Is it that the *women of Jersey*, by holding the space between two large cities, have continued exempt from the corruptions of either, and preserved a purity of manners superior to both? Or, have I paid too great attention to their charms, and too little to those imperfections, which observers tell us are the natural growth of every soil?

You have obliged me so often during the course of my little tour through the Eastern States, with the histories of city feasts, city balls, and city exhibitions, that I could do no less than send you a description of one at which I enjoyed so much. You will say I have divested myself of my national character to find amusements in huts and among woods. Be it so!

To-morrow I leave this quarter, and take the route of Princeton and Trenton, to Philadelphia. I shall stay a few days with you to thank you for your civilities, and that I may see those sages, so greatly celebrated through Europe for giving birth to an Empire already the theme of poets, the subject of historians, and the astonishment of nations. Adieu!

FERN LEAVES.

HELEN LEE'S "HAPPY NEW-YEAR."

"I'm miserable; there's no denying it," said Helen. "There's nothing in this endless fashionable routine of dressing, dancing and visiting that can satisfy me. Hearts enough are laid at my feet, but I owe them all to the accidents of wealth and position. The world seems all emptiness to me. There *must* be something beyond this, else why this ceaseless reaching of the soul after some unseen good? Why do the silent voices of nature so thrill me? Why do the holy stars with their burning eyes utter such silent reproaches? Have I nothing to do but amuse myself with toys like a child? Shall I live only for *myself?*—Does not the sun that rises upon my luxury, shine also upon the tear-stained face of sorrow? Are there not slender feet stumbling wearily in rugged, lonely paths? Why is *mine* flower-bestrewn? How am I better? Whose sorrowful heart have I lightened? What word of comfort has fallen from my lips on the ear of the grief-stricken? What am I here for?—What is my mission?"

"And you have only this wretched place to nurse that sick child in?" said Helen; "and five lesser ones to care for? Will you trust that sick child with me?"

"She is not long for this world, my lady; and I love her as well as though I had but one; sometimes I've thought the more care I had for her, the closer my heart clings to her; she is very patient and sweet."

"Yes, I know," said Helen; "but I have it in my power to make her so much more comfortable. It may preserve, or at least, lengthen her life."

When little Mary opened her eyes the next morning, she half believed herself in fairy land. Soft, fleecy curtains were looped above her head, her little emaciated hand rested upon a silken coverlid, a gilded table stood by her bed-side, the little cup from which her lips were moistened was of bright silver, and a sweet face was bending over her, shaded by a cloud of golden hair, that fell like a glory about her head.

"Where am I?" said the child, passing her little hand across her bewildered brain.

Helen smiled. "You are *my* little bird now, dear. How do you like your cage?"

"It is very, *very* pretty," said Mary, with childish delight; "but won't you get tired of waiting upon a poor little sick girl? Mamma was used to it. You don't look as if you could work."

"Don't I?" said Helen with a slight blush; "for all that you'll see how nicely I can take care of you, little one. I'll sing to you; I'll read to you; I'll tell you pretty stories; and when you are weary of your couch, I'll fold you in my arms, and rock you so gently to sleep. And when you get better and stronger, you shall have so many nice toys to play with, and I'll crown your little bright head with pretty flowers, and make you nice little dresses; and now I'm going to read to you; Betty has been out and bought you a little fairy story about a wonderful puss; and here's 'Little Tinoly Pip,' which will you have?"

"Mamma used to read to me out of the Bible," said little Mary, as her long lashes swept her cheek.

Helen started; a bright crimson flush passed over her face, and bending low, she kissed the child's forehead reverentially.

"About the crucifixion, please," said Mary, as Helen seated herself by her side.

That Holy Book! Helen felt as if her hands were "unclean." She began to read:—perhaps the print might not have been clear; but she stopped often, and drew her small hand across her eyes. Her voice grew tremulous. Years of worldliness had come between her and that sad, touching story. It came upon her now with startling force and freshness. Earth, with its puerile cares and pleasures, dwindled to a point. Oh, what "cross" had *her* shoulders borne? What "crown of thorns" had pierced her brow? How had her careless feet turned aside from the footsteps of Calvary's meek sufferer?

"Thank you," said little Mary, rousing Helen from her reverie; "Mamma used to pray to God to make me patient, and take me to heaven."

Tears started to Helen's eyes. How could she tell that sinless little one she *knew not how to pray?* Ah! *she* was the pupil, Mary the teacher! Laying her cheek to hers, she said, in a soft whisper, "Pray for *us both*, dear Mary."

With sweet, touching, simple eloquence, that little silvery voice floated on the air! The little emaciated hand upon which Helen's face was pressed was wet with tears. Happy tears! Oh! this was what that restless spirit craved! Here at the Cross that world-fettered spirit soon plumed itself for an angel's ceaseless sight. Aye, and a *little child had led her there!*

Adolph Gray wandered listlessly through that brilliant ball-room. There were sweet voices, and sweeter faces, and graceful floating forms; but his eye rested on none of them.

"Pray, where is Lady Helen?" said he, wandering up to his gay hostess with a slight shade of embarrassment.

"Ah, you may well ask that. I'm so vexed with her! Every man in the room is as savage as a New-Zealander. She has turned Methodist, that's all. Just imagine—your peerless Helen thumbing greasy hymn-books at vestry meetings, listening to whining preachers, and hunting up dirty beggar children! I declare, I thought she had too much good sense. Well, there it is; and you may as well hang your harp upon the willows—she'll have nothing to say to you *now*; for you know you are a regular sinner, Gray."

"Very true," said Gray, as he went into the ante-room to cloak himself for a call upon Helen; "I *am* a sinner; but if any woman can make a saint of me, it is Lady Helen. I have looked upon women only as toys to pass away the time, but under that gay exterior of Helen there was always something to which my better nature bowed in reverence. 'A Methodist, is she? Well, be it so. She has a soul above yonder frivolity, and I respect her for it."

If in after years the great moral questions of the day had more interest for Adolph Gray than the pleasures of the turf, the billiard-room, or the wine party, who shall say that Lady Helen's influence was not a blessed one?

Oh, if woman's beauty, and power, and witchery were oftener used for a high and holy purpose, how many who now bend a careless knee at her shrine, would hush the light laugh and irreverent jest, and almost feel *that an angel's wing had rustled by!*—FANNY FERN, in *the True Flag.*

Youth's Corner.

"Attempt the end, and never stand to doubt;
Nothing's so hard, but search will find it out."

ILLUSTRATED REBUS, NO. II.

☞ Answer in two weeks.

MISCELLANEOUS ENIGMA.

I AM composed of 28 letters.
My 8, 22, 24, 3, is much used.
My 4, 19, 23, is the name of a fish.
My 9, 22, 5, 9, 12, 21, is used by bakers.
My 2, 25, 8, 17 is the name of a county in Kentucky.
My 15, 13, 22, 9, 15, is a lake in Europe.
My 18, 10, 26, is the name of a fowl.
My 16, 15, 9, is often seen.
My 11, 20, 27, 1, you can get at the market.
My 13, 7, 22, 6, is useful.
My 21, 27, 14, is the name of an animal.
My whole is a measure of great political and commercial importance. O. B. M.

☞ Answer next week.

MATHEMATICAL QUESTION.

A GENTLEMAN courted a lady, and as their birth days happened together, they made it their wedding day. The day they married, the gentleman's age was just double his lady's; when they had lived together 30 years, his age was in such a proportion to hers as 2 is to 1 3-7; 30 years after this, his age was to hers as 2 to 1 3-5; at which time they both died. What were their ages at marriage and at death?

O. B. S.

Ransomville, N. Y., 1854.

Answer to Illustrated Rebus No. 9.—*Chesterfield once said—Let blockheads read what blockheads wrote.*

Answer to Geographical Enigma in last week's paper.—*Stephen Arnold Douglas.*

Flunkeyism Boiled Down.

IT will be remembered by most of our readers that Mr. MARCY, on assuming the duties of Secretary of State, issued a circular to the representatives of our Government abroad, directing them as far as possible, to conform in dress and manners to the standard of plain republican simplicity.

Some of our diplomatists nobly stood up to the letter of the instructions, and appeared at court in the dress of an American citizen, instead of donning the ruffles, and flummery, and tinsel, fit only for the backs of brainless lackeys and footmen. One of these men, whose dress at court was an exponent, as it ought to be, of the republican simplicity of the Government he represented, is Mr. SANDFORD, late American Charge de'Affaires at Paris. He attended the brilliant court and public reception of LOUIS NAPOLEON, in citizen's dress, and vindicated the right of this Government to prescribe the proper costume of its own representatives abroad.

Now, however, with shame be it spoken, JOHN Y. MASON, or perhaps more appropriately, *Johnny Mason*, of Virginia, the lately appointed American minister to the French court, has undone all Mr. SANDFORD has done, and appears on state occasions in regular court costume, like a brainless fop. Mr. SANDFORD has in consequence resigned his position as Secretary of Legation in disgust, and other members of the corps diplomatic it is said will follow his example.

Mr. BUCHANAN, our Minister at the court of St. James, declined to be present at the opening of the English Parliament on the 31st ult., because the master of ceremonies gave notice that all diplomatists must appear in court costume. Such a course of conduct is honorable to Mr. BUCHANAN and the Government he represents, while that of JOHN Y. MASON is a disgrace to himself and the nation.

OLD ROCHESTER NURSERY.

SAMUEL MOSELEY, at the Old Rochester Nursery, offers No. 35 Front street, Rochester, N. Y., in preparing for fall his inducements to post paid applicants, of the present extensive stock of Nursery Items, consisting in part of 10,000 very fine Southern Spy Apple Trees, from 7 to 8 feet high, which will be offered by the 1,000 at low prices. Also, a quantity of large sized Trees, such as Scotch Pines, Larch Fir, Maples and other ornamental things offered at very cheap rates in order to clear the ground.

10,000 Dwarf and Standard Pears.
20,000 Apple Trees in variety.
20,000 Peach do do
15,000 Plum, Cherry and Apricot,
20,000 Osage Orange of different ages.
Over 10,000 Hardy Evergreens—

And a fine selection of Weeping Deciduous Trees, Ornamental Shrubs, together with such varieties as may be classed strictly hardy, and a large collection of Dahlias, Tulips and other bulbous roots.

The amateur wishing prime fruits of well established repute, or the agriculturist needing fine cropping, thoroughly tested varieties, may rely upon the most careful selection of their orders. The ornamental trees are entirely grown in the Nursery, consequently none of the heavy losses are sustained that usually occur in recently imported subjects.

The Evergreens are very robust and admirably furnished to the surface of the ground, none presenting the naked stems usual in imported plants.

Dealers are invited to give a call before making their purchases.

March 1, 1854. 216-6t

THE PEOPLE'S JOURNAL.

AN ILLUSTRATED RECORD of AMUSEMENTS, MECHANICS, SCIENCE, AND USEFUL KNOWLEDGE.—One Dollar a Year—50 Cents a Volume. Splendid Engravings!

Every Number contains 32 large Pages of Letter-Press, beautifully printed on fine paper, and profusely Illustrated with Engravings, binding, at the end of each year, into Splendid Volumes, containing Four Hundred Pages, and Illustrated with about Five Hundred Elegant Engravings, the entire cost being only ONE DOLLAR.

The People's Journal was commenced in November, '53, and has already attained a large circulation. The November No. contains 40 engravings, the December No. 32 engravings, the January No. 47 engravings, and the February issue has 61 engravings, making in all 220 Illustrations, although only four numbers have been published. These relate to Science, Art, Mechanics, Agriculture, and Useful Knowledge, in accordance with the general plan of the work. No publications of the kind have ever been produced with such magnificence or at so cheap a price. It is admired and taken by every one who sees it.

TERMS.—To Subscribers—One Dollar a Year, or Fifty Cents for Six Months. Subscriptions may be sent by mail in coin, post office stamps, or bills, at the risk of the publisher. The name of the Post Office, County, and State, where the paper is desired to be sent, should be plainly written. Address, postage paid,

ALFRED E. BEACH,
No. 80 Nassau-street, New York City.
Editor of the People's Journal.

A liberal discount to Post-Masters and Agents. Single copies 12½ cents. Specimens sent on receipt of four postage stamps. 214-5t

VALUABLE FARM FOR SALE, IN BATAVIA, GENESEE CO., N. Y.

SITUATED 2½ miles north of the village, on Bank street, containing 120 acres,—a good new dwelling house, commodious barn and other necessary out-buildings; two orchards with grafted fruit, and some 20 acres of wood land.—The land is under a good state of cultivation, naturally adapted to the growth of wheat. There are 80 acres of as good looking wheat as can be found in Genesee Co., which may go with the farm. Also, 30 acres well seeded to clover, preparatory for wheat next season, and 12 acres or more, plowed, and in good condition for spring crops.

One-third or one-half paid down, and the balance may run to suit the purchaser. For further particulars, reference is made to Hon. E. C. Dibble, Batavia village; Rev. Allen Steele, near the premises, and the subscriber.

211-3t D. C. HOUGHTON,
Jan. 14, 1854. Lima, Livingston Co., N. Y.

KETCHUM'S MOWING MACHINE.

THIS machine stands without a successful rival, as *the mowing machine of the age.* The supply will not be equal to the demand. If any person desires one for the coming season, they cannot speak too soon. The uniform price at Buffalo is $110,00. All who will forward us an order accompanied with the cash or satisfactory reference, may depend upon being faithfully served with a machine in good season. H. C. WHITE & CO.,

Buffalo Ag. Warehouse and Seed Store, 11 & 13 West Seneca-street, Buffalo, N. Y. 211tf.

CHERRY SEEDLINGS.—A large quantity of Black Mazzard Cherry Stocks for sale, 1 year old.
214 4t J. C. CAMPBELL, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to prepay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

SPECIAL NOTICES.—TO AGENTS, &c.

☞ Mr. C. MOORE, of Derry, Chau. Co., N. Y., is duly authorized to act as Agent for the RURAL NEW-YORKER, and the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.—assisted by C. D. LANDAS in the last named county.

☞ AGENTS.—Any person so disposed can act as agent for the RURAL NEW-YORKER,—and all who remit according to terms will be entitled to premiums, &c.

☞ THE RURAL is published strictly upon the CASH SYSTEM—sent no longer than paid for—and all orders should be in accordance with terms.

☞ OUR *lowest* club price is $1,25 for any number of copies over 20—and $1,50 under that number, unless a full club of twenty is obtained.

☞ In making up clubs for the RURAL, the Wool Grower and Stock Register can be added at 35 cts. a copy, which is the lowest club price.

☞ In writing us, please be particular to give your P. O. address correctly—the name of your Post Office (not Town,) County, and State. Write all names plainly.

☞ Those wishing their papers changed from one address to another, should give the names of both Post Offices—the *former address*, as well as the one desired.

☞ ADDITIONS to clubs may be made at any time, at the price per copy paid for the original club.

The Wool Grower and Stock Register is the only American journal devoted to the WOOL AND STOCK GROWING INTERESTS. It contains a vast amount of *useful* and *reliable* information not given in any other work, and should be in the hands of *Every Owner of Domestic Animals*, whether located East or West, North or South.—Published monthly in octavo form, illustrated, at ONLY FIFTY CENTS A YEAR—6 copies for $2; 8 for $3. Vol. 5 commenced July, 1853. Subscriptions can begin with the July or January number. Back volumes furnished.

Address D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper,

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

FIRST SPRING-TIME VISIT.

On the first of March, we made a short visit to some of our subscribers in the town of Sweden, and, thanks to the kind attention and hospitality of F. P. Root, Esq., the able President of our County Agricultural Society, spent the day in a most agreeable manner.

Brockport is a large and beautiful village, and has more extensive agricultural implement manufacturers than any place of its size in the State. Whiteside, Chappell & Barnet, we found busily engaged in the manufacture of all sorts of agricultural implements. Among them we noticed Curtis's *Iron Beam Plow*, which we heard many farmers say they preferred to any other for "breaking up" heavy land.—White's, Whitman's, and all sorts of Corn Cultivators, are also made here in large numbers. Ganson, Huntley & Co., have a large establishment, and are engaged principally in the manufacture of their "Self-Raking Reaper"—and Root's Patent Three-wheel Cultivator, a valuable implement. Seymour & Morgan are also extensively engaged in the manufacture of their justly celebrated "New-York Reaper," and other implements.

We next proceeded to the farm of S. L. Sheldon, Esq., and were much pleased with an examination of his imported French and Spanish Merino sheep. From thence, we had a delightful ride to Mr. Root's farm, through a beautiful country, dotted with handsome houses, well arranged and substantial farm buildings, good stone fences, &c., all testifying to the fertility of the soil, and the enterprise, wealth and intelligence of the owners.

Mr. Root's farm consists of nearly 700 acres of beautifully situated limestone wheat soil.—He sows from 100 to 150 acres of wheat each year. Last year his whole crop averaged about 35 bushels per acre, and one field of 50 acres yielded 900 bushels, or 40 bushels per acre. He plants about 30 acres of corn, which averages about 50 bushels per acre. Like all good farmers, Mr. Root generally raises his own clover seed, and seeds down *all his wheat* with ten pounds of red clover per acre, early in the spring, frequently before the snow is off. Some time in April he sows on his wheat about 100 pounds of plaster per acre. This he considers of *no use whatever to the wheat crop*, but of great benefit to the clover. He prefers to sow the plaster on the wheat rather than on the clover the following spring, because it prevents the young clover plants from injury by dry, hot weather. Mr. Root is an earnest advocate of deep plowing. He mentioned a phenomenon which puzzled him. He had about an acre of land which, whenever the field was sown with wheat, though it looked as well as the rest in the fall, always turned yellow in the spring, and did not yield more than five bushels at harvest. Clover, corn and other spring crops did as well on this spot as on the other parts of the field. This phenomenon was observed for several years. At length he thought he would see what effect very deep plowing would have. He accordingly was at some trouble to plow this acre very deep and well, and ever since, the *wheat has been good.* The farm is well fenced with stone wall. The bottom stones are laid on the hard-pan, and in this way, if built with four or five rows of slats, they will stand for ages. They are five feet high, and cost about $1,75 per rod. He has also some movable picket fence on the farm, which is very convenient. It costs about half a dollar per rod. He keeps about 80 head of cattle, principally Durham grades. Mr. Root has a corn sheller of his own invention, which is a very superior article. He has shelled 100 bushels of corn per hour with it. Our space forbids a description in this connection.

ROOT CROPS.

At the last "Legislative Agricultural Meeting" at Boston, the subject of discussion was—*Vegetable products, such as carrots, beets, turnips, &c., their value as food for stock compared with hay and corn.*

There was greater difference of opinion on the subject than we should have expected, but judging from the general tenor of the remarks, we should think that root culture was held in high esteem in Massachusetts.

Mr. Proctor said the product of carrots often amounted to 16, 18, or 20 tons to the acre. They are sold at about half the price of hay in the market. This would make them equivalent to a crop of eight or nine tons of hay on the acre.

Col. Lincoln, of Worcester, and Mr. Dodge, of Sutton, had made some accurate trials in feeding them out to cows, and their report was that they had found a peck per day to increase the quantity of milk given by their cows. But Mr. Porter, of Bradford, did not come to the same conclusion. He reports them a good food for stock, but not as increasing the measure of milk given by the cows.

Hon. Mr. Sprague said some esteemed cultivators in Plymouth County say they cannot afford to raise turnips for cattle—that they do not fatten cattle. The general impression is that carrots are better suited to that purpose. He thought turnips more profitable, because they required less labor.

He had raised 300 bushels of carrots on a quarter of an acre of land. In winter, these roots operate much better than the mere amount of nutriment extracted from them might indicate. He should not think of trying to winter his cattle, without raising for them a quantity of roots.

Mr. Towers had raised carrots and ruta-bagas for fifteen years, and had fed his cows with them. With these roots he kept up the milk of his cows, and made as much butter in October as in the summer. He fed two weeks with 3 pecks per day of carrots; then two weeks on ruta bagas. He could see no difference in the quantity of milk, whether he used one kind or the other. His cows did not eat more than half as much other fodder when they were well supplied with roots.

Mr. Fisk had given up raising turnips, although it had once been a favorite plan with him. He fed two cows on turnips. One did well—while the other did not thrive. Both were in milk. Turnips did not suit the second. He also thought turnips did not leave the land in a good state for the following crop.

Mr. Sanford Howard, mentioned the great effect of turnip culture in England. It had been the anchor of her husbandry. All their crops had increased since the culture of this crop, and such a result was not consistent with the idea that turnips were a crop exhausting to the soil. Corn sometimes fails after turnips. This was sometimes owing to the aphides, which had been found on the roots of corn. He said Judge Buel was successful in farming on sandy land near Albany. He engaged in turnip husbandry. A second farm near to his was commenced as a milk farm. Turnips were produced annually to the amount of 4,000 bushels. The owner was so well convinced of the value of turnip husbandry, that if he discarded the culture of these, he would discard the farm at the same time.

Mr. Russell, of Pittsfield, had tried turnips three or four years. He thought his cattle eat more hay when they had roots than without them. He tried carrots, and held much the same opinion about them.

As regards turnips and carrots, &c., exhausting the soil, we think, with Mr. Howard, that the experience of English farmers ought to settle this point. They are fully convinced that the cultivation of the turnip has been one of the primary means of increasing the fertility of the soil. They bestow more labor and manure on their root crops than on any other, and it is a common saying with them, "insure me a good turnip crop, and I will insure you good barley, clover, and wheat after it." But it must be remembered that they consume them on the farm with stock. Were they grown and exported from the farm, they would doubtless be as exhaustive as any other crop.

But take a crop of turnips, and a crop of Indian corn, for instance, let them both be average crops, and both consumed on the farm, and the manure made from each be carried back to the soil, and our word for it, the soil on which the turnips grew will bear a better crop of wheat, barley, rye, or Indian corn, than that on which the corn was cultivated. Were this not the case, English farmers would soon quit cultivating turnips, for, *considered simply as food for stock*, they are not a paying crop.

RAISE YOUR OWN TURNIP SEED.

When one goes to the store for seeds, he is not always sure of getting the best product.—There are those however, who make a business of raising seeds, that have by persevering honesty acquired a deservedly high reputation.—When one purchases of such he is sure of getting the worth of his money. Still all are not honest, and as we have said, one is not sure—especially in the country—of getting *good seeds* from his store-keeper. Some of my neighbors the past summer experienced the truth of it, when they purchased seed from an honorable(?) merchant in a neighboring city, what he asseverated and warranted upon his honor, to be "first best" Ruta Baga seed, but the product proved to be inferior flat turnips.

It is an easy matter, with a little care, to save turnips, or other roots for seed, and in the spring put them out in a good situation, and then save the largest and best seed therefrom. By such a course one may improve his produce, while he knows he will not be deceived in his expectations. In selecting turnips for seed, the fairest and smoothest should be taken, and those with but a small tap root, without side, or sprangling roots. They should be carefully pulled before fully ripe, and secured as other turnips are, but handled with care, in order to keep the roots uninjured. The leaves should be removed without cutting or injuring the crown. If large roots are taken and those fully matured, they are more apt to rot before perfecting their seed. They should be put out as early in the spring as possible. If they have been kept sufficiently cool in the cellar or pit, they will have sprouted but little. Covering the crown with earth, the leaves that will form in the light and air will stand the frosts uninjured, but a frost will kill the tender leaves fresh from the dark pit. The soil should be sufficiently strong, and kept loose and clean, but the plants should not be handled or meddled with while in blossom, as they are easily blasted. Gather the seed as it ripens and becomes fully matured, but not too green, and you will have fine, plump, black looking seed that you can plant with the utmost confidence.

If you are obliged to buy, you cannot use too much caution. Some unscrupulous people will gather seeds from turnips that have stood the winter in the fields—sell them as *first rate* to the store-keepers, who unwittingly are made to impose on the buyer—such seeds are not good, and especially so as they come mainly from the poorest of the crop—turnips with no bottoms, with all necks, or otherwise, too worthless to harvest. How can any one expect to reap anything but disappointment from such seed.

We repeat it again, and would urge it continually upon all farmers, *raise your own seeds to what extent you can*—and in raising them always select the best developed plants to propagate from. Monsters should be avoided, as well as all half developed or deformed specimens. Use all proper care, and you may improve from year to year whatever you plant. T. E. W.

[Written for Moore's Rural New-Yorker.]

AN ESSAY
ON THE OSIER OR BASKET WILLOW.

In Two Parts.—Part I.

The willows are chiefly natives of the colder parts of the temperate regions of the northern hemisphere. They are generally found in cold, moist soil, or by water courses; the trees on plains, and the creeping or trailing sorts on heaths and mountains. A few species are natives of the Arctic circle. Salix Babylonia (weeping willow) is a native of Armenia, and also of China and Japan. The species indigenous to North America, are neither numerous nor useful. The number of species in different countries, cannot at present be determined with anything like accuracy, since what are considered species by some botanists, are looked upon as only varieties by others.

Theophrastus and Pliny speak of different sorts of willows; the latter describing eight species, as among the most useful trees for the husbandman. The willow, Pliny says, furnishes long props for supporting vines; and the bark may be employed for tying up the shoots; and the young shoots, he adds, are much employed in *basket making, and fodder for horses, cows, oxen and sheep.*

The kinds which the Romans used for this purpose, appear, from Pliny's descriptions, to have been the Salix Alba, Salix Vitellina, Salix Helix, Salix Viminalis and the Salix Americana. These kinds formed the osier holts of the Romans, and are still those principally cultivated for basket making throughout Europe at the present day.

Among modern botanists, the Bauhans in 1650, first began to distinguish willows by their magnitude, the shape of their leaves, and by the nature of their flowers and fruit; and these authors were the first to recognise in each species a fertile and unfertile individual; and with Tragus to assert that willows could be propagated from seed like other plants; a fact that had been denied since the days of Aristotle. Scopoli, in his *Flora*, published in 1760, relates that he had often observed females fecundated by males which are accounted of a different species; and if this observation is correct, it will help to account for the great number of species of this genus. The scientific botanical history of the willow may be considered as commencing with Ray's *synopsis*, in 1650, in which he describes ten species as growing in the neighborhood of Cambridge, England. Linnæus, in 1737, described in the *Flora Lapponica*, 19 species, chiefly Alpine kinds; and in the second edition of his *Species Plantarum*, published in 1753, 31 species. Haller, in 1758, described 21 species as natives of Switzerland; and Villars, in 1789, 30 species as natives of Danphine.—Willdenow, in his edition of Linnæus' *Species Plantarum*, published in 1797, describes 116 species. Smith, in *Ree's Cyclopedia*, published in 1819, describes 141 species; to which Willdenow and other botanists have added, according to Koch, 41 species more, making in all 182; adding to these Schleicha's 119 new species, the total number is 2541 In 1785, Hoffman published the first fasciculus of his elaborate *History of Willows*, the last fasciculus of which came out in 1791; but the work was never completed—a serious loss to the willow cultivator. In so far as it goes, it is a splendid work, and one which can scarcely be surpassed either for accuracy or beauty. In 1828, Professor Koch published an admirable work, of which it is to be regretted neither time nor space will permit to make copious extracts from at present. In 1829, the *Duke* of Bedford had printed for private circulation among the British Peers, the Salictum Woburnense, in which 160 species are figured and described; all of which, with the exception of a very few, were at that time alive in the willow grounds at Woburn. In 1731, Sir W. J. Hooker, in the second edition of his *British Flora*, arranged the British species, and enumerated under these, 68 species, considered indigenous; which in the third edition of the *British Flora*, published in 1835, were increased to 71.—In the same year (1835) Dr. Lindley adopted the system of Koch in his *Synopsis of the British Flora*, and reduced the 71 species of Smith and others to 28 species.

The cultivation of willows with a view to profits, and a determination of their species, was first taken up with vigor and effect by James Howe, of Lakenham, on the alluvial flats near Norwich, England, by which this excellent botanist not only gained much knowledge, but was amply compensated by the returns in money. These willow holts are yet in vigorous growth, although planted nearly a century ago; and considered by the family as part of their best property.

In an economical point of view, scarcely anything was added to our knowledge of the culture and uses of the willow since the time of the Romans, till the slight notices of the uses of willows given by Ray, and afterwards by Evelyn. The first systematic essay on the subject appears to have been written by Dr. Walker, about the latter end of the last century, though not published till 1812. It is entitled *Salicetum*, or the Botanical History and Cultivation of the Willow. Here 22 species are described, and an account given of their uses and mode of cultivation. All these species, and various others which are promised to be described in a future volume, were cultivated by the author in his grounds at Colinton, near Edinburgh.

Salices, &c., by Dr. Wade, was published in 1811, and contains descriptions of most of the European species at that time known, with directions for their propagation and culture.

Willows for basket making and hoops, were principally imported from Holland and France into England, till towards the commencement of the present century, when the exclusion of the British from the continent, in consequence of the continental war, led to the formation of plantations in Britain. The Society of Arts, directing their attention to the subject, have at various times offered premiums for the cultivation of willows, and in their *Transactions* for 1801, 1804, 1805, as well as in previous and subsequent volumes, will be found accounts of plantations made, for which premiums were awarded, although the price of the crops was and is yet the best premium for the necessary outlay in commencing this business. In England, the principal of these plantations were made by the Duke of Bedford, on a tract of land near Woburn Abbey, in Bedfordshire, by Arthur Barron, Esq., of Warrington, Lancashire; Mr. Wade, of Suffolk; Mr. Phillips and Mr. Bull, of Ely; and in Scotland by Mr. Sherriff, at Captainhead, near Haddington.

In Germany, a great many men of ample means, make the cultivation of willows for basket making and hoops their only business. In England small islands in the rivers are planted entirely with willows, and called osier holts.—There are many such islands in the Thames, between London and Reading. The most extensive willow plantations in fields, are in Bedfordshire, near Woburn, and in Cambridgeshire and Huntingtonshire, and perhaps the largest plantation in England is that of Mr. Adams, near Reading, giving employment to no less than one hundred persons in the cultivation, and many more in their manufacture into baskets. The willow is frequently cultivated as a pollard; the top being more desirable for fence wood than even the cedar. It is also planted on the South Down hills, for winter browsing for sheep. Mutton so fed brings the highest price in the London market.

The importance of the willow to man has been recognised from the earliest ages; and ropes and baskets made from willow twigs were probably among the very first of human manufactures, in countries where these plants abound. The Romans raised the twigs for binding their vines and tying their reeds in bundles, and made all sorts of baskets of them. A crop of willow was so valuable in the time of Cato, that he ranks the *Salictum* or willow field next in value to the vineyard and the garden. In modern times, "the many important uses," Sir W. J. Hooker observes, "rendered to man by the different species of willow and osier, serve to rank them among the first in our list of economical plants. The leaves and young shoots are wholesome and nourishing to cattle; and in some northern countries they are collected green, dried and stacked for that purpose. In France, those of S. Caprea, whether in a green or dried state, are consid-

ered the very best food for cows and goats; and horses in some places are fed entirely on them, from the end of August till November. Horses so fed, it is stated, will travel 60 miles a day without being fatigued. (Bost.) In Sweden, Norway and Lapland, the inner bark is ground for the purpose of mixing with oatmeal in years of scarcity.

The bark of the willow, and also the leaves are astringent; and the bark of most sorts may be employed in tanning. That of S. Caprea is used both for tanning and dyeing black, in Sweden, the north of Scotland, and Switzerland, (Walker.) A substance called salacine has been extracted from the bark of the S. Helix, and some other kinds of willow, which Prof. Burnett states to have been "proved to be equally efficient with the Peruvian bark, and he remarks on the wise provision of Providence, in placing the remedy for agues, and other fevers, exactly in those moist, marshy situations where these diseases are most prevalent."—(See Burnett's Inaugural Address to the Medico Botanical Society, Feb., 1831, p. 12.) This new principle was first discovered by M. Leraux; and M. Majendie, states that he has known three doses of six grains of bark stop a fever; which is nearly the same quantity as would be required for the same purpose of sulphate of quinine. Salacine is in the form of very fine whitish crystals, perfectly soluble in water or alcohol.

In Pliny's time, willow wood was in request for the fabrication of shields, on account of its lightness, and in the present day, in England it is, for the same reason, preferred for making cutting-boards for the use of shoemakers and tailors. It is also used for whetting the fine steel instruments of cork-cutters and other mechanics. It is in demand for turning, and for shoes, shoemaker's lasts and toys; for dyeing black, in imitation of ebony, as it takes as fine a polish as rosewood, and for a great variety of minor purposes. The wood of the larger trees, such as S. Alba and S. Russelliana, is sawn into boards for flooring and rafters, in which last situation it has been known to have lasted centuries. The straight stems of young trees, when split in two, make excellent styles for field ladders, on account of their lightness.—The boards are well adapted for lining wagons and carts, particularly such as are intended for coals or stones, or any hard material; as willow wood, like other soft woods, is by no means liable to splinter from the blow of any hard angular substance. It is also valued for the boards of paddles of steam vessels, and for the shouds of water wheels, as it wears in water better and longer than any other wood. It is much used in Scotland for building small vessels; and especially for fast sailing sloops of war, by reason of its lightness, pliancy, elasticity and toughness.

SOWING CLOVER SEED.

Eds. Rural:—On the score of profit, if for no other reason, it is important that all our improved land should be in grass, when not occupied with other crops, or in preparation for a crop. In most cases it will well pay to seed to clover with every crop of small grain, even if the land is to be entirely devoted to raising grain. The pasture afforded in the interval between one crop and another, will pay the expense of seeding and the plaster that it is necessary to put on, leaving the fertilizing matter contained in the grass and roots to be plowed in, a clear gain. This is not all, it will prevent the growth and propagation of weeds, which it would take much after labor to exterminate. Farmers generally are not particular enough upon this point—they leave too much land unoccupied and unproductive, when it should be storing up the elements of fertility for succeeding crops. There is no doubt but that much more land would be annually seeded to clover, if it were not that so much seed fails to come up, or the young plant so often destroyed by what are termed unfavorable seasons. But these failures ought not to prevent any from sowing the seed—it should direct attention to the cause of those failures, that a successful effort might be made to prevent them in future. There may be some little risk in sowing clover seed late in the season, with spring grain, but when it is sown early, either with spring grain or on wheat, it is as sure as any other crop, provided the soil is good, and has been made deep, dry and fine. At least such has been the case with me, on a clayey soil, having never lost a crop when the land was in proper condition, and the seed sown at the proper time.

Clover seed should always be sown on wheat as early as the month of March, and then, or soon after, have a top-dressing of plaster, for both clover and wheat. Plaster, unless sown early, will not benefit the clover at the time when it most needs it, and it often injures wheat when sown late, by causing too rank a growth about the time the grain is coming into maturity. When land is seeded to grass with spring grain, a roller should be passed over it after seeding. In addition to late seeding there is another prevailing error, and that is sowing too little seed. When clover seed alone is used, eight quarts to the acre is little enough. My practice has been to sow 8 or 10 bushels of clover chaff (I prefer to raise my own seed and sow it in that way,) and four quarts of Timothy seed to the acre. It is poor economy to leave one-half the land bare for want of seed, and the other half to produce coarse, rank grass that makes neither good pasture nor good hay. The question is often asked me, "How do you keep so much stock on so little land?" Here, then, is the answer. The land is always in grass when not occupied with grain crops or in preparation for the same. Grass improves the land, aside from furnishing food for stock. Stock makes manure, and manure makes grass and grain. This keeps both stock and land in good condition. If the course here recommended was generally practiced by western farmers, their lands would be more productive and profitable, and in my opinion it would be a long time before they would have to resort to artificial manures to keep up the fertility of the soil.

Troy, Feb. 22d, 1854. LINUS CONE.

SHADE-TREES.

Mr. Editor:—There has been much written in Agricultural papers about setting out shade-trees by the side of the highway. It has been recommended, time and again, as being useful and ornamental. During an excursion in the south part of Oneida County, in October last, I had an opportunity of passing along highways which were lined on each side for more than three miles with lofty maples. They were of uniform size and height, and I should think must have been growing there over fifty years. They were about one rod apart, fifty or sixty feet high, twenty inches in diameter, and every way a beautiful tree, and as fine a specimen of an avenue lined with trees as one could desire to see. It was one of those calm and beautiful days in October, when the sun shone in splendor, the air was soft, and nature clothed in all the beauty of an Indian Summer—just the time to enjoy a ride through forests and woodland scenery. But I very soon became weary of the ride. What was the matter? I tried to rally myself. I was in good health and spirits, and had good horses and carriage, and plenty of good company. Surely, thought I, this is the most beautiful avenue I ever saw, and I am just in circumstances to enjoy it.

I began to analyze the subject, to find out why this disappointment. Each tree by itself was beautiful, and pleasant to look upon; and so was each line of trees, extending away in the distance almost as far as the eye could reach. From any stand-point without, where "fields and flood and wood" could all be embraced in one extended view, the eye could scarce be satisfied with seeing. But the traveler here has a very restricted vision. The thick foliage of the trees shuts out an extended view of the fields. He can see ahead, a gleam of sky whittled down to a mere point. The pleasant light of the sun is shut out—the air is chilled—the road is bad, always bad, for nothing is worse for a highway than a continued shade. How much like, is this, to a dreary ride through forests, in the Genesee country in other times, when settlements were sparse, and new roads were cut through the woods in one long and extended line, only sufficiently wide for a wagon path! I have always loved the forests, and have often roamed through them while in their native beauty, before an axeman had committed sacrilege upon them. Each one has its own identity; their aspects vary as the human face; no two are exactly alike.

I could not rid myself of the idea that this avenue was unpleasant—that these trees, once, perhaps, the pride and boast of the town, had become in old age a nuisance. They spoiled the road—they injured much land each side of it—they had outlived their beauty.

At a certain point the road diverged from this avenue. It appeared the good people had concluded to travel in another direction, and the avenue was fenced up; but there the trees stood, extending through the fields a half a mile or more. The owner of the land was probably in a quandary—having a mind to cut them down, yet hesitating to destroy that which had cost so much labor and care. Had these trees been planted in clusters on some broken spot of land, or so as to hide a ravine or unpleasant object, their age would only have increased their value. I am aware that very much depends upon the location of avenues, and that a cultivated taste would be a sufficient guide whether to plant trees in long extended lines, or in clusters. If we copy from nature, we cannot greatly err, and nature never uses straight lines in the culture of her domains. ADAMS.

Feb. 15th, 1854.

Female Servants in England.—The *Mark Lane Express* says:—Go where we may, we hear the universal cry of, what is to become of the 'Misses?" Emigration and abundant employment have given to the servants at home, the upper hand as completely as if they were in Australia. On all sides we hear complaints of the difficulty of finding, and of retaining when found, a cook who can roast a leg of mutton and make batter pudding or pea soup.

Agricultural Miscellany.

UNITED STATES AGRICULTURAL SOCIETY.

The Second Annual Meeting of the United States Agricultural Society, was held in the Smithsonian Institution, on Wednesday, Feb. 22nd; Hon. M. P. Wilder, of Boston, President of the Society, in the chair.

The President, after calling the meeting to order, alluded to the fact that this was the anniversary of the birth-day of Washington, and suggested that, in token of respect for the day the meeting should be adjourned. The motion was seconded and carried.

On Thursday the President delivered his annual address, which was referred to the Executive Committe for publication.

Prof. Mapes, of New Jersey, had in his hand a head of wheat, part wheat and part chess, which he wished to offer. It was placed in his hands by a farmer of Livonia, Livingston county, New York. He had also a new subsoil plow of his own invention to bring to their notice.

Mr. Denton Offutt, of Lexington, Kentucky, moved the appointment of a committee on Animal Physiology, and the general improvement in all respects of domestic animals. It was a subject of high interest and importance.

Mr. Calvert testified to the influence, to him wonderful, whatever it was in itself, of Mr. Offutt's power over at least one animal, the horse. He had been an eye witness to a scene at the Maryland State Fair, which may be mesmerism, or magnetism, or what not; but Mr. Offutt reduced almost instantaneously a horse noted for vicious propensities to gentleness and tractability. He warmly seconded the motion of Mr. Offutt.

Messrs. Browne, of Pennsylvania, Earle, of Maryland, and B. Perley Poore, of Massachusetts, also bore witness to Mr. Offutt's extraordinay powers in this respect.

The motion was carried, and a committee of three, consisting of Messrs. Browne, Earle, and French, was appointed by the Chair.

An invitation from Mr. Glover, of New York, to visit his collection of models of fruits at the Patent Office was then read.

Gen. Worthington spoke in warm commendation of Mr. Glover's labors and high success.

The Recording Secretary explained it to be the wish of Mr. Glover to extend his collection, so as to include at length all the esculent fruits and vegetables, and he was desirous that Congress should purchase his collection for national purposes.

The invitation of Mr Glover was accepted, and a committee appointed on behalf of th society to examine the collection in the Patent Office.

The Chairman then offered for consideration the contents of two communications confidentially committed to him. One was from Mr. Joel Hitchcock, of St. Lawrence county, New York, on the subject of a remedy for the potato rot; the other on the subject of a remedy for the devastations of the *curculio* on fruits, by Mr. Matthews, of Coshocton, Ohio. The object of the parties seemed to be to get their remedies tested by the society through committees of the same, and reports made at the meeting of next year.

The question on the reference of these proposals gave rise to a very animated debate, in which views of very opposite character in respect to the probable value of the alleged discoveries were elicited. Mr. Browne, of Penn., spoke strongly against entertaining any proposition of a secret nature, and held that all subjects should be open to all members alike.

The Chair vindicated Mr. Hitchcock from any secret or selfish aim. All he wished was that a competent committee of the society should give the matter the benefit of their investigation, and report accordingly.

Mr. Worthington said the discovery, whatever it was, is the property of Mr. Hitchcock, and if the test to be made of it were successful, Mr. Hitchcock was entitled to the endorsement of this society. He then moved "That the communication just read be received and referred to the Executive Committee to test the mode proposed, and that they report to the next annual meeting of this society."

Further discussion was pursued by several gentlemen when the previous question was loudly called for. On being put, the motion of Mr. Worthington was carried.

The Chair then presented a written communication from a gentleman in Ohio requesting that a committee of three be appointed to investigate the subject of the remedy for curculio.

Mr. Browne opposed this and all such secret methods of operation. He adopted the same line of remark as above on the potato rot. His remarks met with a pretty general cheering.

Mr. W. S. King moved a select committee of three on the subject, of which the President of the Society should be chairman. This was carried, and Messrs. Wilder, Brinckle and Birckman, appointed.

Mr. Bradford, of Delaware, read a memorial to Congress from citizens of Delaware, praying the interposition of Congress, either by purchase of one of the Chincha Islands or by negotiation with Peru, to put a stop to the effects of the operation of the Anglo-Peruvian monopoly, by which the price of guano has been raised and kept at the extravagant price of $54 per ton.

Mr. Bradford then pressed this subject on the attention of the society as one of primary concern to the agriculturists, and in fact the whole people of the country. On his motion a committee of five was apointed in relation to the matter.

A communication from Mr. James Pedersen, on the subject of introducing the Alpaca or Peruvian sheep into the United States, was then read.

Dr. J. A. Warder presented a quantity of Japan peas, and described their nature and value. They were introduced in the neighborhood of Cincinnati three years ago, and have been widely distributed. There is not a pea, nor a vine, but has a stiff woody stem; the leaves, however, are broad, and are greedily eaten by cattle; the fruit is very abundant, and occurs in short pods containing two or three beans; these are oblong when green, but round when dry. They will not be valuable for table use when green, but are liked by most who have tried them, boiled, or as soup when ripe in winter, and must prove of great value, especially in the Southern States; succeeding well on all soils in which they have been planted. Their great value will be as food for cattle; they are easily threshed out when ripe.

In planting give them ample room; for the greatest effect, say at squares of three feet; cultivate as corn.

On Friday, Prof. Fox, of Michigan, delivered a lecture on the best means of extending Agricultural Education in the United States; B. P. Poore, one on Agricultural History, and Dr. Ehly, one on Bees and Bee Culture.

Improved Superphosphate of Lime.—A correspondent of the *New England Farmer*, of March 4th, from Colebrook, Ct., has used the improved superphosphate of lime, for two years in succession, on "all sorts of vegetables, from the aristocratic corn-talk, down to the humble squash vine, skipping alternate rows and hills, but *never could perceive any difference* in the *growth*." He concludes that his "soil must be very ungrateful, or that the *manufacturers must be deficient in conscientious scruples.*" A correspondent of the *Country Gentleman* of March 2nd, from Rahway, N. J., who asserts that he had great faith in Mapes, states that he has used two tons, or $100 worth, of "Mapes' improved superphosphate of lime," on oats, corn, &c., *without any benefit*, and he says he "can name at least six of his neighbors who can give similar testimony." A correspondent of the *Boston Cultivator* also reports similar results of experiments with the improved superphosphate of lime.—Yet, in spite of all this, Mapes is constantly reiterating his assertion, that it is cheaper to give him (Mapes) $50 per ton for this fertilizer, than to draw barn-yard manure two miles, even if you get it for nothing.

CHARCOAL DUST FOR POTATOES.

The antiseptic properties of charcoal are well known. Since the prevalence of the potato disease, it has frequently been recommended as a preventive of the rot, and many experiments have been recorded, showing a satisfactory result. We have ourselves used the small dust from coal heaps for this purpose, with success. In the "Survey of Essex County," Mr. Whallon gives the following testimony to the value of coal dust. After speaking of its value as a manure for wheat, and particularly for grass, he says:—"I have also used the dust on loamy and intervale land with the potato crop. During the series of years in which the rot almost ruined the potato crop, I scarcely lost any potatoes from that cause, and supposed it was owing to the coal dust I used.—My manner has been to drop the seed and cover it with a small shovel full of dust, and then cover with earth." Have any of our readers used it, and with what success?

An Ohio Corn Crop.—The *Ohio Cultivator* contains a statement of a corn crop raised by A. H. Thompson, of Union County, Ohio, which is the biggest story of the biggest crop we have found going the rounds of the papers for some time. On a field of 20 acres, a clover sod, an average of 100 bushels per acre was obtained. But there was one acre of these 20, in a cove "in the second bottom, which I plowed about ten inches deep in the winter;—about the first of May, harrowed my soil entirely loose; furrowed my ground two feet each way, and had three stalks to each hill; plowed three times each way, once in each row; the corn was gathered the first of October, and measured in a large basket, and an average basket-full shelled in my presence—the amount was 185¾ bushels. The remainder of the lot was only measured by the wagon-load."

Wheat, Flour and Bread in London and Paris.—The highest quotation of wheat of the first quality, at present in Paris, is $2,48 per bushel, and in London $2,72. It follows therefore that wheat is 14¼ per cent. higher in London than in Paris. Flour of the first quality is worth in Paris $16,62 per sack of 280 lbs., and in London $18,00, or 8½ per cent. higher in London than in Paris. Bread of the first quality in Paris sells for 14 cents per loaf of 4 lbs., and in London 23 cents, or 65 per cent. dearer in London than in Paris.

O. M. Barber, Gaines, Orleans Co., N. Y., states in the Patent Office Report, that the butter produced from cows eating green cornstalks is of a very superior quality, and as hard as beef tallow, in midwinter. He thinks corn for soiling purposes, superior to any other crop.

Wheat in England.—The deficiency in the wheat harvest in 1853, is estimated at twenty-four million bushels. The average imports are forty million bushels. Hence Great Britain will require, this year, sixty-four million bushels of imported wheat.

Inquiries and Answers.

Fence Posts.—Will you, or some of your subscribers who may have experience in the matter, have the goodness to inform me through the columns of the Rural, what is the effect of *charring* upon the durability of fence posts, or other timber set in the ground? Some are decidedly of the opinion that by this process, their posts are rendered more durable, yet comparatively few adopt it in their practice. And of this number, a large share, I apprehend, would fail to give a reason for their opinion. It is with them the result of observation. But if it is true, that by this easy operation, our fence posts may be made to last indefinitely longer, it certainly should be known, as every thing relating to economy in fencing, is becoming of vital importance in this region. If it be a fact, myself, and, I doubt not, many of your readers, would be glad to know it, and also upon what principle of philosophy it is founded.—A. M., *Lima, N. Y.*

A friend, who has had much experience, to whom we handed the above, has kindly furnished the following answer:

There cannot be any doubt, indeed it is a well established fact, that charring wood adds to its durability, and well pays the extra labor, particularly with all the hard woods.

The *rationale* of the operation, consists in rendering the outer portion indestructible, as charcoal never rots, and by destroying the sugar gum of the wood, the fermentation and decomposition of which, by the agency of water and air, is the cause of decay, and also by disarranging the lateral pores of the wood, whereby water is absorbed.

We should have great faith in *dipping* posts in boiled tar or melted pitch, which could be effected with a trifling expense, in comparison to the loss in the tumbling down of expensive fences.

If a post was bored with an inch and a half auger, from the bottom to four inches above where it was set in the earth, and six inches of a saturated solution of blue vitriol or copperas poured in, and a tight plug drove into it and allowed to be absorbed, it would produce all the effects claimed by *Kyanizing* or *Paynizing*. Both these salts are powerful antiseptics, and strongly antagonistical to *eremacausis*, or rot and mildew.

From the already felt scarcity of fencing timber, and the almost entire exhaustion of the red cedar forests, the farming community will have to resort to the use of board fence to secure their crops; and it is an item worth looking after and experimenting upon, to discover a method to make the ordinary timber of the country durable and lasting.

Stretches in Sheep.—I should be much obliged if you could give me a remedy for stretches in sheep.—W. P. Brand, *Perrysburg, N. Y.*

The following method has been recommended by a practical farmer who has had experience with this disease:—When you first see them stand, stretching, catch them and take them up by their hind legs, raising them their full length from the ground; then give them three or four smart jerks up and down; then give them some salt, and in ten minutes give them some tar, and if they will not lick it themselves put some in their mouth and hold it till it is dissolved.

Spring Wheat, Tobacco, &c.—Will some of your correspondents experienced in raising Spring Wheat inform me which is the best kind, where procurable, and time of sowing &c., to avoid the weevil?

Also can I learn through your columns the best kinds of Tobacco suited to northern culture—price of seed, where procurable, and all the details of its rising from the plant to the packing?—A Subscriber, *Canajoharie.*

Yellow Water in Horses.—Will some of the correspondents of the Rural give us a receipt for the cure of yellow water in horses. J. P.—*Columbus, N. Y.*

Plowing Clover in for Wheat.—In the summer of 1849, I had a small field of 4½ acres in clover which I pastured a while, and then let the clover grow until it was fit to cut for seed. With a large plow and three strong horses, I plowed it in, then harrowed it effectually, and let it lie until 26th of September, when I seeded it.—The yield was 165 bush., or 36⅔ bush. per acre. It is proper to state that the crop of wheat that was on it before the clover was plowed down, did not exceed ten bushels per acre.—J. W. in *Farm Journal.*

Night Soil.—Now is the time to haul out your night soil. It can be done easily and without offence. Remove that old dead horse "below the run," and take those dead lambs from the top of the shed and the apple tree.—There they will be offensive to passers by, but if hauled into the field and buried under a good coat of loam, they will soon be transformed into excellent manure. A dead horse is worth more than a cord of the best stable manure.

The *Price Current* publishes a statement of the hogs packed in Ohio, Kentucky and Tennessee this season, embracing all the principal points. The whole number is 1,265,555, against 975,978 last year, being an increase in the number of 289,577, and in the weight five per cent. It is supposed that Indiana, when reported, will not vary much from last year.—Nothing definite has been received from the far west.

Orchard and Garden.

HINTS AND GLEANINGS.

Grafting Grape Vines.—It is sometimes desirable to bring new varieties of grape vines into early bearing, and this can be done by grafting into large, bearing vines. A gentleman in New Jersey, some years ago, erected a grape house, and instead of setting out all his foreign vines, selected large Isabella vines an inch in diameter, and planted them in mid-winter outside his green-house. He then carried the stems under the foundation and cut them off inside about three inches below the surface of the ground; split them, and inserted two scions in each of the varieties he wished to propagate. He simply pressed the earth about them without bending, and every one took, and the next year fruited largely, though they were not suffered to bear much. They have since grown vigorously and borne well, while those set out were five years in coming into bearing. Any time from January to June will answer, if it is done in the root, below the ground. If done after the the leaves are expanded, the scions must have been kept in a cool cellar for that purpose.

Horticulture in Oregon.—We learn by correspondence given in the *Horticulturist*, that Fruit-growing is receiving much attention in that young and far-away Territory. Trees commence bearing very early and yield largely, too much so for their own endurance. The fruit is excellently fair, and the growth of the trees very rapid. Most of the leading varieties of Apples, Pears, Peaches, Plums, Cherries, as well as the smaller fruits, have been introduced by an enterprising firm of nurserymen, and the demand for them bids fair to reward their perseverence in bringing them through the difficulties of the long route.

Ashes for the Curculio.—A correspondent of the *Michigan Farmer*, whose plums were destroyed by this insect, last spring when the buds were nicely started, sifted good strong ashes over the ground as far as the limbs extended, nearly a quarter of an inch in depth, and just before a heavy rain that the lye might leach into the earth. He had a very heavy crop of plums on all the trees so treated, while on those left unashed, though they blossomed full, the plums were all destroyed by the curculio. This single experiment, though not conclusive, is well worth repeating.

Remarkable Pear Trees.—Mr. Pierce of Milton, Mass., has two Dix pear trees, remarkable for blossoming repeatedly several times each summer. In 1849, both trees blossomed three times, and one fruited. One tree blossomed six times, the other four, and fruited three times each. In 1852, one blossomed seven times, the other three times. The one that blossomed seven times fruited each time, and Mr. P. exhibited the fruit of six of the crops, at the Norfolk Co. Ag. Fair, in the autumn of that year.

Pear-trees near Smith Shops.—The flourishing condition of pear-trees near the shops of blacksmiths, in some instances, has led to the supposition that they were benefited by iron rust and cinders, and these have been applied to other trees—but without much effect. The improved vigor is more likely to result from the parings of hoofs and dropping of the horses shod there, as it will generally be found that those alone which get these substances, show any unusual growth or productiveness. —R.

Lucker Apple.—I observe in the Journal of the New York Agricultural Society, the following item:—"*Lucker Apple*, received from T. C. Young, Esq., Saratoga Springs, grown at Canandaigua, was tested by the committee, and pronounced a very fine apple—new variety."

There has been an apple of that name known in Monroe County for twenty-five or thirty years past, and was first brought to my notice by our venerable friend, Gideon Ramsdale, of Perinton, who has grown it for that length of time.

It is of a bright red color, below medium size, rather oblate in shape, tender fleshed and of a rich and high flavor, and a good keeper.

It is a very desirable apple, and the only objection to its general cultivation is, that on old bearing trees it is under-sized. Committees should be careful in pronouncing on new varieties until they are thoroughly advised of the fact, as it introduces confusion and difficulty in the nomenclature of fruit. L. Manly.

Fraud in Fruit Trees.—In an article under this head in the Rural of December 3d, a correspondent asks if "Rochester Nurserymen have agents abroad for whose transactions they are responsible." The *Horticulturist* says in reply to this:—"We believe all the Rochester Nurseries have agents doing business for them and for whose transactions they are responsible; but they are doubtless furnished with such evidences of authority as will distinguish them from impostors."

"VICAR OF WINKFIELD" PEAR.

Our engraving represents a good specimen of the Vicar of Winkfield pear, grown by Hon. M. P. Wilder, of Boston, and presented to the *New England Farmer*. This pear was discovered as a natural seedling in the woods of Clion, in France, by a French *curate*, and hence it derived its name, *Le Cure* or *Monsieur Le Cure*. It was afterwards imported into England by the Rev. Mr. Rham, of Winkfield, Berkshire, and cultivated and disseminated from thence, becoming known in the neighborhood of London as the *Vicar of Winkfield*. It is also sometimes called *Clion*, after the name of the place in which it was found growing wild. It was also imported into this country, and considerably disseminated under the name of *Bourgermester*.

With regard to its merits, there is some difference of opinion. Downing says:—"It has borne admirably with us for some years past. It is always remarkably large, fair and handsome. We think it always a first-rate baking pear. Occasionally it has tasted fine as a table pear, but generally it is astringent, and only third rate for this purpose. If ripened off in a warm temperature, however, it will generally prove a good, second rate eating pear. But its great productiveness, hardiness and full size will always give it a prominent place in the orchard as a profitable, market cooking pear. The tree grows thrifty, with drooping fruit branches. Shoots diverging, dark olive."

Thomas says:—Flesh, greenish or yellowish white, juicy, buttery, with a good second rate flavor, sometimes slightly astringent, but if ripened in a warm temperature, it proves a good table pear. Ripens late in autumn and early in winter, for about three months. Growth spreading and irregular, shoots strong. Fine on quince stocks. The great and uniform productiveness of this pear, its fine qualities for cooking, and the long period of its continuance, render it eminently valuable.

Barry says the tree is a most vigorous grower on both pear and quince stocks, and on the latter makes a beautiful and productive pyramid. He thinks it is one of the most valuable of late pears. Ripens in the cellar.

Cole says:—"It is hardy, a great grower and enormous bearer, the fruit large and fair, and as it comes in when pears are scarce, it is one of the most profitable pears for market or home consumption. Requires a warm locality, and a long season."

Isaac Newton asserts, in the Horticulturist, that in Philadelphia, in December, 1852, he was selling a stock of Vicar of Winkfield pears to eager buyers, at 75 cents per dozen.

Geo. Jacques gives the Vicar of Winkfield as one of the four pears he would cultivate on the quince.

Size quite large; long pyriform, approaching oblong-obconic, with a conical taper towards the crown; skin smooth, pale yellow, or pale yellowish green, with a dull reddish cheek; stalk an inch and a half long, slender, often fleshy at insertion, oblique, not sunk; basin narrow, very shallow.

Dr. Mitchell, of New York, recommends the increased cultivation of pumpkins, for the sake of the oil which may be obtained from their seeds. He states that half a gallon of limpid oil may be pressed from a gallon of seeds, that it has no disagreeable taste or smell, and burns well.

The Northern Spy Apple.—In a recent issue of your paper, I observe, in a quotation of yours from the *Prarie Farmer*, on "Apples and Pears in the West," that the *Northern Spy* does not maintain the same respectable habits in that region, that our experience in Central New York would award it; for grafts of that apple with us on old trees have borne liberally three years from the insertion, and have shown themselves more forwardly than "tardy," considering the juvenility of the branch. However, the vigour of the Northern Spy, even hardy as it is, depends much on its getting the necessary light and air; for although we sometimes have fruit on two-year old grafts—there is a perpetual lesson "down in the orchard" of the injuries of shade, in the shape of twelve inch twigs that have been tugging and struggling the last ten years into that length.—A Subscriber, *Canajoharie, N. Y.*

HINTS FOR THE SEASON.

The winter over, a great portion of the country has been very changeable, and on the whole what may be called severe upon trees and plants ranked as tender; yet up to this time we are not aware that fruit-buds have suffered seriously, but the most trying periods for these are coming.

Mistakes are often made in uncovering trees and plants too early—subjecting them to cold, biting winds, and the blighting influence of warm days, and cold frosty nights. We advise a *slight* covering to remain until the weather be soft and genial.

Pruning should be completed as soon as possible, so as to be out of the way before transplanting and general garden work comes along.

A sure foundation for successful gardening during the coming season, is to be well prepared to execute every operation promptly in its season. Seizing the very first opportunity for planting, and taking time to do it well, is a certain means of success.

Hot-beds for forcing early vegetables, raising plants for the kitchen garden, and propagating soft-wooded plants for bedding out, will be among the important operations of March requiring hourly attention.

Laying turf, mending lawns, &c., where neglected last fall, should be attended to as soon as the frost is out of the ground, to give the grass the advantage of a vigorous spring growth that will put it out of danger from drouth.

Roses, flowering shrubs, &c., should be pruned and dressed. Many people suppose that rose bushes and shrubs when well established may be left to themselves; and the consequence is, they become bushy and twiggy, the growth is feeble, and the flowers indifferent. They need frequent prunings, and top-dressings of good rich compost about their roots, to give them vigorous growth, luxuriant foliage, and a profusion and perfection of bloom. In pruning both shrubs and roses, it should not be forgotten that some produce their blossoms on young wood, and some on wood of last year:—In the latter case, a sufficient quantity of flowering wood must be left, cutting out the older parts.—*Horticulturist.*

Cabbages.—A correspondent of the *Horticulturist* says:—"It may not be generally known that cabbages readily grow and are easily propagated by slips. A stump may be put out in the spring, and the sprouts as they vegetate cut off, the cut allowed to dry, and then planted. When cabbages or cauliflowers throw off side shoots they may be used in the same way. Cabbages thus raised have short stalks, and are sure of being *true* to the parent. I have often pursued this method when short of seed."

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending February 28, 1854.

S. B. Batchelor, of Lowville, N. Y., for improvements in scythe fastenings.

Jno. W. Chittenden and Wm. C. Mead, of Vevay, Ind., for improved machine for splitting hoops.

Jno. P. Conger, of Newark, N. J., for improvement in salt kilns.

Lewis W. Colver, of Louisville, Ky., for improvement in seed planters.

Robt. W. Davis, of Rodgersville, N. Y., for improvement in churns.

A. K. Eaton, of New York, for improvement in machines for pulverizing ores.

Timothy D. Jackson, of New York, for improvement in dies for making seamless metal tubes.

Smith W. Bullock, of New York, assignee to Stillman, Allen & Co., of same place, for improvement in quartz crushers.

Michael M. Gray, of Philadelphia, Pa., for improvement in railroad chair machines.

Thos. D. Henson and Geo. Robr, of Charlestown, Va., for improvement in seed planters.

Wm. Burnett and John Absterdam, of Boston, Mass., for improvement in the use of fusible discs in steam boilers.

James Renton, of Newark, N. J., for improvement in zinc white furnaces.

Frank G. Johnson, of Brooklyn, N. Y., for table, to hold bank notes, when cut.

A. S. Lyman, of New York, for improvement in air engines.

Wm. McBride, of Bristolville, Ohio, for improvement in machines for making bed-pins.

James Pitts, of Lancaster, Mass., for improvement in cotton-picker cylinder.

Jos. Sawyer, of South Royalston, Mass., for improved socket for bench-hooks.

Wm. Sumner, of Worcester, Mass., for improvement in organs.

Solyman Bell, of Marseilles, Ill., for improvement in harvesters.

George A. Rollins, of Nashua, N. H., for improved tool-rest for turning lathes.

John G. Snyder and Jos. Young, of Wheatfield township, Pa., for improvement in seed planters.

Linus Yale, of Newport, N. Y., for improvement in bank locks.

Jacob Zook, of Harrisburgh, Pa., for improved carrier for lathes.

L. Otto P. Meyer, of Newtown, Conn., for improvement in vulcanizing India rubber and other gums.

Jas. F. Brodhead, of Rondout, N. Y., assignor to Thos. Ritch, of Napanock, N. Y., for improvement in forcep saw-sets.

Stephen P. Ruggles, of Boston, Mass., for improvement in printing presses.

Abijah Hall and Sylvanus Sturtevant, of So. Paris, Maine, for improvement in sown-plows for railroads.

RE-ISSUES.

Jonas Holmes and Ephraim French, of Lee, Mass., for improved process of manufacturing variegated roving. Patented May 18, 1852. Re-issued Feb. 28, 1854.

Wm. F. Ketcham, of Buffalo, N. Y., for improvement in grass harvesters. Patented Feb. 10, 1852. Re-issued Feb. 28, 1854.

GUTTA PERCHA AND ITS USES.
